[224] (4) *Summit:* “Sublimest sublimity—self-satisfied am I—Clubhouse ‘Zur Platte’—fine learned world—world of art—Schneckenmuseum clothing—my right side—I am Nathan the Wise—father, mother, brothers, sisters have I none in the world—an orphan child—am Socrates—Lorelei—Schiller’s *Bell* and the monopoly—Lord God, Mary the mother of God—master-key, the key of heaven—I always legalize our hymn-book with gilt edge and the Bible—I am the owner of the southerly zones, royally lovely, so lovely and so pure—in my sole personality I am von Stuart, von Muralt, von Planta, von Kugler—highest intelligence belongs to me—no one else should be made a member—I legalize a second banknote factory six storeys high for the Socrates deputy—the asylum should keep the Socrates deputy—no longer the earlier deputy my parents had, but Socrates—a doctor can explain that to them—I am Germania and Helvetia of exclusively sweet butter—that is a life-symbol—I created the highest summit—I saw the book terribly high above the town-hall grounds covered with white

sugar—high in heaven is the highest summit created—higher than the highest height—you can bring no one who can show a mightier title."

[225] In the concept "summit" we find an enormous number of the craziest ideas some of which sound extraordinarily comical. By and large we elicit from this material that by "summit" the patient simply means the sum of all her "titles" and "achievements." Titles like Schiller's *Bell*, Lorelei, etc., probably express special analogies which will have to be looked for in the individual words.

[226] (5) *Lorelei:* "Is the owner of the world—it expresses the deepest mourning because the world is so depraved—a title that is the greatest happiness for others—usually these personalities who have the misfortune, I might almost say, to be owners of the world are extraordinarily tormented—Lorelei is also the highest life-image—the world can show no higher remembrance—no higher veneration—it is like a statue—for example, the song runs 'I know not what it means' [7]—it happens so often that the title owner of the world is not understood at all—that people say they don't know what it means—it is really a great misfortune—yet I establish the largest silver island—it is a very old song, so old that the title never became known at all—that is sadness."

[227] When the patient says "I am the Lorelei," it is simply—as the analysis shows—a condensation by means of a clumsy analogy: people do not know what owner of the world means, that is sad; Heine's song says "I know not what it means," etc., therefore she is the Lorelei. The mechanism is exactly the same as in the "pine-tree" analogy.

[228] (6) *Crown* (stereotypy: "I am the crown"): "Highest good you can achieve —those who achieve the highest come to the crown—highest happiness and earthly good—greatest earthly riches—it is all earned—there are lazy people who always remain poor—highest heavenly image—highest divinity—Mary the mother of God—master-key and a key of heaven with which one cuts off relations—I myself saw how a door was bolted—the key is necessary for incontrovertible justice—titles—empress, owner of the world—highest title of nobility."

[229] "Crown" is another analogy of "summit," but with the added nuance of merits and rewards. The rewards are attained not only on this earth in the form of the greatest worldly possessions (riches, being crowned empress, titles of nobility, etc.); they are also found in heaven, to which the patient gains entry by means of the key and where she is even crowned Queen of Heaven. In view of

her merits, this seems to her “incontrovertible justice.” A naïve bit of dreaming somewhat reminiscent of *Hannele’s Ascension* (Hauptmann).

[230] (7) *Master-key* (stereotypy: “I am the master-key”): “The master-key is the house-key—I am not the house-key but the house—the house belongs to me—yes, I am the master-key—I affirm the master-key as my property—it is therefore a house-key that folds up—a key that unlocks all doors—therefore it includes the house—it is a keystone—monopoly—Schiller’s *Bell.*”

[231] The patient means the pass key carried by doctors. By means of the stereotypy “I am the master-key” she solves the complex of her internment. Here we can see particularly well how hazy her ideas are and also her expressions: sometimes she *is* the master-key, sometimes she merely “affirms” it; sometimes she *is* the house, sometimes it belongs to her. This key, that unlocks everything and sets her free, also prompts the analogy with the key of heaven, which opens for her the door to bliss.

[232] (8) *Owner of the world* (stereotypy: “I am triple owner of the world”): “Grand Hotel — hotel-life — omnibuses — theatres — comedies — parks — carriages — fiacres — trams — traffic — houses — stations — steamships — railways — post — telegraph — national holidays — music — stores — libraries — governments — letters — monograms — postcards — gondolas — delegates — great occasions — payments — gentry — coaches — Negro on the box — flags — one-horse carriage — pavilion — education — banknote factory — mightiest silver island in the world — gold — precious stones — pearls — rings — diamonds — bank — central court — credit office — villa — servants and maids — carpets — curtains — mirrors, etc.”

[233] The images which “owner of the world” conjures up for the patient are the prerequisites for a princely existence, some of them carefully observed situations, charmingly depicted (“Negro on the box”). These hints give us some idea of the ceaseless inner activity of the complex in dementia praecox, outwardly noticeable only in a few unintelligible fragments. Psychic activity no longer serves the “fonction du réel” but turns inwards to an unending elaboration of thought which exhausts itself in building up her complexes.

[234] (9) *Interest-draughts* (stereotypy: “My interest-draughts will have to be accepted sometime”): “Cocoa, chocolate, noodles, macaroni, coffee, kerosene, black tea, green tea, sugar-candy, white sugar, nut-water, red wine, honey-cakes, wine-cake—fabrics, velvet, merino, double merino, alpaca, twill, fustian, white percale, shirting, linen, wool, shoes, boots, stockings, petticoats, underwear,

skirts, umbrellas, hats, jackets, coats, gloves—they are interest-draughts that in reality belong to me."

[235] This is only a sample from the content of "interest-draughts." They are the concrete wishes of everyday life which have nothing to do with the complex of owning the world. They, too, are thought out in the finest detail and give the impression of a carefully compiled list.

[236] (10) *Establish [or affirm; see below]:* "Substantiate, verify, recommend—generally, complete finality—to express an opinion—to take into consideration—to take in hand—the heathens chatter so, the same thing is explained to them every day and yet they do nothing about it—I affirm that I am paralysed—nine years ago I would have needed 80,000 francs—payment through Director Forel—they are brutal to me—as owner of the world I have affirmed the asylum six times already."

[237] The content of this word [*feststellen*] has been hinted at under "master-key." The meaning is clearest in the sentence "I affirm that I am paralysed." Here "affirm" is used in its proper and original sense. But generally the patient uses the word in a metaphorical sense, for instance "I affirm the asylum," i.e., as my property, or "I establish a payment," i.e., I establish a claim to a payment. As we have seen, there is an abnormal mobility of verbal expression with a marked tendency to arbitrary manipulation of language. Normally changes in speech occur very slowly, but here the changes take place rapidly in a single individual. The reason for these rapid changes seems to lie in the vagueness of her conceptions. She makes hardly any distinction between them, and her conceptions are used and expressed now in one way, now in another (cf. "master-key"). To judge by the list of its contents, this concept is very ambiguous. It is supposed to mean "substantiate," "verify," which at any rate can be understood, although both terms go somewhat beyond the sense of "affirm" and "establish"; but to "recommend," "express an opinion," "take into consideration," have no logical connection with "affirming" and "establishing" and must be understood as superficial associations. They do not in any way explain what the concept means, they only make it blurred. This is probably because the words themselves are conceived very indistinctly, so that their dissimilarities are not recognized.

[238] (11) *Universal* (stereotypy: "I am the universal"): "I came as the universal seventeen years ago—universal infirms rest—regular conditions—it also comes through legacies—includes financial circumstances too—title of world owner includes 1000 millions—that is the villa, equipage—I've been riding horseback

and driving since 1866—I've been universal since the death of my father—in the winter months I affirm the universal—even if I'd not affirmed it in the dream I would have known it—on account of being a legator—25,000 at the very least—with what emphasis—the Swiss annuity is 150,000—they said over the telephone that Mr. O. had drawn my annuity—universal is a finality—you can be that through deceased persons—through legacies—universal is property —the property belongs to me."

[239] According to these associations "universal" means something like "sole heiress"; at any rate that seems to be its derivation. The term, however, is used quite indiscriminately, now for the person and now for the property. Again we have the same uncertainty. Instead of "affirm" the patient prefers to use "include"; on one occasion the two words condense into "infirm." The uncertainty in the use of moods and tenses is significant. For instance the patient says: "I've been riding horseback since 1866," etc. She knows very well that this is not true; on another occasion she said: "I should have been riding horseback since 1866, but I content myself with driving." It makes no difference to her whether she expresses an optative in the present or in the imperfect tense; she talks just like a dream. This peculiarity of dreams has been pointed out by Freud.[8] Her dreamlike, condensed, disconnected manner of speaking is in clear agreement with this fact.

[240] "Universal" is again a symbol of her riches, which she has not only earned herself but has inherited. This also sheds lustre on her family, who, as we shall see, are included in her wish-dreams.

[241] (12) *Hero:* "I am a hero of the pen—generosity—forbearance—heroic deed —hero of the pen because of the content of what one writes—the highest intelligence—the highest traits of character—highest endurance—highest noblesse—the highest that the world shows—includes in itself—letters—deeds of purchase and transfer."

[242] "Hero of the pen" is actually an ironic expression which the patient takes quite seriously. This may be due to her lack of education, but it is more probable that she has lost all sense of humour, as usually happens in dementia praecox. Incidentally, this defect is also characteristic of dreams. "Hero" is another symbolic expression for highest intelligence, etc. How much the patient herself is a "hero of the pen" can be seen from the concluding phrases. Actually she does not write anything except a letter on rare occasions, but in fantasy she writes letters in abundance, especially those dealing with "deeds of purchase

and transfer," a reference to her acquisitive complex. It is interesting to see how she expresses this *arrière pensée* symbolically by "hero," "heroic deed."

[243] (13) *Finality [Endgültigkeit]:* "Alliance, counter-bill, conclusions, signature, title deed, procuration—generally includes the key too—foreign currency, the highest conclusions—dedication of the highest—worship—I dreamt that the worship, veneration, and admiration of which I am worthy cannot be offered to me—so wanders the noblest of women, with roses she would like to surround the people—Queen Louise of Prussia—I established that long ago—I am her too—those are the highest conclusions in life—keystone."

[244] The concept "finality" is again very unclear. "Counter-bill, signature, procuration, title-deed" seem to me to emphasize mainly the element of "validity" [*Gültigkeit*], whereas "conclusions, alliance, keystone" emphasize more the "finality." Actually these relationships merge into one another completely. From "procuration" the association goes to "key," which as we know plays a great role as the "master-key" and always evokes its symbolic counterpart, the "key of heaven." Here again the association goes from "key" to quasi-religious ideas by means of the concept "foreign currency," which for the patient also stands for the "highest," so that she can assimilate the latter concept as well. From "foreign currency" it goes via "dedication" to "worship." In an earlier analysis she identified herself at a similar point with "Mary the mother of God"; here it is only with the "noblest of women, Queen Louise," another symbol for the patient's grandeur. In this way she designates yet another pinnacle of human virtue, including it in the concept of finality along with her numerous other attributes. Quotation is a favourite way of expressing complexes.

[245] (14) *Mountain-peak* (stereotypy: "I created the highest mountain-peak"): "I have achieved the highest of all mountain peaks by mending—obviously it makes a sugar-cone—it comes out quite white—you had to descend the mountain for meals—it was majestic—little houses are provided on the slope—in clear weather you go up there with tourists—it must be very remunerative—I was once there too, but the weather was bad—sea of fog—I was surprised that such distinguished inhabitants still lived up there—they had to come down for meals—in fine weather it is very remunerative—you might also think that down-at-heel people were up there—the sense is majestic because it is the best sense—if you have a majestic sense it is out of the question for you to be killed and robbed in such a place—yes, that is the mountain-peak—the Finsteraarhorn."

[246] The patient has long been occupied with mending linen, she has mended enough linen to make a whole mountain, "the highest of all mountain-peaks." Linen is white, hence "sugarcone."[9] The snowy peaks can be compared to sugar-cones, they are white on top and blue below, hence "Finsteraarhorn." Among these dreamlike but transparent associations the patient inserts an intermezzo about a mountain on which distinguished people live. Involuntarily one thinks of the Rigi,[10] whose big hotels doubtless excited the covetous fantasies of the patient. When subsequently asked about this intermezzo she said she did not mean any particular mountain, she only dreamt of it. Nothing further could be elicited, though she talked about it as if it were something real, or at least a vision. It was obviously an unusually vivid concretization of a fantasy-image such as otherwise occurs only in dreams.

[247] (15) *Turkey* (stereotypy: "I am the finest Turkey"): "I belong to the finest Turkey in the world—no other woman in the world should be undressed—for choosing—I am the legator of champagne and the strongest black wine—of all the finest produce—we are the mightiest preservers of the world—Switzerland comes to my side as the mightiest, most glorious nation—Biel, Liestal, Baden, Seefeld, Neumünster—no discord—Switzerland expresses herself in Turkey—Turkey is fine and imports the finest foodstuffs—fine wines—cigars—lots of coffee, etc."

[248] This reminds one of those advertisements for Greek wines and Egyptian cigarettes, which are adorned with a pretty Oriental girl (the patient also says: "I am an Egyptian"), You see the same thing in advertisements for champagne. This is probably the source of the symbols. Again they are things she wants (wine, coffee, etc.), but it also seems that she distributes these goods to humanity ("I am the legator"), perhaps commercially, since the import business seems to her especially lucrative. She also "affirms businesses," as we shall see below. Be that as it may, the important thing here is the figurative way in which she expresses herself, arrogating a geographical concept (Turkey) as her title. For her it is a technical term that expresses the whole of the material mentioned.

[249] (16) *Silver* (stereotypy: "I have established the mightiest silver island in the world"): "Speech is silver, silence is golden—silver stars—money is made from silver—supply of money—largest silver island in the world—silver medals—one must cling to what is made out of it—watches—silver boxes—goblets—spoons—highest eloquence—speech is silver, silence is golden—as owner of the world the mightiest silver island in the world belongs to me—but I

afterwards gave the order to supply only money, no external things—all the existing silverware must be melted down into money.”

[250] The “silver island” is among the perquisites of the owner of the world; it is from here that her untold millions come. But silver is also “speech,” hence she possesses the “highest eloquence.” This example again shows quite clearly how indistinct her ideas are. One cannot really speak of directed associations here, but merely of the associative principles governing verbal combination and the similarity of images.

[251] (17) *Zähringer*[11] (stereotypy: “I am Zähringer since 1886”): “Means paymaster—extraordinary health—often in life they say: you are tough!—I am Zähringer since 1886—long life—extraordinary achievements—unbelievable with many people—it is in the realm—one is so misunderstood—there are so many people who always want to be ill—they don’t get on with the Zähringers—quite extraordinary—highest age—do you know where the Zähringer quarter is?—near the Franciscan church—a nice quarter—extraordinary—this title means nothing to common people—yet one often says they are so tough—this has to do with the state of health—it makes such an infinite difference, the difference in age—I am Zähringer on account of my health—it is extraordinary—they often say it is wonderful what she does and how tough she is—in 1886 I established the quarter, so that I have a place to live.”

[252] The symbolic significance of “Zähringer” is clear: the patient is “Zähringer” because she is *zäh*, ‘tough.’ This sounds like a pun, but she takes this phonetic metonymy seriously, while at the same time “Zähringer” means for her a nice residence in the “Zähringer quarter.” Again a dreamlike condensation of widely different ideas.

[253] (18) Lately the patient repeatedly produced the following neologism: “I am a Switzerland.” Analysis: “I long ago established Switzerland as a double—I do not belong shut up here—I came here freely—‘He who is free of guilt and sin / Preserves the child’s pure soul within’—I am a crane—Switzerland cannot be shut up.”

[254] It is not difficult to see how the patient is a Switzerland: Switzerland is free, the patient “came here freely,” therefore she should not be kept shut up. The *tertium comparationis* “free” immediately leads to a contamination with Switzerland. Similar but more grotesque is the neologism “I am a crane.” “He who is free of guilt,” etc. is a well-known quotation from *The Cranes of Ibycus*.[12] The patient therefore identifies herself outright with “crane.”

[255] The analyses so far have been concerned only with symbols for the extraordinary power, health, and virtuousness of the patient. They all represent thoughts of self-admiration and self-glorification which express themselves in inordinate and grotesque exaggerations. The basic thoughts—I am an excellent dressmaker, have lived a respectable life and am therefore worthy of respect and financial reward—are understandable enough. We can also understand that these thoughts lead to a great many wishes: for instance, for recognition, praise, financial security in old age. Before her illness the patient was always poor and came from a low-grade family (her sister is a prostitute). Her thoughts and wishes express her striving to get out of this milieu and attain a better social position, so it is not surprising that her wish for money etc. is very strongly emphasized. All strong wishes furnish themes for dreams, and the dreams represent them as fulfilled, expressing them not in concepts taken from reality but in vague dreamlike metaphors. The wish-fulfilling dreams appear side by side with associations from the waking state, the complexes come to light and, the inhibiting power of the ego-complex having been destroyed by the disease, they now go on weaving their dreams on the surface, just as they used to do under normal conditions in the depths of the unconscious.

[256] Dementia praecox has, so to speak, pierced holes in the ceiling of consciousness (that is, in the functioning of the clearest, purposively directed associations), so that it is now possible to see from all sides into the automatic workings of the unconscious complexes. What the patient and we, too, see are only the barely intelligible, distorted and disjointed products of the thought-complex which are analogous to our dreams, where again we see only the dream-image but not the thought-complex hidden beneath it. Thus the patient takes her dream products as real and claims that they are reality. She acts just as we do in dreams, when we are no longer capable of distinguishing between logical and analogical connections; hence it is all the same to her whether she says “I am the double polytechnic” or “I am the best dressmaker.” When we speak of our dreams, we speak, as it were, of something apart from ourselves, we speak from the standpoint of the waking state. But when the patient talks of her dreams, she speaks as if she were still in the dream, she is involved in the automatic machinery, with the result that all logical reproduction naturally ceases. She is then entirely dependent on chance ideas, and must wait to see whether the complex will reproduce anything or not. Accordingly her thought-process is halting, reiterative (perseverating), and constantly interrupted by thought-deprivation, which the patient considers very trying. If asked for explanations she can only reproduce further dream-fragments as answers, so

that one is none the wiser for it. She is totally unable to control the material of the complex and to reproduce it as if it were indifferent material.

[257] We see from these analyses that her pathological dreams have fulfilled her wishes and her hopes in the most brilliant way. Where there is so much light there must also be a good deal of shadow. Excessive happiness must always be paid for very dearly, psychologically speaking. We therefore come to another group of neologisms or delusional ideas, which are concerned with the other side of the picture: they comprise the complex of injury.

B. THE COMPLEX OF INJURY

[258] (1) *Paralysis* (stereotypy: "That is paralysis"): "Bad food—overwork—sleep deprivation—telephone—those are the natural causes—consumption—spine—the paralysis comes from there—wheel-chairs—they only cite these as paralysis—tortured—expresses itself in certain pains—that is the way it is with me—woe is never far away—I belong to the monopoly, to the payment—banknotes—here the suffering is affirmed—it is a just system—crutches—dust development—I need immediate help."

[259] Here we see the reverse of the medal. Just as on one side her fantasies automatically lead to every conceivable splendour, so on the other side she meets with all sorts of malicious persecutions and sufferings. It is for this reason that she demands an indemnity which she expresses by saying: "I belong to the payment," which is synonymous with "a payment belongs to me." In consequence of her suffering [*Not*] she has to claim banknotes. (We shall return to this pun below.) Her complaints are of the same physical injuries that are usual among paranoiacs. What the psychological root of the sufferings here described may be I am unable to say.

[260] (2) *Hieroglyphical* (stereotypy: "I suffer hieroglyphical"): "Just now I suffer hieroglyphical. Marie [a nurse] said I should stay in the other ward today, Ida [another nurse] said she couldn't even do the mending—it was only kind of me to do the mending—I am in my house and the others live with me—I affirm the asylum sixfold, not that it is my caprice to remain here, they forced me to remain here—I have also affirmed a house in the Münsterhof—I was shut up for fourteen years so that my breath could not come out anywhere—that is hieroglyphical suffering—that is the very highest suffering—that not even the breath could come out—yet I establish everything and don't even belong to a

little room—that is hieroglyphical suffering—through speaking-tubes directed outward."

[261] It is not quite clear from this analysis, which was interrupted by the story of the nurses, what exactly is meant by "hieroglyphical," although she cites examples. But in another analysis of this locution she said: "I suffer in an unknown way, that is hieroglyphical." This explanation makes sense. Hieroglyphics are, for the uneducated, a proverbial example of something incomprehensible. The patient does not understand why and to what end she suffers, it is a "hieroglyphical" suffering. To be "shut up for fourteen years so that not even the breath could come out" is nothing but an elaborate paraphrase of her enforced stay in the asylum. The suffering "through speaking-tubes directed outward" seems to be a reference to the "telephone" and the voices, though a different interpretation may be possible.

[262] (3) *Discord* (stereotypy: "There is such a great discord"): "Discords—it is really a crime—I have to be cared for—I saw in a dream two people twisting two cords in the loft—there are two such great discords—I have to be cared for—discords simply won't go any longer on this floor—there is such a great discord that they don't want to care for me—they were making lace in the loft and only went on working without thinking or caring for me—discords come from negligence—discords do not belong to this floor but to Siberia—it is high time I was cared for, I have consumption—instead of providing me with the bank title they only go on working—both of them happened to be making lace in the loft."

[263] "Discord" seems to express something like "disagreeable circumstances." The patient finds it particularly disagreeable that the doctor never wants to hear anything about the payment she demands at every visit. She then complains mostly about the selfishness of people who only think of themselves and "only go on working" without thinking of the payment. The dreamlike intermezzo about the two people twisting two cords in the loft and going on working without caring for her may be a symbol for the indifference with which she is treated here. "Siberia" likewise suggests bad treatment. In spite of the splendid health which on other occasions she claims to enjoy, she considers herself "consumptive," but like all the other mutually exclusive absurdities these contradictions do not disturb one another. Dementia praecox has this, too, in common with normal dreams. Moreover one can observe in hysterics and in rather emotional normal people that they begin to contradict themselves as soon as they talk of their complexes. Reproduction of thought-complexes is always

disturbed or falsified in one way or another. Similarly, judgment of complexes is almost always clouded, or at any rate uncertain. This is known to all psychoanalysts.

[264] (4) *Monopoly* (stereotypy: "I am Schiller's *Bell* and the monopoly" or "banknote monopoly"): "With me it expresses itself in the note-factory—quite black windows—I saw it in a dream—that is paralysis—a note-factory seven storeys high—it is a double house, a front one and behind it is the apartment—the note-factory is genuine American—the factory has been drawn into the monopoly just like, for example, Schiller's *Bell* and the monopoly—the monopoly includes everything that can happen—all diseases which are caused by chemical productions, poisonings without seeing anyone, then attacks of suffocation—from above it is credible—then the terrible stretchings—they're continually stretching me—on this food you cannot get a figure like mine—the awful system of burdening as if there were tons of iron plate lying on your back—then the poisoning, it is invisible—it is shot in through the window—then, as if you were in ice—then pains in the back, this also belonged to the monopoly—as Schiller's *Bell* and the monopoly Forel should have paid me 80,000 francs nine years ago, because I had to endure such pains—I need immediate help—monopoly is a finality of all innovations since 1886, chemical productions, ventilations, sleep-deprivation—even without that a government would be obliged to stand by me with immediate help—I establish a note-factory—even if I weren't owner of the world the government would still have to bring help—as owner of the world I should have paid out fifteen years ago with gentlemen from the note-factory, forever, as long as I live—therefore it is such a great loss if one has to die only a year earlier—since 1886 the Oleum has belonged to me—all those who endure such sufferings should be helped, belong to be helped to the note-factory, to the payment—such innovations are all summed up in the word Monopoly, just as there are people who have the powder monopoly."

[265] The concept of the "monopoly" is again very unclear. It is associated with a series of tortures, and the note-factory is part of this suffering [*Not*]. The patient repeatedly emphasizes that she needs "immediate help," which is connected with the oft-mentioned "payment." She must be helped to get the payment because of her great sufferings. The probable train of thought seems to be as follows: her unprecedented and unique sufferings, as well as her advanced age, require that she should once and for all be given her unique rights. This is what she probably means by "monopoly." The special content of the monopoly is that the patient, as owner of the world, is solely entitled to manufacture banknotes. The psychological connection may be via the clang association *Not / notes*.

[266] (5) *Note factory:* “This is the creation of conditions through too great suffering—the notes have the same weight as money—everything that is necessary to arrange—notes for the alleviation of the greatest suffering—payment of financial conditions—I should be with the city throughout life—the note-factory should definitely be on our soil—I should pay out forever with four gentlemen—it would be too great a loss if one had to die only a year earlier than is necessary, etc.”

[267] We must be content with this extract from an originally much longer analysis. I think it is clear where the idea of the note-factory comes from: the notes alleviate *Not*. In this way the patient has created one of those symbolic clang-associations that so often occur in dreams. One complex has assimilated the other; the two complexes are condensed in the words *Not* and *note*, so that the one concept always contains the other without there being any linguistic justification for such a fusion of ideas. It is characteristic of dream-thinking that the most commonplace similarities give rise to condensations. Even in normal people two complexes existing at the same time always fuse, especially in dreams, where the *tertium comparationis* may be any superficial similarity. The money-complex and the suffering-complex are closely related as regards their content, and for this reason alone they must fuse: *Not* and *note* thereby acquire an even greater significance apart from the clang-association. This type of thinking, as all psychiatrists know, is found not only in dementia praecox but in many other far-fetched interpretations. I have only to mention the mystical interpretations of the name “Napoleon.”

[268] (6) *Oleum:* “Belongs to the title ‘eternal’—it is for old age—when I die, the title is gone, everything is gone—it is a somewhat longer official length of life—Oleum serves for prolongation—it belongs to me but I don’t know what it is made of—the age is established ever since 1886.”

[269] “Oleum” seems to be a sort of elixir which is to prolong the precious life of the patient. The expression “official length of life” is a very characteristic pleonasm. It is a perfect example of the hazy thinking that connects two totally different ideas; it also reveals the marked tendency of the patient to express herself as learnedly as possible (“official language”), a peculiarity of many normal persons who strive to give themselves an air of especial importance. The pompous style of officials or half-educated journalists sometimes bears similar fruit. These individuals, like the patient, have a striving for prestige. Where the word “Oleum” came from I do not know. The patient claims to have heard it

from the voices, just as she heard "monopoly." Very often these products are due to chance coincidences (cf. "Japan-sinner").

[270] (7) *Hufeland* (stereotypy: "I establish a million Hufeland to the left"): "Whoever belongs to Hufeland is universal, a millionaire—on a Monday between eleven and twelve o'clock I slept and established a million Hufeland to the left on the last splinter of earth up on the hill—the highest qualities belong to him—wisdom—many people make themselves ill, that is surely a great loss—known to be one of the most famous doctors who establishes what is true in life—seven-eighths make themselves ill through unwise things—the million belongs to the realm of the distinguished million—a million on the last splinter of earth—you also have two sides, Doctor, and now we have to do with the left—they would have to pay me a million—it is extraordinary—the empty, lazy people do not belong here—money always gets into the wrong hands—they are the deadly enemies of Hufeland, the empty, lazy, unwise people—Hufeland is extraordinarily world-famous—to be Hufeland is so mighty, to feel yourself quite healthy or quite ill, indeed will-power makes such a difference—the highest essence of man is needed in order to be Hufeland—perhaps you do not belong to Hufeland, Doctor—Hufeland has no connection with cruelty, not at the present time—they also snatched away my petticoat—for only two blankets—that is unhufeland—that is murdered, when they make you ill by force—I once had an extract from him, it is splendid to read how he agrees with every fibre of life—I am Hufeland—no cruelties belong to Hufeland."

[271] The patient is "Hufeland." Knowing her use of language, we know that this amounts to saying that there is something in her life that can be expressed symbolically by "Hufeland." She once read about Hufeland and therefore knows that he was a famous doctor.[12a] She probably knows of his "macrobiotics" (as suggested by her remark "will-power makes such a difference"). It is "unhufeland" to take away her petticoat and give her only two blankets. In this way she will catch cold—and this happens on the doctor's orders. Only a bad doctor, who is not a Hufeland, can order such things. I was the doctor, and therefore she says: "You also have two sides, Doctor"; "perhaps you do not belong to Hufeland, Doctor." The adjective "unhufeland" is worth noting; it has the meaning of "not in accordance with Hufeland." She uses the word "Hufeland" as a technical term, just as surgeons say "We will do a Bier here" (i.e., Bier's stasis) or "a Bassini" (Bassini's operation), or as psychiatrists say "This is a Ganser" (Ganser's syndrome). So in "unhufeland"; only the prefix is a pathological formation. Her many complaints about "cruel" treatment justify the supposition that she wants a Hufeland for her doctor. This thought

can also be expressed perfectly well by her saying that she herself is Hufeland; as we have seen, a metonymy of this kind is nothing unexpected. The idea of bad treatment deleterious to her health is always associated with that of the "payment," which she obviously regards as a sort of indemnity. She does not make herself ill, as seven-eighths of the others do, but is made ill "by force." Presumably for this reason she should be paid a million. This brings us to the meaning of her stereotypy: "I establish a million Hufeland to the left on the last splinter of earth" etc. What "left" means in this connection is not clear. But from a lengthy analysis which I cannot reproduce here *in toto* it transpired that the "splinter" is a "wooden post" on a mound of earth which signifies "the extreme end," probably a metaphor for "grave." So here, as (implicitly) in (6) *Oleum*, we encounter the complex of death-expectation. "I establish a million Hufeland to the left on the last splinter of earth, up on the hill" may therefore be a metaphorical and paralogical condensation (ellipsis) for something like this: "For the bad medical treatment which I have to endure here and which will finally torture me to death I claim a high indemnity."

[272] (8) *Gessler* (stereotypy: "I suffer under Gessler"): "Gessler's hat is set up down below, I saw it in a dream—Gessler is the greatest tyrant—I suffer under Gessler, therefore *William Tell* is the greatest tragedy in the world because of personalities like Gessler—I will tell you what he exacted from the people—he requires them always to have the same linen, the same clothes and never the smallest coin—he was always for war, for battle—all the cruelties these battles legalize, cause—I suffer under Gessler, he is a tyrant, there are people who are quite inadmissible, of unnatural unreason and bloody cruelty—for three quarters of a year I should have had a border on my skirt, only it was not given to me—that is Gessler, yes, Gessler—bloody cruelty."

[273] The patient uses "Gessler" just as she used "Hufeland," as a technical term for the petty vexations of asylum life which she imagines she has to endure. The *tertium comparationis* for this metaphor from *William Tell* is the humiliation which Gessler exacted from the people. It is interesting to see how this thought immediately condenses with the personal vexations of the patient: Gessler does not require the people to greet the hat he stuck up, but "always to have the same linen, the same clothes." Thus the patient completely assimilates the scene from *William Tell* to her own complexes.

[274] (9) *Schiller's Bell* (stereotypy: "I am Schiller's *Bell* and the monopoly"): "Well that is—as Schiller's *Bell* I am also the monopoly—Schiller's *Bell* needs immediate help—whoever has achieved this needs immediate help—belongs to

the highest title in the world—includes the greatest finality—needs immediate help. Because all those who established this are at the end of their life and have worked themselves to death, immediate help is needed. Schiller is the most famous poet—for instance *William Tell*, that is the greatest tragedy—I suffer under Gessler—it is world-famous, the poem: *The Bell*—it also establishes the whole of creation—the creation of the world—that is the greatest conclusion—Schiller's *Bell* is the creation, the highest finality—that is a governmental ground-pedestal—the world should now be in the best conditions—we have examined everything so practically and so thoroughly—Schiller's *Bell* is the creation—the work of mighty masters—the world has been helped out of misery—should be in the best conditions."

[275] Here the *tertium comparationis* is the greatness of achievement: Schiller's masterpiece is his poem *The Bell*, the patient likewise has achieved "the greatest," hence something similar to Schiller's *Bell*. In accordance with her habitual use of thought and language the condensation takes place at once and the patient *is* Schiller's *Bell*. Because she has achieved her greatest and final work ("the world has been helped out of misery"), nothing greater can come after, besides which she is getting old. So it is not surprising that the complex of death-expectation (which also plays a considerable role in normal people at this age) appears here and presses for "immediate help," which naturally means the "payment." I would mention here, as an instructive intermezzo, that the patient was very annoyed with the former director, Professor Forel, for not giving her this payment. Once during analysis she said: "I also saw in a dream how Mr. Forel was hit by a bullet, thus causing his own death—but that is awfully stupid—one does not always act like this when one has established the note-factory." She gets rid of her enemies by having them shot out of hand in her dreams. I mention this example not merely because it throws an interesting light on the psychology of our patient but because it is typical of the way by which normal as well as morbid individuals rid themselves in their dreams of persons who are an inconvenience to them. We can confirm this over and over again in our analysis of dreams.

[276] I must content myself here with these nine analyses; they may suffice to shed light on the patient's "unpleasure" complexes. An important role is played by her physical sufferings, the "burdening system," "paralysis," etc. Besides that, the following thoughts are expressed in her stereotypies: she suffers under the discipline imposed by the doctors, and under the treatment she receives from the ward-personnel, she is not recognized, and she does not get her deserts despite the fact that she has achieved the best of everything. The complex of

death-expectation is of great significance in determining some of the stereotypies: she tries to palliate it by “establishing” an elixir of life. Any person with a lively sense of his own worth, who for any reason was forced into such a hopeless and morally destructive situation, would probably dream in a similar way. Every emotional and aspiring individual experiences moments of doubt and apprehension in the very hour of supreme self-confidence, when the reversal of his hopes falls on him “like a ton of iron plate.” Ideas of injury are the usual compensation of exaggerated self-esteem, and we seldom find one without the other.

C. THE SEXUAL COMPLEX

[277] So far the analyses have mainly shown us the bright and dark sides of the patient’s social striving, but up to the present we have not encountered the commonest and most frequent manifestations of the complex, namely the sexual manifestations. In a case where the symbolism is so richly developed, the sexual complex cannot be lacking. It is there right enough, elaborated in the finest detail, as the following analyses will show.

[278] (1) *Stuart:* “I have the honour to be von Stuart—so it is described—once when I broached it Dr. B. said: “Why, she was beheaded—von Stuart, Empress Alexander, von Escher, von Muralt—this is also the greatest tragedy in the world—our all-highest deity in heaven—the Roman Mr. St.[13] has expressed himself giving vent to the highest pain and the highest indignation about this most abominable meaning of the world, where the life of innocent people is persecuted—my eldest sister had to come here so innocently from America, in order to die—then I saw her head at the side of the Roman deity in heaven—but it is abominable that a world like this always comes to light, which persecutes the life of innocent people—Miss S. has caused me consumption—then I saw her lying on the hearse and another, Mrs. Sch., beside her, who was obviously to blame for my coming here—incredible that the world is not freed from such monsters—Mary Stuart was another such unfortunate who had to die innocent.”

[279] The last sentence makes it clear how the patient came to identify herself with Mary Stuart: it is only another analogy. Miss S. is an inmate of the asylum, with whom the patient gets on badly. She, like the other person who was to blame for the patient’s internment, is therefore on the “hearse.” Whether this is a delusional idea or a dream or hallucination does not matter; it is the same mechanism as above (Forel). A remarkable figure in this analysis is “the Roman Mr. St., our all-highest deity in heaven.” We have already seen that the patient

accords herself the title "Lord God," so in this respect there is a firm association to the idea of divinity. Now comes another connecting-link: the highest deity is called "St.," the patient's own name. The predicate "Roman" probably owes its existence to the vague analogy with "Pope." The deity, like the Pope, is of masculine gender and is thereby distinguished from the patient herself as "Lord God." Beside the masculine deity, whose name is obviously meant to express an inner affinity with her family, she sees the head of her deceased sister, an image that reminds one of the two pagan divinities, Jupiter and Juno. She thus more or less marries her sister to the divine Mr. St. This seems to be nothing but an analogy, giving promise of her own ascension, when she will become the (sexually not inactive) Queen of Heaven, Mary the mother of God. Such a "sublimation" of exceedingly earthy matrimonial desires has been a favourite plaything of women's dreams since the dawn of Christianity. From the Christian interpretation of the Song of Songs to the secret raptures of St. Catherine of Siena and the marriage of Hauptmann's Hannele, it has always been the same story: the prologue in heaven to the earthly comedy. The representation of one's own complexes by strange actors in dreams is well known even to dream investigators who wish to hear nothing of Freud; in psychopathology we know it in the form of "transitivism." This interpretation is a conjecture which I hope will be confirmed in the following analyses.

[280] (2) (Stereotypy: "I come first with the deaf and dumb Mr. W. from the city and then with Uster.") "I come for instance first with the deaf and dumb Mr. W. from the city—you are going here with Mrs. W.-Uster—I am Uster—to guard against perversities I shall tell you who must keep my interest-draughts from Uster—a Mr. Grimm—Uster, Jud, Ith, and Guggenbuhl must keep my interest-draughts—I come first with the deaf and dumb Mr. W. from the city and then with Uster—that is the same interest-draught—that is double the same weight as the interest-draught from Uster—I establish the churches in the city to guard the money—Mr. K. in M. manages my money in St. Peter's, then I see the deaf and dumb Mr. W. walking across the square near St. Peter's, in a dream on a Sunday while I slept—Mr. W. can give information about the last penny that belongs to me—Mr. W. belongs to the city and not to Uster—I come first with the deaf and dumb Mr. W. from the city and then with Uster—that is double—same weight."

[281] By "city" the patient naturally means Zurich; Uster is a small, prosperous industrial town near Zurich. Mr. W. is unknown to me, so I can say nothing about his psychological determination. The essential content of the analysis lies in the first three sentences. We then learn that Mr. W. can "give information

about the last penny" of the patient. In her dream, therefore, he is firmly associated with her riches, and, as the analysis seems to show, especially with the sums deposited in churches. (She once dreamt that the church of St. Peter was filled to the roof for her with five-franc pieces.) This wealth is compared with that of Uster. We know already that the patient "affirms" everything that pleases her. Among the things affirmed are the fine villas, the great business-houses in the city, not to mention the whole of the Bahnhofstrasse in Chur. So it is no wonder that she also affirms the profitable factories in Uster. Therefore she says, "I am Uster." (She also says, incidentally, "I am Chur.") Furthermore, she said to me: "You are going here with Mrs. W.-Uster." This clears the matter up: she means that she is married to Mr. W. Through this marriage she unites the wealth of Zurich and Uster. "That is double the same weight as the interest-draught from Uster." If we remember the earlier use of "double," which seemed incomprehensible, we can now give it a satisfying erotic meaning. The marriage that in the preceding analysis was merely suggested by transcendental symbols has here been consummated in somewhat prosaic fashion. But the authentically sexual, not to say "crude," symbols are still lacking. We shall find them in the following analyses.

[282] (3) *Amphi:* This word crops up only rarely, in the form: "Doctor, there is again too much amphi." The patient vaguely derives the word from "amphibian." Occasionally, when she complains about being disturbed every night by "amphi," she says something about the "ritze-ratze animal" that "gnaws the floor," but one cannot find out what harm the amphi do to her.

[283] "Amphi—that expresses itself in hedgehog—*so* broad and *so* long (indicating with her hands about a foot in length and considerably less in breadth)—one morning Mr. Zuppinger, through pork-sausages—only I don't know now if the gentlemen specially want to bring such an animal into the world—I established this through pork-sausages—I always hear: there is too much amphi—the animal will only have grown so big by mistake perhaps—it must be in the evacuation (stool)—instead of the factory in S. there was a building for amphi—for productions—I saw in a dream that it was written on an arch in Weggengasse: 'Only at well-replenished tables after supper'—I never saw such a production—it needs a huge building—we were as in a theatre—up there—I think animals of all descriptions will be discussed—amphi expresses that animals probably have human reason—they can make themselves understood like human beings—they are just amphibians, snakes and suchlike—the hedgehog is *so* long (indicating a little less than a foot) and on Sunday morning it crawled as far as the well—yes, Mr. Zuppinger, it was through pork-

sausages—Mr. Zuppinger has eaten pork-sausages—once when I affirmed my 1,000 millions in a dream, a little green snake came up to my mouth—it had the finest, loveliest feeling, as if it had human reason and wanted to tell me something—just as if it wanted to kiss me.” (At the words “little green snake” the patient showed lively symptoms of affect, blushing and bashful laughter.)

[284] It should be quite clear from the singular content of this analysis what is meant by “amphi.” An amphi is evidently an animal of longish shape, it crawls, it is associated with amphibians, snakes, hedgehogs, and probably also with “pork-sausages.” Furthermore, it is associated with “gentlemen” (“if the gentlemen specially want to bring such an animal into the world”) and particularly—via the “pork-sausages”—with “Mr. Zuppinger,” about whom I could learn nothing more. It will be particularly enlightening to compare these two passages:

The hedgehog is *so* long and on Sunday morning it crawled as far as the well—yes, Mr. Zuppinger, it was through pork-sausages. Mr. Zuppinger has eaten pork-sausages.	Once when I affirmed my 1,000 millions in a dream, a little green snake came up to my mouth—it had the finest, loveliest feeling, as if it had human reason and wanted to tell me something—just as if it wanted to kiss me.

[285] It is not difficult for a dream to condense or at least make an analogy of two outwardly similar objects. Such an analogy seems to be the kissing snake and the eating of pork-sausages. The word “kiss” (which produced a lively affect in the patient) gives it an unmistakable sexual nuance. If one pictures to oneself the process by which the snake crawled up to her mouth to kiss her, one will immediately be struck by the coitus-symbolism. According to the well-known Freudian mechanism of “displacement from below upward,” this localization and paraphrase of the coital act is a favourite one, which, like Freud, we were able to demonstrate in numerous normal and pathological dreams.[14] If the coitus-symbol is localized in the mouth, the vague dream-thought readily tends in the direction of eating, so that this act too is frequently included in the coitus-symbolism.[15] With such a constellation, it can easily be understood why the snake changes into a pork-sausage that is eaten (“sausage” is a well-known vulgar expression for penis). “Eating” is therefore analogous to “kissing.” The hedgehog plays a role as an extensile animal, moreover it is obviously connected with the other “complex-animals” by verbal coexistence. The fact that it “crawls” to the well suggests that it is blended with the snake-idea. “Mouth,” however, is represented by “well.” Mouth can be understood as a sexual symbol if one assumes a displacement from below upward; but one need

not assume a displacement for “well,” it is simply a metaphorical designation based on the familiar analogy which even the ancients applied to their fountains.

[286] Here, then, we find the “crude” sexual symbols which we have missed till now and which are as a rule so extraordinarily common. From this standpoint we can understand without too much difficulty some of the other details in the above associations. For instance, it is not at all remarkable that the “amphi” has human reason if it is meant to represent a man. It can like-wise be understood why the animal is “in the evacuation.” Presumably this is a vague analogy to the intestinal worm, but the important thing is the localization of the symbol—in the “cloaca” (Freud), which has already been expressed by another symbol, the “well.” The cryptic utterance “Only at well-replenished tables after supper” probably belongs to the sexual symbolism of eating: the nuptial couch generally follows a hearty supper. As an old maid she might well say, “I never saw such a production.” “Theatre” and “animals of all descriptions” give one the feeling that the idea of a menagerie had suddenly bobbed up. This is borne out by the “factory in S.,” for S. is a place near Zurich where there are usually menageries, merry-go-rounds, etc.

[287] (4) *Maria Theresa:* “I belong to the synagogue in Löwenstrasse since 1866, I am a Jewess since 1866—owner of the world—I am therefore three empresses—I am also Maria Theresa as von Planta—that is finality—in the dream I was at a table with omelets and dried prunes—then there was a dam with speaking-tubes in it—then there were four horses with moustaches over their tails—they stood near the speaking-tubes—the third emperor has already legalized this—I am the Emperor Francis in Vienna-in spite of that I am a female—my Liesel rises early and yodels in the morning—that is there too—each horse stood near a speaking-tube.” (Suddenly the patient made a gesture of embracing, and on being questioned said that once in a dream it was as though a man took her in his arms.)

[288] This analysis, unlike any of the others, was continually interrupted by blockings (thought-deprivation) and motor-stereo-typies (embracing), from which we may conclude that it hit thoughts that were very strongly repressed. For instance, the patient went on tracing little circles in the air with her forefinger, saying she “had to show the speaking-tubes,” or she drew little half-moons with both hands: “These are the moustaches.” Besides this the “telephone” kept on making mocking remarks, to which we shall return later.

[289] By “Maria Theresa” the patient obviously means a particular quality of her greatness, so this part of the analysis is of no further interest to us. Then comes

a singular dream-image which ends with “I am the Emperor Francis.” The Emperor Francis I was the husband of Maria Theresa. The patient is both of them at once, but “in spite of that I am a female.” She condenses the relationship of these two persons into one person (herself), which in her hazy way of talking probably signifies no more than that both persons have a relationship to one another which bears some resemblance to hers with them. The most likely is the erotic relationship, the wish for a distinguished husband. That it is most probably erotic is clear from the fact that the association which immediately follows is the erotic song: “My Liesel rises early,” etc. The patient connects this song with the horses, which “stood near the speaking-tubes.” Horses in dreams, like bulls, dogs, and cats, are often sexual symbols, because it is from these animals that one is most likely to see crude sexual activities which greatly impress children. Similarly, she connects the horses with the Emperor Francis. This seems to justify the suspicion of an erotic significance. The horses have “moustaches over their tails.” This symbol probably stands for the male genitals, which would also explain the connection with the Emperor Francis, the symbolic husband. Each horse stands near a speaking-tube in a “dam.” I tried to find out whether the patient was acquainted with the anatomical meaning of the word *Damm*,[16] but I was unable to come to any conclusions without asking suggestive questions. I must therefore leave this question *in suspenso*. But considering the patient’s average education it is not unlikely that she knew this meaning of the word. The meaning of the “speaking-tubes” would then be quite unequivocal. With the gesture of embracing and the mention of the sexual dream the situation takes on a definite erotic colouring, which does much to elucidate the obscure symbolism of the preceding images.

[290] (5) *Empress Alexander:* “That expresses von Escher and von Muralt—owner of the world—as Empress Alexander I become owner of the silver island—a Mrs. F. said I had to send the family of the Russian Czar a hundred thousand milliards—I have ordered them to make money exclusively of the silver island—I am three empresses, von Stuart, von Muralt, von Planta and von Kugler—because I am owner of the world I am Empress Alexander—I am three Excellencies—I am the highest Russian lady–Catheter, Chartreuse, Schatedral, Carreau—I saw a carreau of white horses on the hill—beneath the skin they had half-moons, like little curls—they were hungry—the Emperor von Muralt was up there too—I became engaged to him in the dream—they are Russians, it was a battle attack—on the carreau of horses were gentlemen like Mr. Sch. in U., with long lances—like a battle attack.”

[291] The first associations once again have to do with ideas of grandeur. The peculiar collection of clang-associations (Catheter, Chartreuse, Schatedral, Carreau) leads to the carreau of white horses which, instead of having moustaches like half-moons over their tails, had half-moons under their skin, like “little curls.” This is probably a similar but better disguised sexual symbol. The horses were hungry—a near association to “eating.” “Hunger” indicates an instinct, possibly the sexual instinct.[17] The association does not lead, as in the previous analysis, to the symbolic husband, “Emperor Francis,” but to a similarly exalted synonym, “Emperor von Muralt.” It again goes from horse to man, but this time the sexual relationship is unmistakable, as the patient says she became engaged to him. The horses, too, now receive a characteristic attribute: they are ridden by gentlemen with “long lances—like a battle attack.” Anyone who has analysed dreams knows that whenever women dream of men coming into their room at night armed with daggers, swords, lances, or revolvers, it is invariably a sexual symbol, and that the pricking or wounding weapon is a symbol for the penis. We meet this dream-symbolism over and over again in normal as well as pathological persons. Only recently I saw at the clinic a young girl who had to break off a love-affair out of obedience to her parents. As a result she suffered from a depression with sporadic states of sexual excitement. At night she had stereotyped anxiety dreams in which “someone” came into her room and stabbed her in the breast with a long spear. In another, very similar case the patient always dreamt that as she was crossing the street at night someone waylaid her and shot her in the leg with a revolver. In dementia praecox the sensory hallucination of knives in the genitals is not uncommon. After this explanation the sexual significance of the horses in this and the preceding analysis ought to be clear enough, also the significance of the “battle attack.” The association to “Russians” is not so far-fetched, for although mounted lancers are an unknown spectacle in Switzerland nowadays, Russians, especially Suvarov’s Cossacks from the days of the battle of Zurich (1799), are still alive in the popular memory, and many reminiscences of the older generation gather round these figures. The “battle attack” is probably a synonym for the embrace mentioned in the previous analysis, and the thought of masculine activity is probably also hiding behind the “hunger.” This analysis, therefore, has the same content as the previous one, although the verbal and pictorial symbols have changed.

[292] The analyses so far have been concerned with betrothal, marriage, and coitus. All the details of the wedding festivities were vividly dreamt out by the patient; she summarized them in the words: “I am the lilac new-red sea wonder

and the blue." I must refrain from going more closely into this dream-image so as not to overload our already very extensive analysis. (The wedding festivities alone run to ten closely written pages of foolscap.) All that is lacking now is the fruit of this sexual union, the children. These appear in the following analysis.

[293] (6) *Bazaar:* "Double bazaar—I affirm two bazaars—W.-bazaar in Bahnhofstrasse and one in the Wühre—ladies' handwork—the most wonderful plate, glassware, all jewellery, toilet soaps, purses, etc.— Mr. Zuppinger shot out of my mouth as a little boy-doll, once in a dream—he had no uniform on, but the others had military uniforms—they are Czars, the sons of the highest in Russia, dressed up as Czars, hence the word bazaar—the bazaars are extraordinarily good businesses—Czars are hired for these businesses, they have their incomes from these bazaars because they are sons of world-owners and world-owneresses—also a little girl jumped out of my mouth with a little brown frock and a little black apron—my little daughter, she is granted to me—O God, the deputy—she is the deputy, the end of the lunatic asylum came out of my mouth—my little daughter shot out of my mouth to the end of the lunatic asylum—she was slightly paralysed, sewn together from rags—she belongs to a bazaar—you know, these businesses have a large turnover—I came first as double, as sole owner of the world, first with the deaf and dumb Mr. Wegmann from the city and then with Uster—I am the double bazaar." (Later, when part of the analysis was repeated, the patient said: "Both children look like dolls, and they have this name from the bazaar.")

[294] As the analysis shows, there can be no doubt that the patient's delusions have also created children for her. But it is especially interesting to note the circumstances under which this delusional formation arose and how it was determined. It was while she was reeling off a long list of the goods in the bazaar (greatly abbreviated here) that she mentioned that Mr. Zuppinger shot out of her mouth as a little boy-doll, in a dream. If we remember the analysis given under item 3, where "Mr. Zuppinger" is firmly associated with all sorts of sexual symbols, we would seem to be confronted simply with the consequences of this delusional love-affair. The patient's peculiar description has, however, an historical antecedent. As early as 1897 it was noted in her clinical record that Dr. D., the first assistant, who at that time was revered by the patient, "came out of her mouth": "tiny little Dr. D., the son of the Emperor Barbarossa." Dr. D. had a reddish beard, which obviously accounts for the formation "Barbarossa." His elevation to the status of Emperor, presumably a symbol of the estimation in which she held him, seems, like the veneration, to have transferred itself to Dr. D.'s successor, Dr. von Muralt (the "Emperor von Muralt," to whom she is

betrothed). The passage we have just quoted can safely be regarded as the birth of a son begotten by Dr. D., and the episode with “Mr. Zuppinger” is constructed on the same pattern. The manner of birth, the emergence of the child from the mouth, is an obvious confirmation of the “displacement from below upward” and therefore lends powerful support to our interpretation of “snake” and “mouth” in the analysis of (3) *Amphi*. That the little boy is “Mr. Zuppinger,” or at any rate stands in a certain relationship to this gentleman, accords perfectly with the conjectured sexual significance of Mr. Z. The description of the child as a “little boy-doll” can probably be explained by the connection with “bazaar,” where dolls are often displayed on the stalls. Just as “mouth” is a substitute for genitals, so “doll” is a more innocent substitute for child, just as it is in ordinary life. The sentences “he had no uniform on,” “they are Czars,” etc., seem to be reminiscences of the (5) *Empress Alexander* analysis, where the critical “battle-attack” by the lancers is associatively connected with the “Russians,” the link with “Czar.” By means of a clang-association the patient finds her way back to “bazaar” and then presents a train of thought which is altogether typical of the unclear thinking in dementia praecox: “The bazaars are extraordinarily good businesses—Czars … have their income from these bazaars.” Here the clang-association *Czar* / *bazaar* is obviously a meaningful one for the patient. She says: “The sons of the highest in Russia, dressed up as Czars, hence the word bazaar.” This is another contamination: like all good businesses, the patient “affirms” the bazaars as her property. She is the Czarina, just as she is every other distinguished personality; the specific determinant of this status may be the lancers. These two diverse trains of thought blend together by clang-association, and so it comes about that the Czars are bazaar-owners. Since the “battle-attack” by the lancers resulted in the birth of a son, this son becomes Czar and is accordingly the owner of a bazaar.

[295] The marked tendency of dreams to create analogical formations leads, as in the other sexual symbols, to a second delusional birth: a little girl is likewise born from the patient’s mouth. She wears a “little brown frock” and a “little black apron.” This is the usual dress of the patient and she has long been dissatisfied with it; hence she frequently complains and has already “affirmed” a copious wardrobe in her dreams. The words “sewn together from rags” are a reference to this. But the similarity of mother and daughter is crowned by the fact that the child is “slightly paralysed,” i.e., endures the same sufferings as the patient. The child has been “granted” to her as her “deputy”—in other words, because of this similarity the child will, so to speak, take upon herself the fate of

the patient and thereby release her from her manifold sufferings in the lunatic asylum. Hence the patient can say, in a figurative sense: “The end of the lunatic asylum came out of my mouth.” On another occasion she said that the child was the “Socrates deputy.” As will be remembered, the patient identifies herself with Socrates since he, like her, was unjustly imprisoned and suffered innocently. Now the daughter takes over her role as Socrates and accordingly becomes the “Socrates deputy,” which fully explains this singular neologism. To make the analogy complete, the little daughter, like her brother the Czar, is given a bazaar by way of indemnity. This double bequest of bazaars leads to the pronouncement: “I came first as double—I am the double bazaar.” On top of that she adds the familiar Uster stereotypy, which has a distinctly sexual connotation. The word “double” may therefore have a variously determined sexual meaning, namely that of marriage.

[296] In the further course of this analysis (which for the sake of brevity I have not reported in full) the patient elaborated on the theme of how she looked after her children, and finally she extended it to her parents who died in poverty. (“By me my parents are clothed, my sorely tried mother—I sat with her at table, covered white with abundance.”)

D. SUMMARY

[297] In the foregoing discussion we saw how the patient, brought up in miserable home circumstances, amid poverty and hard work, creates in her psychosis a tremendously complicated and to all appearances utterly confused and senseless fantasy-structure. The analysis, which we have conducted just as we would a dream-analysis, shows material that is grouped round certain “dream-thoughts”—thoughts, that is to say, which are understandable enough psychologically if we consider the personality of the patient and her circumstances. The first part of the analysis describes her sufferings and their symbols; the second, her wishes and their fulfilment in symbolic images and episodes. The third part deals with her intimate erotic wishes and the solution of this problem through the transfer of her power and her sufferings to the “children.”

[298] The patient describes for us, in her symptoms, the hopes and disappointments of her life, just as a poet might who is moved by an inner, creative impulse. But the poet, even in his metaphors, speaks the language of the normal mind, therefore most normal people understand him and recognize in his mental products the true reflections of his joys and sorrows. Our patient,

however, speaks as if in a dream—I can think of no better expression. The nearest analogy to her thinking is the normal dream, which employs the same or at least very similar psychological mechanisms and cannot be understood by anyone who does not understand Freud’s method of analysis. The poet works with the most powerful means of expression and for the most part consciously, he thinks directedly, whereas our half-educated and poorly endowed patient thinks in vague, dreamlike images without any directing ideas and with only the feeblest means of expression. All this has helped to make her thought-processes as impenetrable as possible. It is a trite saying that everyone is unconsciously a poet—in his dreams. In dreams he remoulds his complexes into symbolic forms, in a disconnected, aphoristic manner, and only seldom do the dream-formations assume a broader, more coherent structure, for this requires complexes of poetic—or hysterical—intensity. But our patient has created a long-drawn-out and elaborately woven tissue of fancies, comparable on the one hand to an epic poem and on the other to the romances and fantasy-productions of somnambulists. In our patient, as with the poet, the web of fantasy is woven in the waking state, whereas in somnambulists the extension and elaboration of the system are usually accomplished in a dissociated, “other” state of consciousness. But just as somnambulists prefer to translate everything into fantastic and sometimes mystical forms, in which the sharp outlines of the images are often blurred as in dreams, so our patient expresses herself in monstrous, grotesque, distorted metaphors, which are more like normal dreams with their characteristic absurdities. What she has in common with the “conscious” poet and the “unconscious” poet, the somnambulist, therefore, is simply the extension and constant elaboration of the fantasies, while the absurd, the grotesque, the lack of everything beautiful, seems to be derived from the dreams of the normal average person. Hence the psyche of the patient stands midway between the mental state of the normal dreamer and that of the somnambulist, with the difference that dreaming has largely replaced the waking state, and the “fonction du réel,” or adaptation to the environment, is seriously impaired. I first showed how dream-formations develop out of complexes in my “Psychology and Pathology of So-called Occult Phenomena,”[18] and I must refer the reader to this paper, as it would lead us much too far to go into this special field here. Flournoy[19] has pointed out the roots of the complexes in the dreams of Hélène Smith. I regard knowledge of these phenomena as indispensable for understanding the problems we have been discussing.

[299] The conscious psychic activity of the patient, then, is limited to a systematic creation of wish-fulfilments as a substitute, so to speak, for a life of toil and privation and for the depressing experiences of a wretched family milieu. The unconscious psychic activity, on the other hand, is entirely under the influence of repressed, contradictory complexes—on one side the complex of injury, on the other the remnants of normal correction.[20] The entry of fragments of these split-off complexes into consciousness occurs chiefly in the form of hallucinations, in the manner described by Gross, and from psychological roots as conjectured by Freud.

[300] The associative phenomena are in accord with the views of Pelletier, Stransky, and Kraepelin. The associations, though following a vague theme, are without any directing idea (Pelletier, Liepmann) and therefore show all the symptoms of Janet's *abaissement du niveau mental:* release of automatisms (thought-deprivation, pathological ideas) and reduction of attention. The consequence of this last is an incapacity for clear ideation. The ideas are indistinct, no proper differentiation takes place, and this leads to numerous confusions, condensations, contaminations, metaphors, etc. The condensations mostly follow the law of similarity of imagery or sound, so that meaningful connections largely disappear.

[301] The metaphorical modulations of the complexes are closely analogous on the one hand to normal dreams and on the other to the wish-dreams of hysterical somnambulists.

[302] The analysis of this case of paranoid dementia thus confirms in large measure the theoretical assumptions we made in the preceding chapters.

E. SUPPLEMENT

[303] In conclusion I would like to call attention to two special points. First of all, the verbal expression. As in normal speech, the speech of the patient shows a tendency to change. Generally, innovations of language are technical terms serving to designate in concise form certain complicated ideas. In normal speech the formation and acceptance of technical terms is a slow process, and their use is generally dependent on certain requirements of intelligibility and logic. In the patient this process has taken place with pathological speed and intensity which far exceed the understanding of people in her environment. The way the pathological term is formed often bears a resemblance to the changes in normal speech; here I would only mention the change of meaning in the word

"Languedoc."[21] There are many similar examples in the history of language. Unfortunately I am not at all at home in this field, so that I would not dare to look for further analogies. But I have the feeling that a philologist would be able to make valuable observations on speech-confused patients which would help us to understand the normal changes that have occurred in the history of language.

[304] Second, the auditory hallucinations that play such a peculiar role in our patient. She elaborates her daytime wishes in the waking state and at night in dreams. This is an occupation which obviously affords her pleasure, since the direction it takes accords with her innermost wishes. Anyone who thinks so exclusively and so persistently in one fixed and limited direction is bound to repress all contrary thoughts. We know that in normal people—that is, temperamental people who are at any rate halfway normal—the same mood may continue for a very long time, but then is suddenly interrupted with positively elemental force by an invasion from another sphere of thought. We see this in extreme form in hysterical patients with dissociated consciousness, where one state is suddenly superseded by its opposite. The contrary state often manifests itself in hallucinations and various other automatisms (cf. Flournoy), just as every split-off complex habitually disturbs the activity of another complex simultaneously existing in consciousness. (We could compare this to the disturbances caused by an invisible planet in the orbit of a visible one.) The stronger the split-off complex is, the more intensely the automatic disturbances will make themselves felt. The best examples of this are the so-called teleological hallucinations, which I should like to illustrate by three examples from my experience.

[305] (1) A patient in the first stages of progressive paralysis wanted in desperation to kill himself by jumping out of the window. He jumped on to the window-sill, but at that moment a tremendous light appeared in front of the window, hurling him back into the room.

[306] (2) A psychopath who was disgusted with life because of his misfortunes wanted to commit suicide by inhaling gas from an open jet. He inhaled the gas vigorously for a few seconds, then suddenly felt an enormous hand grasp him by the chest and throw him to the floor, where he gradually recovered from his fright. The hallucination was so distinct that the next day he could still show me the place where the five fingers had gripped him.

[307] (3) A Russian-Jewish student, who later fell ill with a paranoid form of dementia praecox, told me the following story. Under the stress of extreme

hardship, he resolved to become a Christian, although he was very orthodox and had strong religious scruples about conversion. One day, following another long spell of starvation, he decided after a hard struggle to take this step. With this thought in mind he fell asleep. In a dream his dead mother appeared before him and uttered a warning. When he awoke, his religious scruples rose up again because of the dream, and he could not make up his mind to be converted. So he tormented himself for weeks on end until finally, driven by continued hardship, he once more thought of getting converted, this time more energetically than before. One evening, therefore, he resolved to apply for baptism the very next morning. That night his mother again appeared before him in a dream and said, "If you go over I will choke you." This dream frightened him so much that he gave up his decision once and for all, and, to escape his hardships, emigrated to a foreign country. Here we see how the repressed religious scruples made use of the strongest possible symbolic argument, his piety towards his dead mother, and in this way overrode the ego-complex.

[308] The psychological life of all epochs is rich in such examples. As we know, the daemon of Socrates played a teleological role. One recalls, for example, the anecdote of the daemon warning the philosopher about a herd of swine (there are similar incidents in Flournoy). Dreams, which are the hallucinations of normal life, are nothing but hallucinatory representations of repressed complexes. It is therefore to be expected that in our patient all the contrary complexes under repression will work upon her consciousness in the form of hallucinations. Her voices therefore have an almost exclusively disagreeable and derogatory content, just as paraesthesias and other automatic phenomena are generally of an unpleasant character.

[309] As usual, we find in this patient the complex of grandeur alongside that of injury. But part of the "injury" consists in the normal correction of her grotesque ideas of grandeur. That such a correction still exists seems *a priori* quite possible, since even in patients who are far more impaired, intellectually and emotionally, than she was, there are still signs of more or less extensive insight into the illness. Naturally the correction runs counter to the complex of grandeur that entirely occupies her consciousness; hence, being repressed, it probably works through hallucinations. This actually seems to be the case; at any rate certain observations favour such a supposition. While the patient was telling me what a misfortune it would be for humanity if she, the owner of the world, should have to die before the "payment," the "telephone" suddenly remarked, "It would do no harm, they would simply take another owner."

[310] Again, while associating to the neologism “million Hufeland,” she was continually hindered by thought-deprivation, and for a long time I could get no further. Suddenly, to the great chagrin of the patient, the telephone called out, “The doctor should not bother himself with these things.” The associations to “Zähringer” likewise presented difficulties, whereupon the telephone said, “She is embarrassed and therefore can say nothing.” Once when she remarked during analysis that she was “a Switzerland” and I had to laugh, the telephone exclaimed, “That is going a bit too far!” She got quite particularly stuck at the neologism “Maria Theresa,” so that I absolutely could not follow her; the thing was really too complicated. The following dialogue then developed:

Telephone: “You’re leading the doctor round the whole wood.”
Patient: “Because this also goes too far.”
Telephone: “You’re too clever by half!”

[311] When she came to the neologism “Emperor Francis” the patient began to whisper, as she often did, so that I continually misunderstood her. She had to repeat several sentences out loud. This made me rather nervous and I told her impatiently to speak louder, whereupon she answered irritably too. At this moment the telephone called out: “Now they’re getting in each other’s hair!”

[312] Once she said, with great emphasis, “I am the keystone, the monopoly and Schiller’s *Bell,”* and the telephone remarked, “That is so important that the markets will drop!”

[313] In all these examples the “telephone” has the character of an ironically commenting spectator who seems to be thoroughly convinced of the futility of these pathological fancies and mocks the patient’s assertions in a superior tone. This kind of voice is rather like a personified self-irony. Unfortunately in spite of diligent research I lack the necessary material for a closer characterization of this interesting split-off personality. But the meagre material we possess at least allows us to conjecture that besides the complexes of grandeur and injury there is another complex which has retained a certain amount of normal criticism but is withheld from reproduction by the complex of grandeur, so that no direct communication can be had with it. (As we know, in somnambulism direct communication can be had with such personalities by means of automatic writing.)

[314] This apparent division of the complexes into three gives us food for thought, not only in regard to the psychology of dementia praecox but also in regard to its clinical aspects. In the case of our patient, communication with the

outside world was dominated by the complex of grandeur. This might be merely an accident. We know of many cases where reproduction is dominated by the complex of injury and where we find only the barest suggestion of ideas of grandeur. Finally, there are cases where a correcting, ironical, semi-normal ego-remnant remains on top, while the two other complexes are acted out in the unconscious and make themselves felt only through hallucinations. An individual case can vary temporarily according to this scheme. In Schreber, for instance, we see during convalescence the reappearance of a corrective ego-remnant.

Epilogue

[315] I do not imagine that I have offered anything conclusive in this paper; this whole field is much too broad and at present much too obscure for that. It would be far beyond the power of a single individual to carry out by himself, in the course of a few years, all the experimental work which alone could lend support to my hypothetical views. I must content myself with the hope that this analysis of a case of dementia praecox will give the reader some idea of our method of thought and work in this field of research. If at the same time he will take into account the basic assumptions and experimental proofs offered in *Studies in Word Association*, he may be in a position to form a coherent picture of the psychological points of view from which we consider the pathological mental disturbances in dementia praecox. I am fully aware that this case only partially corroborates the views expressed in the preceding chapters, since it serves as no more than a paradigm for certain types of paranoid dementia. It manifestly does not touch on the extensive domains of catatonia and hebephrenia. In this connection I must console the reader with the prospect of further contributions to *Studies in Word Association*,[22] which I hope will furnish more experimental work on the psychology of dementia praecox.

[316] I have made it easy for the critics: my work has many weak spots and gaps, for which I crave the reader’s indulgence. All the same, the critic must be ruthless in the interests of truth. Somebody, after all, had to take it on himself to start the ball rolling.

II

THE CONTENT OF THE PSYCHOSES

[Delivered as an academic lecture, *Der Inhalt der Psychose*, in the Zurich Town Hall, January 16, 1908, and then published as no. III in the series "Schriften zur angewandten Seelenkunde," edited by Sigmund Freud (Leipzig and Vienna, 1908). A second edition appeared (Leipzig and Vienna, 1914), augmented by an introduction and a supplement consisting of a German version of "On Psychological Understanding" (see infra, pp. 179ff.). "The Content of the Psychoses" was translated by M. D. Eder in *Collected Papers on Analytical Psychology*, edited by Constance Long (London and New York, 1916; 2nd edn., 1917). The Eder translation has been consulted.—EDITORS.]

INTRODUCTORY

[317] My short sketch on "The Content of the Psychoses," which first appeared in the series "Schriften zur angewandten Seelenkunde," under Freud's editorship, was intended to give the educated lay public some insight into the psychological standpoint of modern psychiatry. I chose by way of example the mental illness known as dementia praecox, which Bleuler calls schizophrenia. Statistically, this group of illnesses contains by far the largest number of cases of psychosis. Many psychiatrists would prefer to limit its scope, and accordingly they make use of other nomenclatures and classifications. From the psychological point of view the change of name is unimportant, for it is of less value to know what a thing is called than to know what it is. The cases I have sketched in this paper are types of common mental disturbances well known to the psychiatrist. It makes no difference to the facts whether these disturbances are called dementia praecox or by some other name.

[318] I have set forth my psychological position in a work [1] whose scientific validity has been contested upon all sorts of grounds. It is particularly gratifying to me that a psychiatrist of Bleuler's standing has fully accepted, in his great monograph [2] on the disease, all the essential points in my work. The chief difference between us is as to whether the psychological disturbance should be regarded as primary or secondary in relation to the physiological basis. The resolution of this weighty question depends on the general problem of whether the prevailing dogma in psychiatry—"mental diseases are diseases of the brain"—represents a final truth or not. We know that this dogma leads to absolute sterility as soon as it is assumed to be generally valid, for there are undoubted psychogenic mental disturbances (those called "hysterical") which are properly designated as *functional* in contrast to the organic diseases which are due to demonstrable anatomical changes. We should designate as organic diseases only those disturbances of the brain function where the psychic symptoms can be proved to be dependent upon a primary disease of the organic substrate. Now in dementia praecox this is by no means clear. Definite anatomical changes have been

found, but we are very far from being able to derive the psychological symptoms from these findings. We have, as a matter of fact, positive indications as to the functional character of at least the initial stages of schizophrenia; further, the organic character of paranoia and of many paranoid forms is more than doubtful. This being so it is worth while to inquire whether secondary symptoms of degeneration might not arise from a psychological disturbance of function. Such an idea is incomprehensible only to those who smuggle materialistic preconceptions into their scientific theories. Nor is my inquiry based on equally arbitrary "spiritualistic" assumptions, but on the following simple argument. Instead of assuming that some hereditary disposition, or a toxin, gives rise directly to an organic process of disease, thereby inducing secondary psychic disturbances, I incline to the view that, on the basis of a disposition whose nature is at present unknown to us, an unadapted psychological function arises which may develop into a manifest mental disturbance and *secondarily* induce symptoms of organic degeneration. This view is borne out by the fact that we have no proof of the primary nature of the organic disturbance, but proofs in abundance of a primarily psychological failure of function whose history can be traced back into early childhood. It accords very well with this view that the practising analyst knows cases where patients on the borderline of dementia praecox could still be brought back to normal life.

[319] Even if regular anatomical findings or actual organic symptoms could be proved, scientists should not imagine that the psychological standpoint can be abandoned and the undoubted psychological connections given up as unimportant. If, for instance, cancer should turn out to be an infectious disease, the peculiar process of proliferation and degeneration in the cancer cells would still remain a factor requiring investigation on its own account. As I have said, however, the connection between the anatomical findings and the psychological picture of the disease is so loose that it is very well worth while to examine the psychological side of it thoroughly for once, since there have been all too few attempts in this direction so far.

C. G. JUNG

Küsnacht / Zurich, 1914

THE CONTENT OF THE PSYCHOSES

[320] Psychiatry is a stepchild of medicine. All the other branches of medicine have one great advantage: the scientific method. In all other branches there are things that can be seen and touched, physical and chemical methods of investigation to be followed. The microscope reveals the dreaded bacillus, the surgeon's knife halts at no anatomical difficulty and gives us glimpses into the most vital and inaccessible organs. Psychiatry, the art of healing the soul, still stands at the door, seeking in vain to weigh and measure as in the other departments of science. We have long known that we have to do with a definite organ, the brain; but only beyond the brain, beyond the anatomical substrate, do we reach what is important for us—the psyche, as indefinable as ever, still eluding all explanation, no matter how ingenious.

[321] Former ages, endowing the soul with substance and personifying every incomprehensible occurrence in nature, regarded mental illness as the work of evil spirits; the patient was looked upon as one possessed, and the methods of treatment were such as befitted this conception. It is not unknown for this medieval view to find credence and expression even today. A classic example is the expulsion of the devil which was successfully performed by the elder Pastor Blumhardt in the famous case of the Dittus sisters.[1] To the honour of the Middle Ages be it said that there were also early evidences of a sound rationalism. Thus, in the sixteenth century at the Julius Hospital in Würzburg, mental patients were already being treated side by side with the physically sick, and the treatment seems to have been really humane. With the opening of the modern era and the dawn of the first scientific ideas, the original barbaric personification of unknown powers gradually disappeared; a change arose in the conception of mental disease in favour of a more philosophic moral attitude. The ancient view that every misfortune was the vengeance of offended gods returned in a new guise to suit the times. Just as physical diseases can, in many cases, be traced back to some frivolous self-injury, so mental diseases were believed to be due to some moral injury, or sin. Behind this conception, too, lurks the angry deity.

[322] Such views played a great role right up to the beginning of the last century, especially in German psychiatry. In France, however, at about the same time, a new idea was appearing, destined to sway psychiatry for a hundred years. Pinel, whose statue fittingly stands at the gateway of the Salpêtrière in Paris, removed the chains from the insane and thus freed them from the stigma of the criminal. In this way he gave the most effective expression to the humane and scientific conceptions of modern times. A little later Esquirol and Bayle made the discovery that certain forms of insanity ended in death after a relatively short time, and that regular changes in the brain could be demonstrated *post mortem*.[2] Esquirol had discovered general paralysis of the insane (or, as it was popularly called, "softening of the brain"), a disease which is always accompanied by chronic inflammatory shrinkage of the cerebral tissue. Thus was laid the foundation of the dogma which you will find repeated in every text-book of psychiatry: "Mental diseases are diseases of the brain."

[323] Further confirmation of this view was furnished about the same time by the discoveries of Gall, who traced partial or complete loss of the power of speech—a psychic faculty—to a lesion in the region of the lower left frontal convolution. Later this view proved to be exceedingly fruitful. Innumerable cases of extreme idiocy and other serious mental disorders were found to be caused by tumours of the brain. Towards the end of the nineteenth century Wernicke (recently deceased) localized the speech-centre in the left temporal lobe. This epoch-making discovery raised hopes to the highest pitch. It was expected that the time was not far off when every characteristic and every psychic activity would be assigned its place in the cortical grey matter. Gradually, more and more attempts were made to trace the primary mental changes in the psychoses back to parallel changes in the brain. Meynert, the famous Viennese psychiatrist, propounded a regular system in which the alteration of the blood-supply to certain areas of the cortex was to play the chief role in the origin of the psychoses. Wernicke made a similar but far more ingenious attempt at an anatomical explanation of psychic disturbances. One visible result of this tendency can be seen in the fact that nowadays even the smallest and most out of the way asylum has its anatomical

laboratory, where cerebral sections are cut, stained, and examined under the microscope. Our numerous psychiatric journals are full of morphological contributions, investigations on the path of the fibres in the brain and spinal cord, on the structure and distribution of cells in the cerebral cortex, and the various ways they are destroyed in different mental diseases.

[324] Psychiatry has been charged with gross materialism. And quite rightly, for it is on the road to putting the organ, the instrument, above the function—or rather, it has long been doing so. Function has become the appendage of its organ, the psyche an appendage of the brain. In modern psychiatry the psyche has come off very badly. While immense progress has been made in cerebral anatomy, we know practically nothing about the psyche, or even less than we did before. Modern psychiatry behaves like someone who thinks he can decipher the meaning and purpose of a building by a mineralogical analysis of its stones. Let us try to form a statistical picture of the number and types of mental patients who show any clear lesions of the brain.

[325] In the last four years we have admitted 1,325 mental patients to Burghölzli Mental Hospital—some 331 a year—of whom 9% suffer from *constitutional* psychic anomalies. By this I mean an inborn defect of the psyche. Of the 9%, about a quarter are imbeciles, congenitally feeble-minded. In them we find definite cerebral changes such as congenital microcephalus, pronounced hydrocephalus, and malformation of certain parts of the brain. The remaining three quarters of the psychopathically inferior show no trace of typical findings in the brain.

[326] Three per cent of our patients suffer from epileptic mental disturbances. In the course of epilepsy a typical degeneration of the brain gradually sets in, which I cannot describe more closely here. The degeneration is demonstrable only in severe cases and after the illness has lasted a long time. If the attacks have been present for a relatively short time only, not more than a few years, as a rule nothing can be discovered in the brain.

[327] Seventeen per cent of our patients suffer from progressive paralysis and senile deterioration. Both diseases present characteristic cerebral

findings. In progressive paralysis there is regularly an extensive shrinkage of the brain, so that the cerebral cortex in particular is often reduced by one half. Especially the frontal portions of the brain may be reduced to a third of the normal weight. A similar destruction occurs in senile deterioration.

[328] Fourteen per cent of the patients admitted annually suffer from poisoning, at least 13% of the cases being due to alcohol. As a rule, in milder cases nothing can be found in the brain; only in relatively few of the more severe cases is there a slight shrinkage of the cortex. The number of these severe cases amounts to less than 1% of the yearly cases of alcoholism.

[329] Six per cent of the patients suffer from so-called manic-depressive insanity, which comprises the manias and the melancholias. The essence of this disease can be understood even by the layman. Melancholia is a condition of abnormal sadness with no disturbance of intelligence and memory. Mania is the opposite, the rule being an abnormally excited state with great restlessness, but without any deeper disturbance of intelligence and memory. In this disease no morphological lesions of the brain can be demonstrated.

[330] Forty-five per cent of the patients suffer from the authentic and common disease known as dementia praecox. The name is a very unhappy one, for the dementia is not always precocious, nor in all cases is there dementia. Unfortunately the disease is too often incurable; even in the best cases, in recoveries where the layman would notice no abnormality, one always finds some defect in the patient’s emotional life. The clinical picture is incredibly varied; usually there is some disturbance of feeling, very often there are delusions and hallucinations. As a rule there is nothing to be found in the brain. Even in cases of the most severe type, lasting for years, an intact brain is not infrequently found post mortem. Only in a few cases are slight changes to be found, which cannot yet, however, be proved to be regular.

[331] To sum up: in round figures about a quarter of our patients show more or less extensive alterations and lesions of the brain, while three-fourths have a brain which seems to be generally unimpaired or at most

exhibits changes such as afford absolutely no explanation of the psychological disturbance.

[332] These figures offer the best possible proof that the purely anatomical approach of modern psychiatry leads—to put it mildly—only very indirectly to the goal, which is the understanding of the psychic disturbance. In addition, it must be remembered that the mental patients who show the most striking lesions of the brain die after a relatively short time; consequently, the chronic inmates of the asylum, who form its real population, consist of up to 70 or 80% cases of dementia praecox, that is, of patients in whom anatomical changes are practically non-existent. The way to a psychiatry of the future, which is to come to grips with the essence of the matter, is therefore clearly marked out: it can only be by way of psychology. For this reason we have entirely abandoned the anatomical approach in our Zurich Clinic and have turned to the psychological investigation of mental disease. Since most of our patients suffer from dementia praecox, this disease is naturally our chief problem.

[333] The older clinicians paid great attention to the psychological precursors of insanity, just as the lay public still does, following a true instinct. We took up this trail and carefully investigated the previous psychological history whenever possible. Our efforts were richly rewarded, for we found surprisingly often that the illness broke out at a moment of some great emotion which, in its turn, had arisen in a more or less normal manner. We also found that in the mental disease which ensued there were a number of symptoms that could not be understood at all from the anatomical standpoint. These symptoms immediately became comprehensible when considered from the standpoint of the individual's previous history. Freud's pioneering investigations into the psychology of hysteria and dreams afforded us the greatest stimulus and help in our work.

[334] A few examples of the most recent departures in psychiatry will, I think, make the subject clearer than any amount of dry theory. In order to bring home to you the difference in our conception I shall, in each case, first describe the medical history in the older fashion, and then give the solution characteristic of the new approach.

[335] The first case to be considered is that of a cook, aged 32. She had no hereditary taint, was always very industrious and conscientious, and had never been noticeable for eccentric behaviour or the like. Quite recently she became acquainted with a young man who wanted to marry her. From that time on she began to show certain peculiarities. She often spoke of his not liking her very much, was frequently out of sorts, moody, and sat alone brooding. Once she ornamented her Sunday hat very strikingly with red and green feathers; another time she bought a pair of pince-nez to wear when she went out walking with her fiancé. One day the sudden idea that there was something the matter with her teeth would not let her rest, and she decided to get a new set, although it wasn't absolutely necessary. She had all her teeth out under an anaesthetic. The following night she suddenly had a severe anxiety-attack. She cried and moaned that she was damned for ever, for she had committed a great sin: she should not have allowed her teeth to be extracted. She must be prayed for, so that God would pardon her sin. In vain her friends tried to talk her out of her fears, to assure her that the extraction of teeth was not really a sin; it availed nothing. At daybreak she became somewhat quieter, and worked throughout the day. On the following nights the attacks were repeated. On being consulted I found the patient quiet, but with a rather vacant expression. I talked to her about the operation, and she assured me that it was not so dreadful to have teeth extracted, but still it was a great sin, from which position, despite every persuasion, she could not be moved. She continually repeated in plaintive, pathetic tones: "I should not have allowed my teeth to be taken out, yes, yes, it was a great sin and God will never forgive me." She gave the impression of real insanity. A few days later her condition grew worse and she had to be brought to the asylum. The anxiety attack persisted and did not stop; it was a disturbance that lasted for months.

[336] This history shows a series of symptoms which are all quite absurd. Why this queer story of the hat and the pince-nez? Why these anxiety attacks? Why this delusion that the extraction of her teeth was an unpardonable sin? Nothing is clear. The anatomically-minded psychiatrist would say: This is just a typical case of dementia praecox. It is the essence of insanity, of "madness," to talk of nothing but

absurdities; the view the diseased mind has of the world is deranged, crazy. What is no sin for a normal person is a sin for a mad one. It is a bizarre delusion characteristic of dementia praecox. The extravagant lamentation about this supposed sin is the result of "inappropriate" emotional emphasis. The eccentric ornamentation of the hat, the pince-nez, are bizarre notions such as are very common in these patients. Somewhere in the brain a few cells have got out of order and produce illogical, senseless ideas of one kind or another which are quite without psychological meaning. The patient is obviously a congenital degenerate with a feeble brain, having from birth a kink which contained the seed of the disorder. For some reason or other the disease suddenly broke out now; it could just as easily have broken out at any other time.

[337] Perhaps we should have had to capitulate to these arguments had not fate come to the aid of our psychological analysis. In connection with the formalities required for her admission to the asylum it was found that many years ago the patient had an affair which came to an end when her lover left her with an illegitimate child. The otherwise respectable girl sought to hide her shame and had the child secretly brought up in the country. Nobody knew of this. When she got engaged she was in a dilemma: what would her fiancé say? At first she put off the marriage, becoming more and more worried, and then the eccentricities began. In order to understand them, we have to feel our way into the psychology of the naïve mind. If we have to disclose some painful secret to a person we love, we usually try to strengthen his love beforehand so as to obtain a guarantee of his forgiveness. We do it by flattery or by sulking, or we try to show off the value of our own personality so as to raise it in the eyes of the other. Our patient decked herself out with "fine feathers," which to her simple taste seemed worthy of esteem. The wearing of pince-nez increases the respect of children, even when they are older. And who does not know people who will have their teeth extracted out of sheer vanity, simply in order to wear a denture?

[338] After such an operation most people find themselves in a slightly nervous state, when everything becomes much more difficult to bear. And it was just at this moment that the catastrophe occurred: her fear lest her fiancé should break with her when he heard of her previous life. That

was the first anxiety attack. Just as the patient had not admitted her fault all these years, so now she still sought to guard her secret, and shifted her pangs of conscience on to the extraction of her teeth. In this she followed the well-known pattern, for when we cannot admit a great sin, we deplore a small one with all the greater emphasis.

[339] The problem seemed insoluble to the weak and sensitive mind of the patient, hence the affect became insurmountably great. That is how mental illness looks from the psychological side. The series of apparently meaningless happenings, the so-called “absurdities,” suddenly take on meaning. We understand the method in the madness, and the insane patient becomes more human to us. Here is a person like ourselves, beset by common human problems, no longer merely a cerebral machine thrown out of gear. Hitherto we thought that the insane patient revealed nothing to us by his symptoms except the senseless products of his disordered brain-cells, but that was academic wisdom reeking of the study. When we penetrate into the human secrets of our patients, the madness discloses the system upon which it is based, and we recognize insanity to be simply an unusual reaction to emotional problems which are in no wise foreign to ourselves.

[340] The light that is shed by this view seems to me exceedingly great, for it penetrates into the innermost depths of the mental disturbance which is the commonest in our asylums and the least understood; indeed, because of the craziness of its symptoms, it is the type that strikes the layman as madness *in excelsis*.

[341] The case I have just sketched is a simple one. It is, in fact, quite transparent. My second example is somewhat more complicated. It is the case of a man between 30 and 40 years of age; he is a foreign archaeologist of great learning and extraordinary intelligence. He was an intellectually precocious boy, very sensitive, with excellent qualities of character and unusual gifts. Physically he was small, weakly, and afflicted with a stammer. Brought up and educated abroad, he afterwards studied for several terms in B. Up to this point there had been no disturbances of any kind. On completing his university studies he immersed himself in his archaeological work, which gradually absorbed

him to such an extent that he was dead to the world and all its pleasures. He worked incessantly, and buried himself entirely in his books. He became thoroughly unsociable; awkward and shy in society before, he now shunned it altogether, and saw no one beyond a few friends. He thus led the life of a hermit devoted entirely to science.

[342] A few years later, on a holiday tour, he revisited B., where he remained a few days. He walked a great deal in the environs of the town. The few acquaintances he had there found him strange, taciturn, and nervous. After a rather long walk he seemed very tired, and remarked that he did not feel very well. He then talked of getting himself hypnotized, as he felt nervously run down. On top of this he fell physically ill with inflammation of the lungs. Soon afterwards a peculiar state of excitement supervened, which rapidly passed over into frenzy. He was brought to the asylum, where for weeks he remained in an extremely excited state. He was completely deranged, did not know where he was, spoke in broken sentences which no one could understand. Often he was so excited and aggressive that it took several attendants to hold him down. He gradually became quieter, and one day he came to himself as if waking out of a long, confused dream. He quickly obtained complete insight into his illness and was soon discharged as cured. He returned home and again immersed himself in his books. In the following years he published several outstanding works, but, as before, his life was that of a hermit living entirely in his books and dead to the world. Gradually he got the reputation of being a dried-up misanthropist, with no feeling for the beauty of life.

[343] A few years after his first illness a short holiday trip again brought him to B. As before, he took his solitary walks in the environs. One day he was suddenly overcome by a feeling of faintness and lay down in the street. He was carried into a neighbouring house, where he immediately became violently excited. He began to perform gymnastics, jumped over the rails of the bed, turned somersaults in the room, started declaiming in a loud voice, sang improvised poems, etc. Again he was brought to the asylum. The excitement continued. He extolled his wonderful muscles, his beautiful figure, his enormous strength. He believed he had discovered a law of nature by which a marvellous voice could be

developed. He regarded himself as a great singer and a unique orator, and at the same time he was a divinely inspired poet and composer to whom the verse came simultaneously with the melody.

[344] All this was in pathetic but very significant contrast to reality. He was a small weakly man of unimposing build, with poorly developed muscles, betraying at the first glance the atrophying effect of his studious life. He was unmusical, his voice was squeaky and he sang out of tune; he was a bad speaker because of his stammer. For weeks he occupied himself in the asylum with peculiar jumpings and contortions of the body which he called gymnastics, now and then singing and declaiming. Then he became quieter and dreamy, often stared musingly in front of him for long periods of time, sometimes softly singing a love-song which, despite its lack of musical expression, showed a pretty feeling for the yearnings of love. This, too, was in complete contrast to the aridity and isolation of his normal life. Gradually he became more accessible for conversations.

[345] Let us break off the case-history here and sum up what has been furnished simply by the observation of the patient.

[346] In the first attack of illness the delirium broke out unexpectedly, and was followed by a mental disturbance with confused ideas and violence which lasted for several weeks. Afterwards complete recovery appeared to have taken place. Six years later there was a sudden outbreak of excitement, with delusions of grandeur and bizarre actions, followed by a twilight stage gradually leading to recovery. Again it is a typical case of dementia praecox, of the catatonic variety, which is especially characterized by peculiar movements and actions. And here again the views now prevailing in psychiatry would regard this as a localized deterioration of the brain-cells in some part of the cortex, causing now delirium and confusional ideas, now delusions of grandeur, now peculiar contortions of the muscles, now twilight states, which taken all together have as little psychological meaning as the weird shapes of a drop of molten lead thrown into water.

[347] This is not my view. It was certainly no accidental freak of diseased brain-cells that created those dramatic contrasts in the second attack. We can see that these contrasts, the so-called delusions of grandeur, are very

subtly attuned to the deficiencies in the patient's personality. They are deficiencies which any one of us would certainly feel as a lack. Who has not felt the need to console himself for the aridity of his profession and of his life with the joys of poetry and music, and to restore to his body the natural strength and beauty stolen from it by the atmosphere of the study? Finally, who does not recall with envy the energy of Demosthenes who, despite his stammer, became a great orator? If our patient filled the obvious gaps in his physical and psychic life by delusionally fulfilled wishes, we may also conjecture that those soft love-songs which he sang from time to time filled a painful blank in his being, making up for a lack which became the more agonizing the more it was concealed.

[348] I did not have to search for long. It was the same old story, born anew in every human soul, in a guise suited to the sensibilities of the predestined victim.

[349] When our patient was a student he learnt to know and love a girl student. Together they took many solitary walks in the environs of the town, but his exceeding timidity and bashfulness (the lot of the stammerer) never allowed him an opportunity to get out the appropriate words. Moreover he was poor and had nothing to offer her but hopes. The time came for the termination of his studies; she went away, and he also, and they never saw one another again. And not long afterwards he heard she had married someone else. Then he relinquished his hopes, but he did not know that Eros never emancipates his slaves.

[350] He buried himself in abstract learning, not to forget, but to work for her in his thoughts. He wanted to keep the love in his heart quite secret, and never to betray that secret. He would dedicate his works to her without her ever knowing it. The compromise succeeded, but not for long. Once he travelled through the town where he had heard she lived—he said it was quite by chance that he travelled through that town. He did not leave the train, which made only a short halt there. From the window he saw in the distance a young woman with a small child, and thought it was she. Impossible to say whether it really was or not; not even he knew. He did not think he felt any particular sensation at that moment; anyway he did not trouble to find out whether it was she or not, and this

suggests that it wasn't. The unconscious wanted to be left in peace with its illusion. Shortly afterwards he again came to B., the place of old memories. Then he felt something strange stir in his soul, an uneasy feeling presciently described by Nietzsche:

> Yet not for long shalt thou thirst, O burnt-out heart!
> There is promise in the air,
> From unknown mouths I feel a breath
> —The great coolness cometh.[3]

[351] Civilized man no longer believes in demons, he calls in the doctor. Our patient wanted to be hypnotized. Then madness overcame him. What was going on?

[352] He answered this question in broken phrases, with long pauses in between, in that twilight stage which precedes convalescence. I followed his own words as faithfully as possible. When he fell ill he suddenly left the orderly world and found himself in the chaos of an overmastering dream: a sea of blood and fire, the world was out of joint, everywhere conflagrations, volcanic outbursts, earthquakes, mountains caved in, then came tremendous battles in which nation was hurled on nation, more and more he found himself involved in the struggle of nature, he was in the midst of the fighters, wrestling, defending himself, enduring unutterable misery and pain, but gradually exalted and strengthened by a strange, soothing feeling that someone was watching his struggles—that his loved one saw all this from afar. (That was the time when he showed real violence towards the attendants.) He felt his strength increasing and saw himself at the head of great armies which he would lead to victory. Then more battles, and victory at last. As the victor's prize he gained his loved one. As he drew near her the illness ceased, and he awoke from a long dream.

[353] His daily life now resumed its ordered course. He shut himself up in his work and forgot the abyss within him. A few years later he was again in B. Demon or destiny? Again he followed the old trail and again was overborne by old memories. But this time he did not sink into the depths of confusion. He remained oriented and en rapport with his surroundings.

The struggle was considerably milder; he merely did gymnastics, practised the masculine arts, and made up for his deficiencies. Then followed the dreamy stage with the love-songs, corresponding to the period of victory in the first psychosis. In this state—I follow his own words—he had a dreamy feeling, as if he stood on the border between two different worlds and did not know whether reality was on the right or on the left. He said: “They tell me she is married, but I believe she is not; she is still waiting for me. I feel that it must be so. For me it is always as if she were not married, as if success must still be attainable.” What our patient has here described is but a pale reflection of that scene in the first attack of psychosis, when he stood as the victor before his bride. A few weeks after this conversation, his scientific interests began to reassert themselves. He spoke with obvious unwillingness about his intimate life, he repressed it more and more, and finally turned away from it as if it did not belong to him. Thus the door of the underworld gradually closed. There remained nothing but a certain tenseness of expression, and a look which, though fixed on the outer world, was at the same time turned inwards; and this alone hinted at the silent activity of the unconscious, preparing new solutions for his insoluble problem. Such is the so-called cure in dementia praecox.

[354] Hitherto we psychiatrists were unable to suppress a smile when we read of a poet’s attempts to describe a psychosis. These attempts have generally been regarded as quite useless, on the ground that a poet introduces into his conception of psychosis psychological relationships that are quite foreign to the clinical picture of the disease. But if the poet has not actually set out to copy a case from a text-book of psychiatry he usually knows better than the psychiatrist.

[355] The case I have just described is not unique, it is typical of a whole class, for which one of our poets has created a universally valid model. The poet is Spitteler, and the model is *Imago*. I take it that the course of *that* case is known. However, the psychological gulf between the creation of the artist and the insane person is great. The world of the artist is a world of solved problems; the world of reality, that of unsolved problems. The insane person is a faithful reflection of this reality. His solutions are unsatisfying illusions, his cure a temporary relinquishing of

the problem, which yet goes on working unsolved in the depths of the unconscious, and at the appointed time rises again to the surface and creates new illusions with new scenery—the history of mankind writ small.

[356] Psychological analysis is far from being able to explain in a clear and illuminating fashion all cases of the disease with which we are here concerned. On the contrary, the majority remain exceedingly obscure and difficult to understand, not least because only a fraction of the patients recover. Our last case was exceptional in that the patient’s return to a normal state enabled us to survey the period of his illness. Unfortunately we do not always enjoy the advantage of this standpoint, because a large number of patients never find their way back from their dreams. They are lost in the maze of a magic garden where the same old story is repeated again and again in a timeless present. For them the hands of the world’s clock remain stationary; there is no time, no further development. It makes no difference to them whether they dream for two days or thirty years. I had a patient in my ward who had lain in bed for five years without uttering a word, completely buried in himself. For years I visited him twice daily, and as I reached his bedside I could always see at once that there was no change. One day I was on the point of leaving the room when a voice I did not recognize called out “Who are you? What do you want?” I saw with amazement that it was our dumb patient who had suddenly recovered his voice, and obviously his senses as well. I told him I was his doctor, whereupon he asked angrily why he was kept a prisoner here, and why no one ever spoke to him? He said this in an injured voice just like a normal person whom one had not greeted for a couple of days. I informed him that he had lain in bed quite speechless for five years and had responded to nothing, whereat he looked at me fixedly and without understanding. Naturally I tried to discover what had gone on in him all these years, but could learn nothing. Another patient with a similar symptom, when asked why he had remained silent for years, declared, “Because I wanted to spare the German language.” [4] These examples show that it is often quite impossible to lift the veil, because the patients themselves have neither the desire nor the interest to explain their strange experiences; as a rule they do not even find them strange.

[357] Occasionally, however, the symptoms themselves are pointers to the psychological content of the disease.

[358] We had a patient who for thirty-five years was an inmate of Burghölzli. For decades she lay in bed, she never spoke or reacted to anything, her head was always bowed, her back bent and the knees slightly drawn up. She was always making peculiar rubbing movements with her hands, so that in the course of the years thick horny patches developed on the palms. She kept the thumb and index finger of her right hand together as if sewing. When she died, some two years ago, I tried to discover what she had been like formerly. Nobody in the asylum recalled ever having seen her out of bed. Only our old chief attendant had a memory of having seen her sitting in the same attitude in which she afterwards lay in bed. In those days she made rapid sweeping movements of the arms across her right knee; she was said to be "sewing shoes" and, later, "polishing shoes." As time went on the movements became more restricted till finally nothing but a little rubbing movement remained, and only the thumb and forefinger kept the sewing position. In vain I consulted our old records; they contained nothing about the patient's previous history. When her seventy-year-old brother came to the funeral I asked him if he remembered what had been the cause of his sister's illness. He told me that she had had a love-affair, but for various reasons it had come to nothing, and the girl had taken this so much to heart that she became melancholic. I asked who her lover was: he was a shoemaker.

[359] Unless we choose to see here some very strange play of chance, we must assume that the patient had kept the memory-image of her lover unaltered in her heart for thirty-five years.

[360] It might easily be thought that these patients, who give the impression of being imbeciles, are in fact nothing but burnt-out ruins of humanity. But in all probability that is not so. Very often one can prove directly that such patients register everything going on around them, sometimes even with curiosity, and that they have an excellent memory for it all. This explains why many patients often become quite sensible again for a time, and develop mental powers which one believed they had long since lost. Such intervals occasionally occur during serious physical

illnesses or shortly before death. For example, we had a patient with whom it was impossible to carry on a sane conversation; he produced only a crazy mixture of delusional ideas and queer words. This man once went down with a serious physical illness, and I expected it would be very difficult to treat him. But not at all. He was entirely changed; he became friendly and obliging, and carried out all the doctor's orders with patience and gratitude. His eyes lost their evil darting looks, and shone quietly and with understanding. One morning I came to his room with the usual greeting: "Good morning, how are you?" But the patient forestalled me with his well-known refrain: "Here comes another of the dog and monkey troupe wanting to play the Saviour." Then I knew his physical trouble was over. From that moment the whole of his reason was as if blown away again.

[361] We can see from this that reason still survives, but is pushed away into some remote corner by the mind's preoccupation with pathological ideas.

[362] Why is the mind compelled to expend itself in the elaboration of pathological nonsense? Our new method of approach gives us a clue to this difficult question. Today we can assert that the pathological ideas dominate the interests of the patient so completely because they are derived from the most important questions that occupied him when he was normal. In other words, what in insanity is now an incomprehensible jumble of symptoms was once a vital field of interest to the normal personality.

[363] I will cite as an example a patient[5] who has been over twenty years in the asylum. She was always a puzzle to the doctors, for the absurdity of her delusions exceeded anything the boldest imagination could devise.

[364] She was a dressmaker by trade, born in 1845, of very poor family. Her sister early went to the bad and was finally lost in the morass of prostitution. The patient herself led an industrious, respectable, secluded life. She fell ill in 1886 in her thirty-ninth year—on the threshold of the age when so many dreams are brought to naught. Her illness consisted of delusions and hallucinations which increased rapidly, and soon became so absurd that no one could understand her wishes and complaints. In

1887 she came to the asylum. By 1888 her speech, so far as it concerned her delusions, had degenerated into complete unintelligibility. She maintained such monstrous things as this: At night the spinal marrow is torn out of her; pains in the back are caused by substances going through the walls covered with magnetism. The monopoly establishes the pains that do not stick in the body and do not fly about in the air. Extracts are made by an inhalation of chemistry and legions perish of death by suffocation.

[365] In 1892 the patient styled herself "The Bank-note Monopoly, Queen of the Orphans, Proprietress of Burghölzli Asylum," saying that "Naples and I must supply the whole world with macaroni."

[366] In 1896 she became "Germania and Helvetia of exclusively sweet butter," and said: "I am Noah's Ark, the boat of salvation and respect."

[367] Since then the pathological nonsense has greatly increased; her latest creation is the delusion that she is the "lilac new-red sea-wonder and the blue."

[368] These examples show how far the unintelligibility of such pathological formations can go. For this reason our patient became the classic example of "meaningless delusional ideas" in dementia praecox, and many hundreds of medical students received from her a lasting impression of the sinister power of insanity. But even this case has not withstood the newest technique in modern analysis. What the patient says is not at all meaningless; it is full of significance, so that he who knows the key can understand her without undue difficulty.

[369] Unfortunately time does not permit me to describe the technique by means of which I succeeded in lifting the veil from her secret. I must content myself with a few examples which will make clear the strange changes of thought and speech in this patient.

[370] She said of herself that she was *Socrates*. Analysis of this delusional idea reveals the following train of thought: Socrates was the greatest sage, the greatest man of learning; he was slanderously accused and had to die at the hands of strange men in prison. She—the patient—is the best dressmaker, has "never cut a thread," "never left a bit of cloth on the

floor." She has worked incessantly, and now she has been falsely accused, wicked men have shut her up, and she will have to die in the asylum. Therefore she is Socrates. This, as you see, is a simple metaphor based on an obvious analogy.

[371] Take another example: "I am the finest professorship and the finest world of art." Analysis shows that she is the best dressmaker and chooses the most beautiful models which show up well and waste little material; she puts the trimming on only where it can be seen. She is a professor, an artist in her work. She makes the best clothes, which she grandly calls the "Schneckenmuseum clothing." Only such persons as frequent the Haus zur Schnecke and the Museum are her customers, for she is the best dressmaker who makes only Schneckenmuseum clothing.

[372] The patient also calls herself Mary Stuart. Analysis shows the same analogy as with Socrates: wrongful suffering and death of the heroine.

[373] "I am the Lorelei." Analysis: This refers to Heine's well-known song, "Ich weiss nicht, was soll es bedeuten" (I know not what it means). Whenever she wants to speak about her affairs people do not understand her, and say they don't know what it means; therefore she is the Lorelei.

[374] "I am a Switzerland." Analysis: Switzerland is free, no one can rob Switzerland of her freedom. The patient does not belong in the asylum; she should be free like Switzerland; therefore she is a Switzerland.

[375] "I am a crane." Analysis: In the *Cranes of Ibycus* it is said: "Whoso is free of guilt and sin / Shall keep the child's pure soul within." She has been wrongfully brought to the asylum and has never committed a crime. Therefore she is a crane.

[376] "I am Schiller's *Bell.*" Analysis: Schiller's *Bell* is the greatest work of the greatest master. She is the best and most industrious dressmaker, and has achieved the highest rung in the art of dressmaking. Therefore she is Schiller's *Bell*.

[377] "I am Hufeland." Analysis: Hufeland was the best doctor. She suffers infinite torments in the asylum and on top of that is treated by the worst doctors. But she is such a distinguished personality that she is entitled to the very best doctors, a doctor like Hufeland. Therefore she is Hufeland.

[378] The patient uses the form "I am" in a very capricious way. Sometimes it means "it belongs to me" or "it is proper for me," sometimes it means "I ought to have." This can be seen from the following analysis:

[379] "I am the master-key." The master key is the key that opens all the doors in the asylum. Properly, by rights, she should have obtained this key long ago, for she has been for many years the "Proprietress of Burghölzli Asylum." She expresses this argument very much simplified in the sentence: "I am the master-key."

[380] The chief content of her delusional ideas is concentrated in the following statement:

"I am the monopoly." Analysis: By this she means the banknote monopoly, which has belonged to her for some time. She believes that she possesses the monopoly of all the bank-notes in the world, thus creating enormous riches for herself, in compensation for the poverty and wretchedness of her life. Her parents died early; therefore she is "Queen of the Orphans." Her parents lived and died in great poverty, and to them too she extends her blessings, in fancy pouring out her riches with both hands. She said in her own words: "By me my parents are clothed, my sorely tried mother, full of sorrows—I sat with her at the table, covered white with abundance."

[381] This is one of those vivid hallucinations which the patient has daily. It is a wish-fulfilment, the poverty in this world contrasting with the riches in the next, reminiscent of Gerhardt Hauptmann's *Hannele*, more especially of that scene where Gottwald says: "She was hung with rags—now she is bedecked in silken robes; she ran about barefoot, now she has shoes of glass to her feet. Soon she will live in a golden castle and eat each day of baked meats. Here she lived on cold potatoes …"

[382] The wish-fulfilments of our patient go even further. Switzerland has to pay her an annuity of 150,000 francs. The director of Burghölzli owes her 80,000 francs damages for wrongful incarceration. She is the owner of a distant island with silver mines, "the mightiest silver island in the world." That is why she is also the "greatest orator," possessing the

“highest eloquence,” because, as she says, “Speech is silver, silence is golden.” To her all the finest estates belong, all the wealthy quarters, all cities and countries, she is the owner of the world, actually the “triple owner of the world.” Whilst poor Hannele was only elevated to the side of the Heavenly Bridegroom, our patient possesses the “key of heaven”; she is not only the honoured earthly queens Mary Stuart and Queen Louise of Prussia, she is also the Queen of Heaven, the Mother of God, and at the same time the Godhead. Even in this earthly world where she was nothing but a humble dressmaker she has attained the fulfilment of her human wishes, for she chose three husbands from the best families in the town and her fourth was the Emperor Francis. From these marriages sprouted two phantom children, a little boy and a little girl. Just as she clothed and regaled her parents with food and drink, so she provided for the future of her children. To her son she bequeathed the big bazaars of Zurich, therefore her son is a Czar, for the owner of a bazaar is a Czar. The little daughter resembles her mother, therefore she becomes the proprietress of the asylum and takes her mother’s place so that the mother shall be released from captivity. The daughter therefore receives the title of the “Socrates deputy,” since she acts for Socrates in captivity.

[383] These examples by no means exhaust the delusional ideas of the patient. But they will give you, I hope, some idea of the richness of her inner life although she was apparently so dull and apathetic, sitting like an “imbecile” for twenty years in her workroom, mechanically darning her linen and occasionally mumbling a few meaningless phrases which nobody had been able to understand. Her baroque jumble of words can now be seen in a different light: they are fragments of an enigmatic inscription, bits and pieces of fairy-tale fantasies, which have broken away from hard reality to build a far-off world of their own. Here the tables are ever laden, and a thousand banquets are held in golden palaces. The patient can spare only a few mysterious symbols for the dim, dismal realm of reality; they need not be understood, for our understanding has long ceased to be necessary to her.

[384] Nor is this patient at all unique. She is one of a type. Similar fantasies are always found in patients of this kind, though not always in such perfection.

[385] The parallels with Hauptmann's *Hannele* show that once again a poet has pointed the way, freely drawing on his own fantasy. From this conjecture, which is not due to chance, we may conclude that what the artist and the insane have in common is common also to every human being—a restless creative fantasy which is constantly engaged in smoothing away the hard edges of reality. Anyone who observes himself, carefully and unsparingly, will know that there is something within him which would gladly hide and cover up all that is difficult and questionable in life, in order to smooth a path for itself. Insanity gives it a free hand. And once it has gained ascendency, reality is veiled, more quickly or less; it becomes a distant dream, but the dream becomes a reality which holds the patient enchained, wholly or in part, often for the rest of his life. We healthy people, who stand with both feet in reality, see only the ruin of the patient in *this* world, but not the richness of that side of the psyche which is turned away from us. Unfortunately only too often no further knowledge reaches us of the things that are being played out on the dark side of the soul, because all the bridges have broken down which connect that side with this.

[386] We still do not know at present whether these new insights have a general or only a limited validity. The more carefully and patiently we examine the mentally sick, the more we find cases which, despite the appearance of total imbecility, allow us at least fragmentary glimpses of a shadowy psychic life, far removed from that spiritual impoverishment which the prevailing theories have obliged us to accept.

[387] Though we are still far from being able to explain all the relationships in that obscure world, we can maintain with complete assurance that in dementia praecox there is no symptom which could be described as psychologically groundless and meaningless. Even the most absurd things are nothing other than symbols for thoughts which are not only understandable in human terms but dwell in every human breast. In insanity we do not discover anything new and unknown; we are looking at the foundations of our own being, the matrix of those vital problems on which we are all engaged.

ON PSYCHOLOGICAL UNDERSTANDING[1]

[388] The number of investigations into the psychology of dementia praecox has grown considerably since the preceding paper was first published. When, in 1903, I made the first analysis of a case of dementia praecox, I had a premonition of future discoveries in this field. This premonition has since been confirmed.

[389] In 1911 Freud, using an improved analytical technique based on his ample experience of neurotics, subjected a case of paranoid dementia to closer psychological investigation.[2] This was the famous autobiography of D. P. Schreber, *Memoirs of My Nervous Illness*. In his investigation Freud shows out of what infantile drives and forms of thinking the delusional system was built up. The peculiar delusions the patient had about his doctor, whom he identified with God or a godlike being, and certain other surprising and even blasphemous ideas about God himself, Freud was able to reduce in a very ingenious manner to the infantile relationship between the patient and his father. This case also shows the comic and grotesque combinations of ideas described in the foregoing paper. Freud confines himself to pointing out the universally existent foundations out of which we may say every psychological product develops historically.[3] This analytical-reductive procedure did not, however, furnish such enlightening results in regard to the rich and surprising symbolism in patients of this kind as we had been accustomed to expect from the same method in cases of hysteria. The reductive method seems to suit hysteria better than dementia praecox.

[390] If one reads the recent researches of the Zurich school, for instance the works of Maeder,[4] Spielrein,[5] Nelken,[6] Grebel-skaja,[7] and Itten,[8] one gets a powerful impression of the enormous symbolic activity in dementia praecox. Although some of these authors still proceed essentially by the analytical-reductive method, tracing back the complicated system of delusions to its simpler and more general components, as I have done in the preceding pages, one cannot resist the feeling that this method does not altogether do justice to the almost

overpowering profusion of fantastic symbolization, illuminating though it may be in other respects.

[391] Let me illustrate what I mean by an example. We are grateful to a commentator on *Faust* when he traces back all the multifarious material of Part II to its historical sources, or when he gives a psychological analysis of Part I, showing how the conflict in the drama springs from a conflict in the soul of the poet, and how this subjective conflict is itself based on those ultimate and universal problems which are in nowise foreign to us because we all carry the seeds of them in our own hearts. Nevertheless, we are a little disappointed. We do not read *Faust* just to discover that things everywhere are "human, all-too-human." We know that only too well already. And anyone who still doesn't know it has only to go out into the world and look at life without prejudice and with open eyes. He will turn back fully convinced of the prevalence and power of the "all-too-human," and he will hungrily pick up his *Faust* again not in order to rediscover what he has just left behind him, but to learn how a man like Goethe deals with these human banalities, and how he redeems his soul from bondage to them. Once we have discovered who the "Proktophantasmist" is, and to what historical events and figures the symbolism of Part II refers, and how closely interwoven all this is with the human personality of the poet, we come to regard these determining factors as far less important than the question of what the poet means by this symbolization. The investigator who proceeds purely reductively sees the final meaning in these human generalities, and demands nothing more from an explanation than that it should reduce the unknown to the known and the complicated to the simple. I should like to designate this kind of understanding "retrospective understanding." There is another kind of understanding, which is not analytical-reductive by nature, but synthetic or constructive. I would call this "prospective understanding," and the corresponding method the "constructive method."

[392] It is generally recognized that the modern scientific method of explanation is based entirely on the principle of causality. Scientific explanation is causal explanation. Hence we are naturally inclined, whenever we think scientifically, to explain causally, and to take a thing as explained when it is reduced analytically to its cause and general

principle. To that extent Freud's method of psychological explanation is strictly scientific.

[393] But when we apply this method to *Faust*, it becomes clear that something more is required for a real understanding. We even realize that we have completely missed the deepest meaning the poet strove to express if we see in it *only* the universally human—for we can see the universally human wherever we look. What we really want to find in *Faust* is how this human being redeems himself as an individual, and when we have understood that, we have understood Goethe's symbolism. True, we may make the mistake of thinking that we have understood Goethe himself. But let us be cautious and modest, and simply say that we have understood ourselves with the help of *Faust*. I think here of that cogent definition of Kant's according to which "comprehension" means "to cognize a thing to the extent which is sufficient for our purpose." [9]

[394] Certainly, this kind of understanding is subjective, and therefore not scientific for those who identify scientific explanation with causal explanation. But the validity of this identification is decidedly a matter for discussion. I have to emphasize my doubts about it in the sphere of psychology.

[395] We speak of "objective" understanding when we have given a causal explanation. But, in reality, understanding is a subjective process, to which we ascribe the quality "objective" simply to differentiate it from another kind of understanding which is also a psychological and subjective process, and which we call "subjective" without further ado. The general attitude of today grants scientific value only to "objective" understanding, precisely because of its general validity. This standpoint is unquestionably right wherever we are not concerned with the psychological process itself, i.e., in all sciences that are not psychology.

[396] Anyone who understands *Faust* "objectively," from the causal standpoint, is—to take a drastic example—like a man who tries to understand a Gothic cathedral under its historical, technical, and finally its mineralogical aspect. But—where is the meaning of the marvellous edifice? Where is the answer to that all-important question: what goal of redemption did the Gothic man seek in his work, and how have we to

understand his work subjectively, in and through ourselves? To the scientific mind this seems an idle question, which at all events has nothing to do with science. What is worse, it conflicts with the causal principle, for its intention is clearly speculative and constructive. The modern mind has overthrown the speculative spirit of scholasticism.

[397] If we want to understand anything psychological, we must bear in mind that all knowledge is subjectively conditioned. The world is not "objective" only; it is also as we see it. This is even truer of the psyche. Of course it is possible to understand the psyche objectively, just as it is possible to understand *Faust* and Cologne Cathedral that way. In this objective understanding lies the whole worth and worthlessness of current experimental psychology and psychoanalysis. But the scientific mind, so far as it thinks causalistically, is incapable of prospective understanding—it understands only retrospectively. Like Ahriman, the Persian devil, it has the gift of hindsight. Yet this kind of understanding is only one half of the psyche. The other, more important, half is constructive, and if we are not able to understand prospectively, then nothing is understood. If psychoanalysis, following Freud's lead, should succeed in establishing an uninterrupted and conclusive connection between Goethe's infantile sexual development and *Faust*, or—following Adler—between the infantile striving for power of the adult Goethe and his work, a very interesting task would have been accomplished, and we should have learnt how a masterpiece can be reduced to the simplest possible elements. But did Goethe create *Faust* to that end? Did he intend it to be understood in that way?

[398] It should be sufficiently clear that though this kind of understanding is undoubtedly scientific it misses the point. This is true of psychology in general. To understand the psyche causally is to understand only one half of it. A causal understanding of *Faust* tells us very clearly how it came to be a finished work of art, but it does not show us its living meaning. That meaning only lives when we experience it in and through ourselves. In so far as our actual life, the life we live here and now, is something essentially new and not just a continuation of the past, the main value of a work of art does not lie in its causal development but in its living effect upon ourselves. We should be depreciating a work like *Faust* if we

regarded it merely as something that has come to be, and is finished and done with. *Faust* is understood only when it is apprehended as something that becomes alive and creative again and again in our own experience.

[399] This is how we have to consider the human psyche, too. Only on one side is it something that has come to be, and, as such, subject to the causal standpoint. The other side is in the process of becoming, and can only be grasped synthetically or constructively. The causal standpoint merely inquires how this psyche has become what it is, as we see it today. The constructive standpoint asks how, out of this present psyche, a bridge can be built into its own future.[10]

[400] (The two standpoints can be illustrated by the difference in their treatment of dream-symbols. A patient of mine, a man of extremely feeble will-power, lazy and inactive, had the following dream: *A certain man gave him a peculiar old sword, ornamented with weird old ciphers. The dreamer enjoyed this gift immensely*. At the time of the dream he was suffering from a slight physical disorder, which had made an exaggerated impression on him, so that he had fallen back into complete despair and inactivity. He had lost all pleasure and interest in life.

[401] It is perfectly true that the patient was very much under the influence of a so-called father-complex, and that he wished to have the phallic power of his father (sword). That was precisely his infantile mistake, he wanted nothing better than to conquer life in an archaic sexual way. To that extent the reduction of the dream-symbol is entirely satisfactory. Only, the patient was well aware of these facts and was able to interpret his dream in this way without any difficulty. So he learnt nothing from this interpretation.

[402] He associated the man in the dream with a young friend, who had been very ill with tuberculosis and was even considered a hopeless case. The patient said: “It was marvellous to see how my friend stood the pain; he had simply tremendous endurance, courage and hope. He used to say, ‘I will not die, I have decided to live.’ His will-power was so strong that he finally overcame the disease and got cured. He was really a model of courage.” His associations to *sword* were: “An old bronze sword handed down from time immemorial. The ciphers remind me of old languages

and old civilizations. The sword is an old heirloom of mankind, a weapon, an instrument of defence and aggression, a guard against the dangers of life."

[403] Now we understand: his young friend gave him an invaluable example of how to face the dangers of life through firm and brave decision. The words "I will" are mankind's oldest heritage and have helped it through innumerable dangers. They are the safeguard of civilized humanity, differentiating it from the animal, that only obeys dumb instinct and natural law. Through this dream a way is opened to the patient, a way to a more idealistic standpoint which redeems him from his childish self-bemoaning, and leads to an attitude that has always helped mankind in the face of threats and dangers.)

[404] Just as through analysis and reduction of individual events the causal method ultimately arrives at the universal principles of human psychology, so through the synthesis of individual trends the constructive method aims at universal goals. The psyche is the point of intersection, hence it must be defined under two aspects. On the one hand it gives a picture of the remnants and traces of all that has been, and, on the other, but expressed in the same picture, the outlines of what is to come, in so far as the psyche creates its own future.

[405] The psyche at any given moment is on the one hand the result and culmination of all that has been and on the other a symbolic expression of all that is to be. Since the future is only apparently like the past, but in its essence always new and unique, the present expression is bound to be incomplete, germlike, as it were, in relation to the future. In so far as we regard the actual content of the psyche as a symbolic expression of what is to be, we have to apply a constructive interest to it—I almost felt tempted to say a "scientific" interest. But modern science is identical with the causal principle. As soon as we regard the psyche causally, that is, scientifically, the psyche as a creative function eludes us. If we want to grasp this other side of the psyche, we shall never do it by the exclusive application of the causal principle, but only with the help of the constructive standpoint. The causal standpoint reduces things to their elements, the constructive standpoint elaborates them into something

higher and more complicated. This latter standpoint is necessarily a speculative one.

[406] Constructive understanding, however, differs from scholastic speculation in that it never asserts that something has universal validity, but merely subjective validity. When a speculative philosopher believes he has comprehended the world once and for all in his system, he is deceiving himself; he has merely comprehended himself and then naively projected that view upon the world. Projection is a fundamental error of scholasticism that has lingered on into modern times. Reacting against this, "scientism" almost put an end to speculation and went to the other extreme. It tried to create an "objective" psychology. In the face of these efforts, the emphasis that Freud laid on the psychology of the individual is of immortal merit. The immense importance of subjective factors in the development of objective mental processes was thus given due prominence for the first time.

[407] Subjective speculation that lays no claim to universal validity is identical with constructive understanding. It is a subjective creation; considered from the outside it may easily seem an "infantile fantasy," or at least an unmistakable product of it. From an "objective" standpoint it has to be judged as such, in so far as "objective" is equated with "scientific" or "causal." But considered from the inside, this subjective creation spells redemption. As Nietzsche says, "Creation—that is the great redemption from suffering; that is ease of living." [11]

[408] When we apply these insights to the psychology of that class of mental patient to which Schreber belongs, we must, from the "objective-scientific" standpoint, reduce the fantasy-structure to its simple, fundamental elements. This is what Freud has done. But that is only one half of the work. The other half is the constructive understanding of Schreber's system. The question is: What is the goal the patient tried to reach through the creation of his system?

[409] The purely scientific thinker of today will regard this question as absurd. The psychiatrist will certainly smile at it, being profoundly convinced of the universal validity of the causal principle, and seeing the psyche merely as something derivative and reactive. The unconscious

picture at the back of his mind, psyche = brain-secretion, is often only too plainly in evidence.

[410] But if we look at the delusional system without prejudice, and ask ourselves what it is aiming at, we see, first, that it is in fact aiming at something, and second, that the patient devotes all his will-power to the completion of his system. There are patients who elaborate their delusions with scientific thoroughness, often dragging in an immense amount of comparative material by way of proof. Schreber belongs to this class. Others do not set about it so thoroughly and learnedly, but content themselves with piling up synonyms for the thing they are struggling to express. A good example of this is the patient I have already described, who gave herself all sorts of grotesque titles.

[411] This unmistakable striving of the patient to express something in and through his delusions Freud conceives retrospectively, as a gratification in fantasy of infantile wishes. Adler reduces it to the striving for power. For him the delusional system is a "masculine protest," a means of safeguarding the patient's threatened superiority. So regarded, this striving is equally infantile, and the means employed—the delusional system—is infantile too, because insufficient for its purpose. Hence one can understand Freud's rejection of the Adlerian viewpoint. Freud, with some justice, classifies this striving for power under the concept of infantile wish-fulfilment.

[412] The constructive standpoint is very different. Here the delusional system, as regards its material content, is neither infantile nor in itself pathological, but subjective, and hence justified within those limits. The constructive standpoint rejects absolutely the view that the subjective fantasy-formation is nothing but an infantile wish symbolically disguised or an obstinate clinging to the fiction of one's own superiority, in so far as this pretends to be a final explanation. One can judge the subjective mental process from the outside as one can judge everything else. But such a judgment is inadequate, because it is of the nature of the subjective that it cannot be judged objectively. You cannot measure distance in pints. The subjective can only be understood and judged

subjectively, that is, constructively. Any other judgment is unfair and does not hit the mark.

[413] The *carte blanche* which the constructive standpoint gives to subjective factors naturally seems to the “scientific” mind an utter violation of reason. But it can protest only so long as the construction is not admitted to be subjective. Constructive understanding also *analyses*, but it does not *reduce*. It breaks the system down into *typical* components. What is to be regarded as a “type” at any given time is dependent on the scope of our experience and knowledge. Even the most individual systems are not absolutely unique, but offer striking and unmistakable analogies with other systems. From the comparative analysis of many systems the typical formations can be discovered. If one can speak of reduction at all, it is simply a reduction to general types, but not to some general principle arrived at inductively or deductively, such as “sexuality” or “striving for power.” This paralleling with other typical formations serves only to widen the basis on which the construction is to rest.[12] At the same time, it serves the purpose of objective communication. Without these parallels we would proceed entirely subjectively; we would go on constructing in the language and mental range of the patient, building up a structure which would be intelligible to him and to the investigator but not to the wider scientific public, who could not be expected to feel their way into the peculiarities of his thought and language.

[414] The work of the Zurich school gives careful and detailed records of the individual material. There we find countless typical formations which show obvious analogies with mythological formations.[13] These parallels have proved to be a new and exceedingly valuable source for the comparative study of delusional systems. It is not easy to accept the possibility of such a comparison, but the only question is whether the materials to be compared are really alike or not. It may also be objected that pathological and mythological formations are not directly comparable. This objection cannot be raised *a priori*, since only careful comparison can show whether a real parallelism exists. At present all we know is that both are fantasy-structures which, like all such products, are based essentially on the activity of the unconscious. Experience must

show whether the comparison is valid. The results so far obtained are so encouraging that further research along these lines seems to me very well worth while.

[415] Without entering more closely into the nature of the constructive method, I made practical use of it in a case published by Flournoy in the *Archives de psychologie*. It was the case of a rather neurotic young woman who describes, in Flournoy's text, how she would suddenly be overcome by coherent fantasies which broke through from the unconscious into consciousness. I subjected these fantasies, there reproduced in detail, to the constructive method and set forth the results of these investigations in my book *Wandlungen und Symbole der Libido*,[14] first published in 1912. This book, I regret to say, has met with numerous, and perhaps inevitable, misunderstandings. But here again I have had a satisfaction particularly to be valued, for the book won the approval of Flournoy himself, who knew the case personally. It is to be hoped that later researches will succeed in making the standpoint of the Zurich school intelligible to a wider public. Those who have tried to grasp the essence of the constructive method with the help of that book will readily appreciate how great are the difficulties of research, and how much greater still the difficulties of presenting it objectively.

[416] Among the many causes of misunderstanding I should like to emphasize one which is especially characteristic. Closer study of Schreber's or any similar case will show that these patients are consumed by a desire to create a new world-system, or what we call a *Weltanschauung*, often of the most bizarre kind. Their aim is obviously to create a system that will enable them to assimilate unknown psychic phenomena and so adapt themselves to their own world. This is a purely subjective adaptation at first, but it is a necessary transition stage on the way to adapting the personality to the world in general. Only, the patient remains stuck in this stage and substitutes his subjective formulation for the real world—which is precisely why he remains ill. He cannot free himself from his subjectivism and therefore does not establish any connection with objective thinking and with human society. He does not gain any real understanding of himself because he understands himself merely subjectively, and this precludes intelligible communication. As

Feuerbach says, understanding is real and effective only when it is in accord with that of other reasonable beings. Then it becomes objective [15] and connects with life.

[417] I am sure many people will object that psychological adaptation does not come about by first creating a philosophical view of the world, and that it is in itself a sign of a morbid disposition even to attempt to adapt oneself by such means. Undoubtedly there are a great many people who are capable of adapting themselves to the world without first having a "philosophical" conception of it. If they arrive at all at a more general view, this only happens afterwards. But there are just as many who are able to adapt only with the help of some previous intellectual formulation. What they do not understand, or think they do not understand, they cannot adapt themselves to. And, as a rule, they do adapt themselves only as far as they can grasp the situation intellectually.

[418] Medical experience has taught us that there are two large groups of functional nervous disorders. One of them comprises all those forms of illness which are commonly designated "hysterical"; the other all those forms which the French school calls "psychasthenic." Although the line of demarcation is rather uncertain, one can mark off two psychological types which in themselves are quite distinct because their psychology is diametrically opposed. I have called these the introverted and extraverted types. The hysteric belongs to the extraverted type, the psychasthenic to the introverted type, and so, to the best of our knowledge, does the schizophrenic. The terms introversion and extraversion are dependent on my energic conception of psychic phenomena. I postulate a hypothetical, fundamental striving which I call *libido*.[16] In accordance with the classical usage of the word,[17] libido does not have an exclusively sexual connotation as it has in medicine. The word "interest," as Claparède once suggested to me, could also be used in this special sense if it had today a less extensive application. Again, Bergson's concept of *élan vital* would serve if only it were less biological and more psychological. Libido is intended as an energic expression for psychological values. A psychological value is something that has an effect, hence it can be

considered from the energic standpoint without any pretence of exact measurement.

[419] The introverted type directs his libido chiefly to his own personality: he finds the absolute value in himself. The extraverted type directs his libido outwards: he finds the absolute value in the object. The introvert sees everything in terms of the value of his own personality; the extravert is dependent on the value of his object. Unfortunately I cannot go more closely into type differences here, but would only like to emphasize that the type question is one of the most vital for our psychology and that any further advance will probably be along those lines. The difference between the types is alarmingly great. So far there is only a short, provisional statement by myself on the type theory,[18] a theory which has particular bearing on our views of dementia praecox. On the psychiatric side Gross[19] has drawn attention to the existence of psychological types: he differentiates between types with a restricted but deep consciousness and those with a wide but superficial consciousness. The former corresponds to my introverted and the latter to my extraverted type. William James has given an excellent description of the two types in philosophy in his book on pragmatism, and Schiller has done the same for aesthetics in his essay on "The Naïve and the Sentimental." In scholastic philosophy our two types are represented by the nominalists and the realists. In the realm of medical psychology, Freud is decidedly the champion of the extravert, Adler the champion of the introvert. The irreconcilable contradiction between the views of Freud and Adler[20] is easily explained by the existence of two diametrically opposed psychologies which view the same things under totally different aspects. An extravert and an introvert find it very difficult to understand each other when they discuss any of the more delicate questions of psychology.

[420] An extravert can barely conceive the necessity that forces the introvert to adapt to the world by means of a system. And yet this need exists, otherwise we should have no philosophical systems and dogmas presumed to be universally valid. Civilized humanity would consist solely of empiricists, and the sciences solely of empirical sciences. There

is no doubt that causalism and empiricism are the two ruling forces in the intellectual life of today, though things may yet turn out otherwise.

[421] This difference of types is the first great obstacle in the way of understanding. The second obstacle is the fact that the constructive method, true to its nature, must follow the clues laid down by the delusional system itself. The thoughts of the patient must be taken seriously and followed out to their logical conclusion; in that way the investigator himself takes over the standpoint of the psychosis. This may expose him to the suspicion of being deranged himself, or at the very least of having a *Weltanschauung* of his own, which nowadays is considered a terrible disgrace. Confirmation of such a possibility is as bad as being unscientific. But everyone has a view of the world, though not everyone is aware of it. And those who are unaware simply have an unconscious, and therefore inadequate and archaic, view, for everything that is left dormant in the psyche without being developed remains in a primitive state. A striking example of the way theories are influenced by unconscious, archaic conceptions is furnished by a famous German historian,[21] whose name is no concern of ours. He took it as self-evident that human beings once propagated themselves by incest, because in the first human family the only possible mate for a brother was a sister. This theory is based on the still existing, unconscious belief that Adam and Eve were the first and only parents of mankind. On the whole, therefore, it is wiser to have a well-developed philosophical standpoint, or at least to make use of a suitable system, if one wishes to avoid mistakes of this kind.

[422] To be suspected of having a *Weltanschauung* is something one could put up with easily enough. There is, however, a greater danger that the public will come to believe that the view of the world worked out by the constructive method is a theoretical and objectively valid view of the world in general. Again and again I have to point out that it is a chronic misunderstanding, dating from the Schoolmen, not to be able to distinguish between a view of the world that is purely psychological, and a non-psychological theory that is concerned with the nature of the object itself. It is absolutely essential for every student of the constructive method to make this distinction. In its immediate results the constructive

method does not produce anything that could be called a scientific theory. It traces, rather, the psychological path of development in a given individual, as I have tried to show in my book *Wandlungen und Symbole der Libido*.

[423] The analytical-reductive method has the advantage of being much simpler. It reduces everything to known basic principles of a very simple nature. The constructive method, working with highly complex material, has to build up towards an unknown goal. This obliges the investigator to take account of all the forces at work in the human psyche. The reductive method tries to replace the religious and philosophical needs of mankind by their more elementary components, following the principle of "nothing but," as William James nicely says; but the constructive method accepts them as such and considers them indispensable ingredients of its work. Only in this way can we do justice to man's psychic striving. It is in the nature of things that such work should go far beyond the fundamental concepts of empiricism, for the human mind has never yet rested content with experience alone. All mental development comes by way of speculation and not by confining ourselves to mere experience. Experience without speculation leads nowhere.

[424] But if one works speculatively with psychological material one risks falling a victim to the popular misconception that the psychological line of development thus traced has the value of an objective theory. That is why so many people feel impelled to pronounce judgment on whether the theory is right or not. Those who are particularly brilliant even discover that the fundamental concepts can be traced back to Heraclitus or someone even earlier. Let me confide to these knowing folk that the fundamental concepts employed in the constructive method go back beyond all historical philosophy to the dynamistic ideas of primitive peoples.[22] If the constructive method resulted in a scientific theory, the theory would be in a parlous condition indeed, for it would be a relapse into darkest superstition. But since it produces anything rather than a scientific theory, the extreme antiquity of the concepts it employs testifies to their practical usefulness. Not until the constructive method has furnished us with a great many more experiences can we start building up a scientific theory, a theory concerning the psychological lines of

development. Until then we must be content to trace them out in individual cases.

III

A CRITICISM OF BLEULER’S THEORY OF SCHIZOPHRENIC NEGATIVISM

ON THE IMPORTANCE OF THE UNCONSCIOUS IN PSYCHOPATHOLOGY

ON THE PROBLEM OF PSYCHOGENESIS IN MENTAL DISEASE

MENTAL DISEASE AND THE PSYCHE

A CRITICISM OF BLEULER’S THEORY OF SCHIZOPHRENIC NEGATIVISM[1]

[425] In this work[2] Bleuler presents a noteworthy clinical analysis of the concept “negativism.” Besides giving a very precise and discerning summary of the various manifestations of negativism, he introduces a new psychological concept well worthy of attention. This is the concept of *ambivalence* or *ambitendency*, which formulates the psychological fact that every tendency is balanced by a contrary one. (We must add that the positive act therefore results from a relatively small preponderance on one side.) Similarly, all feeling-tones are balanced by their opposites, and this gives the feeling-toned idea an ambivalent character. This formulation is based on the clinical observation of catatonic negativism, which demonstrates with perhaps excessive clarity the existence of contradictory tendencies and values. These facts are well known to psychoanalysis, where they are summed up under the concept of resistance. Resistance, however, must not be taken as meaning that every positive psychic act simply calls up its opposite. One may easily gain the impression from Bleuler’s work that his standpoint is that, *cum grano salis*, the ideas or tendencies of the schizophrenic are always accompanied by their opposites. For instance, Bleuler says:

> Predisposing causes of negativistic phenomena are:
>
> (1) *Ambitendency*, which causes every impulse to be accompanied simultaneously by a counter-impulse.
>
> (2) *Ambivalence*, which gives two contradictory feeling-tones to the same idea and makes the same thought appear positive and negative at once.
>
> (3) *Schizophrenic splitting of the psyche*, which prevents conclusions from being drawn from contradictory psychisms, so that the most unsuitable impulse can be translated into action just as easily as the right one, and the right thought accompanied, or replaced, by its negative.
>
> Negativistic phenomena can arise directly on the basis of these propensities, since positive and negative psychisms are substituted for

one another indiscriminately.

[426] If we try to psychoanalyse an obvious manifestation of ambivalence, for instance a more or less unexpected negative reaction instead of a positive one, we find that there is a strict sequence of psychological causes conditioning the negative reaction. The tendency of this sequence is to disturb the intention of the contrary sequence; that is to say, resistance is set up by a complex. This fact, which so far has not been refuted by other observations, seems to me to contradict the above formulations.[3] Psychoanalysis has shown to our satisfaction that resistance is never "indiscriminate" or meaningless, and that, consequently, there is no such thing as a capricious playing with opposites. The systematic character of resistance holds good, as I think I have shown, for schizophrenia as well. So long as this statement, which is supported by ample experience, is not refuted by other observations, the theory of negativism will have to take its cue from it. In a certain sense Bleuler takes account of this when he says: "Generally, however, the negativistic reaction does not seem to be merely accidental, but is *actually preferred to the right one.*"[4] This is an admission that negativism is of the nature of resistance. Once admit this, and the causal significance of ambivalence disappears so far as negativism is concerned. The causally important factor is simply the tendency to resist. Hence ambivalence cannot in any sense be put on a level with the "schizophrenic splitting of the psyche," but is a concept which gives expression to the ever-present, intimate association of opposites.

[427] One of the most striking examples of this can be found in Freud's paper on "The Antithetical Meaning of Primal Words." The same is true of the ambitendency. Neither is specific for schizophrenia, but both are equally true of the neuroses and of the normal. All that is left over for catatonic negativism is the intentional opposition, in other words, the resistance. As is clear from the explanation given above, resistance is something different from ambivalence; it is the dynamic factor which in all cases makes the latent ambivalence manifest. What is characteristic of the diseased mind, therefore, is not the ambivalence but the resistance. This implies the existence of a conflict between two opposite tendencies which have succeeded in intensifying the normally present ambivalence

into a manifest struggle between its contradictory components.[5] In other words it is a conflict of wills, bringing about the neurotic condition of "disunion with oneself." This condition is the only "splitting of the psyche" known to us, which is therefore not so much a "predisposing cause" as a manifestation of the inner conflict, of the "incompatibility of the complex" (Riklin).

[428] Now resistance, as the fundamental fact of schizophrenic dissociation, is something which, in contradistinction to ambivalence, is not necessarily implied in the concept of "feeling-tone," but is a secondary addition, with its own special and more or less independent psychological history which in each case is identical with the previous history of the complex. It follows from this that the theory of negativism must coincide with the theory of the complex, since the complex is the cause of the resistance. Bleuler lists the following causes of negativism:

a. Autistic withdrawal of the patient into his own fantasies.

b. The existence of a "life-wound" (complex) which must be protected from injury.

c. Misapprehension of the environment and its intentions.

d. Directly hostile relationship to the environment.

e. The pathological irritability of schizophrenics.

f. "Pressure of ideas" and other impediments to thought and action.

g. "Often sexuality, with its ambivalent feeling-tone, is one of the roots of negativistic reaction."

[429] As regards *a*. "autistic withdrawal" into one's fantasies[6] is the same as what I have described elsewhere as the marked proliferation of fantasies relating to the complex. Reinforcement of the complex is identical with increase of resistance.

[430] *b*. The "life-wound" is the complex, which is naturally present in every case of schizophrenia and of necessity always entails the phenomenon of autism or autoerotism, since complexes and involuntary egocentricity are inseparable and reciprocal. Points *a* and *b* therefore are really identical.[7]

[431] *c*. It has been shown that “misapprehension of the environment” is an assimilation to the complex.

[432] *d*. “Hostile relationship to the environment” is a maximal point of resistance, as psychoanalysis shows to perfection. Accordingly *d* coincides with *a*.

[433] *e*. “Irritability” proves psychoanalytically to be one of the commonest consequences of the complex. In its systematic form I have called it “complex sensitiveness.” Its generalized form (if one may use such an expression) is a damming up of affect (= damming up of libido) as a result of increased resistances. What is known as “neurasthenia” is a classic example of this.

[434] *f*. Under the heading “pressure of ideas” and similar intellectual disturbances we may also include the “lack of clarity and defective logic of schizophrenic thinking,” which Bleuler considers a “predisposing cause.” I have, as is presumably known, expressed myself with the utmost reserve on the “intentionality” of the schizophrenic attitude. Further and wider experience has taught me that the laws of Freud’s dream-psychology and his theory of the neuroses must be brought to bear on the obscurity of schizophrenic thinking. *The painfulness of the elaborated complex necessitates censorship of its expression*.[8] This fundamental principle has to be applied to the schizophrenic disturbance of thought, and until it has been proved that it is not applicable to schizophrenia there is no justification for setting up a new principle of explanation, i.e., for postulating that the schizophrenic disturbance of thought is something primary. Observation of hypnagogic mental activity as well as of association-processes in the state of relaxed attention has brought to light psychic products which up till now have proved indistinguishable from mental products in schizophrenia. For instance, a marked relaxation of attention is sufficient to conjure up images as like as two peas to schizophrenic fantasies and modes of expression. It will be remembered that I attributed the notorious disturbance of attention in schizophrenia to the peculiar behaviour of the complex, a view which my experience since 1906 has only confirmed. There are good reasons why I

have come to regard the specifically schizophrenic disturbance of thought as the result of a complex.

[435] As for the "pressure of ideas," it is primarily and essentially a symptom of "compulsive thinking" which, as Freud has clearly shown, is in the first place a thought-complex and secondly a sexualization of thought. Occasionally a "manic" element is added, such as can be observed in every vigorous release or production of libido. The "pressure" of ideas proves on closer inspection to be a consequence of schizophrenic introversion, which necessarily leads to a "sexualization" (= autonomization) of thought, i.e., to the autonomy of the complex.[9]

[436] *g*. The passage about sexuality appears, from the psychoanalytical point of view, difficult to understand. When we consider that the development of resistance coincides in every case with the previous history of the complex, we need only ask ourselves: Is the complex sexual or not? (It goes without saying that we must understand sexuality in the proper sense of "psychosexuality.") To this question psychoanalysis gives the invariable answer: resistance always springs from a specific sexual development. This, as we know, leads to a conflict, i.e., to the complex. Every case of schizophrenia which has so far been analysed confirms the above proposition. It can therefore claim at least the value of a working hypothesis, and one to be followed up. In the present state of our knowledge, therefore, it is not easy to see why Bleuler allows sexuality only an occasional influence on the phenomenon of negativism, since psychoanalysis has shown that the source of negativism is resistance, which in schizophrenia as well as in all other neuroses arises from the specific sexual development.

[437] There can scarcely be any more doubt today that schizophrenia possesses essentially the same mechanisms as any other psychoneurosis, though introversion mechanisms preponderate. In my opinion, at any rate, its individual symptoms can be studied, apart from the descriptive, clinical standpoint (and disregarding the anatomical one), only from that of psychoanalysis, particularly when the investigation is directed mainly to the genetic elements. I have therefore tried to show how Bleuler's formulations appear in the light of the complex theory, for I feel bound to

draw attention to it here, and am in no way disposed to surrender this hard-won insight.

ON THE IMPORTANCE OF THE UNCONSCIOUS IN PSYCHOPATHOLOGY[1]

[438] When we speak of a thing being “unconscious,” we must not forget that from the standpoint of the functioning of the brain it may be unconscious to us in two ways—physiologically and psychologically. I shall discuss the subject only from the latter point of view. For our purpose we may define the unconscious as the sum of all those psychic events which are not apperceived, and so are unconscious.

[439] The unconscious contains all those psychic events which do not possess sufficient intensity of functioning to cross the threshold dividing the conscious from the unconscious. They remain, in effect, below the surface of consciousness, and flit by in subliminal form.

[440] It has been known to psychologists since the time of Leibniz that the elements, that is to say the ideas and feelings, which make up the conscious mind—its so-called conscious content—are of a complex nature, and rest upon far simpler and altogether unconscious elements; it is the combination of these which produces consciousness. Leibniz had already mentioned the *perceptions insensibles*—those vague perceptions which Kant called “shadowy representations,” which could attain to consciousness only in an indirect manner. Later philosophers assigned the first place to the unconscious as the foundation upon which consciousness is built.

[441] This is not the place to consider the many speculative theories and the endless philosophical discussions concerning the nature and quality of the unconscious. We must be satisfied with the definition already given, which will prove quite sufficient for our purpose, namely, the conception of the unconscious as the sum of all psychic processes below the threshold of consciousness.

[442] The question of the importance of the unconscious for psychopathology may be briefly put as follows: “In what manner may we

expect unconscious psychic material to behave in cases of psychosis and neurosis?”

[443] In order to get a better grasp of the situation in mental disorders, we may profitably consider first how unconscious psychic material behaves in a normal person, and especially try to visualize what in him is likely to be unconscious. To obtain this information we must first get a complete inventory of his conscious mind; and then, by a process of elimination, we may expect to find what is contained in his unconscious, for obviously—*per exclusionem*—what is in the conscious cannot be unconscious. For this purpose we must review all the activities, interests, passions, cares, and joys which make up the contents of consciousness. All that we are thus able to discover becomes, *ipso facto*, of no further moment as a possible content of the unconscious, and we may then expect to find only those things contained in the unconscious which we have not found in the conscious mind.

[444] Let us take a concrete example: A merchant, who is happily married, father of two children, thorough and painstaking in his business affairs, and at the same time trying in a reasonable degree to improve his position in the world, is self-respecting, enlightened in religious matters, and even belongs to a society for the discussion of liberal ideas.

[445] What can we assume to be the content of the unconscious in such an individual?

[446] Considered from the theoretical standpoint outlined above, everything in the personality that is not contained in the conscious should be found in the unconscious. Let us agree, then, that this man consciously believes himself to possess all the fine qualities we have just described—no more, no less. It follows from this that he is entirely unaware that a man may be not merely industrious, thorough, and painstaking, but may also be careless, indifferent, untrustworthy; for some of these bad qualities are the common heritage of mankind and may be found to be an essential component of every character. This worthy merchant forgets that quite recently he allowed several letters to remain unanswered which he could easily have answered at once. He forgets, too, that he failed to bring a book home which his wife had asked him to get at the book-store,

where she had previously ordered it, although he could easily have made a note of it in his note-book. But such occurrences are common with him. There can then be no other conclusion than that he is also lazy and untrustworthy. He is convinced that he is a thoroughly loyal citizen; but for all that he failed to declare his entire income to the authorities, and so, when they raise his taxes, he votes for the Socialists.

[447] He believes he is an independent thinker, yet a little while back he undertook a big deal on the Stock Exchange, and when he came to enter the details of the transaction in his records he noticed with considerable misgivings that it fell upon a Friday, the 13th of the month. Therefore, he is also superstitious and not a free-thinker.

[448] So we are not at all surprised to find these compensating vices to be an essential content of the unconscious. Obviously, therefore, the reverse must be true—that unconscious virtues compensate for conscious defects. The law which ought to follow from this deduction would appear to be quite simple: the conscious spendthrift is unconsciously a miser, the philanthropist is unconsciously an egoist and misanthrope. But, unfortunately, it is not quite so easy as that, although there is a core of truth in this simple rule. There are essential, hereditary dispositions of a latent or manifest nature that upset the simple rule of compensation and vary greatly in individual cases. From entirely different motives a man may be, shall we say, a philanthropist, but the manner of his philanthropy depends upon his inherited disposition, and the way in which his philanthropic attitude is compensated depends upon his motives. It is not sufficient simply to know that a certain person is philanthropic in order to diagnose an unconscious egoism. We must also bring to such a diagnosis a careful study of the motives involved.

[449] In normal people the principal function of the unconscious is to effect a compensation and to produce a balance. All extreme conscious tendencies are softened and toned down through a counter-impulse in the unconscious. This compensating agency, as I have tried to show in the case of the merchant, expresses itself in certain unconscious, apparently inconsistent activities, which Freud has aptly termed symptomatic actions.

[450] To Freud we owe thanks, also, for having called attention to the importance of dreams. For through dreams we are able to learn much about this compensating function. There is an excellent historical example of this in the well-known dream of Nebuchadnezzar in the fourth chapter of the Book of Daniel, where Nebuchadnezzar at the height of his power had a dream which foretold his downfall. He dreamt of a tree which had raised its head even up to heaven and now must fall. This dream obviously compensates the exaggerated feeling of royal power.

[451] Coming now to conditions in which the mental balance is disturbed, we can the more easily see, from what has been said, wherein lies the importance of the unconscious for psychopathology. Let us consider the question of where and in what manner the unconscious manifests itself in abnormal mental conditions. The way the unconscious works is seen most clearly in disturbances of a psychogenic nature, such as hysteria, obsessional neurosis, etc.

[452] We have known for a long time that certain symptoms of these disturbances are produced by unconscious psychic events. The manifestations of the unconscious in actually insane patients are just as clear, but are not so well recognized. For just as the intuitive ideas of normal people do not spring from logical combinations of the conscious mind, so the hallucinations and delusions of the insane arise not out of conscious but out of unconscious processes.

[453] Formerly, in a more materialistic epoch of psychiatry, it was believed that all delusions, hallucinations, stereotypies, etc., were caused by morbid processes in the brain-cells. Adherents of this theory overlooked the fact that delusions, hallucinations, etc., are found in certain functional disturbances, and not only there but also in normal people. Primitives may have visions and hear strange voices without their mental processes being at all disturbed. To seek to reduce symptoms of this kind directly to a disease of the brain-cells I hold to be superficial and unwarranted. Hallucinations show very plainly how a part of the unconscious content can force itself across the threshold of consciousness. The same is true of

a delusion whose appearance is at once strange and unexpected by the patient.

[454] "Mental balance" is no mere figure of speech, for its disturbance is a real disturbance of the balance which—to a far higher degree than has been recognized—actually exists between the conscious and the unconscious contents. What happens is that the normal functioning of the unconscious processes breaks through into the conscious mind in an abnormal manner, and thereby disturbs the adaptation of the individual to his environment.

[455] If we examine the history of any such person we often find that he has been living for a considerable time in a state of peculiar individual isolation, more or less shut off from the world of reality. This condition of aloofness may be traced back to certain innate or early acquired peculiarities, which show themselves again and again in the events of his life. For instance, in the histories of those suffering from dementia praecox we often hear such a remark as this: "He was always of a pensive disposition, and much shut up in himself. After his mother died he cut himself off still more from the world, shunning his friends and acquaintances." Or again, we may hear: "Even as a child he rigged up all sorts of peculiar inventions; and later, when he became an engineer, he went in for the most ambitious schemes."

[456] Without going into the matter more closely, it seems evident that a counter-irritant will be produced in the unconscious as a compensation to the one-sidedness of the conscious attitude. In the first case mentioned, we may expect to find in the unconscious an increasing wish for human intercourse, a longing for mother, friends, relations, while in the second case self-criticism will try to establish a correcting balance. In normal people a condition never arises which is so one-sided that the natural corrective influences of the unconscious are entirely without effect in everyday life. On the other hand, we find it eminently characteristic of abnormal people that they refuse to recognize the compensating influence which comes from the unconscious and even continue to emphasize their one-sidedness in accordance with the well-known psychological fact that the worst enemy of the wolf is the wolf-hound, the worst despiser of the

Negro the mulatto, and the convert the greatest fanatic; for I become a fanatic when I attack outwardly a thing which inwardly I am obliged to concede is right.

[457] The mentally unbalanced person tries to defend himself against his own unconscious, that is to say, he fights against his own compensating influences. The man already living in an atmosphere of isolation continues to remove himself further and further from the world of reality, and the ambitious engineer strives, by his more and more pathological and exaggerated inventions, to prove the incorrectness of his compensating powers of self-criticism. This results in a condition of excitation, which produces a great lack of harmony between the conscious and unconscious tendencies. The pairs of opposites are torn asunder, the resultant division leads to disaster, for the unconscious soon begins to obtrude itself violently upon the conscious processes. Then come odd and incomprehensible thoughts and moods, and often incipient forms of hallucination, which plainly bear the stamp of the internal conflict.

[458] These corrective impulses or compensations which now break through into the conscious mind should really be the beginning of a healing process, because through them the previously isolated attitude ought to be relieved. But in reality this does not happen, for the reason that the unconscious corrective impulses which succeed in making themselves perceptible to the conscious mind do so in a form that is altogether unacceptable to it.

[459] The isolated individual begins to hear strange voices, which accuse him of murder and all sorts of crimes. These voices drive him to desperation, and in the ensuing excitement he tries to get into contact with the surrounding milieu, thus doing the very thing he had anxiously avoided before. The compensation is, to be sure, effected, but to the detriment of the individual.

[460] The pathological inventor, who is unable to profit by his previous failures, still allows himself, by refusing to recognize the value of his own self-criticism, to work at ever crazier schemes. He wishes to accomplish the impossible but falls instead into the absurd. After a while

he notices that people talk about him, make unfavourable remarks, and even scoff at him. He believes a far-reaching conspiracy exists to frustrate his discoveries and render them objects of ridicule. By this means his unconscious brings about the same results that his self-criticism could have achieved, but again only to the detriment of the individual, because the criticism is projected into his surroundings.

[461] An especially typical form of unconscious compensation—to give a further example—is the paranoia of the alcoholic. The alcoholic loses his love for his wife; the unconscious compensation tries to lead him back again to his duty, but it can only partially succeed, for it merely causes him to become jealous of his wife as if he still loved her. As we know, he can even go so far as to kill his wife and himself through jealousy. In other words, his love for his wife has not been entirely lost, it has simply become subliminal. But from the realm of the unconscious it can now reappear only in the form of jealousy.

[462] We see something similar in the case of religious converts. Everyone who turns from Protestantism to Catholicism has, as is well known, a tendency to be somewhat fanatical. His Protestantism is not entirely relinquished, it has merely disappeared into the unconscious, where it is constantly at work as a counterirritant to his newly acquired Catholicism. Therefore the new convert feels under an obligation to defend fanatically the faith he has adopted. It is exactly the same with the paranoiac, who feels compelled to defend himself against all external criticism, because his delusional system is too much threatened from within.

[463] The strange manner in which these compensating influences break through into consciousness is explained by the fact, firstly, that they have to struggle against the resistances already there and so present themselves to the patient in a quite thoroughly distorted way. Secondly, these compensating influences must of necessity present themselves in the language of the unconscious—that is, in subliminal material of a very heterogeneous nature. For everything in the conscious mind which is of no further value and can find no suitable application becomes subliminal. Such material includes all those forgotten infantile fantasies which have ever entered the minds of men, and of which only legends and myths

remain. For certain reasons which I cannot discuss here, this material is frequently found in dementia praecox.

[464] I hope I may have been able to give in this brief lecture, which I feel to be very incomplete, a glimpse of the importance, as I see it, of the unconscious in psychopathology. It would be impossible in a short talk to give an adequate idea of all the work that has already been done in this field.

[465] To sum up, one could say that the function of the unconscious in mental disturbances is essentially a compensation of the conscious content. But because of the characteristic one-sidedness of the conscious striving in all such cases, the compensating correctives are rendered useless. It is, however, inevitable that these unconscious tendencies will break through, but in adapting themselves to the one-sided conscious aims, it is possible for them to appear only in a distorted and unacceptable form.

ON THE PROBLEM OF PSYCHOGENESIS IN MENTAL DISEASE[1]

[466] If I venture to discuss the problem of psychogenesis in mental disease, I am well aware that I am touching a question that is far from popular. The great progress that has been made in the realm of brain anatomy and pathological physiology, and the general prepossession in favour of natural science today, have taught us to look, always and everywhere, for material causes, and to rest content once we have found them. The ancient metaphysical explanation of Nature was discredited on account of its manifold errors, so much so that the value of its psychological standpoint was lost. In psychiatry, during the first decades of the nineteenth century, the metaphysical explanation of Nature ended in moralistic aetiological theories which explained mental disease as a consequence of moral faults. Only at the time of Esquirol did psychiatry become a natural science.

[467] The development of natural science brought with it a general view of the world—that of scientific materialism, which, considered from the psychological standpoint, is based on an excessive overvaluation of physical causation. Scientific materialism axiomatically refuses to acknowledge any other causal connection than the physical one. The materialistic dogma as formulated in psychiatry runs as follows: "Mental diseases are diseases of the brain." This dogma still prevails today, although materialism in philosophy is already on the wane. The almost undisputed validity of the materialistic dogma in psychiatry is due essentially to the fact that medicine is a natural science, and the psychiatrist as a physician is a natural scientist. The medical student, being overburdened with specialized studies, cannot allow himself to make digressions into the realm of philosophy, and is subjected exclusively to the influence of materialistic axioms. As a consequence, researches in psychiatry are concerned mainly with anatomical problems, so far as they are not preoccupied with questions of diagnosis and classification. Thus the psychiatrist generally considers the physical aetiology to be of primary importance and the psychological aetiology to be only secondary and subsidiary; and because of this attitude he keeps in

view only causal connections of a physical kind and overlooks their psychological determination. This is not a position in which one can appreciate the importance of psychological determinants. Physicians have often assured me that it was impossible to discover in their patients any trace of psychological conflicts or of psychogenic symptoms, but just as often I found they had carefully noted all the incidents of a physical kind and had failed to note all those of a psychological kind, not from negligence but because of a typical undervaluation of the importance of the psychological factor.

[468] Once, for instance, I was called in as consultant on a case in which two well-known nerve specialists had diagnosed sarcoma of the membranes of the spinal cord. The patient, a woman aged about 50, suffered from a peculiar symmetrical rash in the lumbar region, and from fits of crying. The physical examination made by the doctors was exceedingly careful, as was the anamnesis. A piece of the skin had been excised and examined histologically. But it had been entirely overlooked that the patient was a human being with a human psychology. Owing to this characteristic undervaluation of the psychological standpoint, the conditions in which the disease originated remained unexplored.

[469] The patient was a widow. She lived with her eldest son, whom she loved in spite of their many quarrels and mutual difficulties. In a way he replaced her husband. Life under these conditions became more and more intolerable to the son, so he decided to separate himself from his mother and live elsewhere. The first fit of crying occurred on the day he left her. This was the beginning of a protracted illness. The course of the disease, its improvements as well as its exacerbations, all corresponded with changes in relation to the son, as could clearly be shown by means of psychological anamnesis. The wrong diagnosis naturally did not improve the symptoms; on the contrary, it worked by suggestion for the worse. It was an ordinary case of hysteria, as the later developments proved. Since both the doctors were hypnotized by their belief in the physical causation and physical nature of the disease, it did not occur to them to inquire into the patient's psychological circumstances. Therefore they could both assure me that there was "nothing psychic" in the case.

[470] Such errors are easily understood when one remembers that neither psychiatrists nor neurologists have any other training than in natural science. Yet, for these branches of medicine, a knowledge of psychology is absolutely indispensable. The lack of psychological training is frequently compensated later, especially among general practitioners, by practical experience of life and its fundamental emotions, but unfortunately this is not the general rule. The student, at all events, hears little or nothing of abnormal psychology. Even if time should allow him to follow a course of psychology, he would only have the opportunity of learning a kind which has nothing to do with the requirements of medical practice. This at least is the situation on the Continent. As a rule psychologists are men of the laboratory and not general practitioners, at all events not experienced psychiatrists or neurologists. So it is not surprising that the psychological point of view is omitted from the anamnesis, the diagnosis, and the treatment. And yet this view is of the greatest importance, not only in the realm of neurosis, where it has been increasingly appreciated ever since Charcot’s day, but also in the realm of mental disease.

[471] In speaking of the psychogenesis of mental disease I have in mind chiefly those many forms lately labelled in a vague and misleading way “dementia praecox.” Under this rubric are gathered all those hallucinatory, catatonic, hebephrenic, and paranoid conditions, not showing the characteristic organic processes of cellular destruction seen in general paralysis, senile dementia, epileptic dementia, and chronic intoxications, and not belonging to the manic-depressive group. As you are aware, there are certain cases belonging to the class of dementia praecox which do show cellular changes in the brain. But these changes are not regularly present nor do they explain the special symptomatology. If you compare the usual symptoms of dementia praecox with the disturbances which occur in organic brain-disease you will find striking differences. There is not a single usual symptom of dementia praecox which could be called an organic symptom. There is no justification whatever for putting general paralysis, senile dementia, and dementia praecox on the same level. The fact that cellular destruction occasionally occurs does not justify us in classifying dementia praecox among the

organic diseases. I admit, however, that the inmates of a mental hospital present such a degenerative picture that one can quite understand why the term “dementia praecox” was invented. The general aspect of a ward of the incurably insane supports the materialistic bias of the psychiatrist. His clientele includes some of the worst cases imaginable. It is therefore natural that traits of degeneration and destruction make the most impression on him. It is the same with hysteria; only the worst hysterics are confined to asylums, and so psychiatrists see only the most hopeless and degenerate forms of the disease. Naturally such a selection must lead to a prejudiced view. If you read the description of hysteria in a text-book of psychiatry and compare it with real hysteria as it presents itself in the consulting-room of the general practitioner, you will have to acknowledge a considerable difference. The psychiatrist sees only a minimum of hysterics and a selection of only the worst cases. But beside these there are numberless mild cases which never come near a hospital, and these are the cases of genuine hysteria. It is the same with dementia praecox. There are mild forms of this disease far outnumbering the worst cases which alone reach the hospital. The mild forms are never confined. They come under diagnoses as vague and mistaken as “neurasthenia” or “psychasthenia.” As a rule the general practitioner never realizes that his neurasthenic is nothing but a mild case of that dreadful disease called dementia praecox with its almost hopeless prognosis. In the same way he would never consider his hysterical niece to be the liar and impostor and morally unreliable character of the text-books. Bad cases of hysteria give a bad repute to the whole class, hence the public does not mind confessing to nervousness, but will not confess to hysteria.

[472] As regards the apparently destructive and degenerative traits of dementia praecox, I must call special attention to the fact that the worst catatonic states and the most complete dementias are in many cases products of the lunatic asylum, brought on by the psychological influence of the milieu, and by no means always by a destructive process independent of external conditions. It is a well-known fact that the very worst demented catatonics are to be encountered in badly administered and overcrowded asylums. It is well known also that removal to noisy or otherwise unfavourable wards often has an unwholesome influence; the

same applies to coercive measures or forced inactivity. All the conditions which would reduce a normal person to a state of psychic misery will have an equally baleful effect on a patient. Bearing this fact in mind, modern psychiatry tries to avoid the character of a prison and to give the asylum the aspect of a hospital. The wards are made as homelike as possible, the physicians deprecate coercion, and as much personal freedom is granted to the patient as possible. Flowers at the curtained windows make a good impression not only on the normal but also on the sick. It is a fact that nowadays we seldom or never see the sad picture of demented, dirty, insane persons sitting in rows along the asylum walls. And why is this so? Because we realize that these patients react to their surroundings just as much as the normal do. Senile dementia, general paralysis, and epileptic insanity run their course whether the patients are confined with similar cases or not. But cases of dementia praecox not infrequently improve or become worse in response to psychological conditions, in a way that is sometimes astonishing. Every psychiatrist knows such cases; they prove the great importance of the psychological factor. They clearly demonstrate that dementia praecox must not be regarded one-sidedly as an organic disease. Such ameliorations and relapses could not occur if dementia praecox were only organic.

[473] I must also mention those frequent cases in which the onset of the disease, or a new outbreak of it, takes place under special emotional conditions. I remember a case of my own in which a man, aged about 35, was twice seized with a catatonic attack when he came into the town where he had lived as a student. He had an unforgettable love-affair there, which came to an unhappy end. He avoided returning to that town for several years, but as he had relatives there, he could finally no longer refrain from visiting them. In the course of six years he went there twice, and each time almost immediately fell ill on account of a fatal reactivation of his memories. Both times catatonic excitement occurred, and he had to be confined to an asylum. Except for those periods of confinement he was successful in his work, and apart from leading a somewhat solitary existence he did not show any noticeable signs of mental derangement.

[474] It is quite common for a renewed attack to occur when an engagement, marriage, or any similar emotional event is imminent. The outbreak and development of the disease are often determined by psychological motives. I remember the case of a woman who broke down after a quarrel with another woman. The patient's temperament had always been irritable and choleric. In this particular quarrel she became violent towards her opponent, who in return called her "mad." This reproach roused the patient still more, and she said, "If you call me mad, you shall see what it means to be mad!" With these words she fell into a state of frenzy. As it caused a scandal in the street the police intervened and took her to the hospital. There she soon calmed down, only insisting somewhat too energetically upon her immediate discharge. It did not seem advisable, however, to allow her to return after only a few hours, because she was still excited. We sent her from the consultation-room to the observation-ward. There she would not obey the nurses, and tried to open the door by violence. She feared she would be kept permanently in the hospital. Her excitement became so troublesome that she had to be placed in another ward. As soon as she became aware of the character of the patients there, she began to cry out that we had locked her up with crazy people in order to drive her mad. And again she said, "If you want me to be mad, you shall see what madness means." Immediately afterwards she fell into a catatonic dream-state, with wild delusions and fits of rage, which lasted uninterruptedly for about two months.

[475] In my view her catatonia was nothing but pathologically exaggerated emotion, brought on by being confined in a lunatic asylum. During the acute stage of her illness she behaved just as the general public thinks a mad person would behave. It was a perfect demonstration of "madness" in every particular. It was certainly not hysteria, because there was a complete lack of emotional rapport.

[476] It is most unlikely that there was a primary brain-disturbance of an organic nature, and that the mental disorder, the violent emotions, and the subsequent delusions and hallucinations were secondary. Rather is it an instinctive reaction against being deprived of freedom. Wild animals often show similarly violent reactions when they are caged. In spite of the manifest psychogenic causation, the case was typically catatonic,

with excitement, delusions, and hallucinations, and could not be distinguished from a case due to other than psychological causes. The patient had never had such an attack before. She had always been irritable, but her excitement always had a definite cause, and each time quickly subsided. The only really catatonic attack was the one in the hospital.

[477] I remember another case of a similar kind. The patient was a young school-teacher, who began to be lazy, dreamy, and unreliable. Apart from that he showed certain peculiarities in his behaviour. He was confined to an asylum for observation. At first he was quiet and accessible, and believed he would be discharged, as he was convinced of his normality. He was placed in a quiet ward. But when we told him that he would have to be kept under observation for some weeks, he became angry, and said to the doctor, “If you want to keep me here as insane, I will show you what it means to be mad.” He immediately became very excited, and within a few days was completely confused, and had many delusions and hallucinations. This state lasted for some weeks.

[478] The following case emphasizes my point: A young man had been in the asylum for almost two months. He had been certified as morally insane. This diagnosis was based on the fact that he had been proved to be a cheat and a liar. He refused to work, and was excessively lazy. It did not appear to us as if he were merely morally defective. The possibility of dementia praecox occurred to us. There were no specific symptoms, however, except great moral indifference. His behaviour was disagreeably irritating, he was scheming, and at times rough and violent. He was out of place in the quiet ward. In spite of his troublesome conduct I tried to keep him there, although many complaints were received from nurses and patients. Once, during my absence from the hospital, my substitute put him into the ward for excited patients. There he at once became so excited that he had to be narcotized. He then began to be afraid of being murdered or poisoned, and had hallucinations. Obviously the outbreak of manifest psychosis was due to external conditions which had an unfavourable influence on his mental state. It would be an unsatisfactory explanation to attribute the psychosis to sudden aggravation of a pre-existing brain-disease. The exact opposite, namely

marked improvement in a chronic state as a result of improved external conditions, is a fairly common occurrence.

[479] If dementia praecox were due essentially to a process of organic destruction, patients would behave like those showing actual changes in the brain. A patient suffering from general paralysis does not improve or become worse as the result of a change in his psychological condition, nor are such cases noticeably worse in poorly run asylums, but cases of dementia praecox are distinctly worse when the external circumstances are unfavourable.

[480] Since it is evident that the psychological factor plays a decisive role in the course of the dementia praecox, it is not unlikely that the first attack would be due to a psychological cause. It is known that many cases originate in a psychologically critical period or following a shock or a violent moral conflict. The psychiatrist is inclined to regard such conditions rather as precipitating causes or auxiliary factors which bring a latent organic disease to the surface. He thinks that if psychic experiences were really efficient causes they should exercise a pathological effect in everybody. As this is obviously not the case, the psychic causes therefore have the significance only of auxiliary factors. This reasoning is undoubtedly one-sided and materialistically prejudiced. Modern medicine no longer speaks of *one* cause, and one only, of a disease. Tuberculosis is no longer held to be caused only by the specific bacillus, it owes its existence to a number of contributory causes. The modern aetiological conception is no longer causalism but *conditionalism*. Undoubtedly a psychological cause hardly ever produces insanity unless it is supported by some specific predisposition. On the other hand a marked predisposition may exist, but a psychosis will not break out so long as serious conflicts and emotional shocks are avoided. It can be stated, however, almost with certainty that the psychological predisposition leads to a conflict, and thus by way of a vicious circle to psychosis. Such cases, looked at from an external standpoint, might appear to be determined by a degenerative predisposition of the brain. In my view most cases of dementia praecox are driven by their congenital predisposition into psychological conflicts, but these conflicts are not essentially pathological, they are common human experiences. Since the

predisposition consists in an abnormal sensitiveness, the conflicts differ from normal conflicts only in emotional intensity. Because of their intensity they are out of all proportion to the other mental faculties of the individual. They cannot, therefore, be dealt with in the ordinary way, by means of distraction, reason, and self-control. It is only the impossibility of getting rid of an overpowering conflict that leads to insanity. Only when the individual realizes that he cannot help himself in his difficulties, and that nobody else will help him, is he seized by panic, which arouses in him a chaos of emotions and strange thoughts. This experience belongs to the stage of incubation and seldom comes before the psychiatrist, since it occurs a long time before anybody thinks of consulting a doctor. If the psychiatrist succeeds in finding a solution to the conflict the patient can be saved from a psychosis.

[481] It may be objected that it is impossible to prove that this was the initial stage of a psychosis, and that there is no evidence that a psychosis would have arisen if the conflict had not been solved. Certainly I cannot supply any convincing proof to the contrary. If a case of indubitable dementia praecox could be brought back to normal adaptation and a definite estimate made of the effect of the therapeutic measures, it might be considered satisfactory evidence; but even such evidence could easily be invalidated by the objection that the apparent cure was only an accidental remission of symptoms. It is almost impossible to produce satisfactory evidence, in spite of the fact that not a few specialists believe in the possible prevention of psychoses.

[482] It is still perhaps too early to speak of a psychotherapy of psychoses. I am not altogether optimistic in this respect. For the time being I would stress the importance of examining the role and significance of the psychological factor in the aetiology and course of psychoses. Most of the psychoses I have explored are of an exceedingly complicated nature, so that I could not describe them in the narrow space of a lecture. But comparatively simple cases are sometimes met with, the origin of which can be demonstrated. I remember, for instance, the case of a young girl, a peasant’s daughter, who suddenly fell ill with dementia praecox. Her doctor, a general practitioner, told me that she was always very quiet and retiring. Her symptoms came on suddenly and unexpectedly, and nobody

had suspected her of being mentally abnormal. One night she suddenly heard the voice of God speaking to her, about war and peace and the sins of man. She had, she said, a long talk with God. The same night, Jesus also appeared to her. When I saw her, she was perfectly calm, but absolutely without interest in her surroundings. She stood erect all day long near the stove, rocking to and fro, not talking to anybody except when questioned. Her answers were short and clear, but without feeling. She greeted me without the slightest emotional reaction, as if she saw me daily. Though unprepared for my coming she did not seem in the least astonished or curious to know who I was or what was the purpose of my visit. I asked her to tell me of her experiences. In her taciturn and unemotional way she remarked she had had long talks with God. Apparently she had forgotten the subject of her talks. Christ looked quite like an ordinary man with blue eyes. He also talked with her, but she did not remember what he said. I told her it would be a regrettable loss if those talks should be entirely forgotten. She should have taken note of them. She said that she had taken note of them, and gave me the sheet of a calendar. But there was only a cross on it, which she had marked on the date when she heard the voice of God for the first time. Her answers were curt, evasive and indirect, and completely devoid of feeling. Her whole attitude was absolutely indifferent. She was intelligent, a trained teacher, but she betrayed not a trace of either intellectual or emotional reaction. We might have been speaking of her stove rather than of a most unusual phenomenon.

[483] It was impossible to get a coherent story from her. I had to draw her out bit by bit, not against any active resistance, as in hysteria, but against a complete lack of interest. It was a matter of complete indifference to her whether she was questioned or not, or whether her answers were satisfactory or not. She had obviously no emotional rapport with her surroundings. Her indifference was such that it produced the impression that there was nothing in her that it was worth while to ask for. When I asked whether she was troubled about some religious experience, she calmly said that she was not. Nothing was troubling her, there were no conflicts, neither with her relatives nor with other people. I questioned her mother. She could only tell me that the evening before the outbreak

the patient went with her sister to a religious meeting. On coming home she seemed excited, and spoke of having experienced a complete conversion. Her doctor, deeply interested in her case, had already tried to get more out of her, because his common sense could not believe that such a disturbance could arise out of nothing. But he was confronted by her unfeigned indifference, and was forced to believe that there really was nothing below the surface. Her relatives could say nothing more than that she had always been rather over-quiet, retiring, and shy from her sixteenth year. In childhood she was healthy, merry, and not in the least abnormal. There was no pathological heredity in the family. The aetiology was quite impenetrable.

[484] She told me she did not actually hear the voice of God any longer, but that she was almost entirely sleepless, because her thoughts went on working uninterruptedly. She seemed quite unable to tell me what she thought about, apparently because she did not know. She alluded to a constant movement in her head, and to the presence of electric currents in her body. But she was not sure where they came from; presumably they came from God.

[485] There will probably be no disagreement about the diagnosis of dementia praecox. Hysteria is excluded; there were no specifically hysterical symptoms, and moreover the main criterion of hysteria—an emotional rapport—was absolutely lacking.

[486] While I was trying to get at the aetiology, the following conversation took place:

Before you heard the voice of God, did you experience a religious conversion? — *Yes*.

If you were converted, you must have been sinful before? — *Yes*.

How did you sin? — *I don’t know*.

But—I do not understand. Surely you must know what your sin was? — *Yes, I did wrong*.

What did you do? — *I saw a man*.

Where? — *In the town*.

But do you believe it a sin to see a man? — *No*.

Who was this man? — *Mr. M.*

What did you feel when you saw Mr. M.? — *I loved him.*

Do you still love him? — *No.*

Why not? – *I don't know.*

[487] I will not weary you with a verbatim report of my attempts to catch hold of what was behind the screen. It took me about two hours. The patient was unremittingly taciturn and indifferent, so that I had to exert all my energy in order to continue our talk. All the time I was under the impression that the examination was completely hopeless, and I almost felt my questions were superfluous. I lay particular stress upon the patient's attitude for it is just this attitude that makes a psychological examination so exhausting and, very often, so unfruitful. But it is an attitude only, and not a real lack of psychic contents. It is an attitude of self-defence, a mechanism for warding off the overwhelming emotions of the hidden conflict.

[488] Only the fact that the case appeared simple gave me the courage and patience to continue questioning. In more complicated cases, where we are concerned less with realities than with fantasies, questioning becomes more difficult and sometimes impossible, particularly when the patient refuses to answer. As can readily be understood, doctors in a mental hospital cannot as a rule devote so much time to their patients. The exploration of a psychosis demands almost limitless time, so it is no wonder that the psychogenic connections are overlooked. I assure you that if the patient had been admitted to a clinic you would not have found more in her anamnesis than I have already told you.

[489] The result of my examination was as follows. Several weeks before the outbreak of the illness the patient was in town with a friend. There she became acquainted with Mr. M. When she fell in love with him she was frightened by the extraordinary intensity of her feelings. She thereupon became taciturn and shy. She did not tell her friend of her feeling of fear. She hoped Mr. M. would return her love. Seeing no sign of this, she almost immediately afterwards left the town and returned home. She felt as if she had committed a great sin because of the intensity of her feelings, although, as she said, she had never been

particularly religious before. The feeling of guilt kept on worrying her. A few weeks later her friend came to visit her. As this friend was very religious she consented to go with her to a religious meeting. She was deeply moved and professed conversion. She felt great relief, because the feeling of guilt disappeared, and at the same time she found her love for Mr. M. had completely vanished. I wondered why she thought her feeling of love was sinful, and I asked her why it appeared so to her. She replied that owing to her conversion she had realized that such a feeling for a man was a sin against God. I reminded her that this attitude could not be natural, whereupon she confessed that she had always been shy about such feelings. She dated that shyness from a sin she had committed in her sixteenth year. At that time, whilst walking with a girl friend of the same age, they met an elderly imbecile woman whom they provoked to obscene behaviour. This fact became known to her parents and to the school-teacher, and both punished her severely. Only afterwards did she realize the wickedness of her behaviour. She was much ashamed, and solemnly promised herself to lead a pure and irreproachable life henceforth. From that time on she became retiring, not liking to go out of the house, fearing that the neighbours would know of her fault. It became her custom to stay at home and avoid all worldly amusements.

[490] The patient had, as one might expect, been morally a good child—but as often happens with sensitive characters, she remained a child too long. It was because of her childish irresponsibility that she could commit such an inadmissible deed as late as her sixteenth year. Her subsequent insight led to profound remorse. The experience threw a shadow on the feeling of love itself, and she therefore felt disagreeably affected by everything remotely pertaining to this episode. For this reason her sudden love for Mr. M. felt like guilt. By her immediate departure she prevented the development of any further relationship and at the same time cut off all hope.

[491] Her tendency to transfer her hopes to the sphere of religion and to seek consolation there has nothing unusual about it. The unexpected and complete conversion was perhaps exceptional, though similar conversions, where there is no reason to think of a psychosis, often occur at revival meetings. The pathogenic impressions were not essentially

morbid, they were only particularly intense. The friend who took part in the same affair was admonished and punished like herself, yet she did not become a prey to profound regret and everlasting remorse, whereas the result of the patient’s regret was that she cut herself off from intercourse with other people. This caused her to bottle up her desire for human relations to such an extent that when she met Mr. M. she was simply overwhelmed by the intensity of her feelings. Not meeting with an immediately satisfactory response she was deeply disappointed and departed precipitately. Thus she got into still worse trouble, and her solitary life at home became quite intolerable. Again her desire for human companionship was bottled up, and about this time she attended the religious meeting. The impression it made upon her turned her completely away from her former hopes and expectations. She even got rid of her love. By this device she was saved indeed from her former worries, but her natural desire to share the ordinary life of a woman of her class was abolished with them. Now that her hopes were turned away from the world, her “fonction du réel” created a world within herself. When people lose their hold on the concrete values of life the unconscious contents become overwhelmingly real. Considered from the psychological standpoint, psychosis is a mental condition in which formerly unconscious elements take the place of reality.

[492] It depends, of course, upon the patient’s predisposition whether a conversion of this kind will lead to hysteria or to dementia praecox. If the patient can maintain his emotional rapport by dissociating himself into two personalities, one religious and apparently transcendental, the other perhaps all too human, he will become hysterical. If on the other hand he cuts off his emotional rapport with human beings entirely, so that they make no impression on him at all, he will become schizophrenic. In our case there was a striking lack of emotional rapport, and accordingly there was no trace of hysteria.

[493] In these circumstances, can one speak of an organic process at all? I believe it to be completely out of the question. The critical experience occurred when the patient was sixteen, at which time there was not the slightest trace of an organic lesion. There is no evidence whatever in favour of such an hypothesis, nor is there any reason to explain the

traumatic experience with Mr. M. as organically determined, otherwise all cases of this kind would have to be explained in the same way. If we had to admit cellular destruction, it would certainly have begun after the shock of religious conversion, in which case the organic changes would be secondary. More than ten years ago I claimed that a great many cases of dementia praecox were psychogenic in origin,[2] the toxic or destructive processes being secondary only. But I do not deny that there may be cases in which the organic processes are primary and the disturbances of the psychic functions secondary.

[494] It is worth noting that immediately after the consultation the patient's mental state improved considerably. I have repeatedly observed very striking reactions after such an examination, either a marked improvement or, conversely, an exacerbation of the symptoms. This is strictly in keeping with the important role played by the psychic factor.

[495] I am well aware that I have not given a full account of the problem of psychogenesis, but the point I wish to make is that the psychiatrist has here a wide field for psychological research which has not yet been explored.

MENTAL DISEASE AND THE PSYCHE[1]

[496] The predominantly materialistic views that were popular at the end of the nineteenth century have left their mark, as everywhere, on medical theory and particularly on psychiatric theory. That epoch, terminating with the World War, put its faith in the axiom: Mental diseases are diseases of the brain. What is more, one could with impunity attribute even the neuroses to metabolic toxins or to disturbances of the internal secretions. This chemical materialism or, as we may call it, "brain-mythology," came to grief more quickly in the domain of neurosis than it did in psychiatry. It was, above all, the experiences of the French psychopathologists (Janet and the Nancy school) that, with the support of Forel in Switzerland and Freud in Austria, did away with the idea of the organic basis of neurosis, at least in theory. Today nobody doubts that the neuroses are *psychogenic*. "Psychogenesis" means that the essential cause of a neurosis, or the condition under which it arises, is of a psychic nature. It may, for instance, be a psychic shock, a gruelling conflict, a wrong kind of psychic adaptation, a fatal illusion, and so on.

[497] Clear and indubitable as the psychic causation of the neuroses may seem today, the question of psychogenesis in other mental diseases remains obscure and doubtful. Quite apart from the fact that whole groups of mental diseases, such as senile deterioration and progressive paralysis, are merely symptoms of an organic destruction of the brain, there are other groups of mental diseases, such as epileptic and schizophrenic disturbances, which also yield findings relating to the brain. This organic complication is not met with in the neuroses, or only in exceptional cases, such as the spurious neuroses caused by "diaschisis" (Monakow: indirect failure of function). The schizophrenias are the real mental diseases; that is, they supply the main population of our mental hospitals. Nearly every case which the general public rightly regards as "mad" belongs to this class. (The term "schizophrenia" was coined by Bleuler and means "split mind." It replaces Kraepelin's earlier term, "dementia praecox.") If, therefore, we wish to speak of psychogenesis in mental disease, our primary concern must be schizophrenia.

[498] In 1907 I came before the scientific public with a book on the psychology of dementia praecox. By and large, I adopted a standpoint affirming the psychogenesis of schizophrenia, and emphasized that the symptoms (delusions and hallucinations) are not just meaningless chance happenings but, as regards their content, are in every respect significant psychic products. This means that schizophrenia has a “psychology,” i.e., a psychic causality and finality, just as normal mental life has, though with this important difference: whereas in the healthy person the ego is the subject of his experience, in the schizophrenic the ego is only *one* of the experiencing subjects. In other words, in schizophrenia the normal subject has split into a plurality of subjects, or into a plurality of *autonomous complexes*.

[499] The simplest form of schizophrenia, of the splitting of the personality, is paranoia, the classic persecution-mania of the “persécuteur persécuté.” It consists in a simple doubling of the personality, which in milder cases is still held together by the identity of the two egos. The patient strikes us at first as completely normal; he may hold office, be in a lucrative position, we suspect nothing. We converse normally with him, and at some point we let fall the word “Freemason.” Suddenly the jovial face before us changes, a piercing look full of abysmal mistrust and inhuman fanaticism meets us from his eye. He has become a hunted, dangerous animal, surrounded by invisible enemies: the other ego has risen to the surface.

[500] What has happened? Obviously at some time or other the idea of being a persecuted victim gained the upper hand, became autonomous, and formed a second subject which at times completely replaces the healthy ego. It is characteristic that neither of the two subjects can fully experience the other, although the two personalities are not separated by a belt of unconsciousness as they are in an hysterical dissociation of the personality. They know each other intimately, but they have no valid arguments against one another. The healthy ego cannot counter the affectivity of the other, for at least half its affectivity has gone over into its opposite number. It is, so to speak, paralysed. This is the beginning of that schizophrenic “apathy” which can best be observed in paranoid dementia. The patient can assure you with the greatest indifference: “I am

the triple owner of the world, the finest Turkey, the Lorelei, Germania and Helvetia of exclusively sweet butter and Naples and I must supply the whole world with macaroni.” [2] All this without a blush, and with no flicker of a smile. Here there are countless subjects and no central ego to experience anything and react emotionally.

[501] Turning back to our case of paranoia, we must ask: Is it psychologically meaningless that the idea of persecution has taken possession of him and usurped a part of his personality? Is it, in other words, simply a product of some chance organic disturbance of the brain? If that were so, the delusion would be “unpsychological”; it would lack psychological causality and finality, and would not be psychogenic. But should it be found that the pathological idea did not appear just by chance, that it appeared at a particular psychological moment, then we would have to speak of psychogenesis, even if we assumed that there had always been a predisposing factor in the brain which was partly responsible for the disease. The psychological moment must certainly be something out of the ordinary; it must have something about it that would adequately explain why it had such a profound and dangerous effect. If someone is frightened by a mouse and then falls ill with schizophrenia, this is obviously not a psychic causation, which is always intricate and subtle. Thus our paranoiac fell ill long before anyone suspected his illness; and secondly, the pathological idea overwhelmed him at a psychological moment. This happened when his congenitally hypersensitive emotional life became warped, and the spiritual form which his emotions needed in order to live finally broke down. It did not break by itself, it was broken by the patient. It came about in the following way.

[502] When still a sensitive youth, but already equipped with a powerful intellect, he developed a passionate love for his sister-in-law, until finally —and not unnaturally—it displeased her husband, his elder brother. His were boyish feelings, woven mostly out of moonshine, seeking the mother, like all psychic impulses that are immature. But these feelings really do need a mother, they need prolonged incubation in order to grow strong and to withstand the unavoidable clash with reality. In themselves there is nothing reprehensible about them, but to the simple,

straightforward mind they arouse suspicion. The harsh interpretation which his brother put upon them had a devastating effect, because the patient's own mind admitted that it was right. His dream was destroyed, but this in itself would not have been harmful had it not also killed his feelings. For his intellect then took over the role of the brother and, with inquisitorial sternness, destroyed every trace of feeling, holding before him the ideal of cold-blooded heartlessness. A less passionate nature can put up with this for a time, but a highly-strung, sensitive nature in need of affection will be broken. Gradually it seemed to him that he had attained his ideal, when suddenly he discovered that waiters and suchlike people took a curious interest in him, smiling at one another understandingly, and one day he made the startling discovery that they took him for a homosexual. The paranoid idea had now become autonomous. It is easy to see the deeper connection between the pitilessness of his intellect, which cold-bloodedly destroyed every feeling, and his unshakable paranoid conviction. That is psychic causality, psychogenesis.

[503] In some such way—naturally with endless variations—not only does paranoia arise, but also the paranoid form of schizophrenia characterized by delusions and hallucinations, and indeed all other forms of schizophrenia. (I would not class among the group of schizophrenias those schizophrenic syndromes, such as catatonias with a rapidly lethal outcome, which seem from the beginning to have an organic basis.) The microscopic lesions of the brain often found in schizophrenia I would, for the time being, regard as secondary symptoms of degeneration, like the atrophy of the muscles in hysterical paralyses. The psychogenesis of schizophrenia would explain why certain milder cases, which do not get as far as the mental hospital but only appear in the neurologist's consulting-room, can be cured by psychotherapeutic means. With regard to the possibility of cure, however, one should not be too optimistic. Such cases are rare. The very nature of the disease, involving as it does the disintegration of the personality, rules out the possibility of psychic influence, which is the essential agent in therapy. Schizophrenia shares this peculiarity with obsessional neurosis, its nearest relative in the realm of the neuroses.

IV

ON THE PSYCHOGENESIS OF SCHIZOPHRENIA

RECENT THOUGHTS ON SCHIZOPHRENIA

SCHIZOPHRENIA

ON THE PSYCHOGENESIS OF SCHIZOPHRENIA[1]

[504] It is just twenty years since I read a paper on “The Problem of Psychogenesis in Mental Disease”[2] before this Society. William McDougall, whose recent death we all deplore, was in the chair. What I said then about psychogenesis could safely be repeated today, for it has left no visible traces, or other noticeable consequences, either in text-books or in clinics. Although I hate to repeat myself, it is almost impossible to say anything wholly new and different about a subject which has not changed its face in the many years that have gone by. My experience has increased and some of my views have matured, but I could not say that my standpoint has had to undergo any radical change. I am therefore in the somewhat uncomfortable situation of one who believes that he has a well-founded conviction, and yet on the other hand is afraid to indulge in the habit of repeating old stories. Psychogenesis has long been discussed, but it is still a modern, even an ultra-modern, problem.

[505] There is little doubt nowadays about the psychogenesis of hysteria and other neuroses, although thirty years ago some brain enthusiasts still vaguely suspected that at bottom “there was something organically wrong in the neuroses.” Nevertheless the *consensus doctorum* in their vast majority has admitted the psychic causation of hysteria and similar neuroses. Concerning the mental diseases, however, and especially concerning schizophrenia, they agreed unanimously upon an essentially organic aetiology, although for a long time specific destruction of the brain-cells could not be proved. Even today the question of how far schizophrenia itself can destroy the brain-cells has not been satisfactorily answered, much less the more specific question of how far primary organic disintegrations account for the symptomatology of schizophrenia. I fully agree with Bleuler that the great majority of symptoms are of a secondary nature and are due chiefly to psychic causes. For the primary symptoms, however, Bleuler assumes the existence of an organic cause. As *the* primary symptom he points to a peculiar disturbance of the association-process. According to his description, some kind of

disintegration is involved, inasmuch as the associations seem to be peculiarly mutilated and disjointed. He refuses to accept Wernicke’s concept of “sejunction” because of its anatomical implications. He prefers the term “schizophrenia,” obviously understanding by this a *functional* disturbance. Such disturbances, or at least very similar ones, can be observed in delirious states of various kinds. Bleuler himself points out the remarkable similarity between schizophrenic associations and the association-phenomena in dreams and half-waking states. From his description it is sufficiently clear that the primary symptom coincides with the condition which Pierre Janet termed *abaissement du niveau mental*. It is caused by a peculiar *faiblesse de la volonté*. If the main guiding and controlling force of our mental life is will-power, then we can agree that Janet’s concept of *abaissement* explains a psychic condition in which a train of thought is not carried through to its logical conclusion, or is interrupted by strange contents that are insufficiently inhibited. Though Bleuler does not mention Janet, I think that Janet’s *abaissement* aptly formulates Bleuler’s views on the primary symptoms.

[506] It is true that Janet uses his hypothesis chiefly to explain the symptomatology of hysteria and other neuroses, which are indubitably psychogenic and quite different from schizophrenia. Yet there are certain noteworthy analogies between the neurotic and the schizophrenic mental condition. If you study the association tests of neurotics, you will find that their normal associations are disturbed by the spontaneous intervention of complex contents typical of an *abaissement*. The dissociation can even go so far as to create one or more secondary personalities, each, apparently, with a separate consciousness of its own. But the fundamental difference between neurosis and schizophrenia lies in the maintenance of the potential unity of the personality. Despite the fact that consciousness can be split up into several personal consciousnesses, the unity of all the dissociated fragments is not only visible to the professional eye but can be re-established by means of hypnosis. This is not the case with schizophrenia. The general picture of an association test of a schizophrenic may be very similar to that of a neurotic, but closer examination shows that in a schizophrenic patient the connection between the ego and some of the complexes is more or less

completely lost. The split is not relative, it is absolute. An hysterical patient might suffer from a persecution-mania very similar to real paranoia, but the difference is that in the former case one can bring the delusion back under the control of consciousness, whereas it is virtually impossible to do this in paranoia. A neurosis, it is true, is characterized by the relative autonomy of its complexes, but in schizophrenia the complexes have become disconnected and autonomous fragments, which either do not reintegrate back to the psychic totality, or, in the case of a remission, are unexpectedly joined together again as if nothing had happened.

[507] The dissociation in schizophrenia is not only far more serious, but very often it is irreversible. The dissociation is no longer fluid and changeable as it is in a neurosis, it is more like a mirror broken up into splinters. The unity of personality which, in a case of hysteria, lends a humanly understandable character to its own secondary personalities is definitely shattered into fragments. In hysterical multiple personality there is a fairly smooth, even tactful, co-operation between the different persons, who keep to their respective roles and, if possible, do not bother each other. One feels the presence of an invisible *spiritus rector* a central manager who arranges the stage for the different figures in an almost rational way, often in the form of a more or less sentimental drama. Each figure has a suggestive name and an admissible character, and they are just as nicely hysterical and just as sentimentally biased as the patient’s own consciousness.

[508] The picture of a personality dissociation in schizophrenia is quite different. The split-off figures assume banal, grotesque, or highly exaggerated names and characters, and are often objectionable in many other ways. They do not, moreover, co-operate with the patient’s consciousness. They are not tactful and they have no respect for sentimental values. On the contrary, they break in and make a disturbance at any time, they torment the ego in a hundred ways; all are objectionable and shocking, either in their noisy and impertinent behaviour or in their grotesque cruelty and obscenity. There is an apparent chaos of incoherent visions, voices, and characters, all of an overwhelmingly strange and incomprehensible nature. If there is a drama at all, it is certainly far

beyond the patient's understanding. In most cases it transcends even the physician's comprehension, so much so that he is inclined to suspect the mental sanity of anybody who sees more than plain madness in the ravings of a lunatic.

[509] The autonomous figures have broken away from the control of the ego so thoroughly that their original participation in the patient's mental make-up has vanished. The *abaissement* has reached a degree unheard of in the sphere of neurosis. An hysterical dissociation is bridged over by a unity of personality which still functions, whereas in schizophrenia the very foundations of the personality are impaired.

[510] The *abaissement*

(1) Causes the loss of whole regions of normally controlled contents.

(2) Produces split-off fragments of the personality.

(3) Hinders normal trains of thought from being consistently carried through and completed.

(4) Decreases the responsibility and the adequate reaction of the ego.

(5) Causes incomplete realizations and thus gives rise to insufficient and inadequate emotional reactions.

(6) Lowers the threshold of consciousness, thereby allowing normally inhibited contents of the unconscious to enter consciousness in the form of autonomous invasions.

[511] We find all these effects of *abaissement* in neurosis as well as in schizophrenia. But in neurosis the unity of personality is at least potentially preserved, whereas in schizophrenia it is almost irreparably damaged. Because of this fundamental injury the cleavage between dissociated psychic elements amounts to a real destruction of their former connections.

[512] The psychogenesis of schizophrenia therefore prompts us to ask, first of all: Can the primary symptom, the extreme *abaissement,* be considered an effect of psychological conflicts and other disorders of an emotional nature, or not? I do not think it necessary to discuss in detail whether or not the *secondary symptoms,* as described by Bleuler, owe their existence and their specific form to psychological determination. Bleuler himself is

fully convinced that their form and content, i.e., their individual phenomenology, are derived entirely from emotional complexes. I agree with Bleuler, whose experience of the psychogenesis of secondary symptoms coincides with my own, for we were collaborating in the years which preceded his famous book on dementia praecox. As a matter of fact, I began as early as 1903 to analyse cases of schizophrenia for therapeutic purposes. There can, indeed, be no doubt about the psychological determination of secondary symptoms. Their structure and origin are in no way different from those of neurotic symptoms, with, of course, the important exception that they exhibit all the characteristics of mental contents no longer subordinated to the supreme control of a complete personality. There is, as a matter of fact, hardly one secondary symptom which does not show some signs of a typical *abaissement*. This characteristic, however, does not depend upon psychogenesis but derives entirely from the primary symptom. Psychological causes, in other words, produce secondary symptoms exclusively on the basis of the primary condition.

[513] In dealing with the question of psychogenesis in schizophrenia, therefore, we can dismiss the secondary symptoms altogether. There is only one problem, and that is the psychogenesis of the primary condition, i.e., the extreme *abaissement*, which is, from the psychological point of view, the root of the schizophrenic disorder. We therefore ask: Is there any reason to believe that the *abaissement* can be due to causes which are strictly psychological? An *abaissement* can be due to causes which are strictly psychological? An *abaissement* can be produced—as we well know—by many causes: by fatigue, normal sleep, intoxication, fever, anaemia, intense affects, shocks, organic diseases of the central nervous system; likewise it can be induced by mass-psychology or a primitive mentality, or by religious and political fanaticism, etc. It can also be caused by constitutional and hereditary factors.

[514] The more common form of *abaissement* does not affect the unity of the personality, at least not seriously. Thus all dissociations and other psychic phenomena derived from this general form of *abaissement* bear the stamp of the integral personality.

[515] Neuroses are specific consequences of an *abaissement;* as a rule they arise from a habitual or chronic form of it. Where they appear to be the effect of an acute form, a more or less latent psychological disposition always existed prior to the *abaissement*, so that the latter is no more than a conditional cause.

[516] Now there is no doubt that an *abaissement* which leads to a neurosis is produced either by exclusively psychological factors or by these in conjunction with other, perhaps more physical, conditions. Any *abaissement*, particularly one that leads to a neurosis, means in itself that there is a weakening of the supreme control. A neurosis is a relative dissociation, a conflict between the ego and a resistant force based upon unconscious contents. These contents have more or less lost their connection with the psychic totality. They form themselves into fragments, and the loss of them means a depotentiation of the conscious personality. The intense conflict, on the other hand, expresses an equally intense desire to re-establish the severed connection. There is no co-operation, but at least there is a violent conflict, which functions instead of a positive connection. Every neurotic fights for the maintenance and supremacy of his ego-consciousness and for the subjugation of the resistant unconscious forces. But a patient who allows himself to be swayed by the intrusion of strange contents from the unconscious, a patient who does not fight, who even identifies with the morbid elements, immediately exposes himself to the suspicion of schizophrenia. His *abaissement* has reached the fatal, extreme degree, when the ego loses all power to resist the onslaught of an apparently more powerful unconscious.

[517] Neurosis lies on this side of the critical point, schizophrenia on the other. We do not doubt that psychological motives can bring about an *abaissement* which eventually results in a neurosis. A neurosis approaches the danger line, yet somehow it manages to remain on the hither side. If it should transgress the line it would cease to be a neurosis. Yet are we quite certain that a neurosis never steps beyond the danger-line? You know that there are such cases, neuroses to all appearances for many years, and then it suddenly happens that the patient steps beyond the line and clearly transforms himself into a real psychotic.

[518] Now, what do we say in such a case? We say that it has always been a psychosis, a “latent” one, or one concealed or camouflaged by an ostensible neurosis. But what has really happened? For many years the patient fought for the maintenance of his ego, for the supremacy of his control and for the unity of his personality. But at last he gave in—he succumbed to the invader he could no longer suppress. He is not just overcome by a violent emotion, he is actually drowned in a flood of insurmountably strong forces and thought-forms which go far beyond any ordinary emotion, no matter how violent. These unconscious forces and contents have long existed in him and he has wrestled with them successfully for years. As a matter of tact, these strange contents are not confined to the patient alone, they exist in the unconscious of normal people as well, who, however, are fortunate enough to be profoundly ignorant of them. These forces did not originate in our patient out of nowhere. They are most emphatically not the result of poisoned brain-cells, but are normal constituents of our unconscious psyche. They appeared in numberless dreams, in the same or a similar form, at a time of life when seemingly nothing was wrong. And they appear in the dreams of normal people who never get anywhere near a psychosis. But if a normal individual should suddenly undergo a dangerous *abaissement*, his dreams would instantly seize hold of him and make him think, feel, and act exactly like a lunatic. And he would be a lunatic, like the man in one of Andreyev’s stories, who thought he could safely bark at the moon because he knew that he was perfectly normal. But when he barked he lost consciousness of the little bit of difference between normal and crazy, so that the other side overwhelmed him and he became mad.

[519] What happened was that our patient succumbed to an attack of weakness—in reality it is often just a sudden panic—it made him hopeless or desperate, and then all the suppressed material welled up and drowned him.

[520] In my experience of almost forty years I have seen quite a number of cases who developed either a psychotic interval or a lasting psychosis out of a neurotic condition. Let us assume for the moment that they were really suffering from a latent psychosis, concealed under the cloak of a neurosis. What, then, is a latent psychosis exactly? It is obviously

nothing but the possibility that an individual may become mentally deranged at some period of his life. The existence of strange unconscious material proves nothing. You find the same material in neurotics, modern artists, and poets, and also in fairly normal people who have submitted to a careful investigation of their dreams. Moreover, you find most suggestive parallels in the mythology and symbolism of all races and times. The possibility of a future psychosis has nothing to do with the peculiar contents of the unconscious. But it has everything to do with whether the individual can stand a certain panic, or the chronic strain of a psyche at war with itself. Very often it is simply a matter of a little bit too much, of the drop that falls into a vessel already full, or of the spark that accidentally lands on a heap of gunpowder.

[521] Under the stress of an extreme *abaissement* the psychic totality falls apart and splits up into complexes, and the ego-complex ceases to play the important role among these. It is just one among several complexes which are all equally important, or perhaps even more important than the ego. All these complexes assume a personal character although they remain fragments. It is understandable that people should get panicky, or that they eventually become demoralized under a chronic strain, or despair of their hopes and expectations. It is also understandable that their will-power weakens and their self-control becomes slack and begins to lose its grip upon circumstances, moods, and thoughts. It is quite consistent with such a state of mind if some particularly unruly parts of the patient's psyche then acquire a certain degree of autonomy.

[522] Thus far schizophrenia does not behave in any way differently from a purely psychological disorder. We would search in vain for anything characteristic of the disease in this part of the symptomatology. The real trouble begins with the disintegration of the personality and the divestment of the ego-complex of its habitual supremacy. As I have already pointed out, not even multiple personality, or certain religious or "mystical" phenomena, can be compared to what happens in schizophrenia. The primary symptom seems to have no analogy with any kind of functional disturbance. It is as if the very foundations of the psyche were giving way, as if an explosion or an earthquake were tearing asunder the structure of a normally built house. I use this analogy on

purpose, because it is suggested by the symptomatology of the initial stages. Sollier has given us a vivid description of these *troubles cénesthésiques,*[3] which are compared to explosions, pistol-shots, and other violent noises in the head. They appear in projection as earthquakes, cosmic catastrophes, as the fall of the stars, the splitting of the sun, the falling asunder of the moon, the transformation of people into corpses, the freezing of the universe, and so on.

[523] I have just said that the primary symptom appears to have no analogy with any kind of functional disturbance, yet I have omitted to mention the phenomena of the *dream*. Dreams can produce similar pictures of great catastrophes. They can manifest all stages of personal disintegration, so it is no exaggeration to say that the dreamer is normally insane, or that insanity is a dream which has replaced normal consciousness. To say that insanity is a dream which has become real is no metaphor. The phenomenology of the dream and of schizophrenia are almost identical, with a certain difference, of course; for the one occurs normally under the condition of sleep, while the other upsets the waking or conscious state. Sleep, too, is an *abaissement du niveau mental* which leads to more or less complete oblivion of the ego. The psychic mechanism that brings about the normal extinction and disintegration of consciousness in sleep is therefore a normal function which almost obeys our will. In schizophrenia it seems as if this function were set in motion in order to bring about that sleep-like condition in which consciousness is reduced to the level of dreams, or in which dreams are intensified to a degree equalling that of consciousness.

[524] Yet even if we knew that the primary symptom is produced with the aid of an ever-present normal function, we should still have to explain why a pathological condition ensues instead of the normal effect, which is sleep. It must, however, be emphasized that it is not exactly sleep which is produced, but something which disturbs sleep namely, the dream. Dreams are due to an incomplete extinction of consciousness, or to a somewhat excited state of the unconscious which interferes with sleep. Sleep is disturbed if too many remnants of consciousness go on stirring, or if there are unconscious contents with too great an energy-charge, for then they rise above the threshold and create a relatively

conscious state. Hence it is better to explain many dreams as the remnants of conscious impressions, while others derive directly from unconscious sources which have never been conscious. Dreams of the first type have a personal character and conform to the rules of a personalistic psychology; those of the second type have a collective character, inasmuch as they contain peculiarly mythological, legendary, or generally archaic imagery. One must turn to historical or primitive symbology in order to explain such dreams.

[525] Both types of dream are reflected in the symptomatology of schizophrenia. There is a mixture of personal and collective material just as there is in dreams. But in contradistinction to normal dreams, the collective material seems to predominate. This is particularly evident in the so-called "dream-states" or delirious intervals and in paranoid conditions. It seems also to predominate in the catatonic phases, so far as we can get any insight into the inner experiences of such patients. Whenever collective material prevails under normal conditions, it produces important dreams. Primitives call them "big dreams" and consider them of tribal significance. You find the same thing in the Greek and Roman civilizations, where such dreams were reported to the Areopagus or to the Senate. One meets these dreams frequently in the decisive moments or periods of life: in childhood from the third to the sixth year; at puberty, from fourteen to sixteen; in the period of maturity from twenty to twenty-five; in middle life from thirty-five to forty; and before death. They also occur in particularly important psychological situations. It seems that such dreams come chiefly at those moments or periods when the man of antiquity or the primitive would deem it necessary to perform certain religious or magic rites, in order to procure favourable results or to propitiate the gods for the same end.

[526] We may safely assume that important personal matters and worries account for personal dreams. We are not so sure of our ground when we come to collective dreams, with their often weird and archaic imagery, which cannot be traced back to personal sources. The history of symbols, however, yields the most surprising and enlightening parallels, without which we could never follow up the remarkable meaning of such dreams.

[527] This fact makes one realize how inadequate the psychological training of the psychiatrist is. It is, of course, impossible to appreciate the importance of comparative psychology for the theory of delusions without a detailed knowledge of historical and ethnic symbols. No sooner did we begin with the qualitative analysis of schizophrenia at the Psychiatric Clinic in Zurich than we realized the need of such additional information. We naturally started with an entirely personalistic medical psychology, mainly as presented by Freud. But we soon came up against the fact that, in its basic structure, the human psyche is as little personalistic as the body. It is far rather something inherited and universal. The logic of the intellect, the *raison du cœur*, the emotions, the instincts, the basic images and forms of imagination, have in a way more resemblance to Kant's table of *a priori* categories or to Plato's *eida* than to the scurrilities, circumstantialities, whims, and tricks of our personal minds. Schizophrenia in particular yields an immense harvest of collective symbols, the neuroses yield far less, for with few exceptions they show a predominantly personal psychology. The fact that schizophrenia disrupts the foundations of the psyche accounts for the abundance of collective symbols, because it is the latter material that constitutes the basic structure of the personality.

[528] From this point of view we might conclude that the schizophrenic state of mind, so far as it yields archaic material, has all the characteristics of a "big dream"—in other words, that it is an important event, exhibiting the same "numinous" quality which in primitive cultures is attributed to a magic ritual. As a matter of fact, the insane person has always enjoyed the prerogative of being the one who is possessed by spirits or haunted by a demon. This is, by the way, a correct interpretation of his psychic condition, for he is invaded by autonomous figures and thought-forms. The primitive valuation of insanity, moreover, lays stress on a special characteristic which we should not overlook: it ascribes personality, initiative, and wilful intention to the unconscious—again a true interpretation of the obvious facts. From the primitive standpoint it is perfectly clear that the unconscious, of its own volition, has taken possession of the ego. According to this view it is not the ego that is enfeebled; on the contrary, it is the unconscious that is

strengthened through the presence of a demon. The primitive, therefore, does not seek the cause of insanity in a primary weakness of consciousness but rather in an inordinate strength of the unconscious.

[529] I must admit it is exceedingly difficult to decide the intricate question of whether it is a matter of a primary weakness and corresponding dissociability of consciousness, or of the primary strength of the unconscious. The latter possibility cannot easily be dismissed, since it is conceivable that the abundant archaic material in schizophrenia is the expression of a still existing infantile and therefore primitive mentality. It might be a question of *atavism*. I seriously consider the possibility of a so-called "arrested development," in which a more than normal amount of primitive psychology remains intact and does not become adapted to modern conditions. It is natural that under such conditions a considerable part of the psyche should not catch up with the normal progress of consciousness. In the course of years the distance between the unconscious and the conscious mind increases and produces a conflict—latent at first. But when a special effort at adaptation is needed, and when consciousness should draw upon its unconscious instinctive resources, the conflict becomes manifest; the hitherto latent primitive mind suddenly bursts forth with contents that are too incomprehensible and too strange for assimilation to be possible. Indeed, such a moment marks the beginning of the psychosis in a great number of cases.

[530] It should not be overlooked that many patients seem quite capable of exhibiting a modern and sufficiently developed consciousness, sometimes of a particularly concentrated, rational, obstinate kind. However, one must quickly add that such a consciousness shows early signs of a defensive nature. This is a symptom of weakness, not of strength.

[531] It may be that in schizophrenia a normal consciousness is confronted with an unusually strong unconscious: it may also be that the patient's consciousness is just weak and therefore unable to keep back the inrush of unconscious material. In practice I must allow for the existence of two groups of schizophrenia: one with a weak consciousness and the other with a strong unconscious. We have here a certain analogy with the

neuroses, where we also find plenty of patients with a markedly weak consciousness and little will-power, and others who possess remarkable energy but are subjected to an almost overwhelmingly strong unconscious determination. This is particularly the case when creative impulses (artistic or otherwise) are coupled with unconscious incompatibilities.

[532] If we now return to our original question, the psychogenesis of schizophrenia, we reach the conclusion that the problem itself is rather complicated. At all events we ought to make it clear that the term “psychogenesis” means two different things: (1) an exclusively psychological origin, (2) a number of psychological conditions. We have dealt with the second point, but we have not yet touched upon the first. This envisages psychogenesis from the standpoint of a *causa efficiens*. The question is: Is the sole and absolute cause of schizophrenia a psychological one or not?

[533] Over the whole field of medicine such a question is, as you know, more than embarrassing. Only in a very few cases can it be answered positively. The usual aetiology consists in a competition between various conditions. It has therefore been urged that the word *causality* or *cause* should be expunged from the medical vocabulary and replaced by the term “conditionalism.” I am absolutely in favour of such a measure, since it is well-nigh impossible to prove, even approximately, that schizophrenia is an organic disease to begin with. It is equally impossible to make its exclusively psychological origin evident. We may have strong suspicions as to the organic nature of the primary symptom, but we cannot ignore the well-established fact that there are many cases which developed out of an emotional shock, a disappointment, a difficult situation, a reversal of fortune, etc.; and also that many relapses as well as improvements are due to psychological conditions. What are we to say about a case like the following? A young student experiences a great disappointment in a love-affair. He has a catatonic attack, from which he recovers after several months. He then finishes his studies and becomes a successful professional man. After a number of years he returns to Zurich, where he had experienced his love-affair. Instantly he is seized by a new and very similar attack. He says that he believes he saw the girl

somewhere. He recovers and avoids Zurich for several years. Then he returns and in a few days he is back in the clinic with a catatonic attack, again because he is under the impression that he has seen the girl, who by that time was married and had children.

[534] My teacher, Eugen Bleuler, used to say that a psychological cause can produce only the symptoms of the disease, but not the disease itself. This statement may be profound or the reverse. At all events it shows the psychiatrist's dilemma. One could say, for instance, that our patient returned to Zurich when he felt the disease coming on, and one thinks one has said something clever. He denies it—naturally, you will say. But it is a fact that this man was still deeply in love with his girl. He never went near another woman and his thoughts kept on returning to Zurich. What could be more natural than that once in a while he should give way to his unconquered longing to see the streets, the houses, the walks again, where he had met her, insanity or not? We do not know, moreover, what ecstasies and adventures he experienced in his insanity and what thrilling expectations tempted him to seek the experience once more. I once treated a schizophrenic girl who told me that she hated me because I had made it impossible for her to return into her beautiful psychosis. I have heard my psychiatric colleagues say, "That was no schizophrenia." But they did not know that they, together with at least three other specialists, had made the diagnosis themselves, for they were ignorant of the fact that my patient was identical with the one they had diagnosed.

[535] Shall we now say that our patient became ill before he fell in love and before he returned to Zurich? If that is so, then we are bound to make the paradoxical statement that when he was still normal he was already ill and on account of his illness he fell in love, and for the same reason he returned to the fatal place. Or shall we say that the shock of his passionate love was too much for him and instead of committing suicide he became insane, and that it was his longing which brought him back again to the place of the fatal memories?

[536] But surely, it will be objected, not everybody becomes insane on account of a disappointment in love. Certainly not, just as little as everyone commits suicide, falls so passionately in love, or remains true

to the first love for ever. Shall we lay more stress on the assumption of an organic weakness, for which we have no tangible evidence, or on his passion, for which we have all the symptoms?

[537] The far-reaching consequences of the initial *abaissement*, however, constitute a serious objection to the hypothesis of pure psychogenesis. Unfortunately nearly all that we know of the primary symptom, and its supposedly organic nature, amounts to a series of question marks, whereas our knowledge of possibly psychogenic conditions consists of many carefully observed facts. There are indeed organic cases with brain-oedema and lethal outcome. But they are a small minority and it is not certain whether such a disease should be called schizophrenia.

[538] A serious objection against the psychogenesis of schizophrenia is the bad prognosis, the incurability, and the ultimate dementia. But, as I pointed out twenty years ago,[4] the hospital statistics are based chiefly upon a selection of the worst cases; all the milder cases are excluded.

[539] Two facts have impressed themselves on me during my career as a psychiatrist and psychotherapist. One is the enormous change that the average mental hospital has undergone in my lifetime. That whole desperate crowd of utterly degenerate catatonics has practically disappeared, simply because they have been given something to do. The other fact that impressed me is the discovery I made when I began my psychotherapeutic practice: I was amazed at the number of schizophrenics whom we almost never see in psychiatric hospitals. These cases are partially camouflaged as obsessional neuroses, compulsions, phobias, and hysterias, and they are very careful never to go near an asylum. These patients insist upon treatment, and I found myself, Bleuler’s loyal disciple, trying my hand on cases we never would have dreamed of touching if we had had them in the clinic, cases unmistakably schizophrenic even before treatment—I felt hopelessly unscientific in treating them at all—and after the treatment I was told that they could never have been schizophrenic in the first place. There are numbers of latent psychoses—and quite a few that are not so latent—which, under favourable conditions, can be subjected to psychological analysis, sometimes with quite decent results. Even if I am not very hopeful about

a patient, I try to give him as much psychology as he can stand, because I have seen plenty of cases where the later attacks were less severe, and the prognosis was better, as a result of increased psychological understanding. At least so it seemed to me. You know how difficult it is to judge these things correctly. In such doubtful matters, where you have to work as a pioneer, you must be able to put some trust in your intuition and to follow your feeling even at the risk of going wrong. To make a correct diagnosis, and to nod your head gravely at a bad prognosis, is the less important aspect of the medical art. It can even cripple your enthusiasm, and in psychotherapy enthusiasm is the secret of success.

[540] The results of occupational therapy in mental hospitals have clearly shown that the status of hopeless cases can be enormously improved. And the much milder cases not in hospitals sometimes show encouraging results under psychotherapeutic treatment. I do not want to appear overoptimistic. Often enough one can do little or nothing at all; or again, one can have unexpected results. For about fourteen years I have been seeing a woman, who is now sixty-four years of age. I never see her more than fifteen times in the course of a year. She is a schizophrenic and has twice spent a number of months in hospital with an acute psychosis. She suffers from numberless voices distributed all over her body. I found one voice which was fairly reasonable and helpful. I tried to cultivate that voice, with the result that for about two years the right side of the body has been free of voices. Only the left side is still under the domination of the unconscious. No further attacks have occurred. Unfortunately, the patient is not intelligent. Her mentality is early medieval, and I was able to establish a fairly good rapport with her only by adapting my terminology to that of the early Middle Ages. There were no hallucinations then; it was all devils and witchcraft.

[541] This is not a brilliant case, but I have found that I always learn most from difficult and even impossible patients. I treat such cases as if they were not organic, as if they were psychogenic and as if one could cure them by purely psychological means. I admit that I cannot imagine how something “merely” psychic can cause an *abaissement* which destroys the unity of personality, only too often beyond repair. But I know from long experience not only that the overwhelming majority of symptoms

are psychologically determined, but that in an unspecified number of cases the onset of the disease is influenced by, or at least coupled with, psychic facts which one would not hesitate to declare causal in a case of neurosis. Statistics in this respect prove nothing to me, for I know that even in a neurosis one is likely to discover the true anamnesis only after months of careful analysis. In psychiatric anamnesis there is a lack of psychological knowledge which is sometimes appalling. I do not say that the general practitioner should have a knowledge of psychology, but if the psychiatrist wants to practise psychotherapy at all he certainly ought to have a proper psychological training. What we call "medical psychology" is unfortunately a very onesided affair. It may give you some knowledge of everyday complexes, but far too little is known of anything outside the medical department. Psychology does not consist of medical rules of thumb. It has far more to do with the history of civilization, of philosophy, of religion, and quite particularly with the primitive mentality. The pathological mind is a vast, almost unexplored region and comparatively little has been done in this field, whereas the biology, anatomy, and physiology of schizophrenia have had all the attention they want. And with all this work, what exact knowledge have we of the heredity or of the nature of the primary symptom? I should say: Let us discuss the question of psychogenesis once more when the psychic side of schizophrenia has had a square deal.

RECENT THOUGHTS ON SCHIZOPHRENIA[1]

[542] Without doubt we are on the eve of a new age which will ask us some difficult questions. Your request for a forecast concerning future developments in psychology, psychopathology, and psychotherapy sets me, as you probably realize, no easy task. It is a well-known fact in the history of science that very often just the most important and epoch-making developments emerge from rather unexpected discoveries or from hitherto neglected or underestimated spheres of thought. Under such conditions, prognostication becomes so doubtful an undertaking that I prefer to refrain from incompetent attempts at prophecy, and to present my opinion as the mere desideratum of a psychiatrist living in the second half of the twentieth century.

[543] The most desirable things being those which we do not possess, we must begin with questions that have still to be answered, or with speculative hypotheses based on known facts. In psychology as well as in psychopathology, I feel that the most pressing need is a deeper and more comprehensive knowledge of the complex psychic structures which confront the psychotherapist. We know far too little about the contents and the meaning of pathological mental products, and the little we do know is prejudiced by theoretical assumptions. This is particularly true of the psychology of schizophrenia. Our knowledge of this commonest of all mental diseases is still in a very unsatisfactory state. Although a great deal of work has been done in this field since my modest attempt fifty years ago,[2] many aspects of the disease still remain to be investigated. And although I have observed, analysed, and treated a fair number of schizophrenics during the interval, I could not carry out a systematic study as I would have liked to do. The reason for this was that no sound and reliable foundation existed for such an enterprise. One needs the extraneous *point de repère*, the Archimedean point *extra rem;* in this case, the possibility of comparison with normal psychology.

[544] As I pointed out as far back as 1907, comparison with the neurotic mentality and its specific psychology is valid only to a limited extent,

that is, only as far as the personalistic point of view can be stretched. There are manifest elements in the psychology of schizophrenics, however, that cannot be fitted into a purely personalistic frame of reference. Although a personalistic psychology (e.g., the heuristic hypotheses of Freud and Adler) yields satisfactory results up to a point, it is of doubtful value when applied to the peculiar mental formations typical of paranoid schizophrenia, or to the fundamental and specific dissociation that originally caused Bleuler to characterize this disease by his term "schizophrenia." This concept stresses the difference between neurotic and psychotic dissociations, the former being a "systematic" dissociation of the personality, the latter a "physiological" and unsystematic disintegration of the psychic elements, that is, of the ideational content. Again, whereas neurotic phenomena are more closely analogous to normal processes, such as are observed chiefly in emotional conditions, the schizophrenic symptoms resemble formations observable in dreams and toxic states. Since dreams must be considered as phenomena of normal sleep, their analogies with schizophrenic disintegration point to a common denominator consisting in an *abaissement du niveau mental* (Janet). The *abaissement*, whatever its cause, begins with a relaxation of concentration or attention. As the value of associations decreases, they become superficial. Instead of meaningful connections of ideas, verbal-motor and clang associations (rhyme, alliteration, and so forth), and also perseverations, appear and gain the upper hand. Finally, not only the meaning of the sentences but the words themselves break up. Moreover strange, disconnected, and illogical intrusions interrupt the thematic continuity.

[545] This is true not only of the dream-state but also of the schizophrenic condition. There is one considerable difference, however, as in the latter case consciousness is not reduced as it is in dreams. In schizophrenia (except in the dreamlike and delirious states) memory and general orientation function normally, in spite of the undeniable presence of *abaissement* symptoms. This clearly shows that schizophrenic phenomena are not caused by a general reduction of attention and consciousness, but rather depend upon another disturbing factor connected with certain definite psychic elements. Generally it cannot be

predicted which of the patient’s ideas will be damaged, although there is some probability that they will belong to the emotional field of a recognizable complex, the existence of which is not in itself a specifically schizophrenic symptom. On the contrary, such complexes are identical with those observed in neurotic as well as in normal individuals. Although an emotional complex may disturb or diminish general attention and concentration by absorbing their energy, it never disintegrates its own psychic elements or contents in the way that a schizophrenic complex does. One could even say that the elements of a neurotic and normal complex are not only well-developed but even hypertrophied on account of their heightened energic value. They have a marked tendency to enlarge their scope by means of exaggeration and fantastic accretions.

[546] In contrast to this, the schizophrenic complex is characterized by a peculiar deterioration and disintegration of its own ideational content, leaving the general field of attention remarkably undisturbed. It looks as if the complex were destroying itself by distorting its own contents and means of communication, that is, its expression through co-ordinated thinking and speech. It does not seem to draw its energy from other mental processes, as it does not impair general orientation or any of the other functions. It is, on the contrary, evident that the schizophrenic complex devours, as it were, its own energy, abstracting this from its own contents by lowering their *niveau mental*. Or, venturing another approach, we could say that the emotional intensity of the complex causes an unexpected subsiding of its own foundations, or a disturbance of the normal synthesis of ideas. It is extremely difficult to imagine a psychological process which would produce such an effect. The psychotherapy of neurosis gives us no clue here, as all neurotic processes operate with fully co-ordinated psychic elements. No disintegration of ideas and so forth occur in its orbit, and if any such traces should appear in a case of neurosis we may safely suspect the existence of latent schizophrenia.

[547] The self-destruction of the schizophrenic complex manifests itself, in the first place, in a disintegration of the means of expression and communication. Besides this there is another less obvious effect, namely

inadequate affectivity. Though a certain inadequacy of emotion is also observed in neuroses (e.g., exaggeration, apathy, depression, etc.), it is (as it is not in schizophrenia) always systematic and apparent only to the experienced observer. Once all the aspects of the dominating neurotic complex are known, all inadequacies become transparent and comprehensible. In schizophrenia, however, affectivity seems to be disturbed throughout; not only is there an absence or a disturbance of affectivity in the area of the complex proper, it shows itself also in the patient's general behaviour. Within the complex the emotional values seem to be illogically distributed or absent, disintegrated in much the same way as the disturbed psychic elements. This phenomenon seems to be of a rather complicated and perhaps secondary nature. It may be merely a psychological reaction to the complex. In this case we would expect it to show a systematic structure. Or it may be the symptom of a general destruction of affectivity itself. I do not know and I do not dare to give a definite answer to this question.

[548] However we interpret the peculiar behaviour of the schizophrenic complex, its difference from that of the neurotic or normal complex is plain. Further, in view of the fact that no specifically psychological processes which would account for the schizophrenic effect, that is, for the specific dissociation, have yet been discovered, I have come to the conclusion that there might be a *toxic cause* traceable to an organic and local disintegration, a physiological alteration due to the pressure of emotion exceeding the capacity of the brain-cells. (The *troubles cénesthésiques*, described by Sollier some sixty years ago, seem to point in this direction.) Experiences with mescalin and related drugs encourage the hypothesis of a toxic origin.[3] With respect to future developments in the field of psychiatry, I suggest that we have here an almost unexplored region awaiting pioneer research work.

[549] Whereas the problem of a specific toxin presents a task for clinical psychiatry on account of its formal aspects, the question of the *contents* of schizophrenia and their meaning presents an equally important task for the psychopathologist as well as the psychologist of the future. Both problems are of the highest theoretical interest; moreover, their solution will provide an indispensable basis for the therapy of schizophrenia. As

we know, this disease has two aspects of paramount importance, biochemical and psychological. It is also known, as I proved to my own satisfaction fifty years ago, that the disease can be treated by psychotherapy, though only to a limited extent. But as soon as psychological treatment is attempted, the question arises of the psychotic contents and their meaning. In many cases we are confronted with psychological material which can be compared with that found in neuroses or in dreams and can be understood from a personalistic point of view. But unlike the contents of a neurosis, which can be satisfactorily explained by biographical data, psychotic contents show peculiarities that defy reduction to individual determinants, just as there are dreams where the symbols cannot be properly explained with the aid of personal data. By this I mean that neurotic contents can be compared with those of normal complexes, whereas psychotic contents, especially in paranoid cases, show close analogies with the type of dream that the primitive aptly calls a “big dream.” Unlike ordinary dreams, such a dream is highly impressive, numinous, and its imagery frequently makes use of motifs analogous to or even identical with those of mythology. I call these structures *archetypes* because they function in a way similar to instinctual patterns of behaviour. Moreover, most of them can be found everywhere and at all times. They occur in the folklore of primitive races, in Greek, Egyptian, and ancient Mexican myths, as well as in the dreams, visions, and delusions of modern individuals entirely ignorant of all such traditions.

[550] In cases of this kind, one seeks in vain for a personalistic causality which would explain their peculiar archaic form and meaning. We must rather suppose that they are something like universally existent constituents of the unconscious psyche, which form, as it were, a deeper stratum of a collective nature, in contradistinction to the personally acquired contents of the more superficial layers, or what one may call the personal unconscious. I consider these archetypal patterns to be the matrix of all mythological statements. They not only occur in highly emotional conditions but very often seem to be their cause. It would be a mistake to regard them as inherited ideas, as they are merely conditions for the forming of representations in general, just as the instincts are the

dynamic conditions for various modes of behaviour. It is even probable that archetypes are the psychic expressions or manifestations of instinct.

[551] The question of archaic behaviour and thought-forms obviously cannot be dealt with solely from the standpoint of personalistic psychology. Research in this field must have recourse to more general manifestations of the human mind than are to be found in personal biography. Any attempt at deeper penetration leads inevitably to the problem of the human mind *in toto*. The individual mind cannot be understood by and out of itself. For this purpose a far more comprehensive frame of reference is needed; in other words, investigation of the deeper-lying psychic strata can be carried out only with the aid of other disciplines. That is why our research-work is still only at its beginning. Nevertheless the results are encouraging.

[552] The investigation of schizophrenia is in my view one of the most important tasks for a psychiatry of the future. The problem has two aspects, physiological and psychological, for the disease, so far as we can see today, does not permit of a one-sided explanation. Its symptomatology points on the one hand to an underlying destructive process, possibly of a toxic nature, and on the other—inasmuch as a psychogenic aetiology is not excluded and psychological treatment (in suitable cases) is effective—to a psychic factor of equal importance. Both ways of approach open up far-reaching vistas in the theoretical as well as the therapeutic field.

SCHIZOPHRENIA[1]

[553] It is the privilege of old age to look back upon the paths one has travelled. I must thank Professor Manfred Bleuler for giving me the opportunity of presenting my experiences in the domain of schizophrenia before a meeting of my professional colleagues.

[554] It was in the year 1901 that I, a young assistant physician at Burghölzli, asked my then chief, Professor Eugen Bleuler, to propose a theme for my doctoral dissertation. He suggested that I investigate experimentally the disintegration of ideas in schizophrenia. At that time we had already penetrated so far into the psychology of these patients with the help of association tests that we knew of the existence of the feeling-toned complexes that manifested themselves in schizophrenia. They were essentially the same as the complexes that could be found in the neuroses. The way in which they expressed themselves in the association test was, in many not acutely disturbed cases, very much the same as in hysteria, for example. In other cases, however, and particularly in those where the speech area was affected, there was a characteristic picture for schizophrenia, showing, in comparison with the neuroses, an excessively large number of blockings, perseverations, neologisms, irrelevant answers, faults (failures to react), all occurring at, or in the vicinity of, the stimulus-words that hit the complex.

[555] The question now was, how one could penetrate further, from this point, into the structure of the specifically schizophrenic disturbances. This question remained unanswerable. Even my respected chief and teacher could offer no advice. The upshot was that I chose—probably not by accident—a theme which on the one hand presented fewer difficulties, and on the other offered an analogy to schizophrenia in that it concerned the systematic dissociation of personality in a young girl.[2] She passed for a medium and had developed in spiritualistic seances a genuine somnambulism, in which contents from the unconscious appeared that were unknown to her conscious mind, and formed the manifest cause of the splitting of personality. In schizophrenia, too, we very often find

strange contents that inundate consciousness with comparative suddenness and burst asunder the inner cohesion of the personality, though they do this in a way characteristic of schizophrenia. Whereas the neurotic dissociation never loses its systematic character, schizophrenia shows a picture of unsystematic randomness, so to speak, in which the continuity of meaning so distinctive of the neuroses is often mutilated to the point of unintelligibility.

[556] In a work published in 1907, "The Psychology of Dementia Praecox," I tried to set forth the state of my knowledge at the time. It dealt in the main with a typical case of paranoid schizophrenia with characteristic speech disturbances. Although the pathological contents could be recognized as compensatory and their apparently systematic nature could not be denied, the underlying ideas were nevertheless disintegrated to the point of unintelligibility by their unsystematic randomness. Extensive amplificatory material was often needed to reconstitute their originally compensatory meaning.

[557] For the time being, however, we could not understand why the peculiar character of the neuroses breaks down in schizophrenia, and instead of systematic analogies only abstruse, grotesque, or extremely unexpected fragments of them are produced. We could only establish that this breakdown of ideas is distinctive of schizophrenia. It has this peculiarity in common with a quite normal phenomenon, the *dream*. In dreams we observe an apparently identical character—random absurd fragmentary—which requires the same amplificatory procedure in order to be understood. But the not inconsiderable difference from schizophrenia lies in the fact that the dream occurs in the sleeping state, when consciousness is to a large extent obscured, whereas the schizophrenic phenomenon barely affects the elementary orientation of consciousness, if at all. (It may be remarked in parenthesis that it would be difficult to distinguish most dreams of schizophrenics from those of normal people.) The impression that there was a far-reaching analogy between schizophrenia and dreams became more and more pronounced as my experience grew. (At that time I analysed at least four thousand dreams a year.)

[558] Although I gave up my work at Burghölzli in 1909 in order to devote myself entirely to my psychotherapeutic practice, I did not lose touch with schizophrenia, as I had feared I would. On the contrary it was only then that, despite my apprehensions and very much to my astonishment, I came into real contact with this disease. The number of latent and potential psychoses is astoundingly large in comparison with the manifest cases. Without being able to give any exact statistics, I reckon it at 10 : 1. Not a few of the classic neuroses, such as hysteria and obsessional neurosis, turn out under treatment to be latent psychoses, which can sometimes pass over into manifest psychoses–a fact that should constantly be borne in mind by the psychotherapist. A benevolent fate, rather than any merit of mine, preserved me from seeing any of my patients irresistibly slip into a psychosis, but as a consultant I have witnessed a large number of such cases. For instance, there were classic obsessional neuroses where the obsessional impulses gradually changed into auditory hallucinations, or unmistakable hysterias which turned out to be mere screens for various forms of schizophrenia. These experiences are by no means strange to the clinical psychiatrist. What was new to me, however, when I started practising, was the comparatively large number of latent schizophrenics who unconsciously but systematically avoid the asylums and go to the psychologist for advice and help instead. In these cases it is not always a question merely of people with schizoid dispositions, but of genuine psychoses which have not yet definitively undermined the compensating activity of consciousness.

[559] It is now just about fifty years since I became convinced, through practical experience, that schizophrenic disturbances could be treated and cured by psychological means. I found that, with respect to the treatment, the schizophrenic patient behaves no differently from the neurotic. He has the same complexes, the same insights and needs, but not the same certainty with regard to his foundations. Whereas the neurotic can rely instinctively on his personality dissociation never losing its systematic character, so that the unity and inner cohesion of the whole are never seriously jeopardized, the latent schizophrenic must always reckon with the possibility that his very foundations will give way somewhere, that an irretrievable disintegration will set in, that his ideas and concepts will

lose their cohesion and their connection with other spheres of association and with the environment. As a result, he feels threatened by an uncontrollable chaos of chance happenings. He stands on treacherous ground, and very often he knows it. The dangerousness of his situation often shows itself in terrifying dreams of cosmic catastrophes, of the end of the world and such things. Or the ground he stands on begins to heave, the walls bend and bulge, the solid earth turns to water, a storm carries him up into the air, all his relatives are dead, etc. These images bear witness to a fundamental disturbance of relationship, that is, of the patient's rapport with his surroundings, and graphically illustrate the isolation that menaces him.

[560] The immediate cause of this disturbance is a violent affect, which in the neurotic leads, like every emotion, to a similar alienation, but one that passes quickly. Likewise, the images which the neurotic uses to describe the disturbance may show some resemblance to schizoid fantasies, but, in contrast to the menacing and sinister character of the latter, they evoke the impression of dramatization and exaggeration. Therapeutically, therefore, they can be ignored, with no harm being done. It is very different with the evaluation of isolation symptoms in latent psychoses. Here they have the significance of threatening signs whose dangerous character cannot be recognized early enough. They call for immediate precautions, such as discontinuation of treatment, careful re-establishment of personal rapport, change of milieu, choice of another therapist, strict avoidance of any concern with the contents of the unconscious and especially with dream-analysis, and so on.

[561] These are only very general measures which may be modified in individual cases. I would mention, to give an example, the case of a highly educated lady, till then unknown to me, who was attending my lectures on a Tantric text that went very thoroughly into the contents of the unconscious. She became more and more fascinated and excited by all these new ideas, without being able to formulate the questions and problems that arose within her. Accordingly she had compensating dreams of an incomprehensible nature, which rapidly led to destructive images, just those isolation symptoms mentioned above. At this juncture she came to consult me, with the wish that I should analyse her and help

her to understand her incomprehensible thoughts. Her dreams of earthquakes, collapsing houses, and floods showed me that, on the contrary, the patient had to be rescued from the already menacing invasion of the unconscious by effecting a drastic change in her present situation. I forbade her to attend my lectures and advised her instead to make a thorough study of Schopenhauer’s *The World as Will and Idea*. I chose Schopenhauer because this philosopher, who was influenced by Buddhism, lays express emphasis on the redeeming effect of consciousness. Fortunately she was rational enough to follow my advice, whereupon the symptomatic dreams immediately stopped and her excitement abated. It turned out that, twenty-five years previously, she had had a schizophrenic attack of short duration, apparently followed by no relapses.

[562] With schizophrenic patients who are already under successful treatment, emotional complications may occur which lead to a psychotic relapse or to an acute initial psychosis if the danger-signs, and especially the destructive dreams, are not recognized in time. The treatment or termination of such developments does not always require drastic intervention. Even with ordinary therapeutic measures you can get the patient’s mind at a sufficiently safe distance from the unconscious, for instance by inducing him to draw or paint a picture of his psychic situation. (Painting is rather more effective, since by means of the colours his feelings are drawn into the picture too.) In this way the apparently incomprehensible and unmanageable chaos of his total situation is visualized and objectified; it can be observed at a distance by his conscious mind, analysed, and interpreted. The effect of this method is evidently due to the fact that the originally chaotic or frightening impression is replaced by the picture, which, as it were, covers it up. The *tremendum* is spellbound by it, made harmless and familiar, and whenever the patient is reminded of his original experience by its menacing emotional effects, the picture he has made of it interposes itself between him and the experience and keeps his terror at bay. A good example of this procedure is Brother Klaus’s terrifying vision of God. By dint of long meditation, and with the help of certain diagrams drawn by a

Bavarian mystic, he succeeded in changing this vision into a picture of the Trinity, which you can see today in the parish church at Sachseln.[3]

[563] The schizoid disposition is characterized by affects produced by ordinary complexes, but these affects usually have much more devastating consequences than they do in the neuroses. From the psychological point of view, it is the affective concomitants of the complex that form the symptom specific for schizophrenia. They are, as already emphasized, unsystematic, apparently chaotic and random. They are further characterized, like certain dreams, by primitive or archaic associations closely akin to mythological motifs and combinations of ideas. These archaisms also occur in neurotics and normal people, but they are rarer.

[564] Even Freud could not help drawing a comparison between the incest-complex, which is frequently found in neurosis, and a mythological motif, choosing for it the apt name of “Oedipus complex.” This motif is by no means the only one. We would have to choose a different name for the corresponding motif in a woman’s psychology, for instance “Electra complex,” as I suggested many years ago. Besides the endogamy-complex there are many other complications which can equally well be compared with mythological motifs.

[565] It was this frequent reversion to archaic forms of association found in schizophrenia that first gave me the idea of an unconscious not consisting only of originally conscious contents that have got lost, but having a deeper layer of the same universal character as the mythological motifs which typify human fantasy in general. These motifs are not *invented* so much as *discovered;* they are typical forms that appear spontaneously all over the world, independently of tradition in myths fairy-tales, fantasies, dreams, visions, and the delusional systems of the insane. On closer investigation they prove to be typical attitudes, modes of action—thought-processes and impulses which must be regarded as constituting the instinctive behaviour typical of the human species. The term I chose for this, namely “archetype,” therefore coincides with the biological concept of the “pattern of behaviour.” In no sense is it a question of

inherited ideas, but of inherited, instinctive impulses and forms that can be observed in all living creatures.

[566] If, therefore, archaic forms appear especially frequently in schizophrenia, this points in my view to the fact that the biological foundations of the psyche are affected to a far greater extent in this disease than in the neuroses. We know from experience that, in normal people, archaic dream-products with their characteristic numinosity appear mainly in situations that somehow threaten the very foundations of the individual's existence, for instance in moments of mortal danger, before or after accidents, severe illnesses, operations, etc., or when psychic problems are developing which might give his life a catastrophic turn, or in the critical periods of life when a modification of his previous psychic attitude forces itself peremptorily upon him, or before, during, and after radical changes in his immediate or his general surroundings. Such dreams were reported in ancient times to the Areopagus or to the Roman Senate, and in primitive societies even today they are the subject of a palaver. This shows that a collective significance has always been attributed to them.

[567] It is easy to understand that in vitally important situations the instinctual foundations of the psyche are mobilized, even when the conscious mind has no insight into the situation. Indeed, one can say that it is precisely *then* that the instincts have the best opportunity to assert themselves. The vital or menacing significance of the psychosis is obvious enough, and for this reason the appearance of instinctual contents in a schizophrenic situation is nothing astonishing in itself. The only remarkable thing is that this manifestation does not occur in a systematic way that is accessible to consciousness, as it does in hysteria, for instance. There the conscious personality that is lost in one-sidedness is confronted by a compensating, systematically organized personality which, because of its rational structure and the intelligibility of its expressions, has a much better chance of being integrated. In contrast to this, the schizophrenic compensation almost always remains stuck fast in collective and archaic forms, thereby cutting itself off from understanding and integration to a far higher degree.

[568] Now if the schizophrenic compensation, that is, the expression of affective complexes, were satisfied with a merely archaic or mythological formulation, its associative products could easily be understood as *poetic circumlocutions*. This is usually not the case, any more than it is in normal dreams; here as there the associations are unsystematic, abrupt, grotesque, absurd, and correspondingly difficult if not impossible to understand. Not only are the products of schizophrenic compensation archaic, they are further distorted by their chaotic randomness.

[569] Obviously a disintegration has taken place, a decay of apperception, such as can be observed in cases of extreme *abaissement du niveau mental* (Janet) and in intense fatigue and severe intoxication. Very often the associative variants that are excluded by normal apperception enter the field of consciousness, e.g., those countless nuances of form, meaning, and value such as are characteristic of the effects of mescalin. This and kindred drugs cause, as we know, an *abaissement* which, by lowering the threshold of consciousness, renders perceptible the perceptual variants[4] that are normally unconscious, thereby enriching one's apperception to an astounding degree, but on the other hand making it impossible to integrate them into the general orientation of consciousness. This is because the accumulation of variants that have become conscious gives each single act of apperception a dimension that fills the whole of consciousness. This explains the fascination so typical of mescalin. It cannot be denied that schizophrenic apperception is very similar.

[570] Judging by the empirical material at present available, it does not seem certain that mescalin and the noxious agent in schizophrenia cause an *identical* disturbance. The fluid and mobile continuity of mescalin phenomena differs from the abrupt, rigid, halting, and discontinuous behaviour of schizophrenic apperception. This, together with disturbances of the sympathetic system, of the metabolism and the blood-circulation, produces, both psychologically and physiologically, an over-all picture of schizophrenia which in many respects reminds one of a toxic disturbance, and which made me think fifty years ago of the possible presence of a specific, metabolic toxin.[5] Whereas at that time, for lack of psychological experience, I had to leave it an open question

whether the aetiology is primarily or secondarily toxic, I have now, after long practical experience, come to hold the view that the *psychogenic causation of the disease is more probable than the toxic causation*. There are a number of mild and ephemeral but manifestly schizophrenic illnesses—quite apart from the even more common latent psychoses—which begin purely psychogenically, run an equally psychological course (aside from certain presumably toxic nuances) and can be completely cured by a purely psychotherapeutic procedure. I have seen this even in severe cases.

[571] I remember, for instance, the case of a girl of nineteen, who had been hospitalized at seventeen with catatonia and hallucinations. Her brother was a doctor, and as he was personally implicated in the chain of pathogenic occurrences that finally led to catastrophe, in his desperation he lost patience, turned to me and gave me *carte blanche*—including the possibility of suicide—to do “everything that was humanly possible.” He brought the patient to me in a catatonic condition. She was completely mutistic, her hands were cold and bluish, she had livid patches on her face and dilated, feebly reacting pupils. I lodged her in a sanatorium nearby, and from there she was brought to me every day for an hour’s consultation. After weeks of effort I succeeded, by dint of constantly repeated questions, in getting her to whisper a few words at the end of every session. The moment she started to speak, her pupils contracted, the livid patches on her face disappeared, soon her hands grew warm and assumed their normal colour. Finally she began—with endless blockings at first—to talk and to tell me the content of her psychosis. She had only a fragmentary education, had grown up in a small town in a bourgeois milieu, and had no trace of mythological and folkloristic knowledge. She now related to me a long and elaborate myth, a description of her life on the moon, where she played the role of a female saviour for the moon people. The classical connection of the moon with “lunacy” was as unknown to her as the numerous other mythological motifs in her story. The first relapse occurred after about four months of treatment and was caused by the sudden realization that she could no longer go back to the moon after betraying her secret to a human being. She fell into a state of violent excitement which necessitated her transfer to a psychiatric clinic.

Professor Eugen Bleuler, my former chief, confirmed the diagnosis of catatonia. After about two months the acute interval abated, and the patient could be moved back to the sanatorium and resume treatment. She was now rather more accessible and began to discuss problems that are characteristic of cases of neurosis. Her former apathy and lack of affect gradually gave way to a somewhat lymphatic emotionality and soulfulness. Unavoidably, the problem of her re-entry into normal life and her acceptance of a social existence became more and more pressing. When she found herself confronted with this unavoidable task, a second relapse ensued, and again she had to be put in the clinic with a severe attack of delirium. This time the clinical diagnosis was "Unusual epileptoid twilight-state," with a question mark. Evidently her emotional life, reawakened in the interval, had blurred the schizophrenic traits.

[572] Despite my qualms I was able to discharge the patient, after rather more than a year's treatment, as cured. For more than thirty years she kept me informed, by letter, about the state of her health. A few years after her cure she married and had children, and she assured me that she never had any more pathological attacks.

[573] Fairly narrow limits, however, are set to the psychotherapy of severe cases. It would be a mistake to suppose that more or less suitable methods of treatment exist. Theoretical assumptions in this respect count for next to nothing. Also, one would do well not to speak of "methods" at all. The thing that really matters is the personal commitment, the serious purpose, the devotion, indeed the self-sacrifice, of those who give the treatment. I have seen results that were truly miraculous, as when sympathetic nurses and laymen were able, by their courage and steady devotion, to re-establish psychic rapport with their patients and so achieve quite astounding cures. Naturally only a few doctors, in a very limited number of cases, can undertake such a difficult task. But even so one can bring about noticeable improvements in severe schizophrenics, and even cure them, by psychological treatment, provided that "one's own constitution holds out." This question is very much to the point, because the treatment not only demands uncommon efforts but may also induce psychic infections in a therapist who himself has a rather unstable

disposition. I have seen no less than three cases of induced psychoses in treatments of this kind.

[574] The results of the treatment are often curious. I recall the case of a sixty-year-old widow, who had suffered for thirty years from chronic hallucinations after an acute schizophrenic interval which had brought her to the asylum for a few months. She heard voices, which were distributed all over her body and congregated more particularly round the body openings and also round the breasts and navel. She suffered considerably under these vexations. For reasons I cannot discuss here, I had taken on this case for "treatment," though the treatment was more like control or observation. From a therapeutic point of view it seemed to me hopeless, especially as the patient had only a limited intelligence. Although she was able to look after her house tolerably well, intelligent conversation with her was barely possible. Things went best if one confined oneself to one voice, which she called "God's voice." It was localized in the middle of the breastbone. The voice told her that she should get me to induce her to read a chapter of the Bible, chosen by me, at each consultation, and afterward she should memorize it at home and reflect upon it. I was then to hear her at the next consultation. This somewhat peculiar proposal proved, in due course, to be a valuable therapeutic device, for the exercise not only helped the patient's speech and powers of expression but also brought a noticeable improvement in the psychic rapport. The end-result was that after about eight years the right half of her body was completely freed of voices, up to a line running exactly down the middle of the body. The voices persisted only on the left side. This unforeseen result of patient exercise was probably due simply to the fact that her attention and interest were kept alive. (Later she died of an apoplexy.)

[575] In general, the patient's degree of intelligence and education is of considerable importance for the prognosis. In cases of passing, acute intervals, or in the early stages of the disease, an explanatory discussion of the symptoms, especially of the psychotic contents, seems to me of the greatest value. Since fascination by archetypal contents is particularly dangerous, an explanation of their universal, impersonal meaning seems to me especially helpful, as opposed to the usual discussion of personal

complexes. These complexes are the things that called forth the archaic reactions and compensations in the first place, and can obviously produce the same effects again at any time. Often, therefore, one must help the patient to detach his interest from these personal sources of excitation, at least temporarily, so as to give him a general orientation and a broader view of his confused situation. I have therefore made it a rule to give the intelligent patient as much psychological knowledge as he can stand. The more he knows in this respect, the better his whole prognosis will turn out; for if he is equipped with the necessary knowledge he can meet renewed irruptions of the unconscious with understanding and in this way assimilate the strange contents and integrate them into his conscious life. So in cases where the patients remember the content of their psychosis, I discuss it with them in detail and try to get them to understand it as thoroughly as possible.

[576] This procedure naturally demands of the doctor more than merely psychiatric knowledge, for he must know about mythology, primitive psychology, etc. All this is today part of the equipment of the psychotherapist, just as it formed an essential part of medical knowledge up to the Age of Enlightenment. (One thinks, for instance, of the Paracelsist physicians of the Middle Ages.) You cannot handle the human psyche, especially when it is sick, with the ignorance of a layman, whose knowledge of it is confined to his personal complexes. For the same reason the practice of somatic medicine presupposes a thorough knowledge of anatomy and physiology. For just as there is an objective human body and not merely a subjective and personal one, so also there is an objective psyche with its specific structures and activities of which the psychotherapist should have at any rate adequate knowledge. In this matter little has changed during the last half century. There are some—in my view—premature attempts at theory-building, but they are frustrated by professional prejudice and by insufficient knowledge of the facts. Very many more experiences in all fields of psychic research need to be collected before even such foundations could be laid as would bear comparison, for instance, with the findings of comparative anatomy. Nowadays we know infinitely more about the nature of the body than we do about the structure of the psyche, despite the fact that its biology is

becoming more and more important for an understanding of somatic disorders and, finally, of man himself.

*

[577] The over-all picture of schizophrenia, which has presented itself to me in the course of more than fifty years of experience, and which I have tried to outline briefly here, does not indicate any clear-cut aetiology. Nevertheless, so far as I was able to investigate my cases analytically and assure myself, with the help of dreams and other psychological material, not only of the initial state but also of the course of the compensation-process during treatment, I must admit that I have never met with a case that did not show a logical and causally consistent development. At the same time, I am very much aware of the fact that my material consisted for the most part of milder, still fluid cases and of latent psychoses. I do not know, therefore, how it is with those severe catatonias, for instance, that may have a lethal outcome and naturally do not appear in the psychotherapist's consulting-room. Consequently, I must leave the possibility open that there may also be schizophrenias for which a psychogenic aetiology can be considered only in minimal degree or perhaps not at all.

[578] Despite, however, the undoubted psychogeneity of most cases, which would lead one to expect the disease to run a purely psychological course, schizophrenia exhibits concomitant phenomena that do not seem to me to be explicable psychologically. These phenomena, as I have said, occur in the region of the pathogenic complex. In normal people and in neurotics the affect that binds the complex together produces symptoms which could easily be interpreted as milder, preliminary forms of schizophrenic symptoms. This is particularly true of the *abaissement du niveau mental*, with its characteristic one-sidedness, clouding of judgment, weakness of will, and the blocking, perseveration, stereotypy, verbal-motor superficiality, alliteration, and assonance peculiar to the reactions. In the same way, the affect proves to be a creator of neologisms. All these phenomena reappear, heaped together and intensified, in schizophrenia, a clear indication of the exceptional violence of the affect. The affect does not always appear outwardly, in

dramatized form, but very often runs a course invisible to the observer, within, where it provokes intensified compensation-phenomena on the part of the unconscious, thus accounting for the characteristic apathy of the schizophrenic. These phenomena express themselves in delusional formations and dreams that overwhelm his conscious mind with obsessive force. The intensity of their fascination reflects the strength of the pathogenic affect and can as a rule easily be explained accordingly.

[579] But whereas, in the normal and neurotic, the acute affect passes comparatively quickly, and the chronic affect impairs the general orientation of consciousness and its adaptability in ways that are barely perceptible, the schizophrenic complex has an incomparably more powerful effect. Its expressions become fixed, its relative autonomy becomes absolute, and it takes possession of the conscious mind so completely that it alienates and destroys the personality. It does not produce a "double personality" but depotentiates the ego-personality by usurping its place, a phenomenon which is otherwise observed only in the acutest and most severe affective states—which for that reason are called pathological—or in delirium. The normal, preliminary form of this state is the dream, which, in contrast to schizophrenia, occurs in the sleeping and not in the waking state.

[580] Here we are faced with a dilemma: are we to assume, as a causal factor, a weakness of the ego-personality, or a particularly strong affect? I regard the latter hypothesis as the more promising, and for the following reason. The notorious weakness of ego-consciousness in the sleeping state means next to nothing so far as a psychological understanding of the dream-contents is concerned. It is the feeling-toned complex that determines the meaning of the dream, both dynamically and also as regards its content. We must undoubtedly apply this criterion to schizophrenia, for, so far as we can see at present, the whole phenomenology of this disease turns on the pathogenic complex. In our attempts at explanation we shall probably do best if we start from this point and regard the weakening of the ego-personality as secondary, as one of the destructive concomitants of a feeling-toned complex which arose under normal conditions but afterwards shattered the unity of the personality by its intensity.

[581] Every complex, even in the domain of neurosis, has a distinct tendency to normalize itself, either by fitting into the hierarchy of higher psychic structures, or, at the worst, by producing a personal dissociation that is somehow consistent with the ego-personality. In schizophrenia, however, the complex not only remains archaic but remains fixed in a chaotically random condition, regardless of its social aspect. It remains alien, incomprehensible, and incommunicable, like the overwhelming majority of dreams. For this peculiarity of dreams the sleeping state is responsible. For schizophrenia, on the other hand, we must assume as an explanatory hypothesis a specific noxious agent. We may conceive this to be a toxin produced by the excessively strong affect and having, we must suppose, a specific action. It does not act in the general sense of disturbing the sense-functions or the bodily movements, it acts only in the region of the pathogenic complex, reducing the association processes to an archaic level by an intensive *abaissement du niveau mental* and partly decomposing them into their elementary constituents.

[582] This postulate certainly makes one think of a possible localization, an idea that may seem altogether daring. Recently, however, it seems that two American investigators succeeded in evoking an hallucinatory vision of coloured squares and circles by stimulating the occipital cortex. It was the case of an epileptic who, as a prodromal symptom of the attack, always had a vision of a circle in a square.[6] This imagery, probably related to the well-known Purkinje figures, suggests that we are dealing with the raw material from which mandala symbols originate. I have long thought that, if there is any analogy between psychic and physiological processes, the organizing system of the brain must lie subcortically in the brain-stem. This conjecture arose out of considering the psychology of an archetype of central importance and universal distribution represented in mandala symbols. It appears spontaneously and independently of all tradition in the products of the unconscious. It is easy to recognize and cannot remain hidden from anybody who has experience of dreams. The reason that led me to conjecture a localization of a physiological basis for this archetype in the brain-stem was the psychological fact that besides being specifically characterized by the ordering and orientating role its uniting properties are predominantly affective. I would conjecture that

such a subcortical system might somehow reflect characteristics of the archetypal forms in the unconscious. They are never clear-cut units but always have fringes which make them difficult or even impossible to delineate since they would appear not only to overlap but to be indistinct. This results in their having many apparently incompatible meanings.[7] Mandala symbols appear very frequently in moments of psychic disorientation as compensatory ordering factors. This aspect is expressed above all in their mathematical structure, which was known to Hermetic natural philosophy ever since late antiquity as the axiom of Maria Prophetissa (a Neoplatonist of the 3rd century A.D.) and was the object of lively speculation for fourteen hundred years.[8]

[583] Should the idea of a localization of the archetype be confirmed by further investigation, the self-destruction of the pathogenic complex by a specific toxin would gain considerably in probability, and it would then be possible to understand the destructive process as a kind of mistaken biological defence-reaction.

[584] It will assuredly be a long time before the physiology and pathology of the brain and the psychology of the unconscious are able to join hands. Till then they must go their separate ways. But psychiatry, whose concern is the total man, is forced by its task of understanding and treating the sick to consider both sides, regardless of the gulf that yawns between the two aspects of the psychic phenomenon. Even if it is not yet granted to our present insight to discover the bridges that connect the visible and tangible nature of the brain with the apparent insubstantiality of psychic forms, the unerring certainty of their presence nevertheless remains. May this certainty safeguard investigators from the impatient error of neglecting one side in favour of the other, and, still worse, of wishing to replace the one by the other. For indeed, nature would not exist without substance, but neither would she exist for us if she were not reflected in the psyche.

APPENDIX[9]

In a letter to the chairman of a Symposium on Chemical Concepts of Psychosis, held at the second International Congress for Psychiatry in Zurich, September 1–7, 1957, Professor Jung sent this message:

Please convey my sincerest thanks to the opening session of your Society. I consider it a great honour to be nominated as Honorary President, although my approach to the chemical solution of problems presented by cases of schizophrenia is not the same as yours, since I envisage schizophrenia from the psychological point of view. But it was just my psychological approach that had led me to the hypothesis of a chemical factor, without which I would not be able to explain certain pathognomonic details in its symptomatology. I arrived at the chemical hypothesis by a process of psychological elimination rather than by specifically chemical research. It is therefore with the greatest interest that I welcome your chemical attempts.

To make myself clear, I consider the aetiology of schizophrenia to be a dual one: namely, up to a certain point psychology is indispensable in explaining the nature and the causes of the initial emotions which give rise to metabolic alterations. These emotions seem to be accompanied by chemical processes that cause specific temporary or chronic disturbances or lesions.

INDEX

[5] Girl who, when she went for walks, took baby-carriage to suggest maternity.—47

[6] Woman, hysterical, showing incongruity of idea and affect.—71

[7] Woman, who felt she had infected others with obsessional ideas.—72

[8] Young woman, hysterical, depressed, who wept on answering questions.—72

[9] Man concerned about “insinuations” in food.—76*n*

[10] Woman, hysterical, who exhibited stupid behaviour during excitement.—77

[11] Woman, hysterical, depressed but with moods of abnormal cheerfulness.—78*n*

[12] Woman, 32, cook, who felt “damned” after extraction of teeth.—82*f*, 163

[13] Dementia praecox patient who found everything “faked.”—84*n*

[14] Young woman, catatonic, who lost all affect for family.—86

[15] Woman catatonic, who verbigerated “Hallelujah.”—95

[16] Man, who combed hair to remove “plaster.”—95

[17] Woman, recovering from dementia praecox, who developed stereotype based on fantasy of leaving asylum.—95

[18] B. St., woman, dressmaker, with paranoid dementia and vivid delusions.—99*ff*, 173*ff*

[19] Young girl, depressed after broken love affair, with stereotyped anxiety dreams.—140

[20] Man, with progressive paralysis, prevented by hallucination from jumping from window.—147

[21] Man, prevented from suicide by hallucinated hand.—148

[22] Jewish student, withheld from conversion by dream of mother. —148

[23] Archaeologist, mentally disturbed by return to town which recalled early love affair.—165*ff*, 215*f*, 245*f*

[24] Man who recovered speech after five years’ silence in asylum.—171

[25] Female, melancholic, who imitated shoemaking movement.—171*f*

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

5.

PART II

Introduction

The Concept of Libido

The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)
Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY
On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)

The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)
RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF
The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus

The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION
The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution Mondiale” (1934)
The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)
Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)
A Psychological Approach to the Dogma of the Trinity (1942/1948)
Transformation Symbolism in the Mass (1942/1954)
Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)
Brother Klaus (1933)
Psychotherapists or the Clergy (1932)
Psychoanalysis and the Cure of Souls (1928)
Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead”

Yoga and the West (1936)

Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer’s “Der Weg zum Selbst” (1944)

Foreword to the “I Ching” (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE
Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

See also:
C. G. JUNG: LETTERS
Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé.
Translations from the German by R.F.C. Hull.
VOL. 1: 1906–1950
VOL. 2: 1951–1961
THE FREUD/JUNG LETTERS
Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

[*] [“Move every stone, try everything, leave nothing unattempted.”—Erasmus, *Adagia*, I.IV.XXX; trans. here by Margaret Mann Phillips. Cf. *The Freud/Jung Letters*, p. xviii. The *Letters* contain numerous references to “The Psychology of Dementia Praecox”; see the index, Jung, C. G., under the title.]

[1] [In 2 vols., 1906 and 1909. Trans. by M. D. Eder as *Studies in Word-Association* (1918); Jung’s contributions appear in Vol. 2 of the present edition.—EDITORS.]

[1] Cited from Arndt, “Über die Geschichte der Katatonie” (1902).

[2] “Über motorische Symptome bei einfachen Psychosen” (1886).

[3] *Psychiatrie: Ein Lehrbuch für Studierende und Ärzte* (orig. 1883).

[4] “Die Katatoniefrage” (1898). [For works by Ziehen, see Bibliography.—EDITORS.]

[5] “Zur Lehre von der ‘Hemmung’ geistiger Vorgänge” (1894).

[6] Von Leupoldt, who recently worked on this symptom, calls it “the symptom of naming and touching.” Cf. “Zur Symptomatologie der Katatonie” (1906).

[7] “Über motorische Störungen beim einfachen Irresein” (1885), cited from Neisser, *Über die Katatonie* (1887), p. 61.

[8] Ernst Meyer opposed this view, which was then held also by Kraepelin. Cf. Meyer, *Beitrag zur Kenntnis der acut entstandenen Psychosen* (1899).

[9] *Lehrbuch der psychopathologischen Untersuchungsmethoden* (1899).

[10] Ibid., p. 362. Recently Fuhrmann cited some association tests in “acute juvenile dementia,” which were without characteristic results. Cf. “Über akute juvenile Verblödung” (1905).

[11] “Die einfach demente Form der Dementia praecox” (1903).

[12] “Über eknoische Zustände” (1903).

[13] “Über den pathologischen Einfall” (1904).

[14] *From India to the Planet Mars* (1900); “Nouvelles observations sur un cas de somnambulisme avec glossolalie” (1901).

[15] “On the Psychology and Pathology of So-called Occult Phenomena” (orig. 1902; in *Collected Works*, Vol. 1.).

[16] “The Reaction-time Ratio in the Association Experiment” (orig. 1905).

[17] [Association through the sound of words without regard to their meaning; also, “sound associations,” as in “The Associations of Normal Subjects,” pars. 76ff.—EDITORS.]

[18] “Zur Psychologie der katatonischen Symptome” (1902).

[19] “Experimentelle Beiträge zur Lehre von Gedächtnis” (1900).

[20] In conditions of distraction there is often an increase of perseveration. Cf. my “The Associations of Normal Subjects” (1904/5) and the interesting experiments of Stransky, *Über Sprachverwirrtheit* (1905). Also the excellent work of Heilbronner, “Über Haftenbleiben und Stereotypie” (1905).

[21] Cf. Kaiser, “Beiträge zur Differentialdiagnose der Hysterie und Katatonie” (1901).

[22] Janet, *Les Obsessions et la psychasthénie* (1903). He adopts a similar viewpoint in his earlier works, *Névroses et idées fixes* (1898) and *L’Automatisme psychologique* (1889).

[23] According to Binet, attention is “mental adaptation to a state which is new for us.” Cf. “Attention et adaptation” (1900).

[24] “Die psychologische Grundlage der katatonischen Krankheitszeichen” (1903).

[25] *Psychologie des déments précoces* (1902). (Masselon's *La Démence précoce*, 1904, is more a clinical sketch of the disease.)

[26] Ibid., p. 28.

[27] Ibid., pp. 28, 265, 135, 140, 63, 71.

[28] Ibid., pp. 71, 66.

[29] Cf. the works of Freud; also Riklin, "Zur Psychologie hysterischer Dämmerzustände und des Ganser'schen Symptoms" (1904).

[30] Cf. my "Reaction-time Ratio in the Association Experiment" and "Experimental Observations on the Faculty of Memory" (orig. 1905).

[31] "The Reaction-time Ratio in the Association Experiment."

[32] *Psychologie des déments précoces*, pp. 69, 263, 261.

[33] Séglas (*Leçons cliniques sur les maladies mentales et nerveuses*, 1895) says of the uncertainty of the catatonic performance: "There is nothing surprising in this when one considers that all movement requires the previous synthesis of a mass of ideas—and it is precisely the power to make this mental synthesis which is lacking in these individuals."

[34] Cf. Kant, *Critique of Practical Reason*.

[35] Weygandt, "Alte Dementia praecox" (1904).

[36] Janet, *Obsessions et la psychasthénie* (1903), I, p. 433. The "fonction du réel" could also be called psychological adaptation to the environment. It corresponds to Binet's "adaptation," which represents a special aspect of apperception.

[37] *Outlines of Psychology* (orig. 1896; here 1902), p. 229 (slightly modified).

[38] *Grundzüge der physiologischen Psychologie* (orig. 1874; here 1903), III, p. 341.

[39] *L'Association des idées dans la manie aigüe et dans la débilité mentale* (1903).

[40] *Über Ideenflucht, Begriffsbestimmung, und psychologische Analyse* (1904).

[41] Pelletier, pp. 116, 123, 118.

[42] Cf. Chaslin, *La Confusion mentale primitive* (1895).

[43] Aschaffenburg found some prolongation of reaction time in manics. But one should not forget that in acoustic-verbal experiments attention and verbal apperception play a very great role. One observes and measures merely the verbal expressions and not the associations of ideas.

[44] The acceleration and emotional intensity of ideas can at least be verified by observation, but this is not to say that there are not other important factors which at present escape our knowledge.

[45] Cf. my "The Associations of Normal Subjects."

[46] Assonance.

[47] Contiguity.

[48] Assonance.

[49] “Similarity and contiguity: ‘immense’ suggested ‘ocean,’ then the ship and the motto that form the coat-of-arms of the city of Paris.” Pelletier, p. 142.

[50] Ibid., p. 142.

[51] Also pointed out by Kraepelin, *Arch. Psychiat. Nervenkr.*, XXVI (1894), p. 595, and Stransky, *Über Sprachverwirrtheit* (1905).

[52] Pelletier, pp. 128f.

[53] “Die negative Suggestibilität, ein psychologisches Prototyp des Negativismus” (1905).

[54] This is confirmed by Paulhan, *L’Activité mentale et les éléments de l’esprit* (1889); Janet, *Les Obsessions et la psychasthénie* (1903); Pick, “On Contrary Actions” 1904; and Svenson, “Om Katatoni” (1902). An instructive case is reported by Royce: “The Case of John Bunyan” (1894).

[55] *Les Obsessions*, I, p. 60.

[56] Cf. the analyses of Pelletier and the experimental researches of Stransky, *Über Sprachverwirrtheit*.

[57] Other works on negativism, etc., have already been criticized by Bleuler, “Die negative Suggestibilität.”

[58] Kraepelin, too, is of the opinion that comprehension is not unduly impaired; there is merely an increased tendency to arbitrary production of random ideas. Cf. his *Lehrbuch* (5th edn.), p. 177.

[59] “Zur Kenntnis gewisser erworbener Blödsinnsformen” (1903).

[60] Ibid., p. 28. Cf. also by Stransky: “Zur Lehre von der Dementia praecox” (1904); “Zur Auffassung gewisser Symptome der Dementia praecox” (1904); and “Über die Dementia praecox” (1905).

[61] For instance an hysterical woman fell one day into a deep and lasting depression “because the weather was so dull and rainy.” Analysis showed that the depression set in on the anniversary of a tragic event that influenced the whole life of the patient.

[62] Binet (*Alterations of Personality*, p. 89) aptly remarks: “Hysterical patients have been my subjects from choice, because they magnify the phenomena that must necessarily be found to some degree in many persons who have never shown hysterical symptoms.”

[63] *Über Sprachverwirrtheit*.

[64] Cf. my “The Associations of Normal Subjects,” pars. 436ff.

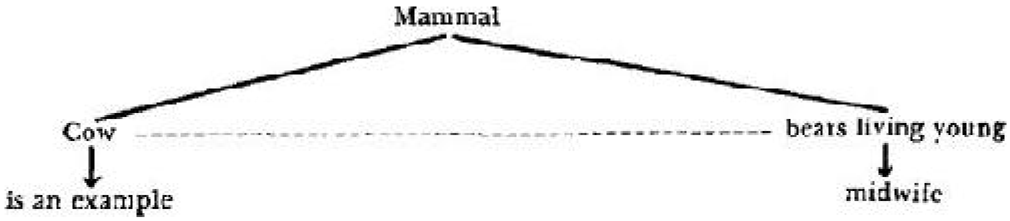
[65] Cf. Meringer and Maver, *Versprechen und Verlesen* (1895).

[66] It must however be remarked that there is an air of precipitancy about Stransky’s talking experiments which is generally lacking in the talk of dementia praecox patients. Just what gives this impression of precipitancy is hard to say.

[67] As indicated above [pars. 9–11], Sommer has already demonstrated clang associations and stereotypies in simple word reactions.

[68] Cf. “The Associations of Normal Subjects,” par. 82.

[69] Professor Bleuler favours the following construction:



[70] “Über die Sprachneubildungen Geisteskranker” (1898).

[71] Kraepelin, in his “Über Sprachstörungen im Traume” (1910), also deals with these phenomena on the basis of extensive empirical material. With regard to their psychological origin, Kraepelin’s remarks suggest that he is not so far from the view we have outlined here. Thus he says (p. 10): “The appearance of speech disturbances in dreams is very closely connected with the clouding of consciousness and with the consequent reduction in clarity of ideas.”

What Paul, Meringer, Mayer, and others designate as “contamination” and Freud as “condensation,” Kraepelin calls “ellipsis” (“blending of different sequences of ideas,” “elliptical contraction of several simultaneous trains of thought”). I would like to take this opportunity to point out that as far back as the 1880’s Forel used the term “ellipses” for the condensations and new word-formations of paranoiacs. It escaped Kraepelin’s notice that already in 1900 Freud had gone very thoroughly into the question of dream-condensations. By “condensation” Freud means the fusing together of situations, images, and elements of speech. The philological term “contamination” applies only to verbal fusions, and is thus a special concept which is subordinate to Freud’s “condensation.” In the case of speech-condensations it is advisable to retain the term “contamination.”

[72] *Arch. Psychiat. Nervenkr*., XXVI (1894), p. 595; cf. also “Über Sprachstörungen im Traume,” p. 79, where he says: “Only, it should be borne in mind that the peculiar language of the patients is not simply ‘nonsense,’ still less the deliberate product of boisterous moods, but rather the expression of a ‘word-finding’ disturbance which must be closely akin to that of dreams.” He also observes that “in speech confusion, besides disturbances in word-finding and in the verbal control of thought, there are disturbances in the thought-process itself which closely resemble those in dreams.”

[73] Cf. Pelletier’s admirable remarks on the symbol, above, par. 25.

[74] Stransky, *Über Sprachverwirrtheit*, p. 14.

[75] Cf. my “On Simulated Insanity,” par. 349, and Wehrlin, “The Associations of Imbeciles and Idiots.”

[76] “Über Haftenbleiben und Stereotypie.”

[77] “Über Bewusstseinszerfall” (1904); “Beitrag zur Pathologie des Negativismus” (1903); “Zur Nomenklatur ‘Dementia sejunctiva’” (1904); “Zur Differentialdiagnostik negativistischer Phänomene” (1905).

[78] Cf. Janet’s fundamental work, *L’Automatisme psychologique* (1889).

[79] *Les Obsessions et la psychasthénie* (1903).

[80] *Studies on Hysteria* (orig. 1895).

[81] Gross, “Zur Nomenklatur ‘Dementia sejunctiva’.”

[82] The laws of association play a very insignificant role compared with the all-powerful emotional constellation, just as in real life the logic of thought is nothing compared with the logic of feeling.

[83] Gross, “Zur Differentialdiagnostik negativistischer Phänomene.”

[84] Basing myself on Flournoy, I have demonstrated precisely this point in a case of somnambulism. Cf. “On the Psychology and Pathology of So-called Occult Phenomena.”

[85] Cf. especially the marvellous examples of automatic writing by Hélène Smith, in Flournoy, *From India to the Planet Mars* (1900).

[86] “On the Psychical Mechanism of Hysterical Phenomena,” *Studies on Hysteria*, part I.

[87] “Further Remarks on the Neuro-Psychoses of Defence” (orig. 1896), Standard Edn., 3, pp. 183f.

[88] Ibid., pp. 175ff.

[89] [I.e., of a hydrotherapeutic establishment where she was first sent for treatment.—EDITORS.]

[90] Cf. my “Psychoanalysis and Association Experiments” and “Association, Dream, and Hysterical Symptoms”; also Bleuler, “Consciousness and Association,” and Riklin, “Cases Illustrating the Phenomena of Association in Hysteria.” [I.e., Chs. 6–9. *Studies in Word-Association* (1918). Jung’s papers: Coll. Works, 2.—EDITORS.]

[91] “The Reaction-time Ratio in the Association Experiment,”

[92] *Individuelle Geistesentartung und Geistesstörung* (1904) and “Zur Aetiologie der Geistesstörungen” (1903).

[93] *Individualität und Psychose* (1906).

[94] Ibid., p. 29.

[95] Note that he does this only for paranoia, by which he can hardly mean Kraepelin’s “primary” paranoia. His description is more applicable to the paranoid states.

[1] For feeling, sentiment, emotion, affect, Bleuler proposes the expression “affectivity,” “which is meant to designate not only affects in the proper sense, but the slight feelings or feeling-tones of pleasure and unpleasure in every possible circumstance.” Cf. *Affektivität, Suggestibilität, Paranoia* (1906), p. 6.

[2] Bleuler says (p. 17): “Thus affectivity, much more than reflection, is the driving force behind all our actions and omissions. It is likely that we act *only* under the influence of pleasure/unpleasure feelings; our logical reflections get their power only from the affects associated with them.” “Affectivity is the broader concept of which volition and conation are only one aspect.” Godfernaux says: “The affective state is the ruling power, ideas are nothing but its subjects. … The logic of reasoning is only the apparent cause of the *volte-faces* of thought. … Below the cold and rational laws of association of ideas there are others which conform more to the profound needs of life. This is the logic of feeling,” *Le Sentiment et la pensée et leurs principaux aspects physiologiques* (1906), pp. 83f.

[3] Bleuler (p. 5): “Just as even in the simplest perception of light we can distinguish between its quality, intensity, and saturation, so we may speak of processes of cognition, feeling, and volition, although we know that there is probably no psychic process to which all three qualities are not common, even if first one and then the other predominates.” For this reason Bleuler divides the “psychic structures” into those that are “preponderantly intellectual, preponderantly affective, and preponderantly volitional.”

[4] This behaviour may be compared directly to Wagnerian music. The leitmotiv, as a sort of feeling-tone, denotes a complex of ideas which is essential to the dramatic structure. Each time one or the other complex is stimulated by something someone does or says, the relevant leitmotiv is sounded in one of its variants. It is exactly the same in ordinary psychic life: the leitmotivs are the feeling tones of our complexes, our actions and moods are modulations of the leitmotivs.

[5] The individual ideas are combined according to the different laws of association (similarity, coexistence, etc.), but are selected and grouped into large combinations by an affect.

[6] Cf. “The Reaction-time Ratio in the Association Experiment.”

[7] Bleuler (*Affektivität*, p. 31) says: “Attention is nothing more than a special form of affectivity.” P. 30: “Attention like all our actions is always directed by an affect”; or more accurately: “Attention is an aspect of affectivity, and does nothing more than what we know affectivity does, i.e., it facilitates certain associations and inhibits others.”

[8] “The Associations of Normal Subjects,” par. 383.

[9] By “affect-ego” I mean the modification of the ego-complex resulting from the emergence of a strongly toned complex. In the case of painful affects the modification consists in a restriction, a withdrawal of many parts of the normal ego. Many other wishes, interests, and affects must make way for the new complex, so far as they are opposed to it. In an outburst of affect the ego is reduced to the barest essentials: one has only to think of scenes like a theatre fire or a shipwreck, where in a trice all civilization melts away and only the most primitive ruthlessness remains.

[10] Cf. my “Experimental Observations on Memory.” In *The Interpretation of Dreams* (Standard edn., V, p. 515) Freud says: “If the first account given me by a patient of a dream is too hard to follow I ask him to repeat it. In doing so he rarely uses the same words. But the parts of the dream which he describes in different terms are by that fact revealed to me as the weak spot in the dream’s disguise. … My request to the patient to repeat his account of the dream has warned him that I was proposing

to take special pains in solving it; under pressure of the resistance, therefore, he hastily covers the weak spots in the dream's disguise by replacing any expressions that threaten to betray its meaning by other less revealing ones."

[11] Further examples of symptomatic actions in my "Psychoanalysis and Association Experiments."

[12] Freud remarks on this too. Cf. also the case in my "Association, Dream, and Hysterical Symptoms."

[13] Freud calls this "sublimation." Cf. "Three Essays on the Theory of Sexuality" (Standard edn., VII), p. 178.

[14] "On the Psychology and Pathology of So-called Occult Phenomena." Cf. also Paulhan, *Les Mensonges du caractère* (1905).

[1] For the technique of analysis see my “Psychoanalysis and Association Experiments” and “Association, Dream, and Hysterical Symptom”; also “The Psychological Diagnosis of Evidence.”

[2] *Versprechen und Verlesen* (1895).

[3] The greatest clarity is found at the point of vision where attention is greatest. Hence attention is reduced for the peripheral field of vision and the inhibition for unsuitable elements is less than at that point. This makes it easier for repressed fragments of complexes to appear in the peripheral field.

[4] Examples in “Reaction-time Ratio in the Association Experiment.” Cf. also the indirect associations in “The Associations of Normal Subjects,” pars. 82, 451.

[5] Cf. *The Psychopathology of Everyday Life* and *The Interpretation of Dreams*.

[6] “Reaction-time Ratio,” par. 605, no. 199 [with further details at no. 72].

[7] “The Associations of Normal Subjects,” par. 451. [P. J. Bunau-Varilla was an individual prominent in the Panama Canal controversy, to whom Jung had seen a newspaper reference.—EDITORS.]

[8] “The Reaction-time Ratio in the Association Experiment,” par. 611, following no. 92.

[9] Standard Edn., VI, pp. 9ff.

[10] Cf. my “Association, Dream, and Hysterical Symptoms.”

[11] Ibid.

[12] The personal and family circumstances of the subject are well known to me.

[13] The fusion of simultaneously existing complexes might, for instance, be explained by the elementary fact, not unknown to psychologists (cf. Féré, *The Pathology of the Emotions)*, that two simultaneous stimuli in different sensory spheres reinforce and influence one another. From experiments on which I myself am engaged it can be shown that voluntary motor activity is influenced by a simultaneous automatic activity (respiration). Judging by all we know of them, complexes are continuous automatic stimulations or activities, and just as they influence our conscious thinking so also they act formatively on one another, so that each complex contains elements of the other—which could be described psychologically as “fusion.” Freud, from a rather different standpoint, calls it “overdetermination.”

[14] Cf. “The Associations of Normal Subjects,” par. 450.

[15] Ibid., pars. 82ff.

[16] Kraepelin (“Über Sprachstörungen im Traume”) is of the opinion that the “proper formulation of a thought is frustrated by the emergence of distracting subsidiary ideas.” On p. 48 he says: “The common feature in all these observations [on dream paraphasia] is the displacement of the underlying thought by a subsidiary association with some essential link in the chain of ideas.” The “derailment” of speech or thought by a subsidiary association is due, in my opinion, to the ideas being insufficiently discriminated. Kraepelin found, further, that the “subsidiary idea causing the displacement was manifestly a narrower one with a richer content, which thrust aside the more general, more shadowy idea.” He terms this symbolic derailment of thought “metaphorical paralogia” and contrasts it with the paralogias due simply to displacement. The subsidiary associations are mostly associations of similarity—at any rate they are exceedingly frequent—so it is easy to understand how the paralogia gets its metaphorical character. Such metaphors can give the

impression of a sort of deliberate distortion of dream-thinking. On this point, therefore, Kraepelin's views come very close to Freud's.

[17] Stadelmann (*Geisteskrankheit und Naturwissenschaft*) says, in his distressingly stilted manner: "The psychotic equips his partially or completely disturbed ego-feeling with a symbol, but he does not compare this feeling with other processes or objects in the manner of a normal person; it is carried so far that the image he has adduced for comparison becomes a reality—his own subjective reality, which in the judgment of others is a delusion." "The genius has need of forms for the inner life which he projects outside him, and whereas in the psychotic the symbolizing association becomes a delusion, in the genius it manifests itself only as an intensified experience."

[18] *L'Association des idées dans la manie aigüe*, pp. 128t.

[19] This is naturally meant only as a figurative expression for the compulsion to sleep, or the sleep-instinct (Claparède, "Esquisse d'une théorie biologique du sommeil"). Theoretically I agree with the view formulated by Janet: "In one way sleep is an act. It requires a certain amount of energy to decide to go to sleep at the opportune moment and to do this correctly" (*Les Obsessions*, I, p. 408). Like every psychic process, sleep probably has its special cell-chemistry (Weygandt). What this is no one knows. From the psychological point of view sleep seems to be an auto-suggestive phenomenon. (Forel and others express similar views.) Thus we can understand that there are all gradations from pure sleep-suggestion to the organic compulsion to sleep, which gives the impression of a poisoning by metabolic toxins.

[20] The instinctive sleep-inhibition can be expressed psychologically as "désintérêt pour la situation présente" (Bergson, Claparède). The effect of the "désintérêt" on the associative activity is the "abaissement de la tension psychologique" (Janet), expressed in the characteristic dream-associations described above.

[21] "The Psychopathological Significance of the Association Experiment."

[22] Hysteria employs all kinds of elaborate devices as a means of protection against the complex, such as conversion into physical symptoms, splitting of consciousness, etc.

[23] "Hysterie und hysterisches Irresein" (1895).

[24] Stadelmann, though he almost chokes it in a welter of verbiage, gives expression to a similar (?) idea.

[1] "Psychoanalysis and Association Experiments" and "Association, Dream, and Hysterical Symptoms."

[2] If I identify Janet's cases, described in *Les Obsessions*, with hysteria, I do so because I do not know how to distinguish his "obsédés" from hysterics.

[3] "Über Emotionslähmung."

[4] "Psychoanalysis and Association Experiments," par. 666.

[5] Riklin cites the following instructive example: An hysterical patient regularly vomited all the milk she drank. Under hypnosis, analysis showed that once when she was staying with a relative he assaulted her in a stable, where she had gone to fetch milk. "Ibi homo puellam coagere conatus est, ut semen, quod masturbatione effluebat, ore reciperet." In the week following the hypnosis she nearly always vomited what milk she drank, though she had total amnesia for the hypnosis. Cf. Riklin, "Analytische Untersuchungen der Symptome und Assoziationen eines Falles von Hysterie" (1904).

[6] Cf. Forel, "Selbstbiographie eines Falles von Mania acuta" (1901), and Schreber, *Memoirs of My Nervous Illness*.

[7] Ibid., passim, particularly p. 357. [*Flüchtig hingemachte Männer;* more literally, perhaps, "fleetingly deposited men." An approximation to the sense is conveyed by the novelist Gavin Lambert, who, in *The Slide Area* (1959), speaks of "instant people."—TRANS.]

[8] Similar to Janet's "conjurations." Cf. *Obsessions*.

[9] Cf. my "Association, Dream, and Hysterical Symptoms."

[10] Forel's patient felt compelled to make many such interpretations; thus, she interpreted the name "Vaterlaus" as "pater laus tibi." A patient of mine complained of the "insinuations" that were made by means of food. He had recently found a linen thread (*Leinenfaser)* in what he was eating. This was enough to suggest to him that a certain Frl. Feuerlein was meant. The same patient announced to me one day that he could not understand what a "green form" had to do with him. He got this idea because "they put chloroform" (*chloros, forma*) in his food.

[11] In experiments with automatic writing ("psychography") we can see very clearly how the unconscious plays with ideas. Often the words are written with the sequence of letters reversed, or there are strange conglomerations of words in otherwise clear sentences. In mediumistic circles attempts are sometimes made at inventing new languages. The best-known of these language-making mediums is Hélène Smith (cf. Flournoy, *From India to the Planet Mars*). Similar phenomena are reported in my "Psychology and Pathology of So-called Occult Phenomena."

[12] Fürstner, "Die Zurechnungsfähigkeit der Hysterischen." [Moria is a morbid impulse to joke.—EDITORS.]

[13] *Les Obsessions*, p. 391.

[14] For some time I treated an hysterical patient who suffered from intense depressions, headaches, and total inability to work. When I suggested pleasure in work and a more cheerful mood, she was often abnormally cheerful the next day, laughing incessantly, and had such a compulsion to work that she kept at it until late at night. Then, on the third day, she was profoundly exhausted. Actually she found the cheerful mood that appeared in her without motivation unpleasant, because all sorts of nonsense, stupid jokes, etc., kept coming into her head together with a regular compulsion to laugh.

For an example of hystero-hypnosis, see my “A Case of Hysterical Stupor in a Prisoner in Detention.”

[15] Cf. Bleuler, “Frühe Entlassungen” (1905).

[16] “Über Versetzungsbesserungen” (1905), pp. 153, 165, 179.

[17] A good example of the momentary changes of front in hysteria can be found in Riklin’s “Zur Psychologie hysterischer Dämmerzustände und des Ganser’schen Symptoms” (1904). Riklin shows that the patient manifested correct or delusional orientation according to the manner of questioning. The same thing may happen spontaneously when the complex is touched. Riklin reports a similar, experimental case (“Cases Illustrating the Phenomena of Association”), where a critical stimulus word induced a twilight state which lasted for some time. Pathological ideas, e.g., the automatic interpolations in the speech or writing of somnambulists, are the same thing in principle.

[18] Cf. Meyer, *Beitrag zur Kenntnis der acut entstandenen Psychosen*. It is worth remembering that a normal dream is always a “complex-delirium,” that is to say its content is determined by one or more complexes which are acute. This has been demonstrated by Freud. Anyone who analyses his own dreams by the Freudian method will soon see the justification for the term “complex-delirium.” Very many dreams are wish-fulfilments. Endogenous dreams are exclusively concerned with complexes, whereas exogenous dreams, i.e., those that are influenced or produced by physical excitations during sleep, are, so far as I can judge, fusions of complex constellations with more or less symbolic elaborations of physical sensations.

[19] Good examples are to be found in Ganser’s twilight states and the deliria of somnambulists. (Cf. Riklin, “Zur Psychologie hysterischer Dämmerzustände,” and my “Hysterical Stupor in a Prisoner in Detention” and “On Simulated Insanity.”) An excellent example of complex-delirium with misinterpretation is given by Weiskorn (*Transitorische Geistesstorungen beim Geburtsakt*, 1897): A 21-year-old primipara, clutching her abdomen during labour, asked, “Who is pressing me there?” She interpreted the descent of the head as a hard movement of the bowels. Transparent complex-deliria are reported by Krafft-Ebing (*Text-Book of Insanity*) and Mayer (“Sechzehn Fälle von Halbtraumzustand,” 1893). The semi-conscious or unconscious fantasies of hysterics described by Pick (“Über pathologische Traumerei und ihre Beziehung zur Hysterie,” 1896) are clear complex-deliria, as are the romances of Hélène Smith described by Flournoy and of the somnambulists observed by me. Another clear case can be found in Bohn, *Ein Fall von doppeltem Bewusstsein* (1898).

[20] Riklin has made valuable contributions to this question in his “Über Versetzungsbesserungen.” I give one of his cases as an example: Miss M. S., aged 26, educated and intelligent. Had a brief attack of illness six years ago, but recovered so well that she was discharged as cured and the diagnosis of dementia praecox was not given. Before the present attack she fell in love with a composer, from whom she took singing lessons and who filled her with admiration. Her love soon reached a passionate intensity, with periods of morbid excitement. She was brought to Burghölzli. At first she looked upon her internment and everything that went on around her as a descent into the underworld. She got this idea from her teacher’s latest composition, “Charon.” Then, after this purifying passage through the underworld, she interpreted everything in terms of the difficulties and struggles she had to endure in order to be united with her lover. She thought a fellow patient was her lover and for several nights went into her bed. Afterwards she believed she was pregnant, felt and heard twins in her womb, a girl that looked like her and a boy that looked like the “father.” Later she believed she had given birth and hallucinated a child next to her in bed. With that the psychosis came to an end. She had discovered a healing substitute for reality. She soon became quiet, freer in her behaviour, the

stiffness in her attitude and gait disappeared, and she willingly gave catamnesic information, so that her statements could be correlated with those in the clinical record.

[21] In his psychological analysis of Magnan's "délire chronique à évolution systématique" Godfernaux finds at its base an affective disturbance: "In reality the patient's thinking is passive; he orients himself in accordance with his affective state, without taking all his ideas into account." *Le Sentiment et la pensée* (1906), p. 83.

[21a] [Cf. infra, pars. 335f.—EDITORS.]

[22] *Affektivität* (1906). Cf. also Neisser, "Paranoia und Schwachsinn" (1898).

[23] Cf. Marguliès, "Die primäre Bedeutung der Affecte im ersten Stadium der Paranoia" (1901), and Gierlich, "Über periodische Paranoia und die Entstehung der paranoischen Wahnideen" (1905).

[24] A dementia-praecox patient under my observation finds everything faked: what the doctor says to him, what the other patients do, the cleaning of the ward, the food, etc., everything is faked. It is all caused by one of his female persecutors "pulling a princess round by the head and yelling at people what they have to do."

[25] *Les Obsessions*, I, pp. 264, 266.

[26] Ibid., 272.

[27] Ball, "La Folie du doute" (1882).

[28] Janet, p. 273.

[29] "Die Entstehung von *Also Sprach Zarathustra,*" by Peter Gast, in Nietzsche's *Werke*, VI, pp. 479ff. Cf. also my "On the Psychology of So-called Occult Phenomena," pars. 140f., 180ff.

[30] Janet, p. 282.

[31] Excellent examples can be found in Schreber.

[32] An original form of thought-deprivation is reported by Klinke: "The footsteps of other patients walking up and down the ward 'walk out' the patient's thoughts." "Über das Symptom des Gedankenlautwerdens" (1894).

[33] The phenomenon is not uncommon in hysterics, as I have observed. Janet calls it a "mental eclipse." His patient, he says, "often complains of a singular arrest of her thought, she loses her ideas." *Les Obsessions*, I, p. 369.

[34] "Theories" such as those of Rogues de Fursac merely restate the facts: "The most suitable term might be psychic interference. The two opposing tendencies cancel one another out, as contrary waves do in physics." Cited from Claus, *Catatonie et stupeur* (1903). Cf. also Mendel, *Leitfaden der Psychologie* (1902), p. 55.

[35] A parallel to this is the "réverie forcée" of Janet's "obsédés": "She feels that at certain moments all her life is concentrated in her head, that the rest of her body is as if asleep, and that she is forced to think tremendously hard, without being able to stop herself. Her memory becomes extraordinary, and so excessively developed that it cannot be directed by attention." *Les Obsessions*, I, p. 154. Cf. also the case reported in "Psychoanalysis and Association Experiments."

[36] [*"Bannung"* is not commonly used in modern psychiatry. It could also be translated "interdiction" and in that sense would cover the phenomenon of thought deprivation,—TRANS.]

[37] A girl was seduced during the prolonged absence of her fiancé. She concealed this fact from him. More than ten years later she fell ill with dementia praecox. The illness began with her feeling that people suspected her morality; she heard voices that talked of her secret, and finally they forced her to confess to her husband. Many patients state that the "sin register" is read out in all its details, or that the voices "know everything" and "put them through it." It is therefore extremely significant that most patients are unable to give any satisfactory information about their hallucinations. As we know, the voluntary reproduction of the complex is under special inhibition.

[38] Cf. below, par. 360. A schizophrenic who was quite inaccessible and always greeted the doctors with a flood of abuse once fell ill with severe gastro-enteritis. With the onset of the illness he changed completely, he was patient and grateful, followed all the instructions and always gave polite and precise information. His convalescence was proclaimed by his once more becoming monosyllabic and shut in, and one fine morning he signalled his complete recovery by greeting me as before with the refrain "Here comes another of the dog and monkey troupe wanting to play the saviour."

[39] Cf. De Sanctis, *I Sogni: Studi psicologici e clinici di un alienista* (1899), and Kazowsky, "Zur Frage nach dem Zusammenhange von Träumen und Wahnvorstellungen" (1901). In Burghölzli we had a patient who was afflicted with all sorts of sexual delusions. The delusions, as we were able to demonstrate countless times, came exclusively from dreams. She simply equated the content of her dreams, which were all very vivid and concrete, with reality and, depending on the dream, became abusive, querulous, or aggressive—but only in writing. In her general behaviour she was neat and orderly, and this contrasted strikingly with the tone of her letters and other writings.

[40] As we have already remarked, the collective term "feeling-tone" includes "attention-tone."

[41] Occasionally the content of the complex perseverates, but in the majority of cases there is only a perseverating disturbance. This may be due to the fact that the complex acts as a distraction and leaves behind an associative "vacuum," just as in the distraction experiment, where, because of this vacuum, the subject simply resorts in embarrassment to the previous content of consciousness. If, like Heilbronner, one asks rather more difficult questions, the resultant emotion may serve the same purpose as a complex. Or else the associative vacuum is primary, there being no familiar associations to the stimulus concepts. In normal people a complex usually perseverates.

[42] Janet, *Les Obsessions*, pp. 335ff. On p. 351 he says: "This more or less complete stoppage of certain actions or even of all actions is one of the most essential phenomena in the mental state of the obsessed." On p. 105: "These forced operations are not normal operations, they are operations of thought, action, and emotion which are at once excessive, sterile, and of an inferior order."

[43] Pfister ("Über Verbigeration," 1906) poses the question whether stereotypies, especially verbigerations, are psychologically motivated or not. He seems, like me, to be of the opinion that some ideational content is at the back of the stereotypy, but that it comes out in a distorted way owing to the pathological disturbance of the means of expression. "It is conceivable that the stereotyped ideas are struggling to express themselves, but instead of them only senseless phrases and new word-formations are reiterated, because the processes of disintegration and excitation in the central speech apparatus render their intelligible reproduction impossible. Instead of the stereotyped thoughts only unintelligible remnants of them are expressed (as a result of paralogical and paraphasic malformations)." There is still another way in which the disintegration of speech can undermine the correct reproduction of stereotyped ideas: owing to the disturbance in the process of formulating them into words and phrases, no corresponding speech-formations can be evoked by the

monotonously recurring ideas and thoughts. During their conversion into words numerous paralogical “derailments” occur; the ideas get in each other’s way, slip in all directions, so that instead of the conceptual stereotypy, which remains completely hidden, only a constantly changing jumble of nonsense is produced.

[44] Cf. Meige and Feindel, *Tics and Their Treatment* (orig. 1902).

[45] Cf. Schreber in particular, who gives an excellent account of how the content of the voices becomes grammatically more and more abbreviated.

[46] My “Association, Dream, and Hysterical Symptoms.”

[47] One of his patients said: “Formerly I used to look back in my memory in order to know whether I ought to reproach myself for anything, in order to reassure myself about my conduct—but now it is not at all the same thing. I always recall what I have done a week or two weeks ago, and I see things exactly, but I have absolutely no interest in seeing them.” Here the detachment from the actual content is especially worth noting, (*Les Obsessions*, I, p. 125.)

[1] [*Kohlrabenschwarz.*—TRANS.]

[2] This figure indicates the number of times the stimulus-word was repeated by the patient.

[3] Cf. “Analysis of the Associations of an Epileptic,” par. 542, where we found “yes” as an expression of feeling in an epileptic.

EDITORIAL NOTE

In the Editorial Note to Volume 1 it was pointed out that Jung's interest had gradually transferred itself, over the years, from psychiatry through psychoanalysis and typology to the theory of archetypes, and finally to the psychology of religious motifs. This facilitated the grouping of his published researches under the relevant headings, even though some of the material could equally well fit into any of several volumes. It follows that there is an underlying network linking, in time or subject-matter, each volume with others, and that wide reading among the volumes is required for a thorough grasp of Jung's views on any particular topic. From no single volume, whatever the arrangement, could the continuity of development be seen in historical perspective.

The present volume gives the substance of Jung's published writings on Freud and psychoanalysis between the years 1906 and 1916; two later papers are, however, added for reasons which will become apparent. Anyone familiar with Jung's work will be aware that references to Freud's observations and theories occur frequently throughout his writings; indeed, the discussion of them has engaged his interest from the beginning of the century to the present day. The scientific papers in this volume, while falling short of a complete account of Freud and psychoanalysis, nevertheless give the essential elements in Jung's changing views on this subject.

Between the years 1907 and 1912, when Jung was a psychoanalyst, his association with Freud was very close. Though the personal relationship between the two then became strained, largely owing to the publication of *Wandlungen und Symbole der Libido* in 1911–12, Jung continued to serve as president of the International Psycho-Analytical Association until 1914. Part I of this volume covers the period of Jung's close and "enthusiastic" collaboration with Freud; the papers in Parts II and III contain the essentials of the criticism that led to the formal rupture. The contents of Part IV are more in need of explanation. "The Significance of the Father in the Destiny of the Individual,” having been originally written in 1908, is associated with the material of Part I. It was, however, considerably revised by the author in 1949, and the revisions are sufficiently extensive to warrant its being placed in Part IV. In view of their special interest, the most important differences between the two versions have been indicated by the use of brackets and footnotes (a comparative method applied also to “The Theory of Psychoanalysis” in Part II). The essay “Freud and Jung: Contrasts” was commissioned in 1929 by the editor of the *Kölnische Zeitung* in view of the then current interest in the relation between Freud and Jung. It is included here because it shows the continuity in Jung’s thinking from the time he wrote “The Theory of Psychoanalysis” (1912), serving at the same time as an outline of the changes that had taken place in the interim. In particular, it stresses that the element of confession and the personality of the investigator cannot be eradicated from psychological formulations and may even be considered an essential part of them. Jung’s estimate of Freud must be seen in this light, not only in the writings in the present volume but in Volume 15, where Freud is viewed in his cultural setting. “Freud and Jung: Contrasts” and the Introduction to Kranefeldt’s *Secret Ways of the Mind* (1930) therefore form a basis for further study of Jung’s reassessment of psychoanalysis in that and other volumes of this edition.

The concept of personality is closely bound up with the subject of typology, first broached in this volume and elaborated systematically in *Psychological Types* (Volume 6). Indeed, Jung has once again declared (in his British television broadcast, November 1959) that it was the difference between Freud’s views and his own that originally impelled him to work out a psychology of types. We can see this very clearly in the publications between the years 1913 and 1921, when *Psychological Types* was published. The break with Freud was followed by a relatively fallow period. Except for a handful of publications chiefly in English only two works appeared during those years, but they are very important indeed: “The Conception of the Unconscious” and “The Psychology of the Unconscious Processes” (a revision of a 1912 work), published in 1916 and 1917. Through periodic revision these ultimately became the celebrated *Two Essays on Analytical Psychology* (Volume 7), and they contain in embryo the whole future development of analytical psychology both as a therapeutic technique and as a method of investigating the unconscious. In these two seminal works and their subsequent revisions, Jung progressively elaborates and clarifies his basic concepts and carefully differentiates his position from that of Freud. They deepen our understanding of Jung's relation to psychoanalysis in that they set his concepts of the collective unconscious, the archetypes, and the individuation process side by side with his assessment of the theories of Freud and Adler. In this respect, they amplify the papers published in Parts I, II, and III of the present volume and form the link between them and Jung's more critical approach to Freud in Part IV.

The combination of scientific with less technical essays illustrates another aspect of editorial policy in this and other volumes. Over the years Jung has responded again and again to the widespread interest which psychoanalysis, and later analytical psychology, aroused. The Editors, therefore, have not hesitated to assemble in the same volume scientific articles with essays of a more popular nature.

VOLUME 4
FREUD & PSYCHOANALYSIS

TABLE OF CONTENTS

EDITORIAL NOTE

I

Freud’s Theory of Hysteria: A Reply to Aschaffenburg

Translated from “Die Hysterielehre Freuds: Eine Erwiderung auf die Aschaffenburgsche Kritik,” *Münchener medizinische Wochenschrift* (Munich), LIII (1906).

The Freudian Theory of Hysteria

Translated from “Die Freud’sche Hysterietheorie,” *Monatsschrift für Psychiatrie und Neurologie* (Berlin), XXIII (1908).

The Analysis of Dreams

Translated from “L’Analyse des rêves,” *Année psychologique* (Paris), XV (1909).

A Contribution to the Psychology of Rumour

Translated from “Ein Beitrag zur Psychologie des Gerüchtes,” *Zentralblatt für Psychoanalyse* (Wiesbaden), I (1910/11).

On the Significance of Number Dreams

Translated from “Ein Beitrag zur Kenntnis des Zahlentraumes,” *Zentralblatt für Psychoanalyse* (Wiesbaden), I (1910/11).

Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review

Translated from a review in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig), III (1911).

On the Criticism of Psychoanalysis

Translated from “Zur Kritik über Psychoanalyse,” *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig), II (1910).

Concerning Psychoanalysis

Translated from “Zur Psychoanalyse,” *Wissen und Leben* (Zurich), V (1912).

II

The Theory of Psychoanalysis

Translated from *Versuch einer Darstellung der psychoanalytischen Theorie*, 2nd edn. (Zurich: Rascher, 1955).

7. THE AETIOLOGY OF NEUROSIS

8. THERAPEUTIC PRINCIPLES OF PSYCHOANALYSIS

9. A CASE OF NEUROSIS IN A CHILD

III

General Aspects of Psychoanalysis

Translated from “Allgemeine Aspekte der Psychoanalyse,” the original ms., which was published (in an anonymous translation) in *Transactions of the Psycho-Medical Society* (Cockermouth, England), 1913.

Psychoanalysis and Neurosis

Originally published in English as “On Psychoanalysis” in *Collected Papers on Analytical Psychology* (London: Baillière, Tindall and Cox, 1916).

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ

Translated from *Psychotherapeutische Zeitfragen: Ein Briefwechsel mit Dr. C. G. Jung*, edited by Dr. R. Loÿ (Leipzig and Vienna: Deuticke, 1914).

Prefaces to *Collected Papers on Analytical Psychology*

Originally published in the book, edited by Constance E. Long (London: Baillière, Tindall and Cox, 1916; 2nd edn., 1917).

IV

The Significance of the Father in the Destiny of the Individual

Translated from *Die Bedeutung des Vaters für das Schicksal des Einzelnen* (3rd revised edn., Zurich: Rascher, 1949), including material from the 1st edn. (1909).

Introduction to Kranefeldt’s *Secret Ways of the Mind*

Translated from the introduction to W. M. Kranefeldt, *Die Psychoanalyse* (Berlin and Leipzig: W. de Gruyter, 1930).

Freud and Jung: Contrasts

Translated from “Der Gegensatz Freud und Jung,” *Seelenprobleme der Gegenwart* (Zurich: Rascher, 1931).

FREUD’S THEORY OF HYSTERIA: A REPLY TO ASCHAFFENBURG[1]

[1] If I try to answer Aschaffenburg’s—on the whole-very moderate and cautious criticism of Freud’s theory of hysteria,[2] I do so in order to prevent the baby from being thrown out with the bath-water. Aschaffenburg, of course, does not assert that Freud’s importance ends with his theory of hysteria. But the medical public (psychiatrists included) know Freud mainly from this side of his work, and for this reason adverse criticism could easily throw a shadow on Freud’s other scientific achievements. I would like to remark at the start that my reply is not directed to Aschaffenburg personally, but to the whole school of thought whose views and aspirations have found eloquent expression in Aschaffenburg’s lecture.

[2] His criticism is confined exclusively to the role which sexuality, according to Freud, plays in the formation of the psychoneuroses. What he says, therefore, does not affect the wider range of Freud’s psychology, that is, the psychology of dreams, jokes, and disturbances of ordinary thinking caused by feeling-toned constellations. It affects only the psychology of sexuality, the determinants of hysterical symptoms, and the methods of psychanalysis.[3] In all these fields Freud has to his credit unique achievements, which can be contested only by one who has never taken the trouble to check Freud’s thought-processes experimentally. I say “achievements,” though this does not mean that I subscribe unconditionally to all Freud’s theorems. But it is also an achievement, and often no small one, to propound ingenious problems. This achievement cannot be disputed even by Freud’s most vigorous opponents.

[3] To avoid being unnecessarily diffuse, I shall leave out of account all those points which are not affected by Aschaffenburg’s criticism, and shall confine myself only to those it attacks.

[4] Freud maintains that he has found the root of *most* psychoneuroses to be a psychosexual trauma. Is this assertion nonsense?

[5] Aschaffenburg takes his stand on the view, generally accepted today, that hysteria is a psychogenic illness. It therefore has its roots in the psyche. It would be a work of supererogation to point out that an essential component of the psyche is sexuality, a component of whose extent and importance we can form absolutely no conception in the present unsatisfactory state of empirical psychology. We know only that one meets sexuality everywhere. Is there any other psychic factor, any other basic drive except hunger and its derivates, that has a similar importance in human psychology? I could not name one. It stands to reason that such a large and weighty component of the psyche must give rise to a correspondingly large number of emotional conflicts and affective disturbances, and a glance at real life teaches us nothing to the contrary. Freud's view can therefore claim a high degree of probability at the outset, in so far as he derives hysteria primarily from psychosexual conflicts.

[6] Now what about Freud's particular view that all hysteria is reducible to sexuality?

[7] Freud has not examined all the hysterias there are. His proposition is therefore subject to the general limitation which applies to empirical axioms. He has simply found his view confirmed in the cases observed by him, which constitute an infinitely small fraction of all cases of hysteria. It is even conceivable that there are several forms of hysteria which Freud has not yet observed at all. Finally, it is also possible that Freud's material, under the constellation of his writings, has become somewhat one-sided.

[8] We may therefore modify his dictum, with the consent of the author, as follows: An indefinitely large number of cases of hysteria derive from sexual roots.

[9] Has anyone proved that this is not so? By "prove" I naturally mean applying Freud's psychanalytic methods and not just carrying out a rigorous examination of the patient and then declaring that nothing sexual can be found. All such "proofs" are of course worthless from the start. Otherwise we would have to admit that a person who examines a bacterial culture with a magnifying-glass and asserts that there are no

bacteria in it is right. The application of psychanalytic methods is, logically, a *sine qua non*.

[10] Aschaffenburg's objection that an entirely traumatic hysteria contains nothing sexual and goes back to other, very clear traumata seems to me very apt. But the limits of traumatic hysteria, as Aschaffenburg's example shows (flower-pot falling followed by aphonia), are very wide. At that rate countless cases of hysteria could be put into the category of "traumatic" hysteria, for how often does a mild fright produce a new symptom! Aschaffenburg will surely not believe that anyone can be so naïve as to seek the cause of the symptom in that little affect alone. The obvious inference is that the patient was hysterical long before. When for instance a shot is fired and a passing girl gets abasia, we can safely assume that the vessel, long since full, has merely overflowed. No special feat of interpretation is needed to prove this. So these and a legion of similar cases prove nothing against Freud.

[11] It is rather different in the case of physical traumata and hysterias about insurance money. Here, where the trauma and the highly affective prospect of money coincide, an emotional situation arises which makes the outbreak of a specific form of hysteria appear at least very plausible. It is possible that Freud's view is not valid in these cases. For lack of other experiences I incline to this opinion. But if we want to be absolutely fair and absolutely scientific, we would certainly have to show first that a sexual constellation really never did pave the way for the hysteria, i.e., that nothing of this sort comes out under analysis. At any rate the allegation of traumatic hysteria proves, at best, only that not all cases of hysteria have a sexual root. But this does not controvert Freud's basic proposition, as modified above.

[12] There is no other way to refute it than by the use of psychanalytic methods. Anyone who does not use them will never refute Freud; for it must be proved by means of the methods inaugurated by him that factors can be found in hysteria other than sexual ones, or that these methods are totally unsuited to bringing intimate psychic material to light.

[13] Under these conditions, can Aschaffenburg substantiate his criticism?

[14] We hear a great deal about “experiments” and “experiences,” but there is nothing to show that our critic has used the methods himself and —what is more important—handled them with certainty. He cites a number of—we must admit—very startling examples of Freudian interpretation, which are bound to nonplus the beginner. He himself points out the inadequacy of quotations torn from their context; it should not be too much if I emphasize still further that in psychology the context is everything. These Freudian interpretations are the result of innumerable experiences and inferences. If you present such results naked, stripped of their psychological premises, naturally no one can understand them.

[15] When Aschaffenburg says these interpretations are arbitrary and asserts that other interpretations are just as possible, or that there is absolutely nothing behind the facts in question, it is up to him to prove, by his own analyses, that such things are susceptible of altogether different interpretations. Then the matter would be quickly settled, and everyone would thank him for clearing up this question. It is the same with the question of “forgetting” and other symptomatic actions which Aschaffenburg relegates to the realm of mysticism. These phenomena are extraordinarily common; you meet them almost every day. It is therefore not too much to ask a critic to show by means of practical examples how these phenomena can be traced back to other causes. The association experiment would provide him with any amount of material. Again he would be doing constructive work for which one could not thank him enough.

[16] As soon as Aschaffenburg meets these requirements, that is to say, publishes psychanalyses with totally different findings, we will accept his criticism, and then the discussion of Freud’s theory can be reopened. Till then his criticism hangs in mid air.

[17] Aschaffenburg asserts that the psychanalytic method amounts to auto-suggestion on the part of the doctor as well as the patient.

[18] Apart from the fact that it is incumbent on a critic to demonstrate his thorough knowledge of the method, we also lack the proof that the method is auto-suggestion. In earlier writings[4] I have already pointed out

that the association experiment devised by me gives the same results in principle, and that psychanalysis is really no different from an association experiment, as Aschaffenburg himself says in his criticism. His assertion that the experiment was used by me in one case only is erroneous; it was used for the purpose of analysis in a great number of cases, as is evident from numerous statements in my own work and from the recent work of Riklin. Aschaffenburg can check my statements and those of Freud at any time, so far as the latter coincide with my own, by experiment, and thereby acquire a knowledge of the exact foundations of psychanalysis.

[19] That my experiments have nothing to do with auto-suggestion can easily be seen from their use in the *experimental diagnosis of facts*. The step from the association experiment, which is already pretty complicated, to full psychanalysis is certainly a big one. But, by thorough study of the association experiment —to the development of which Aschaffenburg himself has made outstanding contributions—one can acquire invaluable insights which prove very useful during analysis. (At any rate this has been so with me.) Only when he has gone through this arduous and difficult training can he begin, with some justification, to examine Freud’s theory for evidence of auto-suggestion. He will also have a more sympathetic insight into the somewhat apodictic nature of Freud’s style. He will learn to understand how uncommonly difficult it is to *describe* these delicate psychological matters. A written exposition will never be able to reproduce the reality of psychanalysis even approximately, let alone reproduce it in such a way that it has an immediately convincing effect on the reader. When I first read Freud’s writings it was the same with me as with everybody else: I could only strew the pages with question-marks. And it will be like that for everyone who reads the account of my association experiments for the first time. Luckily, however, anyone who wants to can repeat them, and so experience for himself what he did not believe before. Unfortunately this is not true of psychanalysis, since it presupposes an unusual combination of specialized knowledge and psychological routine which not everyone possesses, but which can, to a certain extent, be learnt.

[20] So long as we do not know whether Aschaffenburg has this practical experience, the charge of auto-suggestion cannot be taken any more

seriously than that of arbitrary interpretation.

[21] Aschaffenburg regards the exploration of the patient for sexual ideas as, in many cases, immoral.

[22] This is a very delicate question, for whenever morals get mixed up with science one can only pit one belief against another belief. If we look at it simply from the utilitarian point of view, we have to ask ourselves whether sexual enlightenment is under all circumstances harmful or not. This question cannot be answered in general terms, because just as many cases can be cited for as against. Everything depends on the individual. Many people can stand certain truths, others not. Every skilled psychologist will surely take account of this fact. Any rigid formula is particularly wrong here. Apart from the fact that there are many patients who are not in the least harmed by sexual enlightenment, there are not a few who, far from having to be pushed towards this theme, guide the analysis to this point of their own accord. Finally, there are cases (of which I have had more than one) that cannot be got at at all until their sexual circumstances are subjected to a thorough review, and in the cases I have known this has led to very good results. It therefore seems to me beyond doubt that there are at least a great many cases where discussion of sexual matters not only does no harm but is positively helpful. Conversely, I do not hesitate to admit that there are cases where sexual enlightenment does more harm than good. It must be left to the skill of the analyst to find out which these cases are. This, it seems to me, disposes of the moral problem. “Higher” moral considerations derive all too easily from some obnoxious schematism, for which reason their application in practice would seem inopportune from the start.

[23] So far as the therapeutic effect of psychanalysis is concerned, it makes no difference to the scientific rightness of the hysteria theory or of the analytic method how the therapeutic result turns out. My personal conviction at present is that Freud’s psychanalysis is one of several possible therapies and that in certain cases it achieves more than the others.

[24] As to the scientific findings of psychanalysis, nobody should be put off by seeming enormities, and particularly not by sensational quotations.

Freud is probably liable to many human errors, but that does not by any means rule out the possibility that a core of truth lies hidden in the crude husk, of whose significance we can form no adequate conception at present. Seldom has a great truth appeared without fantastic wrappings. One has only to think of Kepler and Newton!

[25] In conclusion, I would like to utter an urgent warning against the standpoint of Spielmeyer,[5] which cannot be condemned sharply enough. When a person reviles as unscientific not only a theory whose experimental foundations he has not even examined but also those who have taken the trouble to test it for themselves, the freedom of scientific research is imperilled. No matter whether Freud is mistaken or not, he has the right to be heard before the forum of science. Justice demands that Freud's statements should be verified. But to strike them dead and then consign them to oblivion, that is beneath the dignity of an impartial and unprejudiced scientist.

[26] To recapitulate:

(1) It has never yet been proved that Freud's theory of hysteria is erroneous in all cases.

(2) This proof can, logically, be supplied only by one who practises the psychanalytic method.

(3) It has not been proved that psychanalysis gives other results than those obtained by Freud.

(4) It has not been proved that psychanalysis is based on false principles and is altogether unsuitable for an understanding of hysterical symptoms.

THE FREUDIAN THEORY OF HYSTERIA[1]

[27] It is always a difficult and ungrateful task to discuss a theory which the author himself has not formulated in any final way. Freud has never propounded a cut-and-dried theory of hysteria; he has simply tried, from time to time, to formulate his theoretical conclusions in accordance with his experience at that moment. His theoretical formulations can claim the status of a working hypothesis that agrees with experience at all points. For the present, therefore, there can be no talk of a firmly-established Freudian theory of hysteria, but only of numerous experiences which have certain features in common. As we are not dealing with anything finished and conclusive, but rather with a process of development, an historical survey will probably be the form best suited to an account of Freud's teachings.

[28] The theoretical presuppositions on which Freud bases his investigations are to be found in the experiments of Pierre Janet. Breuer and Freud, in their first formulation of the problem of hysteria, start from the fact of psychic dissociation and unconscious psychic automatisms. A further presupposition is the aetiological significance of affects, stressed among others by Binswanger.[2] These two presuppositions, together with the findings reached by the theory of suggestion, culminate in the now generally accepted view that hysteria is a psychogenic neurosis.

[29] The aim of Freud's research is to discover how the mechanism producing hysterical symptoms works. Nothing less is attempted, therefore, than to supply the missing link in the long chain between the initial cause and the ultimate symptom, a link which no one had yet been able to find. The fact, obvious enough to any attentive observer, that affects play an aetiologically decisive role in the formation of hysterical symptoms makes the findings of the first Breuer-Freud report, in the year 1893, immediately intelligible. This is especially true of the proposition advanced by both authors, that the hysteric suffers most of all from *reminiscences*, i.e., from feeling-toned complexes of ideas which, in

certain exceptional conditions, prevent the initial affect from working itself out and finally disappearing.

[30] This view, presented only in broad outline at first, was reached by Breuer, who between the years 1880 and 1882 had the opportunity to observe and treat an hysterical woman patient of great intelligence. The clinical picture was characterized chiefly by a profound splitting of consciousness, together with numerous physical symptoms of secondary importance and constancy. Breuer, allowing himself to be guided by the patient, observed that in her twilight states complexes of reminiscences were reproduced which derived from the previous year. In these states she hallucinated a great many episodes that had had a traumatic significance for her. Further, he noticed that the reliving and retelling of these traumatic events had a marked therapeutic effect, bringing relief and an improvement in her condition. If he broke off the treatment, a considerable deterioration set in after a short time. In order to increase and accelerate the effect of the treatment, Breuer induced, besides the spontaneous twilight state, an artificially suggested one in which more material was "abreacted." In this way he succeeded in effecting a substantial improvement. Freud, who at once recognized the extraordinary importance of these observations, thereupon furnished a number of his own which agreed with them. This material can be found in *Studies on Hysteria*, published in 1895 by Breuer and Freud.

[31] On this foundation was raised the original theoretical edifice constructed jointly by the two authors. They start with the symptomatology of affects in normal individuals. The excitation produced by affects is converted into a series of somatic innervations, thus exhausting itself and so restoring the "tonus of the nerve centres." In this way the affect is "abreacted." It is different in hysteria. Here the traumatic experience is followed—to use a phrase of Oppenheim's—by an "abnormal expression of the emotional impulse."[3] The intracerebral excitation is not discharged directly, in a natural way, but produces pathological symptoms, either new ones or a recrudescence of old ones. The excitation is converted into abnormal innervations, a phenomenon which the authors call "conversion of the sum of excitation." The affect is deprived of its normal expression, of its normal outlet in adequate

innervations; it is not abreacted but remains “blocked.” The resulting hysterical symptoms can therefore be regarded as manifestations of the retention.

[32] This formulates the situation as we see it in the patient; but the important question as to why the affect should be blocked and converted still remains unanswered, and it was to this question that Freud devoted special attention. In “The Defence Neuro-psychoses,” published in 1894, he tried to analyse in great detail the psychological repercussions of the affect. He found two groups of psychogenic neuroses, different in principle because in one group the pathogenic affect is converted into somatic innervations, while in the other group it is displaced to a different complex of ideas. The first group corresponds to classic hysteria, the second to obsessional neurosis. He found the reason for the blocking of affect, or for its conversion or displacement, to be the incompatibility of the traumatic complex with the normal content of consciousness. In many cases he could furnish direct proof that the incompatibility had reached the consciousness of the patient, thus causing an active repression of the incompatible content. The patient did not wish to know anything about it and treated the critical complex as “non arrivé.” The result was a systematic circumvention or “repression” of the vulnerable spot, so that the affect could not be abreacted.

[33] The blocking of affect is due, therefore, not to a vaguely conceived “special disposition” but to a recognizable motive.

[34] To recapitulate what has been said: up to the year 1895 the Breuer-Freud investigations yielded the following results. Psychogenic symptoms arise from feeling-toned complexes of ideas that have the effect of a trauma, either

1. by conversion of the excitation into abnormal somatic innervations, or
2. by displacement of the affect to a less significant complex.

[35] The reason why the traumatic affect is not abreacted in a normal way, but is retained, is that its content is not compatible with the rest of the personality and must be repressed.

[36] The content of the traumatic affect provided the theme for Freud's further researches. Already in the *Studies on Hysteria* and particularly in "The Defence Neuro-psychoses," Freud had pointed out the sexual nature of the initial affect, whereas the first case history reported by Breuer skirts round the sexual element in a striking fashion, although the whole history not only contains a wealth of sexual allusions but, even for the expert, becomes intelligible and coherent only when the patient's sexuality is taken into account. On the basis of thirteen careful analyses Freud felt justified in asserting that the specific aetiology of hysteria is to be found in the sexual traumata of early childhood, and that the trauma must have consisted in a "real irritation of the genitals." The trauma works at first only preparatorily; it develops its real effect at puberty, when the old memory-trace is reactivated by nascent sexual feelings. Thus Freud tried to resolve the vague concept of a special disposition into quite definite, concrete events in the pre-pubertal period. At that time he did not attribute much significance to a still earlier *inborn* disposition.

[37] While the Breuer-Freud *Studies* enjoyed a certain amount of recognition (although, despite Raimann's assurances,[4] they have not yet become the common property of science), *this* theory of Freud's met with general opposition. Not that the frequency of sexual traumata in childhood could be doubted, but rather their exclusively pathogenic significance for normal children. Freud certainly did not evolve this view out of nothing, he was merely formulating certain experiences which had forced themselves on him during analysis. To begin with, he found memory-traces of sexual scenes in infancy, which in many cases were quite definitely related to real happenings. Further, he found that though the traumata remained without specific effect in childhood, after puberty they proved to be determinants of hysterical symptoms. Freud therefore felt compelled to grant that the trauma was real. In my personal opinion he did this because at that time he was still under the spell of the original view that the hysteric "suffers from reminiscences," for which reason the cause and motivation of the symptom must be sought in the past. Obviously such a view of the aetiological factors was bound to provoke opposition, especially among those with experience of hysteria, for the

practitioner is accustomed to look for the driving forces of hysterical neurosis not so much in the past as in the present.

[38] This formulation of the theoretical standpoint in 1896 was no more than a transitional stage for Freud, which he has since abandoned. The discovery of sexual determinants in hysteria became the starting-point for extensive researches in the field of sexual psychology in general. Similarly, the problem of the determination of associative processes led his inquiry into the field of dream psychology. In 1900 he published his fundamental work on dreams, which is of such vital importance for the development of his views and his technique. No one who is not thoroughly acquainted with Freud's method of dream interpretation will be able to understand the conceptions he has developed in recent years. *The Interpretation of Dreams* lays down the principles of Freudian theory and at the same time its technique. For an understanding of his present views and the verification of his results a knowledge of Freud's technique is indispensable. This fact makes it necessary for me to go rather more closely into the nature of psychanalysis.

[39] The original cathartic method started with the symptoms and sought to discover the traumatic affect underlying them. The affect was thus raised to consciousness and abreacted in the normal manner; that is, it was divested of its traumatic potency. The method relied to a certain extent on suggestion—the analyst took the lead, while the patient remained essentially passive. Aside from this inconvenience, however, it was found that there were more and more cases in which no real trauma was present, and in which all the emotional conflicts seemed to derive exclusively from morbid fantasy activity. The cathartic method was unable to do justice to these cases.

[40] According to Freud's statements in 1904,[5] much has altered in the method since those early days. All suggestion is now discarded. The patients are no longer guided by the analyst; the freest rein is given to their associations, so that it is really the patients who conduct the analysis. Freud contents himself with registering, and from time to time pointing out, the connections that result. If an interpretation is wrong, it

cannot be forced on the patient; if it is right, the result is immediately visible and expresses itself very clearly in the patient's whole behaviour.

[41] The present psychanalytic method of Freud is much more complicated, and penetrates much more deeply, than the original cathartic method. Its aim is to bring to consciousness all the false associative connections produced by the complex, and in that way to resolve them. Thus the patient gradually gains complete insight into his illness, and also has an objective standpoint from which to view his complexes. The method could be called an educative one, since it changes the whole thinking and feeling of the patient in such a way that his personality gradually breaks free from the compulsion of the complexes and can take up an independent attitude towards them. In this respect Freud's new method bears some resemblance to the educative method of Dubois,[6] the undeniable success of which is due mainly to the fact that the instruction it imparts alters the patient's attitude towards his complexes.

[42] Since it has grown entirely out of empirical practice, the theoretical foundations of the psychanalytic method are still very obscure. By means of my association experiments I think I have made at least a few points accessible to experimental investigation, though not all the theoretical difficulties have been overcome. It seems to me that the main difficulty is this. If, as psychanalysis presupposes, free association leads to the complex, Freud logically assumes that this complex is associated with the starting-point or initial idea. Against this it can be argued that it is not very difficult to establish the associative connection between a cucumber and an elephant. But that is to forget, first, that in analysis only the starting-point is given, and not the goal; and second, that the conscious state is not one of directed thinking but of relaxed attention. Here one might object that the *complex* is the point being aimed at and that, because of its independent feeling-tone, it possesses a strong tendency to reproduction, so that it "rises up" spontaneously and then, as though purely by chance, appears associated with the starting-point.

[43] This is certainly conceivable in theory, but in practice things generally look different. The complex, in fact, does not "rise up" freely but is blocked by the most intense resistances. Instead, what "rises up"

often seems at first sight to be quite incomprehensible intermediate associations, which neither the analyst nor the patient recognizes as belonging in any way to the complex. But once the chain leading to the complex has been fully established, the meaning of each single link becomes clear, often in the most startling way, so that no special work of interpretation is needed. Anyone with enough practical experience of analysis can convince himself over and over again that under these conditions not just *anything* is reproduced, but always something that is related to the complex, though the relationship is, *a priori*, not always clear. One must accustom oneself to the thought that even in these chains of association chance is absolutely excluded. So if an associative connection is discovered in a chain of associations which was not intended—if, that is to say, the complex we find is associatively connected with the initial idea—then this connection has existed from the start; in other words, the idea we took as the starting-point was already constellated by the complex. We are therefore justified in regarding the initial idea as a sign or symbol of the complex.

[44] This view is in agreement with already known psychological theories which maintain that the psychological situation at a given moment is nothing but the resultant of all the psychological events preceding it. Of these the most predominant are the affective experiences, that is, the complexes, which for that reason have the greatest constellating power. If you take any segment of the psychological present, it will logically contain all the antecedent individual events, the affective experiences occupying the foreground, according to the degree of their actuality. This is true of every particle of the psyche. Hence it is theoretically possible to reconstruct the constellations from every particle, and that is what the Freudian method tries to do. During this work the probability is that you will come upon just the affective constellation lying closest to hand, and not merely on one but on many, indeed very many, each according to the degree of its constellating power. Freud has called this fact *over-determination*.

[45] Psychanalysis accordingly keeps within the bounds of known psychological facts. The method is extraordinarily difficult to apply, but it can be learnt; only, as Löwenfeld rightly emphasizes, one needs some

years of intensive practice before one can handle it with any certainty. For this reason alone all over-hasty criticism of Freud's findings is precluded. It also precludes the method from ever being used for mass therapy in mental institutions. Its achievements as a scientific instrument can be judged only by one who uses it himself.

[46] Freud applied his method first of all to the investigation of dreams, refining and perfecting it in the process. Here he found, it appears, all those surprising associative connections which play such an important role in the neuroses. I would mention, as the most important discovery, the significant role which feeling-toned complexes play in dreams and their symbolical mode of expression. Freud attaches great significance to verbal expression—one of the most important components of our thinking–because the double meaning of words is a favourite channel for the displacement and improper expression of affects. I mention this point because it is of fundamental importance in the psychology of neurosis. For anyone who is familiar with these matters, which are everyday occurrences with normal people too, the interpretations given in the "Fragment of an Analysis of a Case of Hysteria," however strange they may sound, will contain nothing unexpected, but will fit smoothly into his general experience. Unfortunately I must refrain from a detailed discussion of Freud's findings and must limit myself to a few hints. These latest investigations are required reading for Freud's present view of hysterical illnesses. Judging by my own experience, it is impossible to understand the meaning of the *Three Essays* and of the "Fragment" without a thorough knowledge of *The Interpretation of Dreams*.

[47] By "thorough knowledge" I naturally do not mean the cheap philological criticism which many writers have levelled at this book, but a patient application of Freud's principles to psychic processes. Here lies the crux of the whole problem. Attack and defence both miss the mark so long as the discussion proceeds only on theoretical ground. Freud's discoveries do not, at present, lend themselves to the framing of general theories. For the present the only question is: do the associative connections asserted by Freud exist or not? Nothing is achieved by thoughtless affirmation or negation; one should look at the facts without prejudice, carefully observing the rules laid down by Freud. Nor should

one be put off by the obtrusion of sexuality, for as a rule you come upon many other, exceedingly interesting things which, at least to begin with, show no trace of sex. An altogether harmless but most instructive exercise, for instance, is the analysis of constellations indicating a complex in the association experiment. With the help of this perfectly harmless material a great many Freudian phenomena can be studied without undue difficulty. The analysis of dreams and hysteria is considerably more difficult and therefore less suitable for a beginner. Without a knowledge of the ground-work Freud's more recent teachings are completely incomprehensible, and, as might be expected, they have remained misunderstood.

[48] It is with the greatest hesitation, therefore, that I make the attempt to say something about the subsequent development of Freud's views. My task is rendered especially difficult by the fact that actually we have only two publications to go on: they are the above-mentioned *Three Essays on the Theory of Sexuality* and the "Fragment of an Analysis of a Case of Hysteria." There is as yet no attempt at a systematic exposition and documentation of Freud's more recent views. Let us first try to come closer to the argument of the *Three Essays*.

[49] These essays are extremely difficult to understand, not only for one unaccustomed to Freud's way of thinking but also for those who have already worked in this special field. The first thing to be considered is that Freud's conception of sexuality is uncommonly wide. It includes not only normal sexuality but all the perversions, and extends far into the sphere of psychosexual derivates. When Freud speaks of sexuality, it must not be understood merely as the sexual instinct.[7] Another concept which Freud uses in a very wide sense is "libido." This concept, originally borrowed from "libido sexualis," denotes in the first place the sexual components of psychic life so far as they are volitional, and then any inordinate passion or desire.

[50] Infantile sexuality, as Freud understands it, is a bundle of possibilities for the application or "investment" of libido. A normal sexual goal does not exist at that stage, because the sexual organs are not yet fully developed. But the psychic mechanisms are probably already in being.

The libido is distributed among all the possible forms of sexual activity, and also among all the perversions—that is, among all the variants of sexuality which, if they become fixed, later turn into real perversions. The progressive development of the child gradually eliminates the libidinal investment of perverse tendencies and concentrates on the growth of normal sexuality. The investments set free during this process are used as driving-forces for sublimations, that is, for the higher mental functions. At or after puberty the normal individual seizes on an objective sexual goal, and with this his sexual development comes to an end.

[51] In Freud's view, it is characteristic of hysteria that the infantile sexual development takes place under difficult conditions, since the perverse investments of libido are much less easily discarded than with normal individuals and therefore last longer. If the real sexual demands of later life impinge in any form on a morbid personality, its inhibited development shows itself in the fact that it is unable to satisfy the demand in the proper way, because the demand comes up against an unprepared sexuality. As Freud says, the individual predisposed to hysteria brings a "bit of sexual repression" with him from his childhood. Instead of the sexual excitation, in the widest sense of the word, being acted out in the sphere of normal sexuality, it is repressed and causes a reactivation of the original infantile sexual activity. This is expressed above all in the fantasy-activity so characteristic of hysterics. The fantasies develop along the line already traced by the special kind of infantile sexual activity. The fantasies of hysterics are, as we know, boundless; hence, if the psychic balance is in some measure to be preserved, equivalent inhibiting mechanisms are needed or, as Freud calls them, resistances. If the fantasies are of a sexual nature, then the corresponding resistances will be shame and disgust. As these affective states are normally associated with physical manifestations, the appearance of physical symptoms is assured.

[52] I think a concrete example from my own experience will illustrate the meaning of Freud's teachings better than any theoretical formulations, which, because of the complexity of the subject, are all apt to sound uncommonly ponderous.

[53] The case is one of psychotic hysteria in an intelligent young woman of twenty. The earliest symptoms occurred between the third and fourth year. At that time the patient began to keep back her stool until pain compelled her to defecate. Gradually she began to employ the following auxiliary procedure: she seated herself in a crouching position on the heel of one foot, and in this position tried to defecate, pressing the heel against the anus. The patient continued this perverse activity until her seventh year. Freud calls this infantile perversion anal eroticism.

[54] The perversion stopped with the seventh year and was replaced by masturbation. Once, when her father smacked her on the bare buttocks, she felt distinct sexual excitement. Later she became sexually excited when she saw her younger brother being disciplined in the same way. Gradually she developed a markedly negative attitude towards her father.

[55] Puberty started when she was thirteen. From then on fantasies developed of a thoroughly perverse nature which pursued her obsessively. These fantasies had a compulsive character: she could never sit at table without thinking of defecation while she was eating, nor could she watch anyone else eating without thinking of the same thing, and especially not her father. In particular, she could not see her father’s hands without feeling sexual excitement; for the same reason she could no longer bear to touch his right hand. Thus it gradually came about that she could not eat at all in the presence of other people without continual fits of compulsive laughter and cries of disgust, because the defecation fantasies finally spread to all the persons in her environment. If she was corrected or even reproached in any way, she answered by sticking out her tongue, or with convulsive laughter, cries of disgust, and gestures of horror, because each time she had before her the vivid image of her father’s chastising hand, coupled with sexual excitement, which immediately passed over into ill-concealed masturbation.

[56] At the age of fifteen, she felt the normal urge to form a love relationship with another person. But all attempts in this direction failed, because the morbid fantasies invariably thrust themselves between her and the very person she most wanted to love. At the same time, because of the disgust she felt, any display of affection for her father had become

impossible. Her father had been the object of her infantile libido transference, hence the resistances were directed especially against him, whereas her mother was not affected by them. About this time she felt a stirring of love for her teacher, but it quickly succumbed to the same overpowering disgust. In a child so much in need of affection this emotional isolation was bound to have the gravest consequences, which were not long in coming.

[57] At eighteen, her condition had got so bad that she really did nothing else than alternate between deep depressions and fits of laughing, crying, and screaming. She could no longer look anyone in the face, kept her head bowed, and when anybody touched her stuck her tongue out with every sign of loathing.

[58] This short history demonstrates the essentials of Freud’s view. First we find a fragment of perverse infantile sexual activity—anal eroticism—replaced in the seventh year by masturbation. At this period the administering of corporal punishment, affecting the region of the anus, produced sexual excitement. Here we have the determinants for the later psychosexual development. Puberty, with its physical and spiritual upheavals, brought a marked increase in fantasy activity. This seized on the sexual activity of childhood and modulated it in endless variations. Perverse fantasies of this kind were bound to act as moral foreign bodies, so to speak, in an otherwise sensitive person, and had to be repressed by means of defence mechanisms, particularly shame and disgust. This readily accounts for all those fits of disgust, loathing, exclamations of horror, sticking out the tongue, etc.

[59] At the time when the ordinary longings of puberty for the love of other people were beginning to stir, the pathological symptoms increased, because the fantasies were now directed most intensively to the very people who seemed most worthy of love. This naturally led to a violent psychic conflict, which fully explains the deterioration that then set in, ending in hysterical psychosis.

[60] We now understand why Freud can say that hysterics bring with them “a bit of sexual repression from childhood.” For constitutional reasons they are probably ready for sexual or quasi-sexual activities earlier than

other people. In keeping with their constitutional emotivity, the infantile impressions go deeper and last longer, so that later, at puberty, they have a constellating effect on the trend of the first really sexual fantasies. Again in keeping with their constitutional emotivity, all affective impulses are much stronger than in normal persons. Hence, to counteract the intensity of their abnormal fantasies, correspondingly strong feelings of shame and disgust are bound to appear. When real sexual demands are made, requiring the transference of libido to the love-object, all the perverse fantasies are transferred to him, as we have seen. Hence the resistance against the object of love. The patient could not transfer her libido to him without inhibitions, and this precipitated the great emotional conflict. Her libido exhausted itself in struggling against her feelings of defence, which grew ever stronger, and which then produced the symptoms. Thus Freud can say that the symptoms represent nothing but the sexual activity of the patient.

[61] Summing up, we can formulate Freud's present view of hysteria as follows:

a. Certain precocious sexual activities of a more or less perverse nature grow up on a constitutional basis.

b. These activities do not lead at first to real hysterical symptoms.

c. At puberty (which psychologically sets in earlier than physical maturity) the fantasies tend in a direction constellated by the infantile sexual activity.

d. The fantasies, intensified for constitutional (affective) reasons, lead to the formation of complexes of ideas that are incompatible with the other contents of consciousness and are therefore repressed, chiefly by shame and disgust.

e. This repression takes with it the transference of libido to a love-object, thus precipitating the great emotional conflict which then provides occasion for the outbreak of actual illness.

f. The symptoms of the illness owe their origin to the struggle of the libido against the repression; they therefore represent nothing but an abnormal sexual activity.

[62] How far does the validity of Freud's view go? This question is exceedingly difficult to answer. Above all, it must be emphatically pointed out that cases which conform exactly to Freud's schema really do exist. Anyone who has learnt the technique knows this. But no one knows whether Freud's schema is applicable to all forms of hysteria (in any case, hysteria in children and the psychotraumatic neuroses form a group apart). For ordinary cases of hysteria, such as the nerve-specialist meets by the dozen, Freud asserts the validity of his views; my own experience, which is considerably less than his, has yielded nothing that would argue against this assertion. In the cases of hysteria which I have analysed, the symptoms were extraordinarily varied, but they all showed a surprising similarity in their psychological structure. The outward appearance of a case loses much of its interest when it is analysed, because one then sees how the same complex can produce apparently very far-fetched and very remarkable symptoms. For this reason it is impossible to say whether Freud's schema applies only to certain groups of symptoms. At present we can only affirm that his findings are true of an indefinitely large number of cases of hysteria which till now could not be delimited as clinical groups.

[63] As to the detailed results of Freud's analyses, the violent opposition they have met with is due simply to the fact that practically no one has followed the development of Freud's theory since 1896. Had his dream-analyses been tested and his rules observed, Freud's latest publications, particularly the "Fragment of an Analysis of a Case of Hysteria," would not have been so difficult to understand. The only disconcerting thing about these reports is their frankness. The public can forgive Freud least of all for his sexual symbolism. In my view he is really easiest to follow here, because this is just where mythology, expressing the fantasy-thinking of all races, has prepared the ground in the most instructive way. I would only mention the writings of Steinthal[8] in the 1860's, which prove the existence of a widespread sexual symbolism in the mythological records and the history of language. I also recall the eroticism of our poets and their allegorical or symbolical expressions. No one who considers this material will be able to conceal from himself that there are uncommonly far-reaching and significant analogies between the

Freudian symbolisms and the symbols of poetic fantasy in individuals and in whole nations. The Freudian symbol and its interpretation is therefore nothing unheard of, it is merely something unusual for us psychiatrists. But these difficulties should not deter us from going more deeply into the problems raised by Freud, for they are of extraordinary importance for psychiatry no less than for neurology.

THE ANALYSIS OF DREAMS[1]

[64] In 1900, Sigmund Freud published in Vienna a voluminous work on the analysis of dreams. Here are the principal results of his investigations.

[65] The dream, far from being the confusion of haphazard and meaningless associations it is commonly believed to be, or a result merely of somatic sensations during sleep as many authors suppose, is an autonomous and meaningful product of psychic activity, susceptible, like all other psychic functions, of a systematic analysis. The organic sensations felt during sleep are not the cause of the dream; they play but a secondary role and furnish only elements (the material) upon which the psyche works. According to Freud the dream, like every complex psychic product, is a creation, a piece of work which has its motives, its trains of antecedent associations; and like any considered action it is the outcome of a logical process, of the competition between various tendencies and the victory of one tendency over another. Dreaming has a meaning, like everything else we do.

[66] It may be objected that all empirical reality is against this theory, since the impression of incoherence and obscurity that dreams make upon us is notorious. Freud calls this sequence of confused images the *manifest content* of the dream; it is the façade behind which he looks for what is essential—namely, the dream-thought or the *latent content*. One may ask what reason Freud has for thinking that the dream itself is only the façade of a vast edifice, or that it really has any meaning. His supposition is not founded on a dogma, nor on an *a priori* idea, but on empiricism alone—namely, the common experience that no psychic (or physical) fact is accidental. It must have, then, its train of causes, being always the product of a complicated combination of phenomena; for every existing mental element is the resultant of anterior psychic states and ought in theory to be capable of analysis. Freud applies to the dream the same principle that we always instinctively use when inquiring into the causes of human actions.

[67] He asks himself, quite simply: why does this particular person dream this particular thing? He must have his specific reasons, otherwise there would be a breakdown in the law of causality. A child's dream is different from an adult's, just as the dream of an educated man differs from that of an illiterate. There is something individual in the dream: it is in agreement with the psychological disposition of the subject. In what does this psychological disposition consist? It is itself the result of our psychic past. Our present mental state depends upon our history. In each person's past there are elements of different value which determine the psychic "constellation." The events which do not awaken any strong emotions have little influence on our thoughts or actions, whereas those which provoke strong emotional reactions are of great importance for our subsequent psychological development. These memories with a strong feeling-tone form complexes of associations which are not only long enduring but are very powerful and closely interlinked. An object which I regard with little interest calls forth few associations and soon vanishes from my intellectual horizon. An object in which, on the contrary, I feel much interest will evoke numerous associations and preoccupy me for a long while. Every emotion produces a more or less extensive complex of associations which I have called the "feeling-toned complex of ideas." In studying an individual case history we always discover that the complex exerts the strongest "constellating" force, from which we conclude that in any analysis we shall meet with it from the start. The complexes appear as the chief components of the psychological disposition in every psychic structure. In the dream, for example, we encounter the emotional components, for it is easy to understand that all the products of psychic activity depend above all upon the strongest "constellating" influences.

[68] One does not have to look far to find the complex that sets Gretchen, in *Faust*, singing:

> There was a king in Thule,
> True even to his grave—
> To him his dying mistress
> A golden beaker gave.

[69] The hidden thought is Gretchen’s doubt about Faust’s fidelity. The song, unconsciously chosen by Gretchen, is what we have called the *dream-material*, which corresponds to the secret thought. One might apply this example to the dream, and suppose that Gretchen had not sung but dreamed this romance.[2] In that case the song, with its tragic story of the loves of a far-off king of old, is the “manifest content” of the dream, its “façade.” Anyone who did not know of Gretchen’s secret sorrow would have no idea why she dreamt of this king. But we, who know the dream-thought which is her tragic love for Faust, can understand why the dream makes use of this particular song, for it is about the “rare faithfulness” of the king. Faust is not faithful, and Gretchen would like his faithfulness to her to resemble that of the king in the story. Her dream–in reality her song–expresses in a disguised form *the ardent desire of her soul*. Here we touch upon the real nature of the feeling-toned complex; it is always a question of *a wish and resistance to it*. Our life is spent in struggles for the realization of our wishes: all our actions proceed from the wish that something should or should not come to pass.

[70] It is for this that we work, for this we think. If we cannot fulfil a wish in reality, we realize it at least in fantasy. The religious and the philosophic systems of every people in every age are the best proof of this. The thought of immortality, even in philosophic guise, is no other than a wish, for which philosophy is but the façade, even as Gretchen’s song is only the outward form, a beneficent veil drawn over her grief. *The dream represents her wish as fulfilled*. Freud says that *every dream represents the fulfilment of a repressed wish*.

[71] Carrying our illustration further, we see that in the dream Faust is replaced by the king. A transformation has taken place. Faust has become the far-off old king; the personality of Faust, which has a strong feeling-tone, is replaced by a neutral, legendary person. The king is an association by analogy, a *symbol* for Faust, and the “mistress” for Gretchen. We may ask what is the purpose of this arrangement, why Gretchen should dream, so to speak, indirectly about this thought, why she cannot conceive it clearly and without equivocation. This question is easily answered: Gretchen’s sadness contains a thought that no one likes to dwell upon; it would be too painful. Her doubt about Faust’s

faithfulness is repressed and kept down. It makes its reappearance in the form of a melancholy story which, although it realizes her wish, is not accompanied by pleasant feelings. Freud says that the wishes which form the dream-thought are never desires which one openly admits to oneself, but desires that are repressed because of their painful character; and it is because they are excluded from conscious reflection in the waking state that they float up, indirectly, in dreams.

[72] This reasoning is not at all surprising if we look at the lives of the saints. One can understand without difficulty the nature of the feelings repressed by St. Catherine of Siena, which reappeared indirectly in the vision of her celestial marriage, and see what are the wishes that manifest themselves more or less symbolically in the visions and temptations of the saints. As we know, there is as little difference between the somnambulistic consciousness of the hysteric and the normal dream as there is between the intellectual life of hysterics and that of normal people.

[73] Naturally, if we ask someone why he had such and such a dream, what are the secret thoughts expressed in it, he cannot tell us. He will say that he had eaten too much in the evening, that he was lying on his back; that he had seen or heard this or that the day before–in short, all the things we can read in the numerous scientific books about dreams. As for the dream-thought, he does not and he cannot know it for, according to Freud, the thought is repressed because it is too disagreeable. So, if anyone solemnly assures us that he has never found in his own dreams any of the things Freud talks about, we can hardly suppress a smile; he has been straining to see things it is impossible to see directly. The dream disguises the repressed complex to prevent it from being recognized. By changing Faust into the King of Thule, Gretchen renders the situation inoffensive. Freud calls this mechanism, which prevents the repressed thought from showing itself clearly, the *censor*. The censor is nothing but the resistance which also prevents us, in the daytime, from following a line of reasoning right to the end. The censor will not allow the thought to pass until it is so disguised that the dreamer is unable to recognize it. If we try to acquaint the dreamer with the thought behind his dream, he will

always oppose to us the same resistance that he opposes to his repressed complex.

[74] We can now ask ourselves a series of important questions. Above all, what must we do to get behind the façade into the inside of the house—that is, beyond the manifest content of the dream to the real, secret thought behind it?

[75] Let us return to our example and suppose that Gretchen is an hysterical patient who comes to consult me about a disagreeable dream. I will suppose, moreover, that I know nothing about her. In this case I would not waste my time questioning her directly, for as a rule these intimate sorrows cannot be uncovered without arousing the most intense resistance. I would try rather to conduct what I have called an "association experiment,"[3] which would reveal to me the whole of her love-affair (her secret pregnancy, etc.). The conclusion would be easy to draw, and I should be able to submit the dream-thought to her without hesitation. But one may proceed more prudently.

[76] I would ask her, for instance: Who is not so faithful as the King of Thule, or who ought to be? This question would very quickly illuminate the situation. In uncomplicated cases such as this, the interpretation or analysis of a dream is limited to a few simple questions.

[77] Here is an example of such a case. It concerns a man of whom I know nothing except that he lives in the colonies and happens at present to be in Europe on leave. During one of our interviews he related a dream which had made a profound impression on him. Two years before, he had dreamt that *he was in a wild and desert place, and he saw, on a rock, a man dressed in black covering his face with both hands. Suddenly he set out towards a precipice, when a woman, likewise clothed in black, appeared and tried to restrain him. He flung himself into the abyss, dragging her with him*. The dreamer awoke with a cry of anguish.

[78] The question, Who was that man who put himself in a dangerous situation and dragged a woman to her doom? moved the dreamer deeply, for that man was the dreamer himself. Two years before, he had been on a journey of exploration across a rocky and desert land. His expedition

was pursued relentlessly by the savage inhabitants of that country, who at night made attacks in which several of its members perished. He had undertaken this extremely perilous journey because at that time *life had no value for him*. The feeling he had when engaging in this adventure was that he was *tempting fate*. And the reason for his despair? For several years he had lived alone in a country with a very dangerous climate. When on leave in Europe two and a half years ago, he made the acquaintance of a young woman. They fell in love and the young woman wanted to marry him. He knew, however, that he would have to go back to the murderous climate of the tropics, and he had no wish to take a woman there and condemn her to almost certain death. He therefore broke off his engagement, after prolonged moral conflicts which plunged him into profound despair. It was in such a state of mind that he started on his perilous journey. The analysis of the dream does not end with this statement, for the wish-fulfilment is not yet evident. But as I am only citing this dream in order to demonstrate the discovery of the essential complex, the sequel of the analysis is without interest for us.

[79] In this case the dreamer was a frank and courageous man. A little less frankness, or any feeling of unease or mistrust towards me, and the complex would not have been admitted. There are even some who would calmly have asseverated that the dream had no meaning and that my question was completely beside the point. In these cases the resistance is too great, and the complex cannot be brought up from the depths directly into ordinary consciousness. Generally the resistance is such that a direct inquiry, unless it is conducted with great experience, leads to no result. By creating the “psychoanalytic method” Freud has given us a valuable instrument for resolving or overcoming the most tenacious resistances.

[80] This method is practised in the following manner. One selects some specially striking portion of the dream, and then questions the subject about the associations that attach themselves to it. He is directed to say frankly whatever comes into his mind concerning this part of the dream, eliminating as far as possible any criticism. Criticism is nothing but the censor at work; it is the resistance against the complex, and it tends to suppress what is of the most importance.

[81] The subject should, therefore, say absolutely everything that comes into his head without paying any attention to it. This is always difficult at first, especially in an introspective examination when his attention cannot be suppressed so far as to eliminate the inhibiting effect of the censor. For it is towards oneself that one has the strongest resistances. The following case demonstrates the course of an analysis against strong resistances.

[82] A gentleman of whose intimate life I was ignorant told me the following dream: *"I found myself in a little room, seated at a table beside Pope Pius X, whose features were far more handsome than they are in reality, which surprised me. I saw on one side of our room a great apartment with a table sumptuously laid, and a crowd of ladies in evening-dress. Suddenly I felt a need to urinate, and I went out. On my return the need was repeated; I went out again, and this happened several times. Finally I woke up, wanting to urinate."*

[83] The dreamer, a very intelligent and well-educated man, naturally explained this to himself as a dream caused by irritation of the bladder. Indeed, dreams of this class are always so explained.

[84] He argued vigorously against the existence of any components of great individual significance in this dream. It is true that the façade of the dream was not very transparent, and I could not know what was hidden behind it. My first deduction was that the dreamer had a strong resistance because he put so much energy into protesting that the dream was meaningless.

[85] In consequence, I did not venture to put the indiscreet question: Why did you compare yourself to the Pope? I only asked him what ideas he associated with "Pope." The analysis developed as follows:

Pope. "The Pope lives royally …" (A well-known students' song.) Note that this gentleman was thirty-one and unmarried.

Seated beside the Pope. "Just in the same way I was seated at the side of a Sheikh of a Moslem sect, whose guest I was in Arabia. The Sheikh is a sort of Pope."

[86] The Pope is a celibate, the Moslem a polygamist. The idea behind the dream seems to be clear: "I am a celibate like the Pope, but I would like to have many wives like the Moslem." I kept silent about these conjectures.

The room and the apartment with the table laid. "They are apartments in my cousin's house, where I was present at a large dinner-party he gave a fortnight ago."

The ladies in evening dress. "At this dinner there were also ladies, my cousin's daughters, girls of marriageable age."

[87] Here he stopped: he had no further associations. The appearance of this phenomenon, known as a mental inhibition, always justifies the conclusion that one has hit on an association which arouses strong resistance. I asked:

And these young women? "Oh, nothing; recently one of them was at F. She stayed with us for some time. When she went away I went to the station with her, along with my sister."

[88] Another inhibition: I helped him out by asking:

What happened then? "Oh! I was just thinking [this thought had evidently been repressed by the censor] that I had said something to my sister that made us laugh, but I have completely forgotten what it was."

[89] In spite of his sincere efforts to remember, it was at first impossible for him to recall what this was. Here we have a very common instance of forgetfulness caused by inhibition. All at once he remembered:

"On the way to the station we met a gentleman who greeted us and whom I seemed to recognize. Later, I asked my sister, Was that the gentleman who is interested in — [the cousin's daughter]?"

[90] (She is now engaged to this gentleman, and I must add that the cousin's family was very wealthy and that the dreamer was interested too, but he was too late.)

The dinner at the cousin's house. "I shall shortly have to go to the wedding of two friends of mine."

The Pope's features. "The nose was exceedingly well-formed and slightly pointed."

Who has a nose like that? (Laughing.) "A young woman I'm taking a great interest in just now."

Was there anything else noteworthy about the Pope's face? "Yes his mouth. It was a very shapely mouth. [Laughing.] Another young woman, who also attracts me, has a mouth like that."

[91] This material is sufficient to elucidate a large part of the dream. The "Pope" is a good example of what Freud would call a *condensation*. In the first place he symbolizes the dreamer (celibate life), secondly he is a transformation of the polygamous Sheikh. Then he is the person seated beside the dreamer during a dinner, that is to say, one or rather two ladies–in fact, the two ladies who interest the dreamer.

[92] But how comes it that this material is associated with the need to urinate? To find the answer to this question I formulated the situation in this way:

You were taking part in a marriage ceremony and in the presence of a young lady when you felt you wanted to pass water? "True, that did happen to me once. It was very unpleasant. I had been invited to the marriage of a relative, when I was about eleven. In the church I was sitting next to a girl of my own age. The ceremony went on rather a long time, and I began to want to urinate. But I restrained myself until it was too late. I wetted my trousers."

[93] The association of marriage with the desire to urinate dates from that event. I will not pursue this analysis, which does not end here, lest this paper should become too long. But what has been said is sufficient to show the technique, the procedure of analysis. Obviously it is impossible to give the reader a comprehensive survey of these new points of view. The illumination that the psychoanalytic method brings to us is very great, not only for the understanding of dreams but for that of hysteria and the most important mental illnesses.

[94] The psychoanalytic method, which is in use everywhere, has already given rise to a considerable literature in German. I am persuaded that the study of this method is extremely important, not only for psychiatrists and neurologists but also for psychologists. The following works are recommended. For normal psychology: Freud, *The Interpretation of Dreams*, and “Jokes and Their Relation to the Unconscious.” For the neuroses: Breuer and Freud, *Studies on Hysteria;* Freud, “Fragment of an Analysis of a Case of Hysteria.” For the psychoses: Jung, *The Psychology of Dementia Praecox*. The writings of Maeder in the *Archives de psychologie* also give an excellent summary of Freud’s ideas.[4]

A CONTRIBUTION TO THE PSYCHOLOGY OF RUMOUR[1]

[95] About a year ago the school authorities in N. asked me to furnish a report on the mental condition of Marie X., a thirteen-year-old schoolgirl. Marie had recently been expelled from the school because she was instrumental in originating an ugly rumour, spreading gossip about her class-teacher. The punishment hit the child, and especially her parents, very hard, so that the school authorities were inclined to readmit her under the cover of a medical opinion.

[96] The facts of the case were as follows. The teacher had heard indirectly that the girls were telling an ambiguous sexual story about him. On investigation, it was found that Marie had one day related a dream to three girl-friends which ran somewhat as follows:

> *The class was going to the bathing-place. I had to go with the boys because there was no more room.—Then we swam a long way out in the lake*. (Asked "Who?" Marie said: "Lina,[2] the teacher, and me.") *A steamer came along. The teacher asked us: "Do you want a ride?" We came to K. A wedding was going on*. ("Whose?" "A friend of the teacher's.") *We were allowed to take part in it. Then we went on a journey*. ("Who?" "Me, Lina, and the teacher.") *It was like a honeymoon trip. We came to Andermatt, and there was no more room in the hotel so we had to spend the night in a barn. There the woman got a child and the teacher became the godfather*.

[97] This dream was told me by the child when I examined her. The teacher had also got her to tell the dream in writing. In this earlier version the obvious gap after "Do you want a ride?" was filled in by the words: "We got on it. Soon we felt cold. An old man gave us a blouse which the teacher put on." On the other hand, there was an omission of the passage about finding no room in the hotel and having to spend the night in the barn.

[98] The child told the dream immediately not only to her three friends but also to her mother. The mother repeated it to me with only trifling

differences from the two readings given above. In his investigations, carried out with the deepest misgivings, the teacher failed, like myself, to discover any other, more dangerous text. It is therefore very probable that the original story could not have been very different. (The passage about the cold and the blouse seems to be an early interpolation, as it tries to establish a logical relationship. Coming out of the water one is wet, has on only a bathing-dress, and therefore cannot take part in a wedding before putting on some clothes.) The teacher would not believe at first that it was simply a dream, he suspected it was an invention. But he had to admit that the innocent telling of the dream was apparently a fact, and that it would be unnatural to credit the child with sufficient guile to make sexual innuendoes in such a veiled form. For a time he wavered between the view that it was a cunning invention and the view that it was really a dream, harmless in itself, which had been given a sexual twist by the other children. When his first indignation wore off he came to see that Marie's guilt could not be so great, and that the fantasies of her friends had contributed to the rumour. He then did something very praiseworthy: he placed Marie's schoolmates under supervision and made them all write out what they had heard of the dream.

[99] Before turning our attention to these accounts, let us first consider the dream analytically. To begin with, we must accept the facts and agree with the teacher that it really was a dream and not an invention–the ambiguities are too great for that. Conscious invention tries to create unbroken transitions; the dream takes no account of this, but proceeds regardless of gaps, which, as we have seen, give rise to interpolations during the conscious revision. The gaps are very significant. In the bathing-place there is no picture of undressing, being unclothed, nor any detailed description of being together in the water. The lack of clothes on the steamer is compensated by the above-mentioned interpolation, but only for the teacher, which shows that his nakedness was most urgently in need of cover. There is no detailed description of the wedding, and the transition from the steamer to the wedding celebration is abrupt. The reason for stopping overnight in the barn at Andermatt is undiscoverable at first. The parallel, however, is the lack of room in the bathing-place, which made it necessary for the girls to go to the men's section; the lack

of room at the hotel again prevents the segregation of the sexes. The picture of the barn is very inadequately filled out: the birth follows suddenly and disconnectedly. The teacher as godfather is extremely ambiguous. Marie's role throughout the whole story is of secondary importance; she is no more than a spectator.

[100] All this has the appearance of a genuine dream, and those of my readers who have sufficient experience of dreams of girls of this age will certainly confirm this view. The interpretation of the dream is so simple that we can safely leave it to the children themselves, whose statements now follow.

Aural Witnesses

[101] (1) Marie dreamt that she and Lina went swimming with our teacher. When they had swum out pretty far in the lake, Marie said she could not swim any further, her foot hurt her so. Our teacher said, she could ride on my back. Marie got on and they swam out together. After a while a steamer came along and they got on it. It seems our teacher had a rope with him with which he tied Marie and Lina together, and so pulled them out into the lake after him. They went as far as Z., where they got out. But now they had no clothes on. The teacher bought a jacket, and Marie and Lina got a long thick veil, and all three walked up the street by the lake. This was when the wedding was going on. Soon they met. The bride had on a blue silk dress but no veil. She asked Marie and Lina if they would be so kind as to give her their veil. Marie and Lina gave it and in return were allowed to go to the wedding. They went to the Sun Inn. Afterwards they made a honeymoon trip to Andermatt, I don't know whether they went to the inn at Andermatt or at Z. There they were given coffee, potatoes, honey, and butter. I must not say any more, only that in the end the teacher became the godfather.

[102] Here the roundabout story of lack of room at the bathing-place is missing; Marie goes swimming with the teacher right away. Their being together in the water is given a more personal relationship by the rope connecting the teacher and the two girls. The ambiguity about the "ride"[3]

in the original story has already had consequences here, for the part about the steamer now takes second place, and first place is given to the teacher, who takes Marie on his back. (The delightful little slip “she could ride on my back”–instead of *his*– shows the narrator’s inner participation in the scene.) This explains why she brings the steamer into action somewhat abruptly, in order to give the equivocal “ride” a familiar, harmless turn, like the anticlimax in a music-hall song. The passage about the lack of clothes, the ambiguity of which has already been noted, arouses her special interest. The teacher buys a jacket, the girls get a long thick veil, such as is worn only in case of death or at weddings. That the wedding is meant here in a wider sense is shown by the remark that the bride had no veil: the one who has the veil is the bride! The narrator, a good friend of Marie, helps her to dream the dream further: the possession of the veil characterizes Marie and Lina as brides. Anything offensive or immoral in this situation is relieved by the girls’ surrendering the veil; the narrator thus gives the story an innocent turn. The same mechanism is followed in the embellishment of the ambiguous situation at Andermatt: there is nothing but nice things, coffee, potatoes, honey, and butter, a reversion to the infantile on the well-known pattern. The conclusion seems to be very abrupt: the teacher becomes a godfather.

[103] (2) Marie dreamt that she went bathing with Lina and the teacher. Far out in the lake Marie told the teacher her leg was hurting. The teacher said she could ride on his back. I don’t know now whether the last sentence was really told so, but I think it was. As there was a ship on the lake just then, the teacher said she should swim to the ship and then get in. I really don’t remember any more how she told it.—Then the teacher or Marie, I don’t know which, said they would get out at Z. and run home. So the teacher called to two gentlemen, who had just been bathing, to carry the children ashore. Lina sat on one man’s back and Marie on the other fat man, and the teacher held on to the fat man’s leg and swam after them. When they landed they ran home.

On the way the teacher met his friend, who had a wedding. Marie said, it was then the fashion to go on foot, not in a carriage. Then the bride said they could come along too. Then the teacher said it would be nice if the two girls gave the bride their black veil, which they had got on the way, I don’t know where. The girls gave it to her, and the bride said they were nice generous children. Then they went on further and stopped at the Sun Inn. There they had something to eat, I don’t know what. Then they went on the honeymoon trip to Andermatt. They went into a barn and danced. All the men had taken off their coats except the teacher. The bride said he should take off his coat too. The teacher refused, but at last he did. Then the teacher was … The teacher said he felt cold. I mustn’t tell any more, it is improper. That’s all I heard of the dream.

[104] The narrator pays special attention to the “ride,” but is uncertain whether in the original story it referred to the teacher or the steamer. This uncertainty is amply compensated by the elaborate story of the two strange gentlemen who took the girls on their backs. For her, the piggyback is too valuable a thought to be relinquished, only she is embarrassed at the idea of the teacher as its object. The lack of clothes likewise arouses strong interest. The bridal veil has now become black, like a veil of mourning (naturally in order to conceal anything indelicate). Here the innocent turn has even been given a virtuous accent (“nice generous children”); the immoral wish has surreptitiously changed into something virtuous on which special emphasis is laid, suspect like every accentuated virtue. The narrator has exuberantly filled in the blanks in the scene of the barn; the men take off their coats, the teacher follows suit and is consequently … naked, and feels cold. Whereupon it becomes too “improper.” She has correctly recognized the parallels we conjectured above when discussing the original story, and has added the undressing scene—which really belongs to the bathing scene–here, for it had to come out in the end that the girls were together with the naked teacher.

[105] (3) Marie told me she had dreamt: Once I went bathing but there was no more room. The teacher took me into his cabin. I undressed and went bathing. I swam until I reached the bank. There I met the teacher. He said, wouldn’t I like to swim across the lake with him? I went, and Lina also. We swam out and were soon in the middle of the lake. I did not want to swim any further. Now I can’t remember it exactly. Soon a ship came along and we got on the ship. The teacher said, “I’m cold,” and a sailor gave us an old shirt. Each of us tore a piece off. I tied it round my neck. Then we left the ship and swam on to K.

Lina and I did not want to go any further and two fat men took us on their backs. In K. we got a veil which we put on. In K. we went into the street. The teacher met his friend who invited us to his wedding. We went to the Sun Inn and played games. We also danced the polonaise. Now I don't remember exactly. Afterwards we went on the honeymoon trip to Andermatt. The teacher had no money with him and stole some chestnuts. The teacher told us, "I am so glad I can travel with my two pupils." Now comes something improper which I will not write. Now the dream is finished.

[106] Here the undressing together takes place in the bathing-cabin. The lack of clothes on the ship gives rise to a new variant (old shirt torn into three pieces). Because of its uncertainty, the sitting on the teacher is not mentioned. Instead, the girls sit on the backs of two fat men. As "fat" is stressed in this and the previous version, it is worth mentioning that the teacher was more than a little plump. The substitution is typical: each of the girls has a teacher. Duplication or multiplication of personalities expresses their significance, i.e., their investment with libido. The same is true of the repetition of actions.[4] The significance of this multiplication is especially clear in religion and mythology. (Cf. the Trinity and the two mystic formulae of confession: "Isis una quae es omnia," "Hermes omnia solus et ter unus.") Proverbially we say: "He eats, drinks, or sleeps 'for two.'" Also, the multiplication of personality expresses an analogy or comparison: *my friend* has the "same aetiological value" as *myself* (Freud). In dementia praecox, or schizophrenia, to use Bleuler's broader and better term, the multiplication of personality is primarily the expression of libido investment, for it is invariably the person to whom the patient has a transference who is liable to multiplication. ("There are two Professor N's." "Oh, so you are Dr. Jung too. This morning another person came to see me who also called himself Dr. Jung.") It seems that, in keeping with the general tendency of schizophrenia, this splitting is an analytical depotentiation for the purpose of preventing too powerful impressions. A further significance of the multiplication of personality, though it does not come exactly into this category, is the raising of some attribute to a living figure. A simple example is Dionysus and his companion Phales, Phales (*phallos*) being the personification of the penis

of Dionysus. The so-called Dionysian train (satyrs, tityrs, Sileni, maenads, Mimallones, etc.) consists of personifications of Dionysian attributes.

[107] The scene in Andermatt is portrayed with a nice wit, or more correctly, is dreamt further. “The teacher stole some chestnuts” is equivalent to saying that he did something prohibited. By chestnuts is meant roast chestnuts, which because of the split are known to be female sexual symbols. Hence the teacher’s remark that he was “so glad to travel with his two pupils,” following directly on the theft of the chestnuts, becomes understandable. The theft of the chestnuts is certainly a personal interpolation, for it occurs in no other account. It shows how intense was the inner participation of her schoolmates in Marie’s dream, i.e., it had the “same aetiological value” for them.

[108] This is the last of the aural witnesses. The story of the veil and the pain in the foot or leg are items which may well have been mentioned in the original narrative. Other interpolations are altogether personal and are based on inner participation in the meaning of the dream.

Hearsay Evidence

[109] (1) The whole school went bathing with the teacher. Only Marie had no room to undress in the bathing-place. So the teacher said, “You can come into my room and undress with me.” She must have felt very uncomfortable. When both were undressed they went into the lake. The teacher took a long cord and tied it round Marie. Then they both swam far out. But Marie got tired, so the teacher took her on his back. Then Marie saw Lina, she called out, “Come with me,” and Lina came. They all swam out still further. They met a ship. Then the teacher asked, “May we get in? These girls are tired.” The ship stopped and they all got in. I don’t know exactly how they came ashore at K. Then the teacher got an old night-shirt. He put it on. Then he met a friend who was having a wedding. Teacher, Marie, and Lina were invited. The wedding was celebrated at the Crown in K. They wanted to dance the polonaise. The teacher said he would not do it. But the others said he might as well. He

did it with Marie. Teacher said, “I will not go home any more to my wife and children. I love you best, Marie.” She was very pleased. After the wedding there was a honeymoon trip. Teacher, Marie, and Lina were allowed to go with them. The trip was to Milan. Afterwards they went to Andermatt, where they could find no place to sleep. They went to a barn, where they could stop the night all together. I must not tell any more because it becomes very indecent.

[110] The undressing scene at the bathing-place is fully developed. The swim undergoes a simplification for which the story of the rope had paved the way: the teacher ties himself to Marie, but Lina is not mentioned here, she comes only later when Marie was already sitting on the teacher’s back. Here the clothing is a night-shirt. The wedding celebrations are given a very direct interpretation: the teacher does not want to go home any more to his wife and children, he loves Marie best. In the barn they found a place “all together” and then it “became very indecent.”

[111] (2) They said she had gone with the school to the bathing-place to bathe. But as the bathing-place was too full, the teacher called her to come with him. Then we swam out in the lake and Lina followed us. Then the teacher took a cord and tied us together. I don’t know exactly how they got separated again. But after a long time they suddenly arrived at Z. There a scene is said to have taken place which I would rather not tell, for if it was true it would be too shameful. Also I don’t know exactly what is supposed to have happened as I was very tired. Only I have heard that Marie said she was always to remain with the teacher now, and that he hugged her again and again as his best pupil. If I knew exactly I would also tell the other thing, but my sister only said something about a little child that was born there, and the teacher was said to be the godfather.

[112] Note that in this story the indecent scene is inserted at the wedding festivities, where it is just as appropriate as at the end, for the attentive reader will long ago have observed that it could also have taken place in the bathing-cabin. Actually, things have happened as they usually do in dreams: the final thought in a long series of dream-images contains precisely what the first image in the series was trying to represent. The

censor pushes the complex away as long as possible by means of ever-renewed symbolical disguises, displacements, bowdlerizations, etc. Nothing happens in the bathing-cabin, there is no piggyback in the water, on landing it is not on the teacher's back that the girls sit, it is another pair who get married, another girl has a child in the barn, and the teacher is only—godfather. But all these situations and images lend themselves to representing the wish for coitus. Behind all these metamorphoses the action nevertheless takes place, and the result is the birth staged at the end.

[113] (3) Marie said: the teacher had a wedding with his wife, and afterwards they went to the Crown and danced together. Marie said all sorts of other wild things which I must not tell or write about, it is too embarrassing.

[114] Here pretty well everything is too improper to be told. Note that the wedding takes place with the "wife."

[115] (4) The teacher and Marie went bathing, and he asked Marie if she wanted to come along too. She said yes. When they had gone out together they met Lina, and the teacher asked if she wanted to come with them. And they went further out. Then I heard that she said the teacher said that Lina and she were his favourite pupils. She also told us that the teacher was in his bathing-dress. Then they went to a wedding and the bride got a little child.

[116] The personal relationship to the teacher is strongly emphasized ("favourite pupils"), likewise the inadequate clothing ("bathing-dress").

[117] (5) Marie and Lina went bathing with the teacher. When Marie and Lina and the teacher had swum a little way, Marie said, "Teacher, I can't go any further, my foot hurts me." The teacher told her to sit on his back and Marie did so. Then a little steamer came along and the teacher got into the ship. The teacher had two ropes with him and tied the children to the ship. Then they all went to Z. and got out there. The teacher bought himself a night-shirt and put it on and the children put a towel over them. Teacher had a bride and they were in a barn. The two children were also

with the teacher and his bride in the barn and they danced. I must not write the other thing for it is too awful.

[118] Here Marie sits on the teacher's back. The teacher fastens the two children to the ship with ropes, from which it can be seen how easily "ship" is substituted for "teacher." The nightshirt again emerges as the article of clothing. It was the teacher's own wedding, and what is improper comes after the dance.

[119] (6: Lina.) The teacher went bathing with the whole school. Marie could not find any room, and she cried. The teacher then told Marie she could come into his cabin.

"I must leave out something here and there," said my sister, "for it is a long story." But she told me something more which I must tell in order to speak the truth. When they were in the water the teacher asked Marie if she would like to swim across the lake with him. She answered that if I came she would come too. Then we swam about halfway. Marie got tired and the teacher pulled her by a cord. At K. they went on shore and from there to Z. All this time the teacher is supposed to have been dressed as for swimming. There we met a friend who was having a wedding. We were invited to it by this friend. After the feast there was a honeymoon trip, and we went to Milan. We had to sleep one night in a barn and there something happened which I must not tell. The teacher said we were his favourite pupils, and he also kissed Marie.

[120] The excuse "I must leave out something here and there" replaces the undressing scene. Special emphasis is laid on the teacher's inadequate clothing. The journey to Milan is a typical honeymoon trip. This passage likewise seems to be an independent fantasy due to inner participation. Marie clearly figures as the loved one.

[121] (7) The whole school and teacher went bathing. They all went into a room. Teacher also. Only Marie could find no room, so the teacher said to her, "I still have room." She went. Then the teacher said, "Lie on my back, I will swim out into the lake with you." I must not write any more, for it is so improper that I can hardly even say it. Except for the improper part which followed I know nothing more of the dream.

[122] This narrator is getting down to the facts. Already at the bathing-place Marie was to lie on the teacher's back. Logically enough the narrator does not know anything of the rest of the dream except the improper part.

[123] (8) The whole school went bathing. Marie had no room and was invited into his cabin by the teacher. The teacher swam out with her and told her, straight, she was his darling or something like that. When they came ashore at Z. a friend had just had a wedding and this friend invited them both in their bathing-costume. The teacher had found an old night-shirt and put it on over his swimming-pants. He also kissed Marie a lot and said he would not go home to his wife any more. They were both invited on the honeymoon trip. The journey went through Andermatt, where they could not find any place to sleep, and so had to sleep in the hay. A woman was there too, now comes the dreadful part, and it is not at all right to laugh and joke about something so serious. This woman got a little child, but I will not say any more for it is too dreadful.

[124] The narrator is very downright ("he told her, straight, she was his darling," "he kissed her a lot" etc.). Her obvious indignation over the silly tattling tells us something special about her character. Subsequent investigations showed that this girl was the only one of all the witnesses who had been sexually enlightened by her mother.

Summary

[125] So far as the interpretation of the dream is concerned, there is nothing for me to add; the children themselves have done all that is necessary, leaving practically nothing over for psychoanalytic interpretation. *The rumour has analysed and interpreted the dream*. So far as I know, rumour has not been investigated in this capacity up to now. Our case certainly makes it appear worth while to fathom the psychology of rumour from the psychoanalytic side. In presenting the material I have purposely restricted myself to the psychoanalytic point of view, though I do not deny that my material offers numerous openings for the invaluable researches of the followers of Stern, Claparède, and others.

[126] The material enables us to understand the structure of the rumour, but psychoanalysis cannot rest satisfied with that. We need to know more about the why and the wherefore of the whole phenomenon. As we have seen, the teacher was greatly affected by the rumour and was left puzzled by the problem of its cause and effect. How can a dream, which is notoriously harmless and never means anything (teachers, as we know, also have a training in psychology), produce such effects, such malicious gossip? Faced with this question, the teacher seems to me to have hit instinctively on the right answer. The effect of the dream can only be explained by its being “le vrai mot de la situation”; that is to say, it gave suitable expression to something that was already in the air. It was the spark which fell into the powder-barrel. Our material affords all the necessary proofs of this view. Throughout, I have drawn attention to the inner participation of Marie’s schoolmates in her dream, and to the points of special interest where some of them have added their own fantasies or day-dreams. The class consisted of girls between the ages of twelve and thirteen, who were therefore in the midst of the prodromata of puberty. The dreamer herself was almost fully developed sexually and in this respect ahead of her class; she was the leader who gave the watchword for the unconscious and so detonated the sexual complexes lying dormant in her companions.

[127] As can easily be understood, the whole affair was most distressing for the teacher. The supposition that this, precisely, was what the girls secretly intended is justified by the psychoanalytic axiom that actions are to be judged more by their results than by their conscious motives.[5] Accordingly, we would conjecture that Marie had been especially troublesome to her teacher. At first she liked this teacher most of all. In the course of the last six months, however, her position had changed. She had become dreamy and inattentive, she was afraid to go into the streets after dark because of bad men. On several occasions she talked about sex to her companions in a rather obscene way; her mother asked me anxiously how she was to explain the approaching menstruation to her daughter. Because of her behaviour she had forfeited the good opinion of her teacher, as was clearly evidenced for the first time by a bad report which she and some of her friends received a few days before the

outbreak of the rumour. Their disappointment was so great that the girls indulged in all sorts of vengeful fantasies about the teacher; for instance, they might push him on to the rails so that the train would run over him. Marie was especially to the fore in these murderous fantasies. On the night following this great outburst of anger, when her former love for her teacher seemed quite forgotten, that repressed part of herself rose up in the dream, and fulfilled its wish for sexual union with the teacher—as compensation for the hate which had filled the day.[6] On waking, the dream became a subtle instrument of her hatred, because its wishful thinking was also that of her companions, as it always is in rumours of this kind. Revenge certainly had its triumph, but the recoil upon Marie herself was even more severe. Such is the rule when our impulses are given over to the unconscious. Marie was expelled from school, but on my report was allowed to return.

[128] I am well aware that this short report is inadequate and unsatisfactory from the point of view of exact science. Had the original story been accurately verified we could have demonstrated quite clearly what we have now only been able to suggest. This case, therefore, merely poses a question, and it remains for more fortunate observers to collect really convincing evidence in this field.

ON THE SIGNIFICANCE OF NUMBER DREAMS[1]

[129] The symbolism of numbers, which greatly engaged the philosophic fantasy of earlier centuries, has acquired a fresh interest from the analytical researches of Freud and his school. In the material of number dreams we no longer discover conscious speculations on the symbolic connections between numbers, but rather the unconscious roots of number symbolism. As there is nothing fundamentally new to be offered in this field since the researches of Freud, Adler, and Stekel, we must content ourselves with corroborating their experience by citing parallel cases. I have under observation a few cases of this kind which may be worth reporting for their general interest.

[130] The first three examples are from a middle-aged man whose conflict of the moment was an extramarital love-affair. The dream-fragment from which I take the symbolical number is: … *the dreamer shows his season ticket to the conductor. The conductor protests at the high number on the ticket. It was 2477.*

[131] The analysis of the dream brought out a rather ungentlemanly reckoning up of the expenses of this love-affair, which was foreign to the dreamer's generous nature. His unconscious made use of this in order to resist the affair. The most obvious interpretation would be that this number had a financial significance and origin. A rough estimate of the expenses so far involved led to a number which in fact approached 2477 francs; a more careful calculation gave 2387 francs, a number which could only arbitrarily be translated into 2477. I then left the number to the free association of the patient. It occurred to him that in the dream the number appeared divided: 24 77. Perhaps it was a telephone number. This conjecture proved incorrect. The next association was that it was the sum of various other numbers. At this point the patient remembered telling me earlier that he had just celebrated the hundredth birthday of his mother and himself, since she was sixty-five and he was thirty-five. (Their birthdays fell on the same day.) In this way he arrived at the following series of associations:

He was born on	26. II[2]
His mistress	28. VIII
His wife	1. III
His mother (his father was long dead)	26. II
His two children	29. IV 13. VII

He was born	II. 75[3]
His mistress	VIII. 85
He was now	36
His mistress	25

[132] If this series of associations is written down in the usual figures, we get the following sum:

$$\begin{array}{r}262\\288\\13\\262\\294\\137\\275\\885\\36\\25\\\hline 2477\end{array}$$

[133] This series, which includes all the members of his family, thus gives the number 2477. Its composition led to a deeper layer of the dream’s meaning. The patient was greatly attached to his family but on the other hand very much in love with his mistress. This caused him severe conflicts. The details of the “conductor’s” appearance (omitted here for the sake of brevity) pointed to the analyst, from whom the patient both feared and wished firm control as well as sharp censure of his dependent state.

[134] The dream that followed shortly afterwards ran (much abbreviated): *The analyst asked the patient what he actually did when he was with his mistress. The patient said he gambled, and always on a very high number: 152. The analyst remarked: “You are sadly cheated.”*

[135] Analysis once more revealed a repressed tendency to reckon up the costs of the affair. The monthly expenses amounted to close on 152 francs (actually between 148 and 158). The remark that he was being cheated alluded to the point at issue between himself and his mistress. She asserted that he deflowered her, but he was quite convinced that she was not a virgin and had already been deflowered by someone else at a time when he was seeking her favours and she was refusing him. The word “number” led to the association “size in gloves,” “size of calibre.” From there it was but a short step to the fact that he had noted

at the first coitus a remarkable width of the opening instead of the expected resistance of the hymen. This seemed to him proof of deception. The unconscious naturally used this discovery as a most effective means of resistance against the relationship. The number 152 proved refractory at first to further analysis. But on a later occasion it led to the not so distant idea of a "house number," followed by these associations: when he first knew her the lady lived at 17 X Street, then at 129 Y Street, then at 48 Z Street.

[136] Here the patient realized that he had already gone far beyond 152, for the total was 194. It then occurred to him that, for certain reasons, the lady had left 48 Z Street at his instigation, so the total must be 194 − 48 = 146. She was now living at 6 A Street, hence it was 146 + 6 = 152.

[137] Later in the analysis he had the following dream: *He received a bill from the analyst charging him interest of 1 franc on a sum of 315 francs for delay in payment from the 3rd to the 29th September*.

[138] This reproach of meanness and avariciousness levelled at the analyst covered, as analysis proved, a strong unconscious envy. There were several things in the analyst's life that might arouse the envy of the patient. One thing in particular had made an impression on him: the analyst had lately had an addition to his family. The disturbed relations between the patient and his wife unfortunately permitted no such expectation in his case. There was therefore ample ground for invidious comparisons.

[139] As before, the analysis started by dividing the number 315 into 3 1 5. The patient associated 3 with the fact that the analyst had 3 children, with the recent addition of another 1. He himself would have had 5 children if all were living, as it was he had 3 − 1 = 2, for 3 children were stillborn. But these associations were far from exhausting the number symbolism of the dream.

[140] The patient remarked that the period from the 3rd to the 29th September comprised 26 days. His next thought was to add this and the remaining numbers together: 26 + 315 + 1 = 342. He then carried out the same operation on 342 as on 315, dividing it into 3 4 2. Whereas before it came out that the analyst had 3 children, with 1 in addition, and the patient would have had 5, now the meaning was: the analyst had 3 children, now has 4, but the patient only 2. He remarked that the second number sounded like a rectification of the wish-fulfilment of the first.

[141] The patient, who had discovered this explanation for himself without my help, declared himself satisfied. His analyst, however, was not; to him it seemed

that the above revelations did not exhaust the possibilities determining the unconscious products. In connection with the number 5, the patient had carefully noted that, of the 3 stillborn children, 1 was born in the 9th and 2 in the 7th month. He also emphasized that his wife had had 2 miscarriages, 1 in the 5th week and 1 in the 7th. If we add these figures together we get the determination of the number 26:

1 child		7 months
1 ″		7 ″
1 ″		9 ″
2 miscarriages (5 + 7 weeks)	=	3 ″
		26

[142] It seems as if 26 were determined by the number of lost periods of pregnancy. In the dream the period of 26 days denoted a delay for which the patient was charged 1 franc interest. Owing to the lost pregnancies he did in fact suffer a delay, for during the time in which the patient knew him the analyst got ahead by 1 child, 1 franc may therefore mean 1 child. We have already noted the patient’s tendency to add together all his children, including the dead ones, in order to outdo his rival. The thought that his analyst had outdone him by 1 child might influence even more strongly the determination of the number 1. We shall therefore follow up this tendency of the patient and continue his number game by adding to 26 the 2 successful pregnancies of 9 months each: 26 + 18 = 44.

[143] Dividing the numbers again into integers we get 2 + 6 and 4 + 4, two groups of figures which have only one thing in common, that each gives 8 by addition. It is to be noted that these figures are composed entirely of the months of pregnancy accruing to the patient. If we compare them with the figures indicating the progenitive capacity of the analyst, namely 315 and 342, we observe that the latter, added crosswise, each gives a total of 9. Now 9 − 8 = 1. Again it seems as if the thought of the difference of 1 were asserting itself. The patient had remarked earlier that 315 seemed to him a wish-fulfilment and 342 a rectification. Letting our fantasy play round them, we discover the following difference between the two numbers:

$$3 \times 1 \times 5 = 15 \qquad 3 \times 4 \times 2 = 24 \qquad 24 - 15 = 9$$

[144] Once more we come upon the significant figure 9, which fits very aptly into this calculus of pregnancies and births.

[145] It is difficult to say where the borderline of play begins–necessarily so, for an unconscious product is the creation of sportive fantasy, of that psychic impulse out of which play itself arises. It is repugnant to the scientific mind to indulge in this kind of playfulness, which tails off everywhere in inanity. But we should never forget that the human mind has for thousands of years amused itself with just this kind of game, so it would be no wonder if those tendencies from the distant past gained a hearing in dreams. Even in his waking life the patient gave free rein to his number-fantasies, as the fact of celebrating the 100th birthday shows. Their presence in his dreams is therefore beyond question. For a single example of unconscious determination exact proofs are lacking, only the sum of our experiences can corroborate the accuracy of the individual discoveries. In investigating the realm of free creative fantasy we have to rely, more almost than anywhere else, on a broad empiricism; and though this enjoins on us a high degree of modesty with regard to the accuracy of individual results, it by no means obliges us to pass over in silence what has happened and been observed, simply from fear of being execrated as unscientific. There must be no parleying with the superstition-phobia of the modern mind, for this is one of the means by which the secrets of the unconscious are kept veiled.

[146] It is particularly interesting to see how the problems of the patient were mirrored in the unconscious of his wife. His wife had the following dream: she dreamt–and this is the whole dream–*Luke 137*. Analysis of this number showed that she associated as follows: the analyst has got 1 more child. He had 3. If all her children (counting the miscarriages) were living, she would have 7; now she has only 3 − 1 = 2. But she wants 1 + 3 + 7 = 11 (a twin number, 1 and 1), which expresses her wish that her two children had been pairs of twins, for then she would have had the same number of children as the analyst. Her mother once had twins. The hope of getting a child by her husband was very precarious, and this had long since implanted in the unconscious the thought of a second marriage.

[147] Other fantasies showed her as “finished” at 44, i.e., when she reached the climacteric. She was now 33, so there were only 11 more years to go till she was 44. This was a significant number, for her father died in his 44th year. Her fantasy of the 44th year thus contained the thought of her father’s death. The emphasis on the death of her father corresponded to the repressed fantasy of the death of her husband, who was the obstacle to a second marriage.

[148] At this point the material to “Luke 137” comes in to help solve the conflict. The dreamer, it must be emphatically remarked, was not at all well up in the Bible, she had not read it for an incredible time and was not in the least religious. It would therefore be quite hopeless to rely on associations here. Her ignorance of the Bible was so great that she did not even know that “Luke 137” could refer only to the Gospel according to St. Luke. When she turned up the New Testament she opened it instead at the Acts of the Apostles.[4] As Acts 1 has only 26 verses, she took the 7th verse: “It is not for you to know the times or the seasons, which the Father hath put in his own power.” But if we turn to Luke 1 : 37, we find the Annunciation of the Virgin:

> 35. The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God.
>
> 36. And, behold, thy cousin Elisabeth, she hath also conceived a son in her old age: and this is the sixth month with her, who was called barren.
>
> 37. For with God nothing shall be impossible.

[149] The logical continuation of the analysis of “Luke 137” requires us also to look up Luke 13 : 7. There we read:

> 6. A certain man had a fig tree planted in his vineyard; and he came and sought fruit thereon, and found none.
>
> 7. Then said he unto the dresser of his vineyard, Behold, these three years I come seeking fruit on this fig tree, and find none: cut it down; why cumbereth it the ground?

[150] The fig-tree, since ancient times a symbol of the male genitals, must be cut down on account of its unfruitfulness. This passage is in complete accord with the numerous sadistic fantasies of the dreamer, which were concerned with cutting off or biting off the penis. The allusion to her husband’s unfruitful organ is obvious. It was understandable that the dreamer withdrew her libido from her husband, for with her he was impotent,[5] and equally understandable that she made a regression to her father (“… which the Father hath put in his own power”) and identified with her mother, who had twins. By thus advancing her age she put her husband in the role of a son or boy, of an age when impotence is normal. We can also understand her wish to get rid of her husband, as was moreover confirmed by her earlier analysis. It is therefore only a further confirmation of what has been said if, following up the material to “Luke 137,” we turn to Luke 7 : 13:

> 12. Now when he came nigh to the gate of the city, behold, there was a dead man carried out, the only son of his mother, and she was a widow …
>
> 13. And when the Lord saw her, he had compassion on her, and said unto her, Weep not.
>
> 14. And he came and touched the bier: and they that bare him stood still. And he said, Young man, I say unto thee, Arise.

[151] In the particular psychological situation of the dreamer the allusion to the raising up of the dead man acquires a pretty significance as the curing of her husband’s impotence. Then the whole problem would be solved. There is no need for me to point out in so many words the numerous wish-fulfilments contained in this material; the reader can see them for himself.

[152] Since the dreamer was totally ignorant of the Bible, “Luke 137” must be regarded as a cryptomnesia. Both Flournoy[6] and myself[7] have already drawn attention to the important effects of this phenomenon. So far as one can be humanly certain, any manipulation of the material with intent to deceive is out of the question in this case. Those familiar with psychoanalysis will know that the whole nature of the material rules out any such suspicion.

[153] I am aware that these observations are floating in a sea of uncertainties, but I think it would be wrong to suppress them, for luckier investigators may come after us who will be able to put them in the right perspective, as we cannot do for lack of adequate knowledge.

MORTON PRINCE, "THE MECHANISM AND INTERPRETATION OF DREAMS": A CRITICAL REVIEW[1]

[154] I hope that all colleagues and fellow workers who, following in Freud's footsteps, have investigated the problem of dreams, and have been able to confirm the basic principles of dream-interpretation, will forgive me if I pass over their corroborative work and speak instead of another investigation which, though it has led to less positive results, is for that reason the more suited to public discussion. A fact especially worth noting is that Morton Prince, thanks to his previous work and his deep insight into psychopathological problems, is singularly well equipped to understand the psychology inaugurated by Freud. I do not know whether Morton Prince has sufficient command of German to read Freud in the original, though this is almost a *sine qua non* for understanding him. But if he must rely only on writings in English, the very clear presentation of dream-analysis by Ernest Jones, in "Freud's Theory of Dreams,"[2] would have given him all the necessary knowledge. Apart from that, there are already a large number of articles and reports by Brill and Jones, and recently also by Putnam,[3] Meyer, Hoch, Scripture, and others, which shed light on the various aspects of psychoanalysis (or "depth psychology," as Bleuler calls it). And, for full measure, there have been available for some time not only Freud's and my lectures at Clark University,[4] but several translations of our works as well, so that even those who have no knowledge of German would have had ample opportunity to familiarize themselves with the subject.

[155] It was not through personal contact, of whose suggestive influence Professor Hoche[5] has an almost superstitious fear very flattering to us, but presumably through reading that Morton Prince acquired the necessary knowledge of analysis. As the German-speaking reader may be aware, Morton Prince is the author of a valuable book, *The Dissociation of a Personality*, which takes a worthy place beside the similar studies of Binet, Janet, and Flournoy.[6] Prince is also, of course, the editor of the

Journal of Abnormal Psychology, in almost every issue of which questions of psychoanalysis are discussed without bias.

[156] From this introduction the reader will see that I am not saying too much when I represent Morton Prince as an unprejudiced investigator with a firmly established scientific reputation and undisputed competence in judging psychopathological problems. Whereas Putnam is chiefly concerned with the therapeutic aspect of psychoanalysis and has discussed it with admirable frankness, Morton Prince is interested in a particularly controversial subject, namely, dream-analysis. It is here that every follower of Freud has lost his honourable name as a man of science in the eyes of German scientists. Freud's fundamental contribution, *The Interpretation of Dreams*, has been treated, with irresponsible levity by the German critics. As usual, they were ready to hand with glib phrases like "brilliant mistake," "ingenious aberration," etc. But that any of the psychologists, neurologists, and psychiatrists should really get down to it and try out his wit on Freud's dream-interpretation was too much to expect.[7] Perhaps they did not dare to. I almost believe they did not dare, because the subject is indeed very difficult–less, I think, for intellectual reasons than on account of personal, subjective resistances. For it is just here that psychoanalysis demands a sacrifice which no other science demands of its adherents: ruthless self-knowledge. It needs to be repeated again and again that *practical and theoretical understanding of psychoanalysis is a function of analytical self-knowledge*. Where self-knowledge fails, psychoanalysis cannot flourish. This is a paradox only so long as people think that they know themselves. And who does not think that? In ringing tones of deepest conviction everyone assures us that he does. And yet it is simply not true, a childish illusion which is indispensable to one's self-esteem. There can be no doubt whatever that a doctor who covers up his lack of knowledge and ability with increased self-confidence will never be able to analyse, for otherwise he would have to admit the truth to himself and would become impossible in his own eyes.

[157] We must rate it all the higher, then, when a scientist of repute, like Morton Prince, courageously tackles the problem and seeks to master it in his own way. We are ready to meet at any time the objections that

spring from honest work of this kind. We have no answer only for those who are afraid of real work and are satisfied with making cheap academic speeches. But before taking up Prince's objections, we shall have a look at his field of inquiry and at his—in our sense—positive results. Prince worked through six dreams of a woman patient who was capable of different states of consciousness and could be examined in several of these states. He used interrogation under hypnosis as well as "free association." We learn that he had already analysed several dozen dreams.[8] Prince found that the method of free association "enables us by the examination of a large number of dreams in the same person to search the whole field of the unconscious, and by comparison of all the dreams to discover certain persistent, conserved ideas which run through and influence the psychical life of the individual."[9] Using the "insane" psychoanalytic method, therefore, the American investigator was able to discover, in the realm of the unconscious, something that perceptibly influences psychic life. For him the "method" is a method after all, he is convinced that there is an unconscious and all the rest of it, without being in any way hypnotized by Freud personally.

[158] Prince admits, further, that we must consider as dream-material "certain subconscious ideas of which the subject had not been aware" (p. 150), thus recognizing that the sources of dreams can lie in the unconscious. The following passage brings important and emphatic confirmation of this:

> It was a brilliant stroke of genius that led Freud to the discovery that dreams are not the meaningless vagaries that they were previously supposed to be, but when interpreted through the method of psychoanalysis may be found to have a logical and intelligible meaning. This meaning, however, is generally hidden in a mass of symbolism which can only be unraveled by a searching investigation into the previous mental experiences of the dreamer. Such an investigation requires, as I have already pointed out, the resurrection of all the associated memories pertaining to the elements of the dream. When this is done the conclusion is forced upon us, I believe, that even the most fantastic dream may express some intelligent idea, though that idea may be hidden in symbolism. My own observations confirm those of Freud, so

> far as to show that running through each dream there is an intelligent *motive;* so that the dream can be interpreted as expressing some idea or ideas which the dreamer previously has entertained. At least all the dreams I have subjected to analysis justify this interpretation.

[159] Prince is thus in a position to admit that dreams have a meaning, that the meaning is hidden in symbols, and that in order to find the meaning one needs the memory-material. All this confirms essential portions of Freud's dream interpretation, far more than the *a priori* critics have ever admitted. As a result of certain experiences Prince has also come to conceive hysterical symptoms "as possible symbolisms of hidden processes of thought." In spite of the views expressed in Binswanger's *Die Hysterie,* which might have prepared the ground, this has still not penetrated the heads of German psychiatrists.

[160] I have, as I said, begun with Prince's affirmative statements. We now come to the deviations and objections (p. 151):

> I am unable to confirm [Freud's view] that every dream can be interpreted as "the imaginary fulfillment of a wish," which is the motive of the dream. That sometimes a dream can be recognized as the fulfillment of a wish there can be no question, but that every dream, or that the majority of dreams are such, I have been unable to verify, even after subjecting the individual to the most exhaustive analysis. On the contrary I find, if my interpretations are correct, that some dreams are rather the expression of the non-fulfillment of a wish; some seem to be that of the fulfillment of a fear or anxiety.

[161] In this passage we have everything that Prince cannot accept. It should be added that the wish itself often seems to him not to be "repressed" and not to be so unconscious or important as Freud would lead us to expect. Hence Freud's theory that a repressed wish is the real source of the dream, and that it fulfils itself in the dream, is not accepted by Prince, because he was unable to see these things in his material. But at least he tried to see them, and the theory seemed to him worth a careful check, which is definitely not the case with many of our critics. (I should have thought that this procedure would be an unwritten law of academic

decency.) Fortunately, Prince has also presented us with the material from which he drew his conclusions. We are thus in a position to measure our experience against his and at the same time to find the reasons for any misunderstanding. He has had great courage in exposing himself in this commendable way, for we now have an opportunity to compare our divergencies openly with his material, a procedure which will be instructive in every respect.

[162] In order to show how it is that Prince was able to see only the formal and not the dynamic element of the dreams, we must examine his material in more detail. One gathers, from various indications in the material, that the dreamer was a lady in late middle age, with a grown-up son who was studying, and apparently that she was unhappily married (or perhaps divorced or separated). For some years she had suffered from an hysterical dissociation of personality, and, we infer, had regressive fantasies about two earlier love-affairs, which the author, perhaps owing to the prudery of the public, is obliged to hint at rather too delicately. He succeeded in curing the patient of her dissociation for eighteen months, but now things seem to be going badly again, for she remained anxiously dependent on the analyst, and he found this so tiresome that he twice wanted to send her to a colleague.

[163] Here we have the well-known picture of an unanalysed and unadmitted transference, which, as we know, consists in the anchoring of the patient's erotic fantasies to the analyst. The six dreams are an illustrative excerpt from the analyst's struggle against the clinging transference of the patient.

[164] *Dream I:* C [the patient's dream-ego] was somewhere and saw an old woman who appeared to be a *Jewess*. She was holding a *bottle* and a *glass* and seemed to be drinking *whiskey;* then this woman changed into her own *mother*, who had the bottle and glass, and appeared likewise to be drinking whiskey; then the door opened and her *father* appeared. He had on her *husband's dressing-gown*, and he was holding two *sticks of wood* in his hand. [Pp. 147ff.]

[165] Prince found, on the basis of copious and altogether convincing material,[10] that the patient regarded the temptation to drink, and also the

temptations of "poor people" in general, as something very understandable. She herself sometimes took a little whiskey in the evening, and so did her mother. But there might be something wrong in it. "The dream scene is therefore the symbolical representation and justification of her own belief and answers the doubts and scruples that beset her mind" (p. 154). The second part of the dream, about the sticks, is certainly, according to Prince, a kind of wish-fulfilment, but he says it tells us nothing, since the patient had ordered firewood the evening before. Despite the trouble expended on it (eight pages of print) the dream has not been analysed thoroughly enough, for the two most important items–the whiskey-drinking and the sticks–remain unanalysed. If the author would follow up those "temptations," he would soon discover that the patient's scruples are at bottom of a far more serious nature than a spoonful of whiskey and two bundles of wood. Why is the father who comes in, condensed with the husband? How is the Jewess determined other than by a memory of the previous day? Why are the two sticks significant and why are they in the hand of the father? And so on. The dream has not been analysed. Unfortunately its meaning is only too clear to the psychoanalyst. It says very plainly: "If I were this poor Jewess, whom I saw on the previous day, I would not resist temptation (just as mother and father don't—a typical infantile comparison!), and then a man would come into my room with firewood—naturally to warm me up." This, briefly, would be the meaning. The dream contains all that, only the author's analysis has discreetly stopped too soon. I trust he will forgive me for indiscreetly breaking open the tactfully closed door, so that it may clearly be seen what kind of wish-fulfilments, which "one cannot see," hide behind conventional discretion and medical blindness to sex.

[166] *Dream 2:* A hill—she was toiling up the hill; one could hardly get up; had the sensation of some one, or thing, following her. She said, *"I must not show that I am frightened, or this thing will catch me."* Then she came where it was lighter, and she could see two clouds or *shadows*, one black and one red, and she said, "My God, it is *A and B!* If I don't have help I am lost." (She meant that she would change again—i.e., relapse

into dissociated personalities.) She began to call "Dr. Prince! Dr. Prince!" and you were there and laughed, and said, "Well, you will have to fight the damned thing yourself." Then she woke up *paralysed* with fright. [P. 156.]

[167] As the dream is very simple, we can dispense with any further knowledge of the analytical material. But Prince cannot see the wish-fulfilment in this dream, on the contrary he sees in it the "fulfilment of a fear." He commits the fundamental mistake of once again confusing the manifest dream-content with the unconscious dream-thought. In fairness to the author it should be remarked that in this case the repetition of the mistake was the more excusable since the crucial sentence ("Well, you will have to fight the damned thing yourself") is really very ambiguous and misleading. Equally ambiguous is the sentence "I must not show that I am frightened," etc., which, as Prince shows from the material, refers to the thought of a relapse into the illness, since the patient was *frightened* of a relapse.

[168] But what does "frightened" mean? We know that it is far more convenient for the patient to be ill, because recovery brings with it a great disadvantage: she would lose her analyst. The illness reserves him, as it were, for her needs. With her interesting illness, she has obviously offered the analyst a great deal, and has received from him a good deal of interest and patience in return. She certainly does not want to give up this stimulating relationship, and for this reason she is afraid of remaining well and secretly hopes that something weird and wonderful will befall her so as to rekindle the analyst's interest. Naturally she would do anything rather than admit that she really had such wishes. But we must accustom ourselves to the thought that in psychology there are things which the patient simultaneously knows and does not know. Things which are apparently quite unconscious can often be shown to be conscious in another connection, and actually to have been known. Only, they were not known in their true meaning. Thus, the true meaning of the wish which the patient could not admit was not directly accessible to her consciousness, which is why we call this true meaning not conscious, or "repressed." Put in the brutal form "I will have symptoms in order to re-

arouse the interest of the analyst," it cannot be accepted, true though it is, for it is too hurtful; but she could well allow a few little associations and half-smothered wishes to be discerned in the background, such as reminiscences of the time when the analysis was so interesting, etc.

[169] The sentence "I must not show that I am frightened" therefore means in reality "I must not show that I would really like a relapse because keeping well is too much trouble." "If I don't have help, I am lost" means "I hope I won't be cured too quickly or I cannot have a relapse." Then, at the end, comes the wish-fulfilment: "Well, you will have to fight the damned thing yourself." The patient keeps well only out of love for the analyst. If he leaves her in the lurch she will have a relapse, and it will be his fault for not helping her. But if she has a relapse she will have a renewed and more intense claim on his attention, and this is the point of the whole manœuvre. It is altogether typical of dreams that the wish-fulfilment is always found where it seems most impossible to the conscious mind. The fear of a relapse is a symbol that needs analysing, and this the author has forgotten, because he took the fear, like the whiskey-drinking and the sticks, at its face value, instead of examining it sceptically for its genuineness. His colleague Ernest Jones's excellent work *On the Nightmare*[11] would have informed him of the wishful character of these fears. But, as I know from my own experience, it is difficult for a beginner to remain conscious of all the psychoanalytic rules all the time.

[170] *Dream* 3: She was in the rocky path of Watts's,[12] barefooted, stones hurt her feet, few clothes, cold, could hardly climb that path; she saw you there, and she called on you to help her, and you said, "I cannot help you, you must help yourself." She said, "I can't, I can't." "Well, you have got to. Let me see if I cannot hammer it into your head." You picked up a stone and hammered her head, and with every blow you said, "I can't be bothered, I can't be bothered." And every blow sent a weight down into her heart so she felt heavy-hearted. She woke and I saw you pounding with a stone; you looked cross. [Pp. 159f.]

[171] As Prince again takes the dream literally, he can see in it merely the "non-fulfillment of a wish." Once again it must be emphasized that Freud has expressly stated that the true *dream-thoughts are not identical with the manifest dream-contents*. Prince has not discovered the true dream-thought simply because he stuck to the wording of the dream. Now, it is always risky to intervene without knowing the material oneself; one can make enormous blunders. But it may be that the material brought out by the author's analysis will be sufficient to give us a glimpse of the latent dream-thought. (Anyone who has experience will naturally have guessed the meaning of the dream long ago, for it is perfectly clear.)

[172] The dream is built up on the following experience. On the previous morning the patient had begged the author for medical help and had received the answer by telephone: "I cannot possibly come to see you today. I have engagements all the day and into the evening. I will send Dr. W, you must not depend on me" (p. 160). An unmistakable hint, therefore, that the analyst's time belonged also to others. The patient remarked: "I didn't say anything about it, but it played ducks and drakes with me the other night." She therefore had a bitter morsel to swallow. The analyst had done something really painful, which she, as a reasonable woman, understood well enough—but not with her heart. Before going to sleep she had thought: "I must not bother him; I should think I would get that *into my head* after a while" (p. 161). (In the dream it is actually hammered into her head.) "If my heart was not like a *stone*, I should weep." (She was hammered with a stone.)

[173] As in the previous dream, it is stated that the analyst will not help her any more, and he hammers this decision of his into her head so that at every blow her heart became heavier. The situation that evening, therefore, is taken up too clearly in the manifest dream-content. In such cases we must always try to find where a new element has been added to the situation of the previous day; at this point we may penetrate into the real meaning of the dream. The painful thing is that the analyst will not treat the patient any more, but in the dream she *is* treated, though in a new and remarkable way. When the analyst hammers it into her head that he cannot let himself be tormented by her chatter, he does it so emphatically that his psychotherapy turns into an extremely intense form

of physical treatment or torture. This fulfils a wish which is far too shocking to be recognized in the decent light of day, although it is a very natural and simple thought. Popular humour and all the evil tongues that have dissected the secrets of the confessional and the consulting-room know it.[13] Mephistopheles, in his famous speech about Medicine,[14] guessed it too. It is one of those imperishable thoughts which nobody knows and everybody has.

[174] When the patient awoke she saw the analyst still carrying out that movement: pounding[15] with a stone. To name an action for a second time is to give it special prominence.[16] As in the previous dream, the wish-fulfilment lies in the greatest disappointment.

[175] It will no doubt be objected that I am reading my own corrupt fantasies into the dream, as is customary with the Freudian school. Perhaps my esteemed colleague, the author, will be indignant at my attributing such impure thoughts to his patient, or at least will find it quite unjustified of me to draw such a far-reaching conclusion from these scanty hints. I am well aware that this conclusion, seen from the standpoint of yesterday's science, looks almost frivolous. But hundreds of parallel experiences have shown me that the above data are really quite sufficient to warrant my conclusion, and with a certainty that meets the most rigorous requirements. Those who have no experience of psychoanalysis can have no idea how very probable is the presence of an erotic wish and how extremely improbable is its absence. The latter illusion is naturally due to moral sex-blindness on the one hand, but on the other to the disastrous mistake of thinking that consciousness is the whole of the psyche. This does not, of course, apply to our esteemed author. I therefore beg the reader: no moral indignation, please, but calm verification. This is what science is made with, and not with howls of indignation, mockery, abuse, and threats, the weapons which the spokesmen of German science use in arguing with us.

[176] It would really be incumbent on the author to present all the interim material which would finally establish the erotic meaning of the dream. Though he has not done it for this dream, everything necessary is said indirectly in the following dreams, so that my above-mentioned

conclusion emerges from its isolation and will prove to be a link in a consistent chain.

[177] *Dream* 4: [Shortly before the last dream the subject] dreamt that she was in a great *ballroom,* where everything was very *beautiful*. She was walking about, and a man came up to her and asked, “Where is your escort?” She replied, “I am *alone.”* He then said, “You cannot stay here, we do not want any *lone women.”* In the next scene she was in a *theater* and was going to sit down, when someone came and said the same thing to her: “You can’t stay here, we do not want any *lone women* here.” Then she was in ever so many different places, but wherever she went she had to leave because she was *alone;* they would not let her stay. Then she was in the street; there was a great crowd, and she saw her husband a little way ahead, and struggled to get to him through the crowd. When she got quite near she saw … [what we may interpret as a symbolical representation of happiness, says Prince.] Then sickness and nausea came over her and she thought there was no place for her there either. [P. 162.]

[178] The gap in the dream is a praiseworthy piece of discretion and will certainly please the prudish reader, but it is not science. Science admits no such considerations of decency. Here it is simply a question of whether Freud’s maligned theory of dreams is right or not, and not whether dream-texts sound nice to immature ears. Would a gynaecologist suppress the illustration of the female genitalia in a textbook of midwifery on grounds of decency? On p. 164 of this analysis we read: “The analysis of this scene would carry us too far into the intimacy of her life to justify our entering upon it.” Does the author really believe that in these circumstances he has any scientific right to speak about the psychoanalytic dream-theory, when he withholds essential material from the reader for reasons of discretion? By the very fact of reporting his patient’s dream to the world he has violated discretion as thoroughly as possible, for every analyst will see its meaning at once: what the dreamer instinctively hides most deeply cries out loudest from the unconscious. For anyone who knows how to read dream-symbols all precautions are in vain, the truth will out. We would therefore request the author, if he

doesn’t want to strip his patient bare the next time, to choose a case about which he can say everything.

[179] Despite his medical discretion this dream too, which Prince denies is a wish-fulfilment, is accessible to understanding. The end of the dream betrays, despite the disguise, the patient’s violent resistance to sexual relations with her husband. The rest is all wish-fulfilment: she becomes a “lone woman” who is socially somewhat beyond the pale. The feeling of loneliness (“she feels that she cannot be alone any more, that she must have company”) is fittingly resolved by this ambiguous situation: there are “lone women” who are not so alone as all that, though certainly they are not tolerated everywhere. This wish-fulfilment naturally meets with the utmost resistance, until it is made clear that in case of necessity the devil, as the proverb says, eats even flies—and this is in the highest degree true of the libido. This solution, so objectionable to the conscious mind, seems thoroughly acceptable to the unconscious. One has to know what the psychology of a neurosis is in a patient of this age; psychoanalysis requires us to take people as they really are and not as they pretend to be. Since the great majority of people want to be what they are not, and therefore believe themselves identical with the conscious or unconscious ideal that floats before them, the individual is blinded by mass suggestion from the start, quite apart from the fact that he himself feels different from what he really is. This rule has the peculiarity of being true of everybody else, but never of the person to whom it is being applied.

[180] I have set forth the historical and general significance of this fact in a previous work,[17] so I can spare myself the trouble of discussing it here. I would only remark that, to practise psychoanalysis, one must subject one’s ethical concepts to a total revision. It is a requirement which explains why psychoanalysis becomes intelligible to a really serious person only gradually and with great difficulty. It needs not only intellectual but, to an even greater extent, moral effort to understand the meaning of the method, for it is not just a medical method like vibro-massage or hypnosis, but something of much wider scope, that modestly calls itself “psychoanalysis.”

[181] *Dream 5*. She dreamt that she was in a dark, gloomy, rocky place, and she was walking with difficulty, as she always does in her dreams, over this rocky path, and all at once the place was filled with cats. She turned in terror to go back, and there in her path was a frightful creature like a wild man of the woods. His hair was hanging down his face and neck; he had a sort of skin over him for covering; his legs and arms were bare and he had a club. A wild figure. Behind him were hundreds of men like him—the whole place was filled with them, so that in front were cats and behind were wild men. The man said to her that she would have to go forward through those cats, and that if she made a sound they would all come down on her and smother her, but if she went through them without making a sound she would never again feel any regret about the past … [mentioning certain specific matters which included two particular systems of ideas known as the Z and Y complexes, all of which had troubled her, adds the author]. She realized that she must choose between death from the wild men and the journey over the cats, so she started forward. Now, in her dream of course she had to step on the cats [the subject here shivers and shudders], and the horror of knowing that they would come on her if she screamed caused her to make such an effort to keep still that the muscles of her throat contracted in her dream [they actually did contract, I could feel them, says Prince]. She waded through the cats without making a sound, and then she saw her mother and tried to speak to her. She reached out her hands and tried to say “O mamma!” but she could not speak, and then she woke up feeling nauseated, frightened, and fatigued, and wet with perspiration. Later, after waking, when she tried to speak, she could only whisper. [Pp. 164f. A footnote adds: “She awoke with complete aphonia, which persisted until relieved by appropriate suggestion.”]

[182] Prince sees this dream partly as a wish-fulfilment, because the dreamer did after all walk over the cats. But he thinks: “The dream would rather seem to be principally a symbolical representation of her idea of life in general, and of the moral precepts with which she has endeavoured to inspire herself, and which she has endeavoured to live up to in order to obtain happiness” (p. 168).

[183] That is not the meaning of the dream, as anyone can see who knows anything of dreams. The dream has not been analysed at all. We are merely told that the patient had a phobia about cats. What that means is not analysed. The treading on the cats is not analysed. The wild man wearing the skin is not analysed, and there is no analysis of the skin and the club. The erotic reminiscences Z and Y are not described. The significance of the aphonia is not analysed. Only the rocky path at the beginning is analysed a little: It comes from a painting by Watts, "Love and Life." A female figure (Life) drags herself wearily along the rocky path, accompanied by the figure of Love. The initial image in the dream corresponds exactly to this picture, "minus the figure of Love," as Prince remarks. Instead there are the cats, as the dream shows and as we remark. This means that the cats symbolize love. Prince has not seen this; had he studied the literature he would have discovered from one of my earlier publications that I have dealt in detail with the question of cat phobia.[18] There he would have been informed of this conclusion and could have understood the dream and the cat phobia as well.

[184] For the rest, the dream is a typical anxiety dream which, in consequence, *must* be regarded from the standpoint of the sexual theory, unless Prince succeeds in proving to us that the sexual theory of anxiety is wrong. Owing to the complete lack of any analysis I refrain from further discussion of the dream, which is indeed very clear and pretty. I would only point out that the patient has succeeded in collecting a symptom (aphonia) which captured the interest of the analyst, as she reckoned it would. It is evident that one cannot criticize the dream-theory on the basis of analyses which are not made; this is merely the method of our German critics.

[185] *Dream 6:* This dream occurred twice on succeeding nights. She dreamed she was in the same rocky, dark path she is always in—Watts's path—but with trees besides (there are always trees, or a hillside, or a canyon). The *wind* was blowing very hard, and she could hardly walk on account of something, as is always the case. Someone, a *figure,* came rushing past her with his hand over his (or her) eyes. This figure said, *"Don't look, you will be blinded."* She was at the entrance of a great

> *cave;* suddenly it *flashed light* in the cave like a flashlight picture, and there, down on the ground *you* were lying, and you were *bound round and round* with bonds of some kind, and your clothes were torn and dirty, and your face was covered with blood, and you looked terribly anguished; and all over you there were just hundreds of little gnomes or pigmies or brownies, and they were *torturing you*. Some of them had axes, and were chopping on your legs and arms, and some were sawing you. Hundreds of them had little things like joss-sticks, but shorter, which were red hot at the ends, and they were jabbing them into you. It was something like Gulliver and the little creatures running over him. You saw C, and you said, "O Mrs. C, for heaven's sake get me out of this damned hole." (You always swear in C's dreams.) She was horrified, and said, "O Dr. Prince, I am coming," but she *could not move*, she was rooted to the spot; and then it all went away, everything became black, as if she were *blinded*, and then it would flash again and illuminate the cave, and she would see again. This happened three or four times in the dream. She kept saying, "I am coming," and *struggled to move*, and she woke up saying it. In the same way *she could not move when she woke up, and she could not see*. [Pp. 170f.]

[186] The author does not report the details of the analysis of this dream, "in order not to weary the reader." He gives only the following résumé:

> The dream proved to be a symbolic representation of the subject's conception of life (the rocky path), of her dread of the future, which for years she has said she dared not face; of her feeling that the future was "blind," in that she could not "see anything ahead"; of the thought that she would be overwhelmed, "lost," "swept away" if she looked into and realized this future, *and she must not look*. And yet there are moments in life when she realizes vividly the future; and so in the dream one of these moments is when she looks into the cave (the future), and in the flash of light the realization comes–she sees her son (metamorphosed through substitution of another person) tortured, as she has thought of him tortured, and handicapped (bound) by the moral "pin pricks" of life. Then follows the symbolic representation (paralysis) of her utter "helplessness" to aid either him or anyone else or alter the conditions of her own life.

> Finally follow the prophesied consequences of this realization. She is overcome by blindness and to this extent the dream is a fulfillment of a fear. [P. 171.]

[187] The author says in conclusion: “In this dream, as in the others, we find no ‘unacceptable’ and ‘repressed wish,’ no ‘conflict’ with ‘censoring thoughts,’ no ‘compromise,’ no ‘resistance’ and no ‘disguise’ in the dream-content to deceive the dreamer—elements and processes fundamental in the Freud school of psychology” (p. 173).

[188] From this devastating judgment we shall delete the words “as in the others,” for the other dreams are analysed so inadequately that the author has no right to pronounce such a judgment on the basis of the preceding “analyses.” Only the last dream remains to substantiate this judgment, and we shall therefore look at it rather more closely.

[189] We shall not linger over the constantly recurring symbol of the painting by Watts, in which the figure of Love is missing and was replaced by the cats in dream 5. Here it is replaced by a figure who warns the patient not to look or she will be “blinded.” Now comes another very remarkable image: the analyst bound round and round with bonds, his clothes torn and dirty, his face covered with blood—the Gulliver situation. Prince remarks that it is the patient’s son who is in this agonizing situation, but withholds further details. Where the bonds, the bloody face, the torn clothes come from, what the Gulliver situation means—of all this we learn nothing. Because the patient “must not look into the future,” the cave signifies the future, remarks Prince. But why is the future symbolized by a cave? The author is silent. How comes it that the analyst is substituted for the son? Prince mentions the patient’s helplessness with regard to the situation of the son, and observes that she is just as helpless with regard to the analyst, for she does not know how to show her gratitude. But these are, if I may say so, two quite different kinds of helplessness, which do not sufficiently explain the condensation of the two persons. An essential and unequivocal *tertium comparationis* is lacking. All the details of the Gulliver situation, especially the red-hot

joss-sticks, are left unanalysed. The highly significant fact that the analyst himself suffers hellish tortures is passed over in complete silence.

[190] In Dream 3 the analyst pounded the patient on the head with a stone, and this torture seems to be answered here, but swelled out into a hellish fantasy of revenge. Without doubt these tortures were thought up by the patient and intended for her analyst (and perhaps also for her son); that is what the dream says. This fact needs analysing. If the son is really "tortured by the moral pin pricks of life," we definitely require to know why in the dream the patient multiplies this torture a hundred-fold, brings the son (or the analyst) into the Gulliver situation and then puts Gulliver in the "damned hole." Why must the analyst swear in the dreams? Why does the patient step into the analyst's shoes and say she is unable to bring help, when really the situation is the other way round?

[191] Here the way leads down into the wish-fulfilling situation. But the author has not trodden this path; he has either omitted to ask himself any of these questions or answered them much too superficially, so that this analysis too must be disqualified as "unsatisfactory."[19]

[192] With this the last prop for a criticism of the dream-theory collapses. We must require of a critic that he carry out his investigations just as thoroughly as the founder of the theory, and that he should at least be able to explain the main points of the dream. But in the author's analyses, as we have seen, the most important items are brushed aside. You cannot produce psychoanalysis out of a hat, as everyone knows who has tried; *unumquemque movere lapidem* is nearer the truth.

*

[193] Only after the conclusion of this review did I see the criticism which Ernest Jones[20] lavished on Morton Prince's article. We learn from Prince's reply that he *does not claim to have used the psychoanalytic method*. In that case he might fairly have refrained from criticizing the findings of psychoanalysis, it seems to me. His analytical methods, as the above examples show, are so lacking in scientific thoroughness that the conclusions he reaches offer no basis for a serious criticism of Freud's

dream-theory. The rest of his remarks, culminating in the admission that he will never be able to see eye to eye with the psychoanalytic school, do not encourage me to make further efforts to explain the problems of dream-psychology to him or to discuss his reply. I confine myself to expressing my regret that he has even gone to the length of denying the scientific training and scientific thinking of his opponents.

ON THE CRITICISM OF PSYCHOANALYSIS[1]

[194] It is a well-known fact to the psychoanalyst that laymen, even those with relatively little education, are able to understand the nature and rationale of psychoanalysis without undue intellectual difficulty. It is the same with educated people, be they scholars, business-men, journalists, artists, or teachers. They can all understand the truths of psychoanalysis. They also understand very well why psychoanalysis cannot be expounded in the same convincing way as a mathematical proposition. Everyone of common sense knows that a psychological proof must necessarily be different from a physical one, and that each branch of science can only offer proofs that are suited to its material. It would be interesting to know just what kind of empirical proof our critics expect, if not proof on the evidence of the empirical facts. Do these facts exist? We point to our observations. Our critics, however, simply say No. What, then, are we to offer if our factual observations are flatly denied? Under these circumstances we would expect our critics to study the neuroses and psychoses as thoroughly as we have done (quite independently of the method of psychoanalysis), and to put forward facts of an essentially different kind concerning their psychological determination. We have waited for this for more than ten years. Fate has even decreed that all investigators in this field who have worked independently of the discoverer of the new theory, but as thoroughly, have arrived at the same results as Freud; and that those who have taken the time and trouble to acquire the necessary knowledge under a psychoanalyst have also gained an understanding of these results.

[195] In general, we must expect the most violent resistance from medical men and psychologists, chiefly because of scientific prejudices based on a different way of thinking to which they obstinately adhere. Our critics, unlike earlier ones, have progressed inasmuch as they try to be more serious and to strike a more moderate note. But they commit the mistake of criticizing the psychoanalytic method as though it rested on *a priori* principles, whereas in reality it is purely empirical and totally lacking in

any final theoretical framework. All we know is that it is simply the quickest way to find facts which are of importance for our psychology, but which, as the history of psychoanalysis shows, can also be discovered in other more tedious and complicated ways. We would naturally be happy if we possessed an analytical technique which led us to the goal even more quickly and reliably than the present method. Our critics, however, will scarcely be able to help us towards a more suitable technique, and one that corresponds better to the assumptions of psychology up till now, merely by contesting our findings. So long as the question of the facts is not settled, all criticism of the method hangs in the air, for concerning the ultimate secrets of the association process our opponents know as little as we do. It should be obvious to every thinking person that what matters is simply and solely the empirical facts. If criticism confines itself to the method, it may easily come one day to deny the existence of facts merely because the method of finding them betrays certain theoretical defects—a standpoint that would carry us happily back to the depths of the Middle Ages. In this respect our critics commit grave mistakes. It is the duty of intelligent people to point them out, for to err is human.

[196] Occasionally, however, the criticism assumes forms which arouse the interest of the psychological worker in the highest degree, since the scientific endeavour of the critic is thrust into the background in the most surprising way by symptoms of personal participation. Such critics make a valuable contribution to the knowledge of the personal undercurrents beneath so-called scientific criticism. We cannot deny ourselves the pleasure of making such a *document humain* accessible to a wider public.

*

Review by Kurt Mendel[2] of an Exposition of the Freudian Standpoint

The present reviewer, who has read many works of Freud and his followers, and has *himself had practical experience of psychoanalysis*,[3] must admit that he finds many things in this doctrine utterly repugnant, especially the latest additions concerning anal eroticism and the sexuality of children.

After perusing the work under review,[4] he stepped up to his youngest child, lying there innocently in his cot, and spoke as follows: “Poor little boy! I fancied you were pure and chaste, but now I know that you are depraved and full of sin! ‘From the first day of your existence you have led a sexual life’ (p. 184); now you are an exhibitionist, a fetishist, a sadist, a masochist, an anal-erotic, an onanist—in short, you are ‘polymorphous-perverse’ (p. 185). ‘There is scarcely a Don Juan among grown-ups whose erotic fantasies could be compared with the products of your infant brain’ (p. 185). How, indeed, could it be otherwise? For you are corrupt from birth. Your father has the reputation of being unusually tidy and economical, and the Freudians say he is stubborn because he won’t give full acceptance to their teachings. Unusually tidy, economical, and stubborn! A hopeless anal-erotic, therefore! (Cf. Freud, “Charakter und Analerotik,” *Psych.-neur. Wochenschr*. IX: 51.) As for your mother, she cleans out the house every four weeks. ‘Cleaning, and particularly spring-cleaning, is the specific female reaction to suppressed anal eroticism’ (Sadger, “Analerotik und Analcharakter,” *Die Heilkunde*, Feb. 1910). You are a congenital anal-erotic from your father’s and your mother’s side! And a little while ago, before going to bed, you would not ‘empty the bowels when you were put on the pot, because you want to derive extra pleasure from defecation and therefore enjoy holding back your stool.’ Previously your father simply told your mother on such occasions: ‘The boy is constipated, give him a pill!’ Pfui! How shamelessly perverse I was then, a regular pimp and corrupter of youth! You’ll get no good-night kiss from me any more, for a caress like that would only ‘arouse your sexuality’ (p. 191). And don’t say your evening prayer to me again: ‘I am small, my heart is pure’;[5] that would be a lie; you are dissipated, an exhibitionist, fetishist, sadist, masochist, anal-erotic, onanist, ‘polymorphous-perverse’–through me, through your mother, and through yourself! Poor little boy!”

Freudians! I have repeatedly asserted that your teachings have opened up many new and valuable perspectives. But for heaven’s sake make an end of your boundless exaggerations and nonsensical fantasies! Instead of puns, give us proofs! Instead of books that read like comics, give us serious works to be taken seriously! Prove to me the truth of your squalid and slanderous statement (p. 187): “There is but one form of love, and that is erotic love”! Do not plunge our most sacred feelings, our love and respect for our parents and our happy love for our children, into the mire of your fantasies by the continual imputation of sordid sexual motives! Your whole argument culminates in the axiom: “Freud has said it, therefore it is so!” But I say with Goethe, the son of an anal-erotic (Sadger, op. cit.):

> “A man who speculates
> Is like a beast upon a barren heath
> Led round in circles by an evil sprite,
> While all around lie pastures green and bright.”

CONCERNING PSYCHOANALYSIS[1]

Küsnacht, 28 January 1912

To the Editor.

Sir,

[197] Thank you for kindly inviting me to publish in your columns an epilogue to the series of articles in the *Neue Zürcher Zeitung*. Such an epilogue could only be a defence either of the scientific truth which we think we can discern in psychoanalysis, and which has been so heavily attacked, or of our own scientific qualities. The latter defence offends against good taste, and is unworthy of anyone dedicated to the service of science. But a defence of the first kind can be carried out only if the discussion takes an objective form, and if the arguments used arise from a careful study of the problem, practical as well as theoretical. I am ready to argue with opponents like this, though I prefer to do so in private; I have, however, also done it in public, in a scientific journal.[2]

[198] I shall not reply, either, to scientific criticism the essence of which is: "The method is morally dangerous, therefore the theory is wrong," or: "The facts asserted by the Freudians do not exist but merely spring from the morbid fantasy of these so-called researchers, and the method used for discovering these facts is in itself logically at fault." No one can assert *a priori* that certain facts do not exist. This is a scholastic argument, and it is superfluous to discuss it.

[199] It is repugnant to me to make propaganda for the truth and to defend it with slogans. Except in the Psychoanalytical Society and in the Swiss Psychiatric Society I have never yet given a public lecture without first having been asked to do so; similarly, my article in Rascher's Yearbook[3] was written only at the request of the editor, Konrad Falke. I do not thrust myself upon the public. I shall therefore not enter the arena now in order to engage in barbarous polemics on behalf of a scientific truth. Prejudice and the almost boundless misunderstanding we are faced with can certainly prevent progress and the spread of scientific knowledge for a

long time, and this is perhaps a necessity of mass psychology to which one has to submit. If this truth does not speak for itself, it is a poor truth and it is better for it to perish. But if it is an inner necessity, it will make its way, even without battle-cries and the martial blast of trumpets, into the hearts of all straight-thinking and realistic persons and so become an essential ingredient of our civilization.

[200] The sexual indelicacies which unfortunately occupy a necessarily large place in many psychoanalytic writings are not to be blamed on psychoanalysis itself. Our very exacting and responsible medical work merely brings these unlovely fantasies to light, but the blame for the existence of these sometimes repulsive and evil things must surely lie with the mendaciousness of our sexual morality. No intelligent person needs to be told yet again that the psychoanalytic method of education does not consist merely in psychological discussions of sex, but covers *every department of life*. The goal of this education, as I have expressly emphasized in Rascher's Yearbook, is not that a man should be delivered over helplessly to his passions but that he should attain the necessary self-control. In spite of Freud's and my assurances, our opponents want us to countenance "licentiousness" and then assert that we do so, regardless of what we ourselves say. It is the same with the theory of neurosis—the sexual or libido theory, as it is called. For years I have been pointing out, both in my lectures and in my writings, that the concept of libido is taken in a very general sense, rather like the instinct of preservation of the species, and that in psychoanalytic parlance it definitely does not mean "localized sexual excitation" but all striving and willing that exceed the limits of self-preservation, and that this is the sense in which it is used. I have also recently expressed my views on these general questions in a voluminous work,[4] but our opponents wishfully decree that our views are as "grossly sexual" as their own. Our efforts to expound our psychological standpoint are quite useless, as our opponents want this whole theory to resolve itself into unspeakable banality. I feel powerless in the face of this overwhelming demand. I can only express my sincere distress that, through a misunderstanding which confuses day with night, many people are preventing themselves from employing the extraordinary insights afforded by psychoanalysis for the

benefit of their own ethical development. Equally I regret that, by thoughtlessly ignoring psychoanalysis, many people are blinding themselves to the profundity and beauty of the human soul.

[201] No sensible person would lay it at the door of scientific research and its results that there are clumsy and irresponsible people who use it for purposes of hocus-pocus. Would anybody of intelligence lay the blame for the faults and imperfections in the execution of a method designed for the good of mankind on the method itself? Where would surgery be if one blamed its methods for every lethal outcome? Surgery is very dangerous indeed, especially in the hands of a fool. No one would trust himself to an unskilled surgeon or let his appendix be removed by a barber. So it is with psychoanalysis. That there are not only unskilled psychiatrists but also laymen who play about in an irresponsible way with psychoanalysis cannot be denied, any more than that there are, today as always, unsuitable doctors and unscrupulous quacks. But this fact does not entitle anyone to lump together science, method, researcher, and doctor in a wholesale condemnation.

[202] I regret, Sir, having to bore you and the readers of your paper with these self-evident truths, and I therefore hasten to a conclusion. You must forgive me if my manner of writing is at times a little heated; but no one, perhaps, is so far above public opinion as not to be painfully affected by the frivolous discrediting of his honest scientific endeavours.

Yours, etc.,

DR. JUNG

II

THE THEORY OF PSYCHOANALYSIS

[Written originally in German under the title *Versuch einer Darstellung der psychoanalytischen Theorie* and translated (by Dr. and Mrs. M. D. Eder and Miss Mary Moltzer) for delivery as a series of lectures under the present title at the medical school of Fordham University, New York, in September 1912. The German text was published in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Vienna and Leipzig), V (1913; reprinted as a book the same year); the English, in five issues of the *Psychoanalytic Review* (New York): I (1913/14) : 1–4 and II (1915) : 1. The latter was then republished in the Nervous and Mental Disease Monograph Series, No. 19 (New York, 1915). The analysis of a child in the last chapter had been previously presented as “Über Psychoanalyse beim Kinde” at the First International Congress of Pedagogy, Brussels, August 1911, and printed in the proceedings of the Congress (Brussels, 1912), II, 332–43.

[A second edition of the German text, with no essential alterations, was published in 1955 (Zurich). The present translation is made from this edition in consultation with the previous English version.

[The text of the 1913 and 1955 editions in German is uninterrupted by headings, but at the author’s request the original division into nine lectures (ascertained from an examination of the manuscript) has here been preserved. This arrangement differs from that of the previous English version, which is divided into ten lectures; the chapter and section headings there introduced have in general been retained, with some modifications. A number of critical passages inserted at a later stage into the original manuscript and included in the German editions were omitted from the previous English version, together with the footnotes. In the present version these passages are given in pointed brackets ().—EDITORS.]

FOREWORD TO THE FIRST EDITION

In these lectures I have attempted to reconcile my practical experiences in psychoanalysis with the existing theory, or rather, with the approaches to such a theory. It is really an attempt to outline my attitude to the guiding principles which my honoured teacher Sigmund Freud has evolved from the experience of many decades. Since my name is associated with psychoanalysis, and for some time I too have been the victim of the wholesale condemnation of this movement, it will perhaps be asked with astonishment how it is that I am now for the first time defining my theoretical position. When, some ten years ago, it came home to me what a vast distance Freud had already travelled beyond the bounds of contemporary knowledge of psychopathological phenomena, especially the psychology of complex mental processes, I did not feel in a position to exercise any real criticism. I did not possess the courage of those pundits who, by reason of their ignorance and incompetence, consider themselves justified in making “critical” refutations. I thought one must first work modestly for years in this field before one might dare to criticize. The unfortunate results of premature and superficial criticism have certainly not been lacking. Yet the great majority of the critics missed the mark as much with their indignation as with their technical ignorance. Psychoanalysis continued to flourish undisturbed and did not trouble itself about the unscientific chatter that buzzed around it. As everyone knows, this tree has waxed mightily, and not in one hemisphere only, but alike in Europe and America. Official critics meet with no better success than the Proktophantasmist in *Faust*, who laments in the Walpurgisnacht:

> Preposterous! You still intend to stay?
> Vanish at once! You’ve been explained away.

The critics have omitted to take it to heart that everything that exists has sufficient right to its own existence, and that this holds for psychoanalysis as well. We will not fall into the error of our opponents, neither ignoring their existence nor denying their right to exist. But this enjoins upon us the duty of applying a just criticism ourselves, based on a proper knowledge of the facts. To me it seems that psychoanalysis stands in need of this weighing-up from inside.

It has been wrongly suggested that my attitude signifies a "split" in the psychoanalytic movement. Such schisms can only exist in matters of faith. But psychoanalysis is concerned with knowledge and its ever-changing formulations. I have taken as my guiding principle William James's pragmatic rule: "You must bring out of each word its practical cash-value, set it at work within the stream of your experience. It appears less as a solution, then, than as a program for more work, and more particularly as an indication of the ways in which existing realities may be changed. *Theories thus become instruments, not answers to enigmas, in which we can rest*. We don't lie back upon them, we move forward, and, on occasion, make nature over again by their aid."[1]

In the same way, my criticism does not proceed from academic arguments, but from experiences which have forced themselves on me during ten years of serious work in this field. I know that my own experience in no wise approaches Freud's quite extraordinary experience and insight, but nonetheless it seems to me that certain of my formulations do express the observed facts more suitably than Freud's version of them. At any rate I have found, in my teaching work, that the conceptions I have put forward in these lectures were of particular help to me in my endeavours to give my pupils an understanding of psychoanalysis. I am far indeed from regarding a modest and temperate criticism as a "falling away" or a schism; on the contrary, I hope thereby to promote the continued flowering and fructification of the psychoanalytic movement, and to open the way to the treasures of psychoanalytic knowledge for those who, lacking practical experience or handicapped by certain theoretical preconceptions, have so far been unable to master the method.

For the opportunity to deliver these lectures I have to thank my friend Dr. Smith Ely Jelliffe, of New York, who kindly invited me to take part in the Extension Course at Fordham University, in New York. The nine lectures were given in September 1912. I must also express my best thanks to Dr. Gregory, of Bellevue Hospital, for his ready assistance at my clinical demonstrations.

Only after the preparation of these lectures, in the spring of 1912, did Alfred Adler’s book *Über den nervosen Character* [*The Nervous Constitution*] become known to me, in the summer of that year. I recognize that he and I have reached similar conclusions on various points, but here is not the place to discuss the matter more thoroughly. This should be done elsewhere.

Zurich, autumn 1912

FOREWORD TO THE SECOND EDITION

Since the appearance of the first edition in 1913 so much time has elapsed, and so many things have happened, that it is quite impossible to rework a book of this kind, coming from a long-past epoch and from one particular phase in the development of knowledge, and bring it up to date. It is a milestone on the long road of scientific endeavour, and so it shall remain. It may serve to call back to memory the constantly changing stages of the search in a newly discovered territory, whose boundaries are not marked out with any certainty even today, and thus to make its contribution to the story of an evolving science. I am therefore letting this book go to press again in its original form and with no essential alterations.

C. G. J.

October 1954

1. A REVIEW OF THE EARLY HYPOTHESES

[203] It is no easy task to lecture on psychoanalysis at the present time. I am not thinking so much of the fact that this whole field of research raises—I am fully convinced—some of the most difficult problems facing present-day science. Even if we put this cardinal fact aside, there remain other serious difficulties which interfere considerably with the presentation of the material. I cannot offer you a well-established, neatly rounded doctrine elaborated from the practical and the theoretical side. Psychoanalysis has not yet reached that point of development, despite all the labour that has been expended upon it. Nor can I give you a description of its growth *ab ovo*, for you already have in your country, dedicated as always to the cause of progress, a number of excellent interpreters and teachers who have spread a more general knowledge of psychoanalysis among the scientifically-minded public. Besides this, Freud, the true discoverer and founder of the movement, has lectured in your country and given an authentic account of his views. I, too, have already had the great honour of lecturing in America, on the experimental foundation of the theory of complexes and the application of psychoanalysis to education.[1]

[204] In these circumstances you will readily appreciate that I am afraid of repeating what has already been said or already been published in scientific journals. Another difficulty to be considered is the fact that quite extraordinary misconceptions prevail in many quarters concerning the nature of psychoanalysis. At times it is almost impossible to imagine what exactly these erroneous conceptions might be. But sometimes they are so preposterous that one is astonished that anyone with a scientific background could ever arrive at ideas so remote from reality. Obviously it would not be worth while to cite examples of these curiosities. It will be better to devote time and energy to discussing those problems of psychoanalysis which by their very nature give rise to misunderstandings.

THE TRAUMA THEORY

[205] Although it has been pointed out on any number of occasions before, many people still do not seem to know that the theory of psychoanalysis has changed considerably in the course of the years. Those, for instance, who have read only the first book, *Studies on Hysteria*,[2] by Breuer and Freud, still believe that, according to psychoanalysis, hysteria and the neuroses in general are derived from a so-called trauma in early childhood. They continue senselessly to attack this theory, not realizing that it is more than fifteen years since it was abandoned and replaced by a totally different one. This change is of such great importance for the whole development of the technique and theory of psychoanalysis that we are obliged to examine it in rather more detail. So as not to weary you with case histories that by now are well known, I shall content myself with referring to those mentioned in Breuer and Freud's book, which I may assume is known to you in its English translation. You will there have read that case of Breuer's to which Freud referred in his lectures at Clark University,[3] and will have discovered that the hysterical symptom did not derive from some unknown anatomical source, as was formerly supposed, but from certain psychic experiences of a highly emotional nature, called traumata or psychic wounds. Nowadays, I am sure, every careful and attentive observer of hysteria will be able to confirm from his own experience that these especially painful and distressing occurrences do in fact often lie at the root of the illness. This truth was already known to the older physicians.

[206] So far as I know, however, it was really Charcot who, probably influenced by Page's theory of "nervous shock,"[4] first made theoretical use of this observation. Charcot knew, from his experience of the new technique of hypnotism, that hysterical symptoms can be produced and also be made to disappear by suggestion. He believed something of the kind could be observed in those increasingly common cases of hysteria caused by accidents. The traumatic shock would be comparable, in a sense, to the moment of hypnosis, since the emotion it produced would cause, temporarily, a complete paralysis of the will during which the trauma could become fixed as an auto-suggestion.

[207] This conception laid the foundations for a theory of psycho-genesis. It was left for later aetiological researches to find out whether the same mechanism, or a similar one, existed in cases of hysteria which could not be called traumatic. This gap in our knowledge of the aetiology of hysteria was filled by the discoveries of Breuer and Freud. They showed that even in cases of ordinary hysteria which had not been regarded as traumatically conditioned the same traumatic element could be found, and that it seemed to have an aetiological significance. So it was very natural for Freud, himself a pupil of Charcot, to see in this discovery a confirmation of Charcot's views. Consequently, the theory elaborated out of the experience of that period, mainly by Freud, bore the imprint of a traumatic aetiology. It was therefore fittingly called the trauma theory.

[208] The new thing about this theory, apart from the truly admirable thoroughness of Freud's analysis of hysterical symptoms, is the abandonment of the concept of auto-suggestion, which was the dynamic element in the original theory. It was replaced by a more detailed conception of the psychological and psychophysical effects produced by the shock. The shock or trauma causes an excitation which, under normal conditions, is got rid of by being expressed ("abreacted"). In hysteria, however, the trauma is incompletely abreacted, and this results in a "retention of the excitation," or a "blocking of affect." The energy of the excitation, always lying ready *in potentia*, is transmuted into the physical symptoms by the mechanism of conversion. According to this view, the task of therapy was to release the accumulated excitation, thereby discharging the repressed and converted affects from the symptoms. Hence it was aptly called the "cleansing" or "cathartic" method, and its aim was to "abreact" the blocked affects. That stage of the analysis was therefore bound up fairly closely with the symptoms—one analysed the symptoms, or began the work of analysis with the symptoms, very much in contrast to the psychoanalytical technique employed today. The cathartic method and the theory on which it is based have, as you know, been taken over by other professional people, so far as they are interested in psychoanalysis at all, and have also found appreciative mention in the text-books.

[209] Although the discoveries of Breuer and Freud are undoubtedly correct in point of fact, as can easily be proved by any case of hysteria, several objections can nevertheless be raised against the trauma theory. The Breuer-Freud method shows with wonderful clearness the retrospective connection between the actual symptom and the traumatic experience, as well as the psychological consequences which apparently follow of necessity from the original traumatic situation. All the same, some doubt arises as to the *aetiological* significance of the trauma. For one thing, the hypothesis that a neurosis, with all its complications, can be related to events in the past—that is, to some factor in the patient's predisposition—must seem doubtful to anyone who knows hysteria. It is the fashion nowadays to regard all mental abnormalities not of exogenous origin as consequences of hereditary degeneration, and not as essentially conditioned by the psychology of the patient and his environment. But this is an extreme view which fails to do justice to the facts. We know very well how to find the middle course in dealing with the aetiology of tuberculosis. There are undoubtedly cases of tuberculosis where the germ of the disease proliferates from early childhood in soil predisposed by heredity, so that even under the most favourable conditions the patient cannot escape his fate. But there are also cases where there is no hereditary taint and no predisposition, and yet a fatal infection occurs. This is equally true of the neuroses, where things will not be radically different from what they are in general pathology. An extreme theory about predisposition will be just as wrong as an extreme theory about environment.

THE CONCEPT OF REPRESSION

[210] Although the trauma theory gave distinct prominence to the predisposition, even insisting that some past trauma is the *conditio sine qua non* of neurosis, Freud with his brilliant empiricism had already discovered, and described in the Breuer-Freud *Studies*, certain elements which bear more resemblance to an "environment theory" than to a "predisposition theory," though their theoretical importance was not sufficiently appreciated at the time. Freud had synthesized these observations in a concept that was to lead far beyond the limits of the

trauma theory. This concept he called “repression.” As you know, by “repression” we mean the mechanism by which a conscious content is displaced into a sphere outside consciousness. We call this sphere the unconscious, and we define it as the psychic element of which we are not conscious. The concept of repression is based on the repeated observation that neurotics seem to have the capacity for forgetting significant experiences or thoughts so thoroughly that one might easily believe they had never existed. Such observations are very common and are well known to anyone who enters at all deeply into the psychology of his patients.

[211] As a result of the Breuer-Freud *Studies*, it was found that special procedures were needed to call back into consciousness traumatic experiences that had long been forgotten. This fact, I would mention in passing, is astonishing in itself, inasmuch as we are disinclined from the start to suppose that things of such importance could ever be forgotten. For this reason it has often been objected that the reminiscences brought back by hypnotic procedures are merely “suggested” and bear no relation to reality. Even if this doubt were justified, there would certainly be no justification for denying repression in principle on that account, for there are plenty of cases where the actual existence of repressed memories has been verified objectively. Quite apart from numerous proofs of this kind, it is possible to demonstrate this phenomenon experimentally, by the association test. Here we discover the remarkable fact that associations relating to feeling-toned complexes are much less easily remembered and are very frequently forgotten. As my experiments were never checked, this finding was rejected along with the rest. It was only recently that Wilhelm Peters, of the Kraepelin school, was able to confirm my earlier observations, proving that “painful experiences are very rarely reproduced correctly.”[5]

[212] As you see, then, the concept of repression rests on a firm empirical basis. But there is another side of the question that needs discussing. We might ask if the repression is due to a conscious decision of the individual, or whether the reminiscences disappear passively, without his conscious knowledge? In Freud’s writings you will find excellent proofs of the existence of a conscious tendency to repress anything painful.

Every psychoanalyst knows dozens of cases showing clearly that at some particular moment in the past the patient definitely did not want to think any longer of the content to be repressed. One patient told me, very significantly: “Je l’ai mis de côté.” On the other hand, we must not forget that there are any number of cases where it is impossible to show, even with the most careful examination, the slightest trace of “putting aside” or of conscious repression, and where it seems as if the process of repression were more in the nature of a passive disappearance, or even as if the impressions were dragged beneath the surface by some force operating from below. Patients of the first type give us the impression of being mentally well-developed individuals who seem to suffer only from a peculiar cowardice in regard to their own feelings. But among the second you may find cases showing a more serious retardation of development, since here the process of repression could be compared rather to an automatic mechanism. This difference may be connected with the question discussed above, concerning the relative importance of predisposition and environment. Many factors in cases of the first type appear to depend on the influence of environment and education, whereas in the latter type the factor of predisposition seems to predominate. It is pretty clear where the treatment will be more effective.

[213] As I have indicated, the concept of repression contains an element which is in intrinsic contradiction with the trauma theory. We saw, for instance, in the case of Miss Lucy R., analysed by Freud,[6] that the aetiologically significant factor was not to be found in the traumatic scenes but in the insufficient readiness of the patient to accept the insights that forced themselves upon her. And when we think of the later formulation in the *Schriften zur Neurosenlehre*,[7] where Freud’s experience obliged him to recognize certain traumatic events in early childhood as the source of the neurosis, we get a forcible impression of the incongruity between the concept of repression and that of the trauma. The concept of repression contains the elements of an aetiological theory of environment, while the trauma concept is a theory of predisposition.

[214] At first the theory of neurosis developed entirely along the lines of the trauma concept. In his later investigations Freud came to the conclusion that no positive validity could be attributed to the traumatic

experiences of later life, as their effects were conceivable only on the basis of a specific predisposition. It was evidently there that the riddle had to be solved. In pursuing the roots of hysterical symptoms, Freud found that the analytical work led back into childhood; the links reached backwards from the present into the distant past. The end of the chain threatened to get lost in the mists of earliest infancy. But it was just at that point that reminiscences appeared of certain sexual scenes—active or passive—which were unmistakably connected with the subsequent events leading to the neurosis. For the nature of these scenes you must consult the works of Freud and the numerous analyses that have already been published.

THE THEORY OF SEXUAL TRAUMA IN CHILDHOOD

[215] Hence arose the theory of sexual trauma in childhood, which provoked bitter opposition not because of theoretical objections against the trauma theory in general, but against the element of sexuality in particular. In the first place, the very idea that children might be sexual, and that sexual thoughts might play any part in their lives, aroused great indignation. In the second place, the possibility that hysteria had a sexual basis was most unwelcome, for the sterile position that hysteria either was a uterine reflex-neurosis or arose from lack of sexual satisfaction had just been given up. Naturally, therefore, the validity of Freud's observations was contested. Had the critics confined themselves to that question, and not embellished their opposition with moral indignation, a calm discussion might have been possible. In Germany, for example, this method of attack made it impossible to gain any credit at all for Freud's theory. As soon as the question of sexuality was touched, it aroused universal resistance and the most arrogant contempt. But in reality there was only one question at issue: were Freud's observations true or not? That alone could be of importance to a truly scientific mind. I daresay his observations may seem improbable at first sight, but it is impossible to condemn them *a priori* as false. Wherever a really honest and thorough check has been carried out, the existence of the psychological connections established by Freud has been absolutely confirmed, but not

the original hypothesis that it is always a question of real traumatic scenes.

[216] Freud himself had to abandon that first formulation of his sexual theory of neurosis as a result of increasing experience. He could no longer retain his original view as to the absolute reality of the sexual trauma. Those scenes of a decidedly sexual character, the sexual abuse of children, and premature sexual activity in childhood were later on found to be to a large extent unreal. You may perhaps be inclined to share the suspicion of the critics that the results of Freud's analytical researches were therefore based on suggestion. There might be some justification for such an assumption if these assertions had been publicized by some charlatan or other unqualified person. But anyone who has read Freud's works of that period with attention, and has tried to penetrate into the psychology of his patients as Freud has done, will know how unjust it would be to attribute to an intellect like Freud's the crude mistakes of a beginner. Such insinuations only redound to the discredit of those who make them. Ever since then patients have been examined under conditions in which every possible precaution was taken to exclude suggestion, and still the psychological connections described by Freud have been proved true in principle. We are thus obliged to assume that many traumata in early infancy are of a purely fantastic nature, mere fantasies in fact, while others do have objective reality.

[217] With this discovery, somewhat bewildering at first sight, the aetiological significance of the sexual trauma in childhood falls to the ground, as it now appears totally irrelevant whether the trauma really occurred or not. Experience shows us that fantasies can be just as traumatic in their effects as real traumata. As against this, every doctor who treats hysteria will be able to recall cases where violent traumatic impressions have in fact precipitated a neurosis. This observation is only in apparent contradiction with the unreality, already discussed, of the infantile trauma. We know very well that there are a great many more people who experience traumata in childhood or adult life without getting a neurosis. Therefore the trauma, other things being equal, has no absolute aetiological significance and will pass off without having any lasting effect. From this simple reflection it is perfectly clear that the

individual must meet the trauma with a quite definite inner predisposition in order to make it really effective. This inner predisposition is not to be understood as that obscure, hereditary disposition of which we know so little, but as a psychological development which reaches its climax, and becomes manifest, at the traumatic moment.

THE PREDISPOSITION FOR THE TRAUMA

[218] I will now show you, by means of a concrete example, the nature of the trauma and its psychological preparation. It concerns the case of a young woman who suffered from acute hysteria following a sudden fright.[8] She had been to an evening party and was on her way home about midnight in the company of several acquaintances, when a cab came up behind them at full trot. The others got out of the way, but she, as though spellbound with terror, kept to the middle of the road and ran along in front of the horses. The cabman cracked his whip and swore; it was no good, she ran down the whole length of the road, which led across a bridge. There her strength deserted her, and to avoid being trampled on by the horses she would, in her desperation, have leapt into the river had not the passers-by restrained her. Now, this same lady had happened to be in St. Petersburg on the bloody 22nd of January [1905], in the very street which was being cleared by the volleys of the soldiers. All round her people were falling to the ground dead or wounded; she, however, quite calm and clear-headed, espied a gate leading into a yard, through which she made her escape into another street. These dreadful moments caused her no further agitation. She felt perfectly well afterwards—indeed, rather better than usual.

[219] This failure to react to an apparent shock is often observed. Hence it necessarily follows that the intensity of a trauma has very little pathogenic significance in itself; everything depends on the particular circumstances. Here we have a key to the “predisposition.” We have therefore to ask ourselves: what are the particular circumstances of the scene with the cab? The patient’s fear began with the sound of the trotting horses; for an instant it seemed to her that this portended some

terrible doom —her death, or something as dreadful; the next moment she lost all sense of what she was doing.

[220] The real shock evidently came from the horses. The patient's predisposition to react in so unaccountable a way to this unremarkable incident might therefore be due to the fact that horses have some special significance for her. We might conjecture, for instance, that she once had a dangerous accident with horses. This was actually found to be the case. As a child of about seven she was out for a drive with the coachman, when suddenly the horses took fright and at a wild gallop made for the precipitous bank of a deep river-gorge. The coachman jumped off and shouted to her to do likewise, but she was in such deadly fear that she could hardly make up her mind. Nevertheless she managed to jump in the nick of time, while the horses crashed with the carriage into the depths below. That such an event would leave a very deep impression hardly needs proof. Yet it does not explain why at a later date such an insensate reaction should follow a perfectly harmless stimulus. So far we know only that the later symptom had a prelude in childhood. The pathological aspect of it still remains in the dark.

[221] This anamnesis, whose continuation we shall find out later,[9] shows very clearly the discrepancy between the so-called trauma and the part played by fantasy. In this case fantasy must predominate to a quite extraordinary degree in order to produce such a great effect from so insignificant a stimulus. At first one is inclined to adduce that early childhood trauma as an explanation—not very successfully, it seems to me, because we still do not understand why the effects of that trauma remained latent so long, and why they manifested themselves precisely on this occasion and on no other. The patient must surely have had opportunities enough during her lifetime of getting out of the way of a carriage going at full speed. The moment of deadly peril she experienced earlier in St. Petersburg did not leave behind the slightest trace of neurosis, despite her being predisposed by the impressive event in her childhood. Everything about this traumatic scene has still to be explained, for, from the standpoint of the trauma theory, we are left completely in the dark.

[222] You must forgive me if I return so persistently to this question of the trauma theory. I do not think it superfluous to do so, because nowadays so many people, even those closely connected with psychoanalysis, still cling to the old standpoint, and this gives our opponents, who mostly never read our writings or do so only very superficially, the impression that psychoanalysis still revolves round the trauma theory.

[223] The question now arises: what are we to understand by this "predisposition," through which an impression, insignificant in itself, can produce such a pathological effect? This is a question of fundamental importance, and, as we shall see later, it plays a very important role in the whole theory of neurosis. We have to understand why apparently irrelevant events of the past still have so much significance that they can interfere in a daemonic and capricious way with our reactions in actual life.

THE SEXUAL ELEMENT IN THE TRAUMA

[224] The early school of psychoanalysis, and its later disciples, did all they could to find in the special quality of those original traumatic experiences the reason for their later effectiveness. Freud went deepest: he was the first and only one to see that some kind of sexual element was mingled with the traumatic event, and that this admixture, of which the patient was generally unconscious, was chiefly responsible for the effect of the trauma. The unconsciousness of sexuality in childhood seemed to throw a significant light on the problem of the long-lasting constellation caused by the original traumatic experience. The real emotional significance of that experience remains hidden all along from the patient, so that, not reaching consciousness, the emotion never wears itself out, it is never used up. We might explain the long-lasting constellative effect of the experience as a kind of *suggestion à échéance*, for this, too, is unconscious and develops its effect only at the appointed time.

[225] It is hardly necessary to give detailed examples showing that the real character of sexual activities in infancy is not recognized. Doctors are aware, for instance, that open masturbation right up to adult life is not understood as such, especially by women. From this it is easy to deduce

that a child would be even less conscious of the character of certain actions; hence the real meaning of these experiences remains hidden from consciousness even in adult life. In some cases the experiences themselves are completely forgotten, either because their sexual significance is quite unknown to the patient, or because their sexual character, being too painful, is not admitted, in other words, is repressed.

[226] As already mentioned, Freud's observation that the admixture of a sexual element in the trauma is a characteristic concomitant having a pathological effect led to the theory of the infantile sexual trauma. This hypothesis means that the pathogenic experience is a sexual one.

INFANTILE SEXUAL FANTASY

[227] At first this hypothesis was countered by the widespread opinion that children have no sexuality at all in early life, thus making such an aetiology unthinkable. The modification of the trauma theory already discussed, that the trauma is generally not real at all but essentially just fantasy, does not make things any better. On the contrary, it obliges us to see in the pathogenic experience a positive sexual manifestation of infantile fantasy. It is no longer some brutal accidental impression coming from outside, but a sexual manifestation of unmistakable clearness actually created by the child. Even real traumatic experiences of a definitely sexual character do not happen to the child entirely without his co-operation; it was found that very often he himself prepares the way for them and brings them to pass. Abraham has furnished valuable proofs of great interest in support of this, which in conjunction with many other experiences of the same kind make it seem very probable that even real traumata are frequently aided and abetted by the psychological attitude of the child. Medical jurisprudence, quite independently of psychoanalysis, can offer striking parallels in support of this psychoanalytic assertion.

[228] The precocious manifestations of sexual fantasy, and their traumatic effect, now seemed to be the source of the neurosis. One was therefore obliged to attribute to children a much more developed sexuality than was admitted before. Cases of precocious sexuality had long been

recorded in the literature, for instance of a two-year-old girl who was menstruating regularly, or of boys between three and five years old having erections and therefore being capable of cohabitation. But these cases were curiosities. Great was the astonishment, therefore, when Freud began to credit children not only with ordinary sexuality but even with a so-called "polymorphous-perverse" sexuality, and moreover on the basis of the most exhaustive investigations. People were far too ready with the facile assumption that all this had merely been suggested to the patients and was accordingly a highly debatable artificial product.

[229] In these circumstances, Freud's *Three Essays on the Theory of Sexuality*[10] provoked not only opposition but violent indignation. I need hardly point out that the progress of science is not furthered by indignation and that arguments based on the sense of moral outrage may suit the moralist—for that is his business—but not the scientist, who must be guided by truth and not by moral sentiments. If matters really are as Freud describes them, all indignation is absurd; if they are not, indignation will avail nothing. The decision as to what is the truth must be left solely to observation and research. In consequence of this misplaced indignation the opponents of psychoanalysis, with a few honourable exceptions, present a slightly comic picture of pitiful backwardness. Although the psychoanalytic school was unfortunately unable to learn anything from its critics, as the critics did not trouble to examine our actual conclusions, and although it could not get any useful hints, because the psychoanalytic method of investigation was and still is unknown to them, it nevertheless remains the duty of our school to discuss very thoroughly the discrepancies between the existing views. It is not our endeavour to put forward a paradoxical theory contradicting all previous theories, but rather to introduce a certain category of new observations into science. We therefore consider it our duty to do whatever we can from our side to promote agreement. True, we must give up trying to reach an understanding with all those who blindly oppose us, which would be a waste of effort, but we do hope to make our peace with men of science. This will now be my endeavour in attempting to sketch the further conceptual development of psychoanalysis, up to the point where it reached the *sexual theory of neurosis.*[11]

2. THE THEORY OF INFANTILE SEXUALITY

[230] As you have heard in the last lecture, the discovery of precocious sexual fantasies, which seemed to be the source of the neurosis, forced Freud to assume the existence of a richly developed infantile sexuality. As you know, the validity of this observation has been roundly contested by many, who argue that crude error and bigoted delusion have misled Freud and his whole school, alike in Europe and in America, into seeing things that never existed. We are therefore regarded as people in the grip of an intellectual epidemic. I must confess that I have no way of defending myself against this sort of "criticism." For the rest, I must remark that science has no right to start off with the idea that certain facts do not exist. The most one can say is that they appear to be very improbable, and that more confirmation and more exact study are needed. This is also our reply to the objection that nothing reliable can be learnt from the psychoanalytic method, as the method itself is absurd. No one believed in Galileo's telescope, and Columbus discovered America on a false hypothesis. The method may for all I know be full of errors, but that should not prevent its use. Chronological and geographical observations were made in the past with quite inadequate instruments. The objections to the method must be regarded as so many subterfuges until our opponents come to grips with the facts. It is there that the issue should be decided—not by a war of words.

[231] Even our opponents call hysteria a psychogenic illness. We believe we have discovered its psychological determinants and we present, undaunted, the results of our researches for public criticism. Anyone who does not agree with our conclusions is at liberty to publish his own analyses of cases. So far as I know, this has never yet been done, at least in the European literature. Under these circumstances, critics have no right to deny our discoveries *a priori*. Our opponents have cases of hysteria just as we have, and these are just as psychogenic as ours, so there is nothing to prevent them from finding the psychological determinants. It does not depend on the method. Our opponents content

themselves with attacking and vilifying our researches, but they do not know how to find a better way.

[232] Many of our critics are more careful and more just, and admit that we have made many valuable observations and that the psychic connections revealed by the psychoanalytic method very probably hold good, but they maintain that our conception of them is all wrong. The alleged sexual fantasies of children, with which we are here chiefly concerned, must not be taken, they say, as real sexual functions, being obviously something quite different, since the specific character of sexuality is acquired only at the onset of puberty.

[233] This objection, whose calm and reasonable tone makes a trustworthy impression, deserves to be taken seriously. It is an objection that has given every thoughtful analyst plenty of cause for reflection.

THE CONCEPT OF SEXUALITY

[234] The first thing to be said about this problem is that the main difficulty resides in the concept of sexuality. If we understand sexuality as a fully developed function, then we must restrict this phenomenon to the period of maturity and are not justified in speaking of infantile sexuality. But if we limit our conception in this way, we are faced with a new and much greater difficulty. What name are we then to give to all those biological phenomena correlated with the sexual function in the strict sense, such as pregnancy, birth, natural selection, protection of offspring, and so on? It seems to me that all this belongs to the concept of sexuality, although a distinguished colleague did once say that childbirth is not a sexual act. But if these things do pertain to the concept of sexuality, then countless psychological phenomena must come into it too, for we know that an incredible number of purely psychological functions are connected with this sphere. I need only mention the extraordinary importance of fantasy in preparing and perfecting the sexual function. Thus we arrive at a highly biological conception of sexuality, which includes within it a series of psychological functions as well as a series of physiological phenomena. Availing ourselves of an old but practical classification, we might identify sexuality with the instinct for the preservation of the

species, which in a certain sense may be contrasted with the instinct of self-preservation.

[235] Looking at sexuality from this point of view, we shall no longer find it so astonishing that the roots of the preservation of the species, on which nature sets such store, go much deeper than the limited conception of sexuality would ever allow. Only the more or less grown-up cat catches mice, but even the very young kitten at least plays at catching them. The puppy's playful attempts at copulation begin long before sexual maturity. We have a right to suppose that man is no exception to this rule. Even though we do not find such things on the surface in our well-brought-up children, observation of children of primitive peoples proves that they are no exceptions to the biological norm. It is really far more probable that the vital instinct for preservation of the species begins to unfold in early infancy than that it should descend at one fell swoop from heaven, fully-fledged, at puberty. Also, the organs of reproduction develop long before the slightest sign of their future function can be discerned.

[236] So when the psychoanalytic school speaks of "sexuality," this wider concept of the preservation of the species should be associated with it, and it should not be thought that we mean merely the physical sensations and functions which are ordinarily connoted by that word. It might be said that in order to avoid misunderstandings one should not call the preliminary phenomena of early infancy "sexual." But this demand is surely not justified, since anatomical nomenclature is taken from the fully-developed system and it is not usual to give special names to the more or less rudimentary stages.

IMPORTANCE OF THE NUTRITIVE FUNCTION

[237] Now although no fault can be found with Freud's sexual terminology as such, since he logically gives all the stages of sexual development the general name of sexuality, it has nevertheless led to certain conclusions which in my view are untenable. For if we ask ourselves how far the first traces of sexuality go back into childhood, we have to admit that though sexuality exists implicity *ab ovo* it only manifests itself after a long

period of extra-uterine life. Freud is inclined to see even in the infant's sucking at its mother's breast a kind of sexual act. He was bitterly attacked for this view, yet we must admit that it is sensible enough if we assume with Freud that the instinct for the preservation of the species, i.e., sexuality, exists as it were separately from the instinct of self-preservation, i.e., the nutritive function, and accordingly undergoes a special development *ab ovo*. But this way of thinking seems to me inadmissible biologically. It is not possible to separate the two modes of manifestation or functioning of the hypothetical life-instinct and assign each of them a special path of development. If we judge by what we see, we must take into consideration the fact that in the whole realm of organic nature the life-process consists for a long time only in the functions of nutrition and growth. We can observe this very clearly indeed in many organisms, for instance in butterflies, which as caterpillars first pass through an asexual stage of nutrition and growth only. The intra-uterine period of human beings, as well as the extra-uterine period of infancy, belong to this stage of the life process.

[238] *This period is characterized by the absence of any sexual function*, so that to speak of manifest sexuality in infancy would be a contradiction in terms. The most we can ask is whether, among the vital functions of the infantile period, there are some that do not have the character of nutrition and growth and hence could be termed sexual. Freud points to the unmistakable excitement and satisfaction of the infant while sucking, and he compares these emotional mechanisms with those of the sexual act. This comparison leads him to assume that the act of sucking has a sexual quality. Such an assumption would be justifiable only if it were proved that the tension of a physical need, and its release by gratification, is a sexual process. But the fact that sucking has this emotional mechanism proves just the contrary. Consequently we can only say that this emotional mechanism is found both in the nutritive function and in the sexual function. If Freud derives the sexual quality of the act of sucking from the analogy of the emotional mechanism, biological experience would also justify a terminology qualifying the sexual act as a function of nutrition. This is exceeding the bounds in both directions. What is quite evident is that the act of sucking cannot be qualified as sexual.

[239] We know, however, of other functions at the infantile stage which apparently have nothing to do with the function of nutrition, such as sucking the finger and its numerous variants. Here is rather the place to ask whether such things belong to the sexual sphere. They do not serve nutrition, but produce pleasure. Of that there can be no doubt, but it nevertheless remains disputable whether the pleasure obtained by sucking should be called by analogy a sexual pleasure. It could equally well be called a nutritive pleasure. This latter qualification is the more apt in that the form of pleasure and the place where it is obtained belong entirely to the sphere of nutrition. The hand which is used for sucking is being prepared in this way for the independent act of feeding in the future. That being so, surely no one will beg the question by asserting that the first expressions of human life are sexual.

[240] Yet the formula we hit on just now, that pleasure is sought in sucking the finger without serving any nutritive purpose, leaves us feeling doubtful whether it does belong entirely to the sphere of nutrition. We notice that the so-called bad habits of a child as it grows up are closely connected with early infantile sucking, like putting the finger in the mouth, biting the nails, picking the nose, ears, etc. We see, too, how easily these habits pass over into masturbation later on. The conclusion that these infantile habits are the first stages of masturbation or of similar activities, and therefore have a distinctly sexual character, cannot be denied: it is perfectly legitimate. I have seen many cases in which an indubitable correlation existed between these childish habits and masturbation, and if masturbation occurs in late childhood, before puberty, it is nothing but a continuation of the infantile bad habits. The inference from masturbation that other infantile habits have a sexual character appears natural and understandable from this point of view, in so far as they are acts for obtaining pleasure from one’s own body.

[241] From here it is but a short step to qualifying the infant’s sucking as sexual. Freud, as you know, took that step and you have just heard me reject it. For here we come upon a contradiction which is very hard to resolve. It would be fairly easy if we could assume two separate instincts existing side by side. Then the act of sucking the breast would be a nutritive act and at the same time a sexual act, a sort of combination of

the two instincts. This seems to be Freud's conception. The obvious coexistence of the two instincts, or rather their manifestation in the form of hunger and the sexual drive, is found in the life of adults. But at the infantile stage we find *only* the function of nutrition, which sets a premium on pleasure and satisfaction. Its sexual character can be argued only by a *petitio principii*, for the facts show that the act of sucking is the first to give pleasure, not the sexual function. *Obtaining pleasure is by no means identical with sexuality*. We deceive ourselves if we think that the two instincts exist side by side in the infant, for then we project into the psyche of the child an observation taken over from the psychology of adults. The co-existence or separate manifestation of the two instincts is *not* found in the infant, for one of the instinctual systems is not developed at all, or is quite rudimentary. If we take the attitude that the striving for pleasure is something sexual, we might just as well say, paradoxically, that hunger is a sexual striving, since it seeks pleasure by satisfaction. But if we juggle with concepts like that, we should have to allow our opponents to apply the terminology of hunger to sexuality. This kind of one-sidedness appears over and over again in the history of science. I am not saying this as a reproach: on the contrary, we must be glad that there are people who are courageous enough to be immoderate and one-sided. It is to them that we owe our discoveries. What is regrettable is that each should defend his one-sidedness so passionately. Scientific theories are merely suggestions as to how things might be observed.

[242] The co-existence of two instinctual systems is an hypothesis that would certainly facilitate matters, but unfortunately it is impossible because it contradicts the observed facts and, if pursued, leads to untenable conclusions.

THE POLYMORPHOUS-PERVERSE SEXUALITY OF INFANCY

[243] Before I try to resolve this contradiction, I must say something more about Freud's sexual theory and the changes it has undergone. As I explained earlier, the discovery of a sexual fantasy-activity in childhood, which apparently had the effect of a trauma, led to the assumption that the child must have, in contradiction to all previous views, an almost

fully developed sexuality, and even a polymorphous-perverse sexuality. Its sexuality does not seem to be centred on the genital function and on the other sex, but is occupied with the child's own body, whence it is said to be autoerotic. If its sexual interest is directed outwards to another person, it makes but little difference to the child what that person's sex is. Hence the child may very easily be "homosexual." Instead of the non-existent, localized sexual function there are a number of so-called bad habits, which from this point of view appear as perverse actions since they have close analogies with subsequent perversions.

[244] As a result of this conception sexuality, ordinarily thought of as a unity, was decomposed into a plurality of separate drives; and since it was tacitly assumed that sexuality originates in the genitals, Freud arrived at the conception of "erogenous zones," by which he meant the mouth, skin, anus, etc.

[245] The term "erogenous zone" reminds us of "spasmogenic zone." At all events the underlying idea is the same: just as the spasmogenic zone is the place where a spasm originates, the erogenous zone is the place from which comes an afflux of sexuality. On the underlying model of the genitals as the anatomical source of sexuality, the erogenous zones would have to be conceived as so many genital organs out of which sexuality flows. This state is the polymorphous-perverse sexuality of children. The term "perverse" appeared justified by the close analogy with later perversions which are, so to speak, simply a new edition of certain "perverse" interests in early infancy. They are frequently connected with one or other of the erogenous zones and cause those sexual anomalies which are so characteristic of children.

SEXUAL COMPONENTS AS ENERGIC MANIFESTATIONS

[246] From this point of view the later, normal, "monomorphic" sexuality is made up of several components. First it falls into a homo- and a heterosexual component, then comes the autoerotic component, and then the various erogenous zones. This conception can be compared with the position of physics before Robert Mayer, when only separate fields of phenomena existed, each credited with elementary qualities whose

correlation was not properly understood. The law of the conservation of energy brought order into the relationship of forces to one another, at the same time abolishing the conception of those forces as having an absolute, elementary character and making them manifestations of the same energy. The same thing will have to happen with this splitting of sexuality into the polymorphous-perverse sexuality of childhood.

[247] Experience compels us to postulate a constant interchange of individual components. It was recognized more and more that perversions, for instance, exist at the expense of normal sexuality, and that increased application of one form of sexuality follows a decrease in the application of another form. To make the matter clearer I will give an example. A young man had a homosexual phase lasting for some years, during which time he had no interest in girls. This abnormal condition gradually changed towards his twentieth year, and his erotic interests became more and more normal. He began to take an interest in girls, and soon he had overcome the last traces of homosexuality. This lasted for several years, and he had a number of successful love-affairs. Then he wanted to marry. But here he suffered a severe disappointment, as the girl he adored threw him over. During the ensuing phase he gave up all idea of marriage. After that he experienced a dislike of all women, and one day he discovered that he had become homosexual again, for young men once more had a peculiarly irritating effect upon him.

[248] If we regard sexuality as consisting of a fixed heterosexual and a fixed homosexual component we shall never explain this case, since the assumption of fixed components precludes any kind of transformation. In order to do justice to it, we must assume a great mobility of the sexual components, which even goes so far that one component disappears almost completely while the other occupies the foreground. If nothing but a change of position took place, so that the homosexual component lapsed in full force into the unconscious, leaving the field of consciousness to the heterosexual component, modern scientific knowledge would lead us to infer that equivalent effects would then arise from the unconscious sphere. These effects would have to be regarded as resistances to the activity of the heterosexual component, that is, as resistances against women. But in our case there is no evidence of this.

Though faint traces of such influences existed, they were of such slight intensity that they could not be compared with the previous intensity of the homosexual component.

[249] On the existing theory, it remains incomprehensible how the homosexual component, regarded as so firmly fixed, could disappear without leaving any active traces behind it. (Further, it would be very difficult to conceive how these transformations come about. One could, at a pinch, understand the development passing through a homosexual stage in the pubertal period in order to lay the foundation for normal heterosexuality later, in a fixed, definite form. But how are we then to explain that the product of a gradual development, to all appearances bound up very closely with organic processes of maturation, is suddenly abolished under the impact of an impression, so as to make room for an earlier stage? Or, if two active components are postulated as existing simultaneously side by side, why is only one of them active and not the other as well? One might object that the homosexual component in men does in fact show itself most readily in a peculiar irritability, a special sensitiveness in regard to other men. According to my experience the apparent reason for this characteristic behaviour, of which we find so many examples in society today, is an invariable disturbance in the relationship with women, a special form of dependence on them. This would constitute the "plus" that is counterbalanced by the "minus" in the homosexual relationship. (Naturally this is not the real reason. The real reason is the infantile state of the man's character.))

[250] It was, therefore, urgently necessary to give an adequate explanation of such a change of scene. For this we need a dynamic hypothesis, since these permutations of sex can only be thought of as dynamic or energic processes. Without an alteration in the dynamic relationships, I cannot conceive how a mode of functioning can disappear like this. Freud's theory took account of this necessity. His conception of components, of separate modes of functioning, began to be weakened, at first more in practice than in theory, and was eventually replaced by a conception of energy. The term chosen for this was *libido*.

3. THE CONCEPT OF LIBIDO

[251] Freud had already introduced the concept of libido in his *Three Essays on the Theory of Sexuality*, where he says:

> The fact of the existence of sexual needs in human beings and animals is expressed in biology by the assumption of a “sexual instinct,” on the analogy of the instinct of nutrition, that is of hunger. Everyday language possesses no counterpart to the word “hunger,” but science makes use of the word “libido” for that purpose.[1]

[252] In Freud’s definition the term *libido* connotes an exclusively sexual need, hence everything that Freud means by libido must be understood as sexual need or sexual desire. In medicine the term *libido* is certainly used for sexual desire, and specifically for sexual lust. But the classical use of the word as found in Cicero, Sallust, and others was not so exclusive; there it is used in the more general sense of passionate desire.[2] I mention this fact now, because further on it will play an important part in our argument, and because it is important to know that the term *libido* really has a much wider range of meaning than it has in medicine.

[253] The concept of libido—whose sexual meaning in the Freudian sense we shall try to retain as long as possible—represents that dynamic factor which we were seeking in order to explain the shifting of the psychological scenery. This concept makes it much easier to formulate the phenomena in question. Instead of the incomprehensible exchanging of the homosexual component for the heterosexual component, we can now say that the libido was gradually withdrawn from its homosexual application and that it passed over in the same measure to a heterosexual application. In the process the homosexual component disappeared almost completely. It remained only an empty possibility, signifying nothing in itself. Its very existence is quite rightly denied by the layman, just as he would deny the possibility that he is a murderer. The libido concept also helps to explain the reciprocal relationships between the

various modes of sexual functioning. At the same time, it does away with the original idea of a plurality of sexual components, which savoured too much of the old philosophical notion of psychic faculties. Their place is taken by libido, which is capable of the most varied applications. The earlier “components” represent only possible modes of action. The libido concept puts in the place of a divided sexuality split into many roots a dynamic unity, lacking which these once-significant components remain nothing but potential activities. This conceptual development is of the greatest importance; it accomplishes for psychology the same advance that the concept of energy introduced into physics. Just as the theory of the conservation of energy deprived the various forces of their elementary character and made them manifestations of a single energy, so the theory of libido deprives the sexual components of their elementary significance as psychic “faculties” and gives them a merely phenomenological value.

THE ENERGIC THEORY OF LIBIDO

[254] This view is a far better reflection of reality than the theory of components. With the libido theory we can easily explain the case of the young man cited earlier. The disappointment he met with at the moment he wanted to marry drove his libido away from its heterosexual mode of application, with the result that it assumed a homosexual form again and thus reinduced the earlier homosexuality. Here I cannot refrain from remarking that the analogy with the law of the conservation of energy is very close. In both cases one has to ask, when one sees that a quantum of energy has disappeared, where this energy has re-emerged in the meantime? If we apply this point of view as an explanatory principle to the psychology of human conduct, we shall make the most surprising discoveries. We can then see that the most heterogeneous phases in an individual’s psychological development are connected with one another in an energic relationship. Every time we come across a person who has a “bee in his bonnet,” or a morbid conviction, or some extreme attitude, we know that there is too much libido, and that the excess must have been taken from somewhere else where, consequently, there is too little. From this point of view psychoanalysis is a method which helps us to discover

those places or functions where there is too little libido, and to restore the balance. Thus the symptoms of a neurosis must be regarded as exaggerated functions over-invested with libido.[3] The energy used for this purpose has been taken from somewhere else, and it is the task of the psychoanalyst to discover the place it was taken from or where it was never applied.

[255] The question has to be reversed in the case of those syndromes characterized mainly by lack of libido, for instance apathetic states. Here we have to ask, where did the libido go? The patient gives us the impression of having no libido, and there are many doctors who take him at his face value. Such doctors have a primitive way of thinking, like a savage who, seeing an eclipse of the sun, believes that the sun has been swallowed and killed. But the sun is only hidden, and so it is with these patients. The libido is there, but it is not visible and is inaccessible to the patient himself. Superficially, we have here a lack of libido. It is the task of psychoanalysis to search out that hidden place where the libido dwells and where the patient himself cannot get at it. The hidden place is the "non-conscious," which we may also call the "unconscious" without attributing to it any mystical significance.

UNCONSCIOUS FANTASY SYSTEMS

[256] Psychoanalysis has taught us that there are non-conscious psychological systems which, by analogy with conscious fantasies, can be described as unconscious fantasy systems. In states of neurotic apathy these unconscious fantasy systems are the objects of libido. We are fully aware that when we speak of unconscious fantasy-systems we are speaking only figuratively. By this we mean no more than that we accept as a necessary postulate the conception of psychic entities outside consciousness. Experience teaches us, we might say daily, that there are non-conscious psychic processes which perceptibly influence the libido economy. Those cases known to every psychiatrist, in which a complicated system of delusions breaks out with comparative suddenness, prove that there must be unconscious psychic developments

that have prepared the ground, for we can hardly suppose that such things come into being just as suddenly as they enter consciousness.

[257] I have allowed myself to make this digression concerning the unconscious in order to point out that, with regard to the changing localization of libidinal investments, we have to reckon not merely with the conscious but with another factor, the unconscious, into which the libido sometimes disappears. We can now resume our discussion of the further consequences resulting from the adoption of the libido theory.

THE CONSERVATION OF LIBIDO

[258] Freud has taught us, and we see it in the everyday practice of psychoanalysis, that there exist in early childhood, instead of the later normal sexuality, the beginnings of many tendencies which in later life are called "perversions." We have had to admit Freud's right to apply a sexual terminology to these tendencies. Through the introduction of the libido concept, we see that in adults those elementary components which seemed to be the origin and source of normal sexuality lose their importance and are reduced to mere potentialities. Their operative principle, their vital force, so to speak, is the libido. Without libido these components mean practically nothing. Freud, as we saw, gives the libido an unquestionably sexual connotation, something like "sexual need." It is generally assumed that libido in this sense comes into existence only at puberty. How, then, are we to explain the fact that children have a polymorphous-perverse sexuality, and that the libido activates not merely one perversion but several? If the libido, in Freud's sense, comes into existence only at puberty, it cannot be held accountable for earlier infantile perversions—unless we regard them as "psychic faculties," in accordance with the theory of components. Quite apart from the hopeless theoretical confusion this would lead to, we would be sinning against the methodological axiom that "explanatory principles are not to be multiplied beyond the necessary."

[259] There is no alternative but to assume that before and after puberty it is the same libido. Hence the infantile perversions arise in exactly the same way as in adults. Common sense will object to this, as obviously

the sexual needs of children cannot possibly be the same as those of sexually mature persons. We might, however, compromise on this point and say with Freud that though the libido before and after puberty is the same it is different in its intensity. Instead of the intense sexual need after puberty there would be only a slight sexual need in childhood, gradually diminishing in intensity until, at about the first year, it is nothing but a trace. We could declare ourselves in agreement with this from the biological point of view. But we should also have to assume that everything that comes within the realm of the wider concept of sexuality discussed in the previous lecture is already present in miniature, including all those emotional manifestations of psychosexuality, such as need for affection, jealousy, and many other affective phenomena, and by no means least the neuroses of childhood. It must be admitted, however, that these affective phenomena in children do not at all give the impression of being "in miniature"; on the contrary, they can rival in intensity those of an adult. Nor should we forget that, as experience has shown, the perverse manifestations of sexuality in childhood are often more glaring, and even seem to be more richly developed, than in adults. In an adult showing a similar state of richly developed perversion we could rightly expect a total extinction of normal sexuality and of many other important forms of biological adaptation, as is normally the case with children. An adult is rightly called perverse when his libido is not used for normal functions, and the same can reasonably be said of a child: he is polymorphous-perverse because he does not yet know the normal sexual function.

[260] These considerations suggest that perhaps the amount of libido is always the same and that no enormous increase occurs at sexual maturity. This somewhat audacious hypothesis leans heavily, it is clear, on the law of the conservation of energy, according to which the amount of energy remains constant. It is conceivable that the peak of maturity is reached only when the infantile, subsidiary applications of libido gradually discharge themselves into one definite channel of sexuality and are extinguished in it. For the moment we must content ourselves with these suggestions, for we must next pay attention to one point of criticism concerning the nature of the infantile libido.

[261] Many of our critics do not concede that the infantile libido is simply less intense but of essentially the same nature as the libido of adults. The libidinal impulses of adults are correlated with the genital function, those of children are not, or only in exceptional cases, and this gives rise to a distinction whose importance must not be underestimated. It seems to me that this objection is justified. There is indeed a considerable difference between immature and fully developed functions, just as there is between play and seriousness, between shooting with blank and with loaded cartridges. This would give the infantile libido that undeniably harmless character which is demanded by common sense. But neither can one deny that blank-shooting is shooting. We must get accustomed to the idea that sexuality really exists, even before puberty, right back into early childhood, and we have no grounds for not calling the manifestations of this immature sexuality sexual.

[262] This naturally does not invalidate the objection which, while admitting the existence of infantile sexuality in the form we have described, nevertheless contests Freud’s right to designate as “sexual” early infantile phenomena such as sucking. We have already discussed the reasons which may have induced Freud to stretch his sexual terminology so far. We mentioned, too, how this very act of sucking could be conceived just as well from the standpoint of the nutritive function and that, on biological grounds, there was actually more justification for this derivation than for Freud’s view. It might be objected that these and similar activities of the oral zone reappear in later life in an undoubtedly sexual guise. This only means that these activities can be used later for sexual purposes, but proves nothing about their originally sexual character. I must, therefore, admit that I can find no ground for regarding the pleasure-producing activities of the infantile period from the standpoint of sexuality, but rather grounds to the contrary. It seems to me, so far as I am capable of judging these difficult problems correctly, that from the standpoint of sexuality it is necessary to divide human life into three phases.

THE THREE PHASES OF LIFE

[263] The first phase embraces the first years of life; I call this period the *presexual stage*.[4] It corresponds to the caterpillar stage of butterflies, and is characterized almost exclusively by the functions of nutrition and growth.

[264] The second phase embraces the later years of childhood up to puberty, and might be called the *prepubertal stage*. Germination of sexuality takes place at this period.

[265] The third phase is the adult period from puberty on, and may be called the period of *maturity*.

[266] It will not have escaped you that the greatest difficulty lies in assigning limits to the presexual stage. I am ready to confess my great uncertainty in regard to this problem. When I look back on my own psychoanalytic experiences with children—insufficiently numerous as yet, unfortunately—at the same time bearing in mind the observations made by Freud, it seems to me that the limits of this phase lie between the third and fifth year, subject, of course, to individual variation. This age is an important one in many respects. The child has already outgrown the helplessness of a baby, and a number of important psychological functions have acquired a reliable hold. From this period on, the profound darkness of the early infantile amnesia, or discontinuity of consciousness, begins to be illuminated by the sporadic continuity of memory. It seems as if, at this stage, an essential step forward is taken in the emancipation and centring of the new personality. So far as we know, the first signs of interests and activities which may fairly be called sexual also fall into this period, even though these indications still have the infantile characteristics of harmlessness and naïveté.

THE SEXUAL TERMINOLOGY

[267] I think I have sufficiently explained why a sexual terminology cannot be applied to the presexual stage, so we may now consider the other problems from the standpoint we have just reached. You will remember that we dropped the problem of decreased libido in childhood because it was impossible in that way to reach any clear conclusion. We now take

up this question once again, if only to see whether the energic conception fits in with our present formulations.

[268] We saw that the difference between infantile and mature sexuality can be explained, according to Freud, by the diminishing intensity of sexuality in childhood. But we have just advanced reasons why it seems doubtful that the life-processes of a child, with the exception of sexuality, are any less intense than those of adults. We could say that, sexuality excepted, the affective phenomena, and the nervous symptoms if there are any, are quite as intense as in adults. Yet, on the energic view, they are all manifestations of libido. It is therefore difficult to believe that the intensity of libido can make the difference between mature and immature sexuality. Rather the difference seems to be conditioned by a change in the localization of libido (if such an expression be permitted). In contradistinction to its medical definition, the libido of a child is occupied far more with subsidiary functions of a mental and physical nature than with local sexual functions. This being so, one is tempted to withdraw the predicate “sexualis” from the term “libido” and to strike out the sexual definition of libido given in Freud’s *Three Essays on the Theory of Sexuality*. The necessity for this becomes really urgent when we ask ourselves whether the intense joys and sorrows of a child in the first years of his life, that is, *at the presexual stage*, are conditioned solely by his sexual libido.

[269] Freud has pronounced himself in favour of this supposition. There is no need for me to repeat here the reasons which compelled me to postulate a presexual stage. The caterpillar stage possesses an alimentary libido but no sexual libido; we have to put it like that if we want to retain the energic view which the libido theory offers us. I think there is nothing for it but to abandon the sexual definition of libido, or we shall lose what is valuable in the libido theory, namely the energic point of view. For a long time now the need to give the concept of libido breathing-space and to remove it from the narrow confines of the sexual definition has forced itself on the psychoanalytical school. One never wearied of insisting that sexuality was not to be taken too literally but in a wider sense; yet exactly *how* remained obscure and so could not satisfy the serious critics.

[270] I do not think I am going astray if I see the real value of the concept of libido not in its sexual definition but in its energic view, thanks to which we are in possession of an extremely valuable heuristic principle. We are also indebted to the energic view for dynamic images and correlations which are of inestimable value to us in the chaos of the psychic world. Freudians would be wrong not to listen to those critics who accuse our libido theory of mysticism and unintelligibility. We were deceiving ourselves when we believed that we could make the *libido sexualis* the vehicle of an energic conception of psychic life, and if many of Freud's school still believe that they are in possession of a well-defined and, so to speak, concrete conception of libido, they are not aware that this concept has been put to uses which far exceed the bounds of any sexual definition. Consequently the critics are right when they object that the libido theory purports to explain things which do not properly belong to its sphere. This really does evoke the impression that we are operating with a mystical entity.

THE PROBLEM OF LIBIDO IN DEMENTIA PRAECOX

[271] In my book *Wandlungen und Symbole der Libido* I tried to furnish proof of these transgressions and at the same time to show the need for a new conception of libido which took account only of the energic view. Freud himself was forced to admit that his original conception of libido might possibly be too narrow when he tried to apply the energic view consistently to a famous case of dementia praecox—the so-called Schreber case.[5] This case is concerned among other things with that well-known problem in the psychology of dementia praecox, the loss of adaptation to reality, a peculiar phenomenon consisting in the special tendency of these patients to construct an inner fantasy world of their own, surrendering for this purpose their adaptation to reality.

[272] One aspect of this phenomenon, the absence of emotional rapport, will be well known to you, as this is a striking disturbance of the reality function. By dint of much psychoanalytic work with these patients we established that this lack of adaptation to reality is compensated by a progressive increase in the creation of fantasies, which goes so far that

the dream world becomes more real for the patient than external reality. Schreber found an excellent figurative description for this phenomenon in his delusion about the "end of the world." He thus depicts the loss of reality in a very concrete way. The dynamic explanation is simple: we say that libido has withdrawn more and more from the external world into the inner world of fantasy, and there had to create, as a substitute for the lost world, a so-called reality equivalent. This substitute is built up piece by piece, so to speak, and it is most interesting to see out of what psychological material this inner world is constructed.

[273] This way of looking at the displacement of libido is based on the everyday use of the term, its original, purely sexual connotation being very rarely remembered. In actual practice we speak simply of *libido,* and this is understood in so innocuous a sense that Claparède once remarked to me that one could just as well use the word "interest." The customary use of the term has developed, quite naturally and spontaneously, into a usage which makes it possible to explain Schreber's end of the world simply as a withdrawal of libido. On this occasion Freud remembered his original sexual definition of libido and tried to come to terms with the change of meaning that had quietly taken place in the meantime. In his paper on Schreber he asks himself whether *what the psychoanalytic school calls libido and conceives as "interest from erotic sources" coincides with interest in general*. You see that, putting the problem in this way, Freud asks himself the question which Claparède had already answered in practice.

[274] Freud thus broaches the question of whether the loss of reality in schizophrenia, to which I drew attention in my "Psychology of Dementia Praecox,"[6] is due entirely to the withdrawal of erotic interest, or whether this coincides with objective interest in general. We can hardly suppose that the normal "fonction du réel" (Janet) is maintained solely by erotic interest. The fact is that in very many cases reality disappears altogether, so that not a trace of psychological adaptation can be found in these patients. (In these states reality is replaced by complex contents.) We are therefore compelled to admit that not only the erotic interest, but all interest whatsoever, has got lost, and with it the whole adaptation to reality.

[275] Earlier, in my "Psychology of Dementia Praecox," I tried to get round this difficulty by using the expression "psychic energy," because I could not base the theory of dementia praecox on the theory of displacements of libido sexually defined. My experience—at that time chiefly psychiatric—did not permit me to understand this latter theory: only later did I come to realize its partial correctness as regards the neuroses, thanks to increased experiences in the field of hysteria and obsessional neurosis. Abnormal displacements of libido, quite definitely sexual, do in fact play a great role in these illnesses. But although very characteristic repressions of sexual libido do take place in the neuroses, the loss of reality so typical of dementia praecox never occurs. In dementia praecox the loss of the reality function is so extreme that it must involve the loss of other instinctual forces whose sexual character must be denied absolutely, for no one is likely to maintain that reality is a function of sex. Moreover, if it were, the withdrawal of erotic interest in the neuroses would necessarily entail a loss of reality comparable to that which occurs in dementia praecox. But, as I said before, this is not the case.

[276] (Another thing to be considered—as Freud also pointed out in his work on the Schreber case—is that the introversion of sexual libido leads to an investment of the ego which might conceivably produce that effect of loss of reality. It is indeed tempting to explain the psychology of the loss in this way. But when we examine more closely the various things that can arise from the withdrawal and introversion of sexual libido, we come to see that though it can produce the psychology of an ascetic anchorite, it cannot produce dementia praecox. The anchorite's whole endeavour is to exterminate every trace of sexual interest, and this is something that cannot be asserted of dementia praecox.[7])

[277] These facts have made it impossible for me to apply Freud's libido theory to dementia praecox. I am also of the opinion that Abraham's essay on this subject[8] is theoretically untenable from the standpoint of Freud's conception of libido. Abraham's belief that the paranoid system, or the schizophrenic symptomatology, is produced by the withdrawal of sexual libido from the outside world cannot be justified in terms of our present knowledge. For, as Freud has clearly shown, a mere introversion

or regression of libido invariably leads to a neurosis and not to dementia praecox. It seems to me impossible simply to transfer the libido theory to dementia praecox, because this disease shows a loss of reality which cannot be explained solely by the loss of erotic interest.

THE GENETIC CONCEPTION OF LIBIDO

[278] The attitude of reserve which I adopted towards the ubiquity of sexuality in my foreword to “The Psychology of Dementia Praecox,” despite the fact that I recognized the psychological mechanisms pointed out by Freud, was dictated by the position of the libido theory at that time. Its sexual definition did not permit me to explain functional disturbances which affect the indefinite sphere of the hunger drive just as much as that of sex solely in the light of a sexual libido theory. Freud’s libido theory had long seemed to me inapplicable to dementia praecox. In my analytical work I noticed that, with growing experience, a slow change in my conception of libido had taken place. Instead of the descriptive definition set forth in Freud’s *Three Essays*, there gradually took shape a genetic definition of libido, which enabled me to replace the expression “psychic energy” by “libido.” I had to tell myself: if the reality function consists nowadays to only a very small extent of sexual libido and to a far greater extent of other instinctual forces, then it is very important to consider whether, phylogenetically speaking, the reality function is not, at least very largely, of sexual origin. It is impossible to answer this question directly, but we can seek to approach it by a circuitous route.

[279] A cursory glance at the history of evolution suffices to show that numerous complicated functions, which today must be denied all trace of sexuality, were originally nothing but offshoots of the reproductive instinct. As we know, an important change occurred in the principles of reproduction during the ascent through the animal kingdom: the vast numbers of gametes which chance fertilization made necessary were progressively reduced in favour of assured fertilization and effective protection of the young. The decreased production of ova and spermatozoa set free considerable quantities of energy for conversion

into the mechanisms of attraction and protection of offspring, etc. Thus we find the first stirrings of the artistic impulse in animals, but subservient to the reproductive instinct and limited to the breeding season. The original sexual character of these biological phenomena gradually disappears as they become organically fixed and achieve functional independence. Although there can be no doubt that music originally belonged to the reproductive sphere, it would be an unjustified and fantastic generalization to put music in the same category as sex. Such a terminology would be tantamount to treating of Cologne cathedral in a text-book of mineralogy, on the ground that it consisted very largely of stones.

[280] Up to now we have spoken of libido as the instinct for propagation or for the preservation of the species, and have kept within the confines of a view which contrasts libido with hunger in the same way as the instinct for the preservation of the species is contrasted with the instinct for self-preservation. In nature, of course, this artificial distinction does not exist. There we see only a continuous life-urge, a will to live, which seeks to ensure the continuance of the whole species through the preservation of the individual. Thus far our conception of libido coincides with Schopenhauer’s Will, inasmuch as a movement perceived from the outside can only be grasped as the manifestation of an inner will or desire. Once we have arrived at the bold conjecture that the libido which was originally employed in the production of ova and spermatozoa is now firmly organized in the function of nest-building, for instance, and can no longer be employed otherwise, we are compelled to include every striving and every desire, as well as hunger, in this conception. There is no longer any justification for differentiating in principle between the desire to build nests and the desire to eat.[9]

[281] I think you will already see where our argument is leading us. We are in the process of carrying through the energic point of view consistently, putting the energic mode of action in the place of the purely formal functioning. Just as the older sciences were always talking of reciprocal actions in nature, and this old-fashioned point of view was replaced by the law of the conservation of energy, so here too, in the realm of psychology, we are seeking to replace the reciprocal action of co-

ordinated psychic faculties by an energy conceived to be homogeneous. We thus take cognizance of the justified criticism that the psychoanalytic school is operating with a mystical conception of libido.

[282] For this reason I must dispel the illusion that the whole psychoanalytic school has a clearly understood and concrete conception of libido. I maintain that the libido with which we operate is not only not concrete or known, but is a complete X, a pure hypothesis, a model or counter, and is no more concretely conceivable than the energy known to the world of physics. Only in this way can we escape those violent transgressions of the proper boundaries, which happen time and again when we try to reduce co-ordinated forces to one another. (We shall never be able to explain the mechanics of solid bodies or of electromagnetic phenomena in terms of a theory of light, for mechanics and electromagnetism are not light. Moreover, strictly speaking, it is not physical forces that change into one another, but the energy that changes its outward form. Forces are phenomenal manifestations; what underlies their relations with one another is the hypothetical idea of energy, which is, of course, entirely psychological and has nothing to do with so-called objective reality.) This same conceptual achievement that has taken place in physics we seek to accomplish for the libido theory. We want to give the concept of libido the position that really belongs to it, which is a purely energic one, so that we can conceive the life-process in terms of energy and replace the old idea of reciprocal action by relations of absolute equivalence. We shall not be disturbed if we are met with the cry of vitalism. We are as far removed from any belief in a specific life-force as from any other metaphysical assertion. Libido is intended simply as a name for the energy which manifests itself in the life-process and is perceived subjectively as conation and desire. It is hardly necessary to defend this view. It brings us into line with a powerful current of ideas that seeks to comprehend the world of appearances energically. Suffice it to say that everything we perceive can only be understood as an effect of force.

[283] In the diversity of natural phenomena we see desire—libido —taking the most variegated forms. In early childhood it appears at first wholly in the form of the nutritive instinct which builds up the body. As the body

develops, new spheres of activity are opened up successively for the libido. A definitive and extremely important sphere of activity is sexuality, which to begin with appears closely bound up with the function of nutrition (one has only to think of the influence of nutritional factors on propagation in the lower animals and plants). In the sphere of sexuality the libido acquires a form whose tremendous importance gives us the justification for using the ambiguous term “libido” at all. Here it appears at first in the form of an undifferentiated, primary libido, as the energy of growth that causes cell-division, budding, etc. in individuals.

[284] Out of this primary, sexual libido, which produces from one small organism millions of ova and spermatozoa, there developed, by a tremendous restriction of fertility, offshoots whose function is maintained by a specifically differentiated libido. This differentiated libido is now “desexualized” by being divested of its original function of producing eggs and sperm, nor is there any possibility of restoring it to its original function. Thus the whole process of development consists in a progressive absorption of the primary libido, which produced nothing but gametes, into the secondary functions of attraction and protection of offspring. This development presupposes a quite different and much more complicated relation to reality, a genuine reality function which is inseparably connected with the needs of reproduction. In other words, the altered mode of reproduction brings with it, as a correlate, a correspondingly enhanced adaptation to reality. This, of course, does not imply that the reality function owes its existence exclusively to the differentiation in reproduction. I am fully aware of the indefinitely large role played by the nutritive function.

[285] In this way we gain some insight into the factors originally conditioning the reality function. It would be a fundamental error to say that its driving force is a sexual one. It *was* in large measure a sexual one originally, but even then not exclusively so.

[286] The process of absorption of primary libido into secondary functions probably always occurred in the form of “libidinal affluxes,” that is to say sexuality was diverted from its original destination and part of it used for the mechanisms of attraction and protection of the young—functions

which gradually increase the higher you go in the phylogenetic scale. This transfer of sexual libido from the sexual sphere to subsidiary functions is still taking place. (Malthusianism, for instance, is an artificial continuation of the natural tendency.) Wherever this operation occurs without detriment to the adaptation of the individual we call it “sublimation,” and “repression” when the attempt fails.

[287] The descriptive standpoint of psychoanalysis views the multiplicity of instincts, among them the sexual instinct, as partial phenomena, and, in addition, recognizes certain affluxes of libido to nonsexual instincts.

[288] The genetic standpoint is different. It regards the multiplicity of instincts as issuing from a relative unity, the libido; it sees how portions of libido continually split off from the reproductive function, add themselves as libidinal affluxes to the newly formed functions, and finally merge into them.

[289] From this point of view we can rightly say that the schizophrenic withdraws his libido from the outside world and in consequence suffers a loss of reality compensated by an increase in fantasy activity.

INFANTILE PERVERSIONS

[290] We shall now try to fit this new conception of libido into the theory of infantile sexuality, which is so very important for the theory of neurosis. In infants we find that libido as energy, as a vital activity, first manifests itself in the nutritional zone, where, in the act of sucking, food is taken in with a rhythmic movement and with every sign of satisfaction. With the growth of the individual and development of his organs the libido creates for itself new avenues of activity. The primary model of rhythmic movement, producing pleasure and satisfaction, is now transferred to the zone of the other functions, with sexuality as its ultimate goal. A considerable portion of the “alimentary libido” has to convert itself into “sexual libido.” This transition does not take place quite suddenly at puberty, but only very gradually during the course of childhood. The libido can free itself only with difficulty and quite slowly

from the modality of the nutritive function in order to pass over into the sexual function.

[291] In this transitional stage there are, so far as I am able to judge, two distinct phases: the phase of sucking, and the phase of displaced rhythmic activity. Sucking belongs by its very nature to the sphere of the nutritive function, but outgrows it by ceasing to be a function of nutrition and becoming a rhythmic activity aiming at pleasure and satisfaction without intake of nourishment. At this point the hand comes in as an auxiliary organ. It appears even more clearly as an auxiliary organ in the phase of displaced rhythmic activity for pleasure, which then leaves the oral zone and turns to other regions. As a rule, it is the other body-openings that become the first objects of libidinal interest; then the skin, or special parts of it. The activities carried out in these places, taking the form of rubbing, boring, picking, pulling, and so forth, follow a certain rhythm and serve to produce pleasure. After lingering for a while at these stations, the libido continues its wanderings until it reaches the sexual zone, where it may provide occasion for the first attempts at masturbation. In the course of its migrations the libido carries traces of the nutritional phase into its new field of operations, which readily accounts for the many intimate connections between the nutritive and the sexual function.[10] This migration of libido takes place during the presexual stage, whose special distinguishing-mark is that the libido gradually sloughs off the character of the nutritive instinct and assumes that of the sexual instinct.[11] At the stage of nutrition, therefore, we cannot yet speak of a true sexual libido.

[292] In consequence, we are obliged to qualify the so-called polymorphous-perverse sexuality of early infancy. The polymorphism of libidinal strivings at this period can be explained as the gradual migration of libido, stage by stage, away from the sphere of the nutritive function into that of the sexual function. Thus the term “perverse,” so bitterly attacked by our critics, can be dropped, since it creates a false impression.

[293] When a chemical substance breaks up into its elements, these elements are, under those conditions, products of disintegration. But it is

not permissible to describe all elements whatsoever as products of disintegration. Perversions are disturbed products of a developed sexuality. They are never the initial stages of sexuality, although there is an undoubted similarity between the initial stage and the product of disintegration. As sexuality develops, its infantile stages, which should no longer be regarded as “perverse” but as rudimentary and provisional, resolve themselves into normal sexuality. The more smoothly the libido withdraws from its provisional positions, the more quickly and completely does the formation of normal sexuality take place. It is of the essence of normal sexuality that all those early infantile tendencies which are not yet sexual should be sloughed off as much as possible. The less this is so, the more perverse will sexuality become. Here the expression “perverse” is altogether appropriate. The basic conditioning factor in perversion, therefore, is an infantile, insufficiently developed state of sexuality. The expression “polymorphous-perverse” has been borrowed from the psychology of neurosis and projected backwards into the psychology of the child, where of course it is quite out of place.

4. NEUROSIS AND AETIOLOGICAL FACTORS IN CHILDHOOD

[294] Now that we have ascertained what is to be understood by infantile sexuality, we can follow up the discussion of the theory of neurosis, which we began in the first lecture and then dropped. We followed the theory of neurosis up to the point where we ran up against Freud's statement that the predisposition which makes traumatic experiences pathogenically effective is a sexual one. Helped by our reflections since then, we can now understand how that sexual predisposition is to be conceived: it is a retardation, a check in the process of freeing the libido from the activities of the presexual stage. The disturbance must be regarded in the first place as a temporary fixation: the libido lingers too long at certain stations in the course of its migration from the nutritive function to the sexual function. This produces a state of disharmony because provisional and, as it were, outworn activities still persist at a period when they should have been given up. This formula can be applied to all those infantile features which are so prevalent in neurotics that no attentive observer can have failed to notice them. In dementia praecox the infantilism is so striking that it has even given a telltale name to one particular syndrome–*hebephrenia* (literally, 'adolescent mind').

[295] The matter is not ended, however, by saying that the libido lingers too long in the preliminary stages. For while the libido is lingering, time does not stand still, and the development of the individual is proceeding apace. Physical maturation heightens the discrepancy between the perseverating infantile activity and the demands of later years with their changed conditions of life. In this way the foundation is laid for a dissociation of the personality, and hence for a conflict, which is the real basis of a neurosis. The more the libido is engaged in retarded activities, the more intense will the conflict be. The particular experience best suited to make this conflict manifest is a traumatic or pathogenic one.

[296] As Freud has shown in his early writings, one can easily imagine a neurosis arising in this way. It was a conception that fitted in quite well with the views of Janet, who attributed a neurosis to some kind of defect.

From this standpoint one could regard neurosis as a product of retarded affective development, and I can easily imagine that this conception must seem self-evident to anyone who is inclined to derive the neuroses more or less directly from a hereditary taint or congenital degeneracy. Unfortunately the real state of affairs is much more complicated. In order to give you some idea of these complications, I shall cite a very ordinary example of hysteria, which I hope will show you how characteristic and how extremely important they are theoretically.

[297] You will probably remember the case of the young hysteric I mentioned earlier, who, surprisingly enough, did not react to a situation which might have been expected to make a profound impression on her, and yet displayed an unexpected and pathologically violent reaction to a quite ordinary occurrence. We took this occasion to express our doubt as to the aetiological significance of the trauma, and to investigate more closely the so-called predisposition which rendered the trauma effective. The result of that investigation led to the conclusion just mentioned, that it is by no means improbable that the origin of a neurosis is due to a retardation of affective development.

[298] You will now ask in what way the patient's affective development was retarded. The answer is that she lived in a world of fantasy which can only be described as infantile. It is unnecessary for me to give you a description of these fantasies, for, as neurologists or psychiatrists, you undoubtedly have a daily opportunity to listen to the childish prejudices, illusions, and emotional demands of neurotics. The disinclination to face stern reality is the distinguishing feature of these fantasies; there is a lack of seriousness, a playfulness in them, which sometimes frivolously disguises real difficulties, at other times makes mountains out of molehills, always thinking up fantastic ways of evading the demands of real life. We immediately recognize in them the intemperate psychic attitude of the child to reality, his precarious judgment, his lack of orientation, his dislike of unpleasant duties. With such an infantile mentality all manner of wishful fantasies and illusions can grow luxuriantly, and this is where the danger comes in. By means of these fantasies people can easily slip into an unreal and completely unadapted attitude to the world, which sooner or later must lead to catastrophe.

THE TRAUMA THEORY CRITICIZED

[299] If we follow the patient’s infantile fantasy-life back into earliest childhood, we find, it is true, many obviously outstanding scenes which might well serve to provide fresh food for this or that fantastic variation, but it would be vain to search for the so-called traumatic elements from which something pathological, for instance her abnormal fantasy activity, might have originated. There were plenty of “traumatic” scenes, but they did not lie in early childhood; and the few scenes of early childhood which were remembered did not appear to be traumatic, being more like accidental experiences which passed by without having any effect worth mentioning on her fantasies. The earliest fantasies consisted of all sorts of vague and half-understood impressions she had received of her parents. All sorts of special feelings clustered round the father, fluctuating between fear, horror, aversion, disgust, love, and ecstasy. The case was like so many other cases of hysteria for which no traumatic aetiology can be found; they are rooted instead in a peculiar, premature fantasy activity which permanently retains its infantile character.

[300] You will object that it is just that scene with the bolting horses that represents the trauma, and that this was obviously the model for that nocturnal scene eighteen years later, when the patient could not get out of the way of the horses trotting along behind her and wanted to throw herself into the river, following the model of the horses and carriage plunging down the ravine. From this moment on she also suffered from hysterical twilight states. But, as I tried to show you in my earlier lecture, we find no trace of any such aetiological connection in the development of her fantasy system. It is as though the danger of losing her life, that first time with the bolting horses, passed by without noticeable effect. In all the years following that experience there was no discernible trace of that fright. It was as though it had never happened. In parenthesis let me add that perhaps it never happened at all. There is nothing to prevent it from being sheer fantasy, for here I have only the statements of the patient to rely on.[1]

[301] Suddenly, after eighteen years, this experience becomes significant, is reproduced and acted out in all its details. The old theory says: the

previously blocked affect has suddenly forced its way to the surface. This assumption is extremely unlikely and becomes still more inconceivable when we consider that the story of the bolting horses may not even be true. Be that as it may, it is almost inconceivable that an affect should remain buried for years and then suddenly explode at an unsuitable opportunity.

[302] It is very suspicious, too, that patients often have a pronounced tendency to account for their ailments by some long-past experience, ingeniously drawing the analyst's attention away from the present to some false track in the past. This false track was the one pursued by the first psychoanalytical theory. But to this false hypothesis we owe an insight into the determination of neurotic symptoms which we should never have reached if the investigators had not trodden this path, guided into it, really, by the tendency of the patient to mislead. I think that only those who regard the happenings in this world as a concatenation of errors and accidents, and who therefore believe that the pedagogic hand of the rationalist is constantly needed to guide us, can ever imagine that this path was an aberration from which we should have been warned off with a signboard. Besides the deeper insight into psychological determination, we owe to this "error" a method of inquiry of incalculable importance. It is for us to rejoice and be thankful that Freud had the courage to let himself be guided along this path. Not thus is the progress of science hindered, but rather by blind adherence to insights once gained, by the typical conservatism of authority, by the childish vanity of the savant and his fear of making mistakes. This lack of courage is considerably more injurious to the name of science than an honest error. When will there be an end to the incessant squabbling about who is right? One has only to look at the history of science: how many have *been* right, and how few have *remained* right!

THE PARENTAL COMPLEX

[303] But to return to our case. The question that now arises is this: if the old trauma is not of aetiological significance, then the cause of the manifest neurosis is obviously to be sought in the retardation of affective

development. We must therefore regard the patient's statement that her hysterical twilight states were caused by the fright she got with the horses as null and void, although that fright was the starting-point for her manifest illness. This experience merely *seems* to be important without being so in reality, a formulation which is true of most other traumata. They merely *seem* to be important because they provide occasion for the manifestation of a condition that has long been abnormal. The abnormal condition, as we have already explained, consists in the anachronistic persistence of an infantile stage of libido development. The patients continue to hang on to forms of libido activity which they should have abandoned long ago. It is almost impossible to catalogue these forms, so extraordinarily varied are they. The commonest, which is scarcely ever absent, is an excessive fantasy activity characterized by a thoughtless overvaluation of subjective wishes. Excessive fantasy activity is always a sign of faulty application of libido to reality. Instead of being used for the best possible adaptation to the actual circumstances, it gets stuck in fantastic applications. We call this state one of partial introversion when libido is used for the maintenance of fantasies and illusions instead of being adapted to the actual conditions of life.

[304] A regular concomitant of this retardation of affective development is the *parental complex*. When the libido is not used for purposes of real adaptation it is always more or less introverted.[2] The material content of the psychic world consists of memories, that is, of material from the individual's past (aside from actual perceptions). If the libido is partially or totally introverted, it invests to a greater or lesser degree large areas of memory, with the result that these reminiscences acquire a vitality that no longer properly belongs to them. The patients then live more or less entirely in the world of the past. They battle with difficulties which once played a role in their lives but which ought to have faded out long ago. They still worry, or rather are forced to worry, about things which should long since have ceased to be important. They amuse or torment themselves with fancies which, in the normal course of events, were once significant but no longer have any significance for adults.

[305] Among the things that were of the utmost significance at the infantile period the most influential are the personalities of the parents. Even when

the parents have long been dead and have lost, or should have lost, all significance, the situation of the patient having perhaps completely changed since then, they are still somehow present and as important as if they were still alive. The patient's love, admiration, resistance, hatred, and rebelliousness still cling to their effigies, transfigured by affection or distorted by envy, and often bearing little resemblance to the erstwhile reality. It was this fact that compelled me to speak no longer of "father" and "mother" but to employ instead the term "imago," because these fantasies are not concerned any more with the real father and mother but with subjective and often very much distorted images of them which lead a shadowy but nonetheless potent existence in the mind of the patient.

[306] The complex of the parental imagos, that is, the whole tissue of ideas relating to the parents, provides an important field of activity for the introverted libido. I should mention in passing that the complex in itself leads but a shadowy existence if it is not invested with libido. In accordance with the earlier usage worked out in my *Studies in Word Association*, the word "complex" denoted a system of ideas already invested with libido and activated by it. But this system also exists *in potentia*, ready for possible action, even when not temporarily or permanently invested with libido.

PARENTAL INFLUENCES ON CHILDREN

[307] At the time when psychoanalytic theory was still dominated by the trauma concept and, in conformity with that view, was inclined to look for the *causa efficiens* of the neurosis in the past, it seemed to us that the parental complex was, as Freud called it, the "nuclear complex" of neurosis. The role of the parents seemed to be so powerful a factor that we were apt to blame them for all the subsequent complications in the life of the patient. Some years ago I discussed this in my paper, "The Significance of the Father in the Destiny of the Individual."[3] Once again we had allowed ourselves to be guided by the tendency of the patient to revert to the past, following the direction of his introverted libido. This time, certainly, it was no longer an external, accidental experience or event which seemed to produce the pathogenic effect; it was rather a

psychological effect apparently arising out of the individual's difficulties in adapting to the conditions of the family milieu. The disharmony between the parents on the one hand and between the parents and the child on the other seemed especially liable to produce psychic currents in the child which were incompatible with his individual way of life.

[308] In the paper just alluded to I cited a number of instances, taken from a wealth of material on this subject, which show these effects particularly clearly. The effects apparently emanating from the parents are not limited to the endless recriminations of their neurotic offspring, who constantly lay the blame for their illness on their family circumstances or bad upbringing, but extend even to actual events in the life of the patients, where no such determining influence could have been expected. The lively imitativeness which we find in primitives as well as in children can give rise, in particularly sensitive children, to a peculiar inner identification with the parents, to a mental attitude so similar to theirs that effects in real life are sometimes produced which, even in detail, resemble the personal experiences of the parents.[4]

[309] For the empirical material on this subject, I must refer you to the literature, but should just like to remind you that one of my pupils, Dr. Emma Fürst, has adduced valuable experimental proofs in regard to this problem. I have already referred to her researches in my lectures at Clark University.[5] By applying the association test to whole families, Dr. Fürst established the great conformity of reaction type among all members of one family. These experiments show that very often there exists an unconscious concordance of association between parents and children, which can only be explained as an intensive imitation or identification. The results of these researches indicate a far-reaching parallelism of biological tendencies that readily explains the sometimes astonishing similarity in the destinies of parents and children. Our destinies are as a rule the outcome of our psychological tendencies.

[310] These facts enable us to understand why not only the patients themselves, but the theories that have been built on these researches, tend to assume that neurosis is the result of the characterological influence of the parents on the children. This assumption is, moreover, supported by

the experience which lies at the base of all education, namely, the plasticity of the child's mind, which is commonly compared with soft wax, taking up and preserving all impressions. We know that the first impressions of childhood accompany us inalienably throughout life, and that, just as indestructibly, certain educational influences can keep people all their lives within those limits. In these circumstances it is not surprising that conflicts break out between the personality moulded by educational and other influences of the infantile milieu and one's own individual style of life. It is a conflict which all those must face who are called upon to live a life that is independent and creative.

[311] Owing to the enormous influence which childhood has on the later development of character, you will readily understand why one would like to attribute the cause of a neurosis directly to the influences of the infantile environment. I must confess that I have known cases in which any other explanation seemed to me less plausible. There are indeed parents whose own contradictory nature causes them to treat their children in so unreasonable a fashion that the children's illness would appear to be unavoidable. Hence it is almost a rule among nerve specialists to remove neurotic children, whenever possible, from the dangerous family atmosphere and place them among more healthy influences, where, even without any medical treatment, they thrive much better than at home. There are many neurotic patients who were clearly neurotic as children and so have never been free from illness since childhood. In such cases the view outlined above seems generally valid.

THE INFANTILE MENTALITY

[312] This knowledge, which for the time being seemed to us definitive, was considerably deepened by the researches of Freud and the psychoanalytic school. The parent-child relationship was studied in all its details, since it was just this relationship which was considered aetiologically important. It was soon noticed that these patients really did live partly or entirely in their childhood world, although themselves quite unconscious of this fact. On the contrary, it was the arduous task of psychoanalysis to investigate the psychological mode of adaptation so

thoroughly that one could put one’s finger on the infantile misunderstandings. As you know, a striking number of neurotics were spoiled as children. Such cases offer the best and clearest examples of the infantilism of their psychological mode of adaptation. They start out in life expecting the same friendly reception, tenderness, and easy success to which they were accustomed by their parents in their youth. Even very intelligent patients are incapable of seeing that from the very beginning they owe the complications of their lives as well as their neurosis to dragging their infantile emotional attitude along with them. The small world of the child, the family milieu, is the model for the big world. The more intensely the family sets its stamp on the child, the more he will be emotionally inclined, as an adult, to see in the great world his former small world. Of course this must not be taken as a conscious intellectual process. On the contrary, the patient feels and sees the difference between now and then, and tries as well as he can to adapt himself. Perhaps he will even believe himself perfectly adapted, since he may be able to grasp the situation intellectually, but that does not prevent his emotions from lagging far behind his intellectual insight.

[313] It is scarcely necessary to give you examples of this phenomenon, for it is an everyday experience that our emotions never come up to the level of our insight. It is exactly the same with the neurotic, but greatly intensified. He may perhaps believe that, except for his neurosis, he is a normal person, fully adapted to the conditions of life. It never crosses his mind that he has still not given up certain infantile demands, that he still carries with him, in the background, expectations and illusions of which he has never made himself conscious. He indulges in all sorts of pet fantasies, of which he is seldom, if ever, so conscious that he knows that he has them. Very often they exist only as emotional expectations, hopes, prejudices, and so forth. In this case we call them unconscious fantasies. Sometimes they appear on the fringe of consciousness as fleeting thoughts, only to vanish again the next moment, so that the patient is unable to say whether he had such fantasies or not. It is only during psychoanalytic treatment that most patients learn to retain and observe these fugitive thoughts. Although most fantasies were once conscious, for a moment, as fleeting thoughts, it would not do to call them *conscious*,

because most of the time they are practically *unconscious*. It is therefore right to call them unconscious fantasies. Of course there are also infantile fantasies which are perfectly conscious and can be reproduced at any time.

5. THE FANTASIES OF THE UNCONSCIOUS

[314] The realm of unconscious infantile fantasies has become the real object of psychoanalytic research, for it seems to offer the key to the aetiology of neurosis. Here, quite otherwise than with the trauma theory, we are forced by all the reasons we have mentioned to assume that the roots of the psychological present are to be found in the family history of the patient.

[315] The fantasy systems which patients present on being questioned are mostly of a composite nature and are elaborated like a novel or a drama. But, despite their elaboration, they are of relatively little value in investigating the unconscious. Just because they are conscious, they defer too much to the demands of etiquette and social morality. They have been purged of all painful personal details, and also of everything ugly, thereby becoming socially presentable and revealing very little. The more valuable and evidently more influential fantasies are not conscious, in the sense previously defined, and so have to be dug out by the psychoanalytic technique.

[316] Without wishing to enter fully into the question of technique, I must here meet an objection that is constantly heard. It is that the so-called unconscious fantasies are merely suggested to the patient and exist only in the mind of the analyst. This objection is on the same vulgar level as those which impute to us the crude mistakes of beginners. Only people with no psychological experience and no knowledge of the history of psychology are capable of making such accusations. No one with the faintest glimmering of mythology could possibly fail to see the startling parallels between the unconscious fantasies brought to light by the psychoanalytic school and mythological ideas. The objection that our knowledge of mythology has been suggested to the patient is without foundation, because the psychoanalytic school discovered the fantasies first and only then became acquainted with their mythology. Mythology, as we know, is something quite outside the ken of the medical man.

[317] As these fantasies are unconscious, the patient is naturally unaware of their existence, and to question him about them directly would be quite pointless. Nevertheless it is said over and over again, not only by patients but by so-called normal persons: “But if I had such fantasies, surely I would know it!” But what is unconscious is in truth something that we do *not* know. Our opponents, too, are firmly convinced that such things do not exist. This *a priori* judgment is pure scholasticism and has no grounds to support it. We cannot possibly rest on the dogma that consciousness alone is the psyche, for we have daily proof that our consciousness is only a part of the psychic function. When the contents of our consciousness appear they are already in a highly complex state; the constellation of our thoughts from the material contained in our memory is a predominantly unconscious process. We are therefore obliged to assume, whether we like it or not, the existence of a non-conscious psychic sphere, even if only as a “negative borderline concept,” like Kant’s *Ding an sich*. Since we perceive effects whose origin cannot be found in consciousness, we are compelled to allow hypothetical contents to the sphere of the non-conscious, which means presupposing that the origin of those effects lies in the unconscious precisely because it is not conscious. This conception of the unconscious can hardly be accused of “mysticism.” We do not pretend to know or to assert anything positive about the state of psychic elements in the unconscious. Instead, we have formulated symbolical concepts in a manner analogous to our formulation of conscious concepts, and this terminology has proved its value in practice.

THE CONCEPT OF THE UNCONSCIOUS

[318] This way of thinking is the only possible one if we accept the axiom that “principles are not to be multiplied beyond the necessary.” We therefore speak about the effects of the unconscious just as we do about the phenomena of consciousness. Great objection was taken to Freud’s statement: “The unconscious can only wish.” This was regarded as an unheard-of metaphysical assertion, something like a tenet from von Hartmann’s *Philosophy of the Unconscious*. The indignation was due simply to the fact that these critics, unknown to themselves, evidently

started from a metaphysical conception of the unconscious as an *ens per se*, and naively projected their epistemologically unclarified ideas on to us. For us the unconscious is not an entity in this sense but a mere term, about whose metaphysical essence we do not permit ourselves to form any idea. In this we are unlike those arm-chair psychologists who are not only perfectly informed about the localization of the psyche in the brain and the physiological correlates of mental processes, but can assert positively that beyond consciousness there are nothing but "physiological processes in the cortex."

[319] Such naïvetés should not be imputed to us. When Freud says that the unconscious can only wish, he is describing in symbolical terms effects whose source is not conscious, but which from the standpoint of conscious thinking can only be regarded as analogous to wishes. The psychoanalytic school is, moreover, aware that the discussion as to whether "wishing" is a suitable analogy or not can be reopened at any time. Anybody who knows a better one will be welcome. Instead of which, our opponents content themselves with denying the existence of these phenomena or else, if certain phenomena have to be admitted, they abstain from all theoretical formulations. This last point is understandable enough, since it is not everyone's business to think theoretically.

[320] Once one has succeeded in freeing oneself from the dogma of the psyche's identity with consciousness, thus admitting the possible existence of extra-conscious psychic processes, one cannot, *a priori*, either assert or deny anything about the potentialities of the unconscious. The psychoanalytic school has been accused of making assertions without sufficient grounds. It seems to us that the abundant, perhaps too abundant case-material contained in the literature offers enough and more than enough grounds, yet it does not seem sufficient for our opponents. There must be a good deal of difference as to the meaning of the word "sufficient" in regard to the validity of these grounds. So we must ask: Why does the psychoanalytic school apparently demand far less exacting proofs of its formulations than its opponents?

[321] The reason is simple. An engineer who has built a bridge and calculated its load needs no further proof of its holding capacity. But a sceptical layman, who has no notion how a bridge is built, or what is the strength of the material used, will demand quite different proofs of its holding capacity, since he can have no confidence in it. It is chiefly the profound ignorance of our opponents about what we are doing that screws their demands up to such a pitch. In the second place, there are the countless theoretical misunderstandings: it is impossible for us to know them all and to clear them up. Just as we find in our patients new and ever more astounding misconceptions about the ways and aims of psychoanalysis, so our critics display an inexhaustible ingenuity in misunderstanding. You can see from our discussion of the concept of the unconscious just what kind of false philosophical assumptions can vitiate understanding of our terminology. Obviously a person who thinks of the unconscious as an absolute entity is bound to require proofs of a totally different kind, utterly beyond our power to give, as our opponents in fact do. Had we to offer proof of immortality, mountains of proofs of the weightiest nature would have to be furnished, very different from what would be required to demonstrate the existence of plasmodia in a malaria patient. Metaphysical expectations still bedevil scientific thinking far too much for the problems of psychoanalysis to be seen in their own frame of reference.

[322] But, in fairness to our critics, I must admit that the psychoanalytic school has itself given rise to plenty of misunderstandings, even though in all innocence. One of the principal sources is the confusion that reigns in the theoretical sphere. Regrettable though it is, we have no presentable theory. You would understand this if you could see in concrete instances the enormous difficulties we have to wrestle with. Contrary to the opinion of nearly all the critics, Freud is anything rather than a theorist. He is an empiricist, as anyone must admit who is willing to go at all deeply into Freud’s writings and to try to see his cases as he sees them. Unfortunately, our critics are not willing. As we have repeatedly been told, it is “repulsive and disgusting” to see them as Freud does. But how can anyone learn the nature of Freud’s method if he allows himself to be put off by disgust? Just because people make no effort to accommodate

themselves to Freud’s point of view, adopted perhaps as a necessary working hypothesis, they come to the absurd conclusion that he is a theorist. They readily assume that *Three Essays on the Theory of Sexuality* is simply a theory, invented by a speculative brain, and that everything is put into the patient’s head by suggestion. But that is turning things upside down. This makes it easy for the critics, which is just what they want. They pay no attention at all to the “couple of case-histories” with which the psychoanalyst conscientiously documents his theoretical statements, but only to the theory and the formulation of technique. The weak spots of psychoanalysis are not to be found here—for psychoanalysis is essentially empirical—though here, undoubtedly, is a large and insufficiently cultivated field where the critics can romp to their heart’s content. In the field of theory there are many uncertainties and not a few contradictions. We were conscious of this long before our learned critics began to honour us with their attentions.

THE DREAM

[323] After this digression we will return to the question of unconscious fantasies which occupied us before. Nobody, as we have seen, has the right to assert their existence or define their qualities unless effects of unconscious origin are observed which can be expressed in terms of conscious symbolism. The only question is whether effects can in fact be found that comply with this expectation. The psychoanalytic school believes it has discovered such effects. I will mention the principal phenomenon at once: the dream.

[324] Of this it may be said that it enters consciousness as a complex structure compounded of elements whose connection with each other is not *conscious*. Only afterwards, by adding a series of associations to the individual images in the dream, can we show that these images had their origin in certain memories of the recent past. We ask ourselves: Where have I seen or heard that? And then, by the ordinary process of association, comes the memory that certain parts of the dream have been consciously experienced, some the day before, some earlier. So far there will be general agreement, for these things have been known for a long

time. To that extent the dream presents itself to us as a more or less unintelligible jumble of elements not at first conscious and only recognized afterwards through their associations.[1] It should be added that not all parts of the dream have a recognizable quality from which their conscious character can be deduced; they are often, and indeed mostly, unrecognizable at first. Only afterwards does it occur to us that we have consciously experienced this or that part of the dream. From this standpoint alone we may regard the dream as a product of unconscious origin.

[325] The technique for exploring the unconscious origin is the one I have just mentioned, used as a matter of course long before Freud by every dream-investigator. We simply try to remember where the parts of the dream came from. The psychoanalytic technique of dream elucidation is based on this very simple principle. It is a fact that certain parts of the dream are derived from our waking life, from events which, on account of their obvious unimportance, would have fallen into oblivion and were already on the way to becoming definitely unconscious. It is just these parts that are the effects of "unconscious ideas." Exception has been taken to this expression too. Naturally we do not take things nearly so concretely, not to say ponderously, as our critics. Certainly this expression is nothing more than conscious symbolism—we were never in any doubt on that point. But it is perfectly clear and serves very well as a sign for an unknown psychic fact. As I have said before, we have no alternative but to conceive the unconscious by analogy with the conscious. We do not pretend that we understand a thing merely because we have invented a sonorous and all-but-incomprehensible name for it.

THE METHOD OF DREAM-ANALYSIS

[326] The principle of psychoanalytic elucidation is, therefore, extraordinarily simple and has actually been known for a long time. The subsequent procedure follows logically along the same lines. If we get really absorbed in a dream—which naturally never happens outside analysis—we shall succeed in discovering still more reminiscences about the individual dream-parts. But we are not always successful in finding

reminiscences about some of them. These must be put aside for the time being. (When I say “reminiscences” I do not mean only memories of actual experiences; I also mean the reproduction of meaningful associations and connections.) The reminiscences so gathered are called the “dream-material.” We treat this material in accordance with a generally accepted scientific principle. If you have any experimental material to work up, you compare its individual parts and classify them according to their similarities. You proceed in exactly the same way with dream-material; you look for the common features, whether of form or content.

[327] In doing this one has to get rid, so far as possible, of certain prejudices. I have observed that the beginner is always looking for some special feature and then tries to force his material to conform to his expectations. I have noticed this particularly with colleagues who, because of the well-known prejudices and misunderstandings, were once passionate opponents of psychoanalysis. If it was my fate to analyse them, and they at last obtained real insight into the method, the first mistake they generally made in their psychoanalytic work was to do violence to the material by their own preconceived opinions. That is, they now vented their previous attitude to psychoanalysis on their material, which they could not assess objectively but only in terms of their subjective fantasies.

[328] Once embarked on the task of examining the dream-material, you must not shrink from any comparison. The material usually consists of very disparate images, from which it is sometimes very difficult to extract the *tertium comparationis*. I must refrain from giving detailed-examples, as it is quite impossible to discuss such voluminous material in a lecture. I would, however, like to call your attention to a paper by Rank on “a dream which interprets itself.”[2] There you will see how extensive is the material that must be taken into account for purposes of comparison.

[329] Hence, in exploring the unconscious, we proceed in the usual way when conclusions are to be drawn by the comparative method. It has often been objected: Why should a dream have any unconscious content at all? This objection is in my view about as unscientific as it could

possibly be. Every psychological element has its special history. Every sentence I utter has, besides the meaning consciously intended by me, its historical meaning, which may turn out to be quite different from its conscious meaning. I am expressing myself somewhat paradoxically on purpose: I do not mean that I could explain the historical meaning of every individual sentence. That is easier in the case of larger and more complex structures. Thus, it will be clear to everyone that, apart from the manifest content of a poem, the poem itself is especially characteristic of the poet in regard to its form, content, and manner of origin. While the poet merely gave expression in his poem to the mood of the moment, the literary historian will see things in it and behind it which the poet would never have suspected. The analysis which the literary historian makes of the poet's material is exactly comparable with the method of psychoanalysis, not excluding the mistakes that may creep in.

[330] The psychoanalytic method can be compared with historical analysis and synthesis in general. Suppose, for instance, we did not understand the meaning of the baptismal rite practised in our churches today. The priest tells us: baptism means the admission of the child into the Christian community. But this does not satisfy us. Why is the child sprinkled with water? In order to understand this ceremony, we must gather together from the whole history of ritual, that is, from mankind's memories of the relevant traditions, a body of comparative material culled from the most varied sources:

1. Baptism is clearly a rite of initiation, a consecration. Therefore we have to collect all memories in which any initiation rites are preserved.

2. The act of baptism is performed with water. For this special form another series of memories must be collected, namely, of rites in which water is used.

3. The person to be baptized is sprinkled with water. Here we have to collect all those rites in which the neophyte is sprinkled, immersed, etc.

4. All reminiscences from mythology, folklore, as well as superstitious practices, etc., have to be recalled, in so far as they run in any way parallel to the symbolism of the baptismal act.

[331] In this way we build up a comparative study of the act of baptism. We discover the elements out of which the baptismal act is formed; we ascertain, further, its original meaning, and at the same time become acquainted with the rich world of myths that have laid the foundation of religions and help us to understand the manifold and profound meanings of baptism. The analyst proceeds in the same way with a dream. He collects the historical parallels to every part of the dream, even the remotest, and tries to reconstruct the psychological history of the dream and its underlying meanings. Through this monographic elaboration we obtain, just as in the analysis of baptism, a profound insight into the marvellously delicate and meaningful network of unconscious determination—an insight that may legitimately be compared with the historical understanding of an act which we had hitherto regarded in a very superficial and one-sided way.

[332] This excursus seemed to me unavoidable. In view of the numerous misunderstandings of all those who constantly seek to discredit the psychoanalytic method, I felt obliged to give you a very general account of the method and its position within the methodology of science. I do not doubt that there are superficial and improper applications of this method. But an intelligent critic should not allow this to detract from the method itself, any more than a bad surgeon should be used to discredit the value of surgery in general. I do not doubt, either, that not all the expositions of dream-psychology by psychoanalysts are entirely free from misunderstandings and distortions. But much of this is due to the fact that, precisely because of his training in the natural sciences, it is difficult for the medical man to get an intellectual grasp of a very subtle psychological method, even though he instinctively handles it correctly.

[333] The method I have described is the one I adopt and the one to which I hold myself scientifically responsible. To give advice about dreams and to make direct attempts at interpretation is, in my opinion, absolutely wrong and scientifically inadmissible. It is not a methodological but a quite arbitrary proceeding which defeats itself by the sterility of its results, like every false method.

[334] If I have made the attempt to illustrate the principles of the psychoanalytic method by means of dream-analysis it is because the dream is one of the clearest examples of psychic contents whose composition eludes direct understanding. When someone knocks in a nail with a hammer in order to hang something up, we can understand every detail of the action; it is immediately evident. It is otherwise with the act of baptism, where every phase is problematic. We call these actions, whose meaning and purpose are not immediately evident, symbolic actions, or symbols. On the basis of this reasoning we call a dream symbolic, because it is a psychological product whose origin, meaning, and purpose are obscure, and is therefore one of the purest products of unconscious constellation. As Freud aptly says, the dream is the *via regia* to the unconscious.

THE ASSOCIATION EXPERIMENT

[335] There are many products of unconscious constellation besides dreams. In the association experiment we have a means of determining exactly the influence of the unconscious. We see these effects in the disturbances which I have called “complex indicators.” The task which the association test sets the subject of the experiment is so extraordinarily simple that even children can accomplish it without difficulty. It is all the more surprising that, despite this, so many disturbances of the intended action should be registered. The only things that can regularly be shown to be causes of these disturbances are the partly conscious, partly unconscious constellations caused by complexes. In the majority of cases the connection of these disturbances with feeling-toned complexes can be demonstrated without difficulty. But very often we must have recourse to the psychoanalytic method in order to explain the connection; that is, we must ask the patient what associations he can give to the disturbed reactions.

[336] In this way we obtain the historical material on which to base our judgment. It has been objected that the patient could then say whatever he liked—in other words, any old nonsense. This objection is made, I believe, on the unconscious assumption that the historian who gathers

material for his monograph is an imbecile, incapable of distinguishing real parallels from apparent ones and authentic reports from crude falsifications. The professional has means at his disposal for avoiding clumsy mistakes with certainty and more subtle ones with some probability. For anyone who understands psychoanalytic work it is a well-known fact that it is not so very difficult to see where there is coherence and where there is none. In addition, fraudulent statements are in the first place very significant of the person who makes them, and secondly they are easily recognized as fraudulent.

[337] (There is, however, another objection to be considered, which is more worth mentioning. One can ask oneself whether the reminiscences subsequently produced were really the basis of a dream. If, in the evening, I read an interesting account of a battle, and at night dream of the Balkan War, and then during analysis remember by association certain details in the account of the battle, even the most rigorous critic will fairly assume that my retrospective association is right and true. As I mentioned earlier, this is one of the most firmly entrenched hypotheses regarding the origin of dreams. All we have done is to apply this working hypothesis consistently to all the remaining associations relating to all other parts of the dream. Ultimately, we are saying no more than that this dream-element is linked with this association, that it therefore has something to do with it, that there is a connection between the two things. When a distinguished critic once remarked that, by means of psychoanalytic interpretations, one could even connect a cucumber with an elephant, this worthy showed us, by the very fact of associating "cucumber" with "elephant," that these two things somehow have an associative connection in his mind. One must have a lot of nerve and a magisterial judgment to declare that the human mind produces entirely meaningless associations. In this instance, only a little reflection is needed to understand the meaning of the association.)

[338] In the association experiment we can ascertain the extraordinarily intense effects emanating from the unconscious precisely through the interference of complexes. The slips and faults in the experiment are nothing but prototypes of the mistakes we make in everyday life, the majority of which must be regarded as due to the interference of

complexes. Freud has gathered this material together in his book *The Psychopathology of Everyday Life*. It includes the so-called symptomatic actions–which from another point of view might equally well be called “symbolic actions” and real slips like lapses of memory, slips of the tongue, and so on. All these phenomena are effects of unconscious constellations and are therefore so many gateways to the realm of the unconscious. When they are cumulative, we have to call them a neurosis, which from this point of view looks like a dysfunction and must be understood as the effect of an unconscious constellation.

[339] Thus the association experiment is, not infrequently, a means of unlocking the unconscious directly, although mostly it is simply a technique for obtaining a wide selection of faulty reactions which can then be used for exploring the unconscious by psychoanalysis. At least, this is its most reliable form of application at present. However, it is possible that it will furnish other, especially valuable facts which would give us direct glimpses of the unconscious, but I do not consider this question sufficiently ripe to speak about yet.

6. THE OEDIPUS COMPLEX

[340] After what I have told you about our method you may have gained rather more confidence in its scientific character, and will be inclined to agree that the fantasies which have been brought to light by psychoanalytic research are not just the arbitrary suppositions and illusions of psychoanalysts. Perhaps you will even be willing to listen patiently to what these products of unconscious fantasy can tell us.

[341] The fantasies of adults are, in so far as they are conscious, immensely varied and take the most strongly individual forms. It is therefore impossible to give a general description of them. But it is very different when we enter by means of analysis into the world of unconscious fantasies. The diversity of the fantasy-material is indeed very great, but we do not find nearly so many individual peculiarities as in the conscious realm. We meet here with more typical material which is not infrequently repeated in similar form in different individuals. Constantly recurring in these fantasies are ideas which are variations of those found in religion and mythology. This fact is so striking that we may say we have discovered in these fantasies the forerunners of religious and mythological ideas.

[342] I should have to enter into very much more detail to give you any adequate examples. For these problems I must refer you to my book *Symbols of Transformation*. Here I will only mention that the central symbol of Christianity—sacrifice—plays an important part in the fantasies of the unconscious. The Viennese school knows this phenomenon under the ambiguous name of “castration complex.” This paradoxical use of the term follows from the special attitude of the Viennese school towards the question of sexuality, which I discussed earlier. I have devoted special attention to the problem of sacrifice in the above-mentioned book. I must content myself with this passing reference and will now proceed to say something about the origin of unconscious fantasies.

[343] In a child’s unconscious the fantasies are very much simpler, as if scaled to the childish milieu. Thanks to the concerted efforts of the psychoanalytic school, we have discovered that the most frequent fantasy of childhood is the so-called Oedipus complex. This term, too, seems the most unsuitable one possible. We all know that the tragic fate of Oedipus consisted in his marrying his mother and slaying his father. This tragic conflict of adult life appears far removed from the psyche of a child, and to the layman it seems quite inconceivable that a child should suffer from this conflict. But, with a little reflection, it will become clear that the *tertium comparationis* lies precisely in the *narrow restriction of the fate of Oedipus to his two parents*. This restriction is characteristic of the child, for the fate of the adult is not limited to the parents. To that extent Oedipus is the exponent of an infantile conflict magnified to adult proportions. The term “Oedipus complex” naturally does not mean conceiving this conflict in its adult form, but rather on a reduced scale suitable to childhood. All it means, in effect, is that the childish demands for love are directed to mother and father, and to the extent that these demands have already attained a certain degree of intensity, so that the chosen object is jealously defended, we can speak of an “Oedipus complex.”

[344] This weakening and reduction in scale of the Oedipus complex should not be understood as a diminution of the total sum of affect, but as indicating the smaller share of sexual affect characteristic of a child. To make up for this, childish affects have that peculiar intensity which is characteristic of the sexual affect in adults. The little son would like to have his mother all to himself and to be rid of his father. As you know, small children can sometimes force themselves between the parents in the most jealous way. In the unconscious these wishes and intentions assume a more concrete and more drastic form. Children are small primitive creatures and are therefore quickly ready to kill—a thought which is all the easier in the unconscious, because the unconscious is wont to express itself very dramatically. But as a child is, in general, harmless, this seemingly dangerous wish is as a rule harmless too. I say “as a rule,” for we know that children can occasionally give way to their murderous impulses, not only indirectly, but in quite direct fashion. But

just as the child is incapable of making systematic plans, so his intention to murder is not all that dangerous. The same is true of his Oedipal intention towards the mother. The faint hints of this fantasy in the child's consciousness can easily be overlooked; all parents are therefore convinced that their children have no Oedipus complex. Parents, like lovers, are mostly blind. If I now say that the Oedipus complex is in the first place only a formula for childish desires in regard to the parents and for the conflict which these desires evoke—as every selfish desire must—the matter may seem more acceptable.

[345] The history of the Oedipus fantasy is of special interest because it teaches us a great deal about the development of unconscious fantasies in general. People naturally think that the Oedipus problem is the problem of the son. But this, remarkably enough, is an illusion. Under certain conditions, the sexual libido reaches its final differentiation, corresponding to the sex of the individual, only relatively late in puberty. Before this time it has a sexually undifferentiated character, which could also be termed bisexual. It is therefore not surprising if little girls have an Oedipus complex too. So far as we know, the first love of a child, regardless of sex, belongs to the mother. If the love for the mother is intense at this stage, the father is jealously kept away as a rival. Of course, for the child itself, the mother at this early stage of childhood has no sexual significance worth mentioning, and to that extent the term "Oedipus complex" is not really suitable. At this period the mother still has the significance of a protecting, enfolding, nourishing being, who for this reason is a source of pleasure.

[346] (It is characteristic, too, that the babyish word for mother, "mamma," is the name for the maternal breast. As Dr. Beatrice Hinkle has informed me, interrogation of small children elicited the fact that they defined "mother" as the person who gives food, chocolate, etc. One could hardly assert that for children of this age food is only a symbol for sex, though this is sometimes true of adults. A superficial glance at the history of civilization will show just how enormous the nutritive source of pleasure is. The colossal feasts of Rome in its decadence were an expression of anything you like, only not of repressed sexuality, for that is the last thing one could accuse the Romans of in those days. There is no doubt that

these excesses were some kind of substitute, but not for sexuality; they were far more a substitute for neglected moral functions, which we are too prone to regard as laws forced on man from outside. Men have the laws which they make for themselves.)

[347] As I explained earlier, I do not identify the feeling of pleasure *eo ipso* with sexuality. Sexuality has an increasingly small share in pleasure-sensations the further back we go in childhood. Nevertheless, jealousy can play a large role, for it too is something that does not belong entirely to the sexual sphere, since the desire for food has itself much to do with the first stirrings of jealousy—one has only to think of animals! Certainly it is reinforced by a budding eroticism relatively early. This element gains in strength as the years go on, so that the Oedipus complex soon assumes its classical form. The conflict takes on a more masculine and therefore more typical form in a son, whereas a daughter develops a specific liking for the father, with a correspondingly jealous attitude towards the mother. We could call this the Electra complex. As everyone knows, Electra took vengeance on her mother Clytemnestra for murdering her husband Agamemnon and thus robbing her—Electra—of her beloved father.

[348] Both these fantasy complexes become more pronounced with increasing maturity, and reach a new stage only in the postpubertal period, when the problem arises of detachment from the parents. This stage is characterized by the symbol we have already mentioned: the symbol of sacrifice. The more sexuality develops, the more it drives the individual away from his family and forces him to achieve independence. But the child has become closely attached to the family by his whole previous history, and especially to the parents, so that it is often only with the greatest difficulty that the growing individual can free himself inwardly from his infantile milieu. If he does not succeed in this, the Oedipus (or Electra) complex will precipitate a conflict, and then there is the possibility of neurotic disturbances. The libido, already sexually developed, pours into the Oedipal “mould” and gives rise to feelings and fantasies which prove beyond doubt the effectiveness of the complex, which till then had been unconscious and more or less inoperative.

[349] The first consequence is the formation of intense resistances against the "immoral" impulses stemming from the now active complex. This affects the conscious behaviour in two ways. Either the consequences are direct, in which case the son displays violent resistances against his father and a particularly affectionate and dependent attitude towards his mother; or they are indirect, that is to say compensated: instead of resistance to the father there is marked submissiveness coupled with an irritated, antagonistic attitude towards the mother. Direct and compensated consequences can sometimes alternate. All this is true also of the Electra complex. If the sexual libido were to get stuck in this form, the Oedipus and Electra conflict would lead to murder and incest. This naturally does not happen with normal people, nor in so-called "amoral" primitive communities, otherwise the human race would have perished long ago. On the contrary, it is in the natural order of things that familiar objects lose their compelling charm and force the libido to seek new objects; and this acts as an important regulative factor which prevents parricide and incest. The continuous development of libido towards objects outside the family is perfectly normal and natural, and it is an abnormal and pathological phenomenon if the libido remains, as it were, glued to the family. Nevertheless, it is a phenomenon that can sometimes be observed in normal people.

THE PROBLEM OF INCEST

[350] (The unconscious fantasy of sacrifice, occurring some time after puberty, is a direct outcome of the infantile complexes. Of this I have given a circumstantial example in my book *Symbols of Transformation*. The fantasy of sacrifice means the giving up of infantile wishes. I have shown this in my book and at the same time have pointed out the parallels in the history of religion. It is not surprising that this problem plays an important role in religion, for religion is one of the greatest helps in the psychological process of adaptation. The chief obstacle to new modes of psychological adaptation is conservative adherence to the earlier attitude. But man cannot leave his previous personality and his previous objects of interest simply as they are, otherwise his libido would stagnate in the past, and this would be an impoverishment for him. Here

religion is a great help because, by the bridge of the symbol, it leads his libido away from the infantile objects (parents) towards the symbolic representatives of the past, i.e., the gods, thus facilitating the transition from the infantile world to the adult world. In this way the libido is set free for social purposes.)

[351] Freud has a special conception of the incest complex which has given rise to heated controversy. He starts from the fact that the Oedipus complex is usually unconscious, and he conceives this to be the consequence of a moral repression. It is possible that I am not expressing myself quite correctly if I give you Freud’s view in these words. At any rate, according to him the Oedipus complex seems to be repressed, that is, displaced into the unconscious through the reactive effect of conscious tendencies. It almost looks as if the Oedipus complex would rise to consciousness if the child’s development were uninhibited and were not affected by cultural influences.[1]

[352] Freud calls the barrier that prevents this acting out of the Oedipus complex the “incest barrier.” He seems to believe, so far as one can gather from his writings, that the incest barrier is formed by the backwash of experience, that it is a correction by reality, since the unconscious strives for boundless and immediate satisfaction without regard for others. In this he agrees with Schopenhauer, who says of the egoism of the blind World-Will that it is so strong that a man could slay his brother merely to grease his boots with his brother’s fat. Freud considers that the psychological incest barrier can be compared with the incest prohibitions found even among primitives. He further considers that these prohibitions are a proof that men really do desire incest, for which reason laws were framed against it even on the primitive level. He therefore takes the tendency towards incest to be an absolutely concrete sexual wish, for he calls this complex the root-complex, or nucleus, of the neuroses and is inclined, viewing this as the original one, to reduce practically the whole psychology of the neuroses, as well as many other phenomena in the realm of the mind, to this one complex.

7. THE AETIOLOGY OF NEUROSIS

[353] With this new conception of Freud's we come back to the question of the aetiology of neurosis. We have seen that psychoanalytic theory started from a traumatic experience in childhood, which later on was found to be partly or wholly unreal. In consequence, the theory made a change of front and sought the aetiologically significant factor in the development of abnormal fantasies. The investigation of the unconscious, continued over a period of ten years with the help of an increasing number of workers, gradually brought to light a mass of empirical material which showed that the incest complex was a highly important and never-failing element in pathological fantasy. But it was found that the incest complex was not a special complex of neurotic people; it proved to be a component of the normal infantile psyche. We cannot tell from its mere existence whether this complex will give rise to a neurosis or not. To become pathogenic, it must precipitate a conflict; the complex, which in itself is inactive, must be activated and intensified to the point where a conflict breaks out.

[354] This brings us to a new and important question. If the infantile "nuclear complex" is only a general form, not in itself pathogenic but requiring special activation, then the whole aetiological problem is altered. In that case we would dig in vain among the reminiscences of earliest childhood, since they give us only the general forms of later conflicts but not the actual conflict. (It makes no difference that there were already conflicts in childhood, for the conflicts of childhood are different from the conflicts of adults. Those who have suffered ever since childhood from a chronic neurosis do not suffer now from the same conflict they suffered from then. Maybe the neurosis broke out when they first had to go to school as children. Then it was the conflict between indulgence and duty, between love for their parents and the necessity of going to school. But now it is the conflict between, say, the joys of a comfortable bourgeois existence and the strenuous demands of professional life. It only seems to be the same conflict. It is just as if the

“Teutschen” of the Napoleonic wars were to compare themselves with the old Germans who rebelled against the Roman yoke.)

UNCONSCIOUS DETERMINATION

[355] I think I can best make my meaning clear if I describe the subsequent development of the theory by using the example of the young lady whose story you have heard in the earlier lectures. As you will probably remember, we found in the anamnesis that the fright with the horses led to the reminiscence of a similar scene in childhood, in which connection we discussed the trauma theory. We found that we had to look for the real pathological element in her exaggerated fantasies, which arose from her retarded psychosexual development. We now have to apply the theoretical insight we have thus gained to the genesis of this particular illness if we want to understand how, just at that moment, that childhood experience was constellated so effectively.

[356] The simplest way to find an explanation for that nocturnal occurrence would be to make an exact inquiry into the circumstances of the moment. The first thing I did, therefore, was to question the patient about the company she had been keeping at the time. From this I learnt that she knew a young man to whom she thought of getting engaged; she loved him and hoped to be happy with him. At first nothing more could be discovered. But it would never do to be deterred from investigation by the negative results of the preliminary questioning. There are indirect ways of reaching the goal when the direct way fails. We therefore return to that singular moment when the lady ran headlong in front of the horses. We inquire about her companions and the sort of festive occasion she had just taken part in. It had been a farewell party for her best friend, who was going abroad to a health-resort on account of her nerves. This friend was married and, we are told, happily; she was also the mother of a child. We may take leave to doubt the statement that she was happy; for, were she really so, she would presumably have no reason to be “nervous” and in need of a cure.

[357] Shifting my angle of approach, I learnt that after her friends had caught up with her they took the patient back to the house of her host, as

this was the nearest shelter. There she was hospitably received in her exhausted state. At this point the patient broke off her narrative, became embarrassed, fidgeted, and tried to change the subject. Evidently some disagreeable recollection had suddenly bobbed up. After the most obstinate resistance had been overcome, it appeared that yet another very remarkable incident had occurred that night: the amiable host had made her a fiery declaration of love, thus precipitating a situation which, in the absence of the lady of the house, might well be considered both difficult and distressing. Ostensibly this declaration of love came to her like a bolt from the blue. A modicum of criticism teaches us, however, that these things never drop from the skies but always have their history. It was now the task of the next few weeks to dig out bit by bit a long love-story, until at last a complete picture emerged which I attempt to outline as follows:

[358] As a child the patient had been a regular tomboy, caring only for wild boys’ games, scorning her own sex and avoiding all feminine ways and occupations. After puberty, when the erotic problem might have come too close, she began to shun all society, hated and despised everything that even remotely reminded her of the biological destiny of woman, and lived in a world of fantasy which had nothing in common with rude reality. Thus, until about her twenty-fourth year, she evaded all those little adventures, hopes, and expectations which ordinarily move a girl’s heart at this age. Then she got to know two men who were destined to break through the thorny hedge that had grown up around her. Mr. A was her best friend’s husband, and Mr. B was his bachelor friend. She liked them both. Nevertheless it soon began to look as though she liked Mr. B a vast deal better. An intimacy quickly sprang up between them and before long there was talk of a possible engagement. Through her relations with Mr. B and through her friend she often came into contact with Mr. A, whose presence sometimes disturbed her in the most unaccountable way and made her nervous.

[359] About this time the patient went to a large party. Her friends were also there. She became lost in thought and was dreamily playing with her ring when it suddenly slipped off her finger and rolled under the table. Both gentlemen looked for it and Mr. B succeeded in finding it. He

placed the ring on her finger with an arch smile and said, “You know what that means!” Overcome by a strange and irresistible feeling, she tore the ring from her finger and flung it through the open window. A painful moment ensued, as may be imagined, and soon she left the party in deep dejection.

[360] Not long after this, so-called chance brought it about that she should spend her summer holidays at a health resort where Mr. and Mrs. A were also staying. Mrs. A then began to grow visibly nervous, and frequently stayed indoors because she felt out of sorts. The patient was thus in a position to go out for walks alone with Mr. A. On one occasion they went boating. So boisterous was she in her merriment that she suddenly fell overboard. She could not swim, and it was only with great difficulty that Mr. A pulled her half-unconscious into the boat. And then it was that he kissed her. With this romantic episode the bonds were tied fast. To excuse herself in her own eyes she tried all the more energetically to get herself engaged to Mr. B, telling herself every day that it was Mr. B whom she really loved. Naturally this curious little game had not escaped the keen glances of wifely jealousy. Mrs. A, her friend, had guessed the secret and fretted accordingly, so that her nerves only got worse. Hence it became necessary for Mrs. A to go abroad for a cure.[1]

[361] The farewell party presented a dangerous opportunity. The patient knew that her friend and rival was going off the same evening, and that Mr. A would be alone in the house. Of course she did not think this out logically and clearly, for some women have a remarkable capacity for thinking purely with their feelings, and not with their intellects, so that it seems to them as if they had never thought certain things at all. At any rate she had a very queer feeling all the evening. She felt extraordinarily nervous, and when Mrs. A had been accompanied to the station and had gone, the hysterical twilight state came over her on the way back. I asked her what she had been thinking or feeling at the actual moment when she heard the horses coming along behind her. Her answer was that she had only a feeling of panic, the feeling that something dreadful was approaching which she could no longer escape. The consequence was, as you know, that she was brought back exhausted to the house of her host, Mr. A.

[362] To the simple mind this dénouement seems perfectly obvious. Every layman will say, “Well, that is clear enough, she only intended to return by one way or another to Mr. A’s house.” But the psychologist would reproach the layman for his incorrect way of expressing himself, and would tell him that the patient was not conscious of the motives of her behaviour, and that we cannot therefore speak of her *intention* to return to Mr. A’s house. There are, of course, learned psychologists who could find any number of theoretical reasons for disputing the purposiveness of her action—reasons based on the dogma of the identity of consciousness and psyche. But the psychology inaugurated by Freud recognized long ago that the purposive significance of psychological acts cannot be judged by conscious motives but only by the objective criterion of their psychological result. Today it can no longer be contested that there are unconscious tendencies which have a great influence on a person’s reactions and on the effect he has on others.

[363] What happened at Mr. A’s house bears out this observation. Our patient made a sentimental scene, and Mr. A felt obliged to react to it with a declaration of love. Looked at in the light of these concluding events, the whole previous history seems to be very ingeniously directed towards precisely this end, though consciously the patient was struggling against it all the time.

[364] The theoretical gain from this story is the clear recognition that an unconscious “intention” or tendency stage-managed the fright with the horses, very probably using for this purpose the infantile reminiscence of the horses galloping irresistibly towards disaster. Seen in the light of the whole material, the nocturnal scene with the horses—the starting point of the illness —seems to be only the keystone of a planned edifice. The fright and the apparently traumatic effect of the childhood experience are merely staged, but staged in the peculiar way characteristic of hysteria, so that the *mise en scène* appears almost exactly like a reality. We know from hundreds of experiences that hysterical pains are staged in order to reap certain advantages from the environment. Nevertheless these pains are entirely real. The patients do not merely think they have pains; from the psychological point of view the pains are just as real as those due to organic causes, and yet they are stage-managed.

THE REGRESSION OF LIBIDO

[365] This utilization of reminiscences for staging an illness or an ostensible aetiology is called a *regression of libido*. The libido goes back to these reminiscences and activates them, with the result that an apparent aetiology is simulated. In this instance, according to the old theory, it might seem as if the fright with the horses were due to the old trauma. The resemblance between the two scenes is unmistakable, and in both cases the patient's fright was very real. At all events, we have no reason to doubt her assertions in this respect, as they fully accord with our experiences of other patients. The nervous asthma, the hysterical anxiety-attacks, the psychogenic depressions and exaltations, the pains, the cramps, etc. are all quite real, and any doctor who has himself suffered from a psychogenic symptom will know how absolutely real it feels. Regressively reactivated reminiscences, however fantastic they may be, are as real as recollections of events which have actually happened.

[366] As the term "regression of libido" indicates, we understand by this retrograde mode of application a reversion to earlier stages. From our example we can see very clearly how the process of regression takes place. At that farewell party, which presented a good opportunity for her to be alone with her host, the patient shrank from the idea of turning this opportunity to her advantage, but let herself be overpowered by desires which hitherto she had never admitted. The libido was not used consciously for that purpose, nor was this purpose ever acknowledged. In consequence, the libido had to carry it out by means of the unconscious, under the cover of panic in face of overwhelming danger. Her feelings at the moment when the horses approached illustrate our formulation very clearly: she felt as if something inescapable now had to happen.

[367] The process of regression is beautifully illustrated in an image used by Freud. The libido can be compared with a river which, when it meets with an obstruction, gets dammed up and causes an inundation. If this river has previously, in its upper reaches, dug out other channels, these channels will be filled up again by reason of the damming below. They appear to be real river-beds, filled with water as before, but at the same

time they have only a provisional existence. The river has not permanently flowed back into the old channels, but only for as long as the obstruction lasts in the main stream. The subsidiary streams carry the water not because they were independent streams from the beginning, but because they were once stages or stations in the development of the main river-bed, passing possibilities, traces of which still exist and can therefore be used again in times of flood.

[368] This image can be applied directly to the development of the uses of libido. The final direction, the main river-bed, has not yet been found at the time of the infantile development of sexuality. Instead, the libido branches out into all sorts of subsidiary streams, and only gradually does the final form appear. But when the river has dug out its main bed, all the subsidiary streams dry up and lose their importance, leaving only traces of their former activity. Similarly, the importance of the child's preliminary exercises at sexuality disappears almost completely as a rule, except for a few traces. If later an obstruction occurs, so that the damming up of libido reactivates the old channels, this state is properly speaking a new and at the same time an abnormal one. The earlier, infantile state represents a normal application of libido, whereas the reversion of libido to infantile ways is something abnormal. I am therefore of the opinion that Freud is not justified in calling the infantile sexual manifestations "perverse," since a normal manifestation should not be designated by a pathological term. This incorrect usage has had pernicious consequences in confusing the scientific public. Such a terminology is a misapplication to normal people of insights gained from neurotic psychology, on the assumption that the abnormal by-path taken by the libido in neurotics is still the same phenomenon as in children.

[369] The so-called "amnesia of childhood," which I would like to mention in passing, is a similar illegitimate "retrograde" application of terms from pathology. Amnesia is a pathological condition, consisting in the repression of certain conscious contents, and this cannot possibly be the same as the anterograde amnesia of children, which consists in an incapacity for intentional memory-reproduction, such as is also found among primitives. This incapacity for memory-reproduction dates from birth and can be understood on quite obvious biological grounds. It

would be a remarkable hypothesis if we were to assume that this totally different quality of infantile consciousness could be reduced to sexual repressions on the analogy of a neurosis. A neurotic amnesia is punched out, as it were, from the continuity of memory, whereas memory in early childhood consists of single islands in the continuum of non-memory. This condition is in every sense the opposite of the condition found in neurosis, so that the expression “amnesia” is absolutely incorrect. The “amnesia of childhood” is an inference from the psychology of neurosis, just as is the “polymorphous-perverse” disposition of the child.

THE PERIOD OF SEXUAL LATENCY

[370] This error in theoretical formulation comes to light in the peculiar doctrine of the so-called “period of sexual latency” in childhood. Freud observed that the early infantile sexual manifestations, which I call phenomena of the presexual stage, disappear after a time and reappear only much later. What Freud calls “infantile masturbation”—that is, all those quasi-sexual activities which we spoke about before—is said to return later as real masturbation. Such a process of development would be biologically unique. In conformity with this theory we would have to assume, for instance, that when a plant forms a bud from which a blossom begins to unfold, the blossom is taken back again before it is fully developed, and is again hidden within the bud, to reappear later on in a similar form. This impossible supposition is a consequence of the assertion that the early infantile activities of the presexual stage are sexual phenomena, and that the quasi-masturbational acts of that period are genuine acts of masturbation. Here the incorrect terminology and the boundless extension of the concept of sexuality take their revenge. Thus it was that Freud was compelled to assume that there is a disappearance of sexuality, in other words, a period of sexual latency. What he calls a disappearance is nothing other than the *real beginning of sexuality*, everything preceding it being but a preliminary stage to which no real sexual character can be attributed. The impossible phenomenon of sexual latency is thus explained in a very simple way.

[371] The theory of the latency period is an excellent example of the incorrectness of the conception of infantile sexuality. But there has been no error of observation. On the contrary, the hypothesis of the latency period proves how exactly Freud observed the apparent recommencement of sexuality. The error lies in the conception. As we have already seen, the prime error consists in a somewhat old-fashioned conception of a plurality of instincts. As soon as we accept the idea of two or more instincts existing side by side, we must necessarily conclude that, if one instinct is not yet manifest, it is still present *in nuce*, in accordance with the old theory of encasement.[2] Or, in physics, we should have to say that when a piece of iron passes from the condition of heat to the condition of light, the light was already present *in nuce* (latently) in the heat. Such assumptions are arbitrary projections of human ideas into transcendental regions, contravening the requirements of the theory of cognition. We have therefore no right to speak of a sexual instinct existing *in nuce*, as we would then be giving an arbitrary interpretation of phenomena which can be explained otherwise, in a much more suitable manner. We can only speak of the manifestation of the nutritive function, of the sexual function, and so on, and then only when that function has come to the surface with unmistakable clarity. We speak of light only when the iron is visibly glowing, but not when the iron is merely hot.

[372] Freud as an observer sees quite clearly that the sexuality of neurotics cannot really be compared with infantile sexuality, just as there is a great difference, for instance, between the un-cleanliness of a two-year-old child and the uncleanliness of a forty-year-old catatonic. The one is normal, the other exceedingly pathological. Freud inserted a short passage in his *Three Essays*,[3] stating that the infantile form of neurotic sexuality is either wholly, or at any rate partly, due to regression. That is, even in those cases where we can say that it is still the same old infantile by-path, the function of this by-path is intensified by the regression. Freud thus admits that the infantile sexuality of neurotics is for the greater part a regressive phenomenon. That this must be so is evidenced by the researches of recent years, showing that the observations concerning the childhood psychology of neurotics hold equally true of normal people. At any rate we can say that the historical development of

infantile sexuality in a neurotic is distinguished from that of normal people only by minimal differences which completely elude scientific evaluation. Striking differences are exceptional.

THE AETIOLOGICAL SIGNIFICANCE OF THE ACTUAL PRESENT

[373] The more deeply we penetrate into the heart of the infantile development, the more we get the impression that as little of aetiological significance can be found there as in the infantile trauma. Even with the acutest ferreting into their respective histories we shall never discover why people living on German soil had just such a fate, and why the Gauls another. The further we get away, in analytical investigations, from the epoch of the manifest neurosis, the less can we expect to find the real *causa efficiens*, since the dynamics of the maladjustment grow fainter and fainter the further we go back into the past. In constructing a theory which derives the neurosis from causes in the distant past, we are first and foremost following the tendency of our patients to lure us as far away as possible from the critical present. *For the cause of the pathogenic conflict lies mainly in the present moment*. It is just as if a nation were to blame its miserable political conditions on the past; as if the Germany of the nineteenth century had attributed her political dismemberment and incapacity to her oppression by the Romans, instead of seeking the causes of her difficulties in the actual present. It is mainly in the present that the effective causes lie, and here alone are the possibilities of removing them.

[374] The greater part of the psychoanalytic school is still under the spell of the conception that infantile sexuality is the *sine qua non* of neurosis. It is not only the theorist, delving into childhood simply from scientific interest, but the practising analyst also, who believes that he has to turn the history of infancy inside out in order to find the fantasies conditioning the neurosis. A fruitless enterprise! In the meantime the most important factor escapes him, namely, the conflict and its demands in the present. In the case we have been describing, we should not understand any of the motives which produced the hysterical attacks if we looked for them in earliest childhood. Those reminiscences determine

only the form, but the dynamic element springs from the present, and insight into the significance of the actual moment alone gives real understanding.

[375] It may not be out of place to remark here that it would never occur to me to blame Freud personally for the innumerable misunderstandings. I know very well that Freud, being an empiricist, always publishes only provisional formulations to which he certainly does not attribute any eternal value. But it is equally certain that the scientific public is inclined to make a creed out of them, a system which is asserted as blindly on the one hand as it is attacked on the other. I can only say that from the sum total of Freud's writings certain average conceptions have crystallized out, which both sides treat far too dogmatically. These views have led to a number of undoubtedly incorrect technical axioms the existence of which cannot be postulated with any certainty in Freud's own work. We know that in the mind of a creator of new ideas things are much more fluid and flexible than they are in the minds of his followers. They do not possess his vital creativity, and they make up for this deficiency by a dogmatic allegiance, in exactly the same way as their opponents, who, like them, cling to the dead letter because they cannot grasp its living content. My words are thus addressed less to Freud, who I know recognizes to some extent the final orientation of the neuroses, than to his public, who continue to argue about his views.

[376] From what has been said it should be clear that we gain insight into the history of a neurosis only when we understand that each separate element in it serves a purpose. We can now understand why that particular element in the previous history of our case was pathogenic, and we also understand why it was chosen as a symbol. Through the concept of regression, the theory is freed from the narrow formula of the importance of childhood experiences, and the actual conflict acquires the significance which, on the empirical evidence, implicitly belongs to it. Freud himself introduced the concept of regression, as I have said, in his *Three Essays*, rightly acknowledging that experience does not permit us to seek the cause of a neurosis exclusively in the past. If it is true, then, that reminiscences become effective again chiefly because of regressive activation, we have to consider whether the apparently determining

effects of the reminiscences can be traced back solely to the regression of libido.

[377] As you have heard already, Freud himself in the *Three Essays* gives us to understand that the infantilism of neurotic sexuality is for the most part due to regression. This statement deserves considerably more emphasis than it received there. (Actually Freud did give it due emphasis in his later works.) The point is that the *regression of libido abolishes to a very large extent the aetiological significance of childhood experiences*. It had seemed to us very peculiar anyway that the Oedipus or Electra complex should have a determining influence in the formation of a neurosis, since these complexes are actually present in everyone, even in people who have never known their father and mother and were brought up by foster-parents. I have analysed cases of this kind, and found that the incest complex was as well developed in them as in other patients. This seems to me a good proof that the incest complex is much less a reality than a purely regressive fantasy formation, and that the conflicts resulting from it must be reduced rather to an anachronistic clinging to the infantile attitude than to real incestuous wishes, which are merely a cover for regressive fantasies. Looked at from this point of view, childhood experiences have a significance for neurosis only when they are made significant by a regression of libido. That this must be so to a very large extent is shown by the fact that neither the infantile sexual trauma nor the incest complex present in everyone causes hysteria. Neurosis occurs only when the incest complex is activated by regression.

FAILURE OF ADAPTATION

[378] This brings us to the question: why does the libido become regressive? In order to answer this, we must examine more closely the conditions under which a regression arises. In discussing this problem with my patients I generally give the following example: A mountain-climber, attempting the ascent of a certain peak, happens to meet with an insurmountable obstacle, for instance a precipitous rock-face whose ascent is a sheer impossibility. After vainly seeking another route, he will turn back and regretfully abandon the idea of climbing that peak. He will

say to himself: “It is not in my power to get over this difficulty, so I will climb an easier mountain.”

[379] Here we see a normal utilization of libido: the man turns back when he meets an insurmountable difficulty, and uses his libido, which could not attain its original goal, for the ascent of another mountain.

[380] Now let us imagine that the rock-face was not really un-climbable so far as the man’s physical abilities were concerned, but that he shrank back from this difficult undertaking from sheer funk. In this case two possibilities are open:

1. The man will be annoyed by his own cowardice and will set out to prove himself less timid on another occasion, or perhaps he will admit that with his timidity he ought never to undertake such daring ascents. At any rate, he will acknowledge that his moral capacity is not sufficient to overcome the difficulties. He therefore uses the libido which did not attain its original aim for the useful purpose of self-criticism, and for evolving a plan by which he may yet be able, with due regard to his moral capacity, to realize his wish to climb a mountain.
2. The second possibility is that the man does not admit his cowardice, and flatly asserts that the rock face is physically un-climbable, although he can very well see that, with sufficient courage, the obstacle could be overcome. But he prefers to deceive himself. This creates the psychological situation which is of significance for our problem.

[381] At bottom the man knows perfectly well that it would be physically possible to overcome the difficulty, and that he is simply morally incapable of doing so. But he pushes this thought aside because of its disagreeable character. He is so conceited that he cannot admit his cowardice. He brags about his courage and prefers to declare that things are impossible rather than that his own courage is inadequate. In this way he falls into contradiction with himself: on the one hand he has a correct appreciation of the situation, on the other he hides this knowledge from himself, behind the illusion of his bravery. He represses his correct insight and tries to force his subjective illusions on reality. The result of this contradiction is that his libido is split and the two halves fight one another. He pits his wish to climb the mountain against the opinion,

invented by himself and supported by artificial arguments, that the mountain is un-climbable. He draws back not because of any real impossibility but because of an artificial barrier invented by himself. He has fallen into disunion with himself. From this moment on he suffers from an internal conflict. Now the realization of his cowardice gains the upper hand, now defiance and pride. In either case his libido is engaged in a useless civil war, and the man becomes incapable of any new enterprise. He will never realize his wish to climb a mountain, because he has gone thoroughly astray in the estimation of his moral qualities. His efficiency is reduced, he is not fully adapted, he has become—in a word—neurotic. The libido that retreated in face of the difficulty has led neither to honest self-criticism nor to a desperate struggle to overcome the difficulty at any price; it has been used merely to maintain the cheap pretence that the ascent was absolutely impossible and that even heroic courage would have availed nothing.

REVERSION TO THE INFANTILE LEVEL

[382] This kind of reaction is called *infantile*. It is characteristic of children, and of naïve minds generally, not to find the mistake in themselves but in things outside them, and forcibly to impose on things their own subjective judgment.

[383] This man, therefore, solves the problem in an infantile way; he substitutes for the adapted attitude of the first climber a mode of adaptation characteristic of the child’s mind. That is what we mean by regression. His libido retreats before the obstacle it cannot surmount and substitutes a childish illusion for real action.

[384] Such cases are a daily occurrence in the treatment of neurosis. I would only remind you of all those young girls who suddenly become hysterically ill the moment they have to decide whether to get engaged or not. As an example, I will present the case of two sisters. The two girls were separated by only a year in age. In talents and also in character they were very much alike. They had the same education and grew up in the same surroundings under the same parental influences. Both were ostensibly healthy, neither showed any noticeable nervous symptoms. An

attentive observer might have discovered that the elder daughter was rather more the darling of her parents than the younger. Her parents' esteem was due to the special kind of sensitiveness which this daughter displayed. She demanded more affection than the younger one, was somewhat more precocious and forthcoming than she. Besides, she showed some delightfully childish traits—just those things which, because of their contradictory and slightly unbalanced character, make a person specially charming. No wonder father and mother had great joy in their elder daughter.

[385] When the two sisters became of marriageable age, they both made the acquaintance of two young men, and the possibility of their marriages soon drew near. As is generally the case, there were certain difficulties in the way. Both girls were quite young and had very little experience of the world. The men were fairly young too, and in positions which might have been better; they were only at the beginning of their careers, nevertheless both were capable young men. The two girls lived in social surroundings which gave them the right to certain expectations. It was a situation in which doubts as to the suitability of either marriage were permissible. Moreover, both girls were insufficiently acquainted with their prospective husbands, and were not quite sure of their love. Hence there were many hesitations and doubts. It was noticed that the elder sister always showed greater waverings in all her decisions. On account of these hesitations there were some painful moments with the two young men, who naturally pressed for a definite answer. At such moments the elder sister showed herself much more agitated than the younger one. Several times she went weeping to her mother, bemoaning her own uncertainty. The younger one was more decided, and put an end to the unsettled situation by accepting her suitor. She thus got over her difficulty and thereafter events ran smoothly.

[386] As soon as the admirer of the elder sister heard that the younger one had given her word, he rushed to his lady and begged passionately for her final acceptance. His tempestuous behaviour irritated and rather frightened her, although she was really inclined to follow her sister's example. She answered in a haughty and rather offhand way. He replied with sharp reproaches, causing her to answer still more tartly. At the end

there was a tearful scene, and he went away in a huff. At home, he told the story to his mother, who expressed the opinion that the girl was obviously not the right one for him and that he had better choose someone else. The quarrel had made the girl profoundly doubtful whether she really loved him. It suddenly seemed to her impossible to leave her beloved parents and follow this man to an unknown destiny. Matters finally went so far that the relationship was broken off altogether. From then on the girl became moody; she showed unmistakable signs of the greatest jealousy towards her sister, but would neither see nor admit that she was jealous. The former happy relationship with her parents went to pieces too. Instead of her earlier child-like affection she put on a sulky manner, which sometimes amounted to violent irritability; weeks of depression followed. While the younger sister was celebrating her wedding, the elder went to a distant health-resort for nervous intestinal catarrh. I shall not continue the history of the illness; it developed into an ordinary hysteria.

[387] In the analysis of this case great resistance was found to the sexual problem. The resistance was due to numerous perverse fantasies whose existence the patient would not admit. The question as to where these perverse fantasies, so unexpected in a young girl, could come from led to the discovery that once, as a child of eight years old, she had found herself suddenly confronted in the street by an exhibitionist. She was rooted to the spot by fright, and for a long time afterwards the ugly image pursued her in her dreams. Her younger sister had been with her at the time. The night after the patient told me about this, she dreamt of a man in a grey suit, who started to do in front of her what the exhibitionist had done. She awoke with a cry of terror.

[388] Her first association to the grey suit was a suit of her father's, which he had been wearing on an excursion she had made with him when she was about six years old. This dream, without any doubt, connects the father with the exhibitionist. There must be some reason for this. Did something happen with the father that might possibly call forth such an association? This question met with violent resistance from the patient, but it would not let her alone. At the next interview she reproduced some very early reminiscences, in which she had watched her father

undressing; and one day she came, terribly embarrassed and shaken, to tell me that she had had an abominable vision, absolutely distinct. In bed at night, she suddenly felt herself once again a child of two or three years old, and she saw her father standing by her bed in an obscene attitude. The story was gasped out bit by bit, obviously with the greatest internal struggle. Then followed wild lamentations about how dreadful it was that a father should do such a terrible thing to his child.

[389] Nothing is less probable than that the father really did this. It is only a fantasy, presumably constructed in the course of the analysis from that same need for causality which once misled the analysts into supposing that hysteria was caused merely by such impressions.

[390] This case seems to me perfectly designed to demonstrate the importance of the regression theory, and to show at the same time the sources of the previous theoretical errors. Originally, as we saw, there was only a slight difference between the two sisters, but from the moment of their engagement their ways became totally divided. They now seemed to have two entirely different characters. The one, vigorous in health, and enjoying life, was a fine courageous girl, willing to submit to the natural demands of womanhood; the other was gloomy, ill-tempered, full of bitterness and malice, unwilling to make any effort to lead a reasonable life, egotistical, quarrelsome, and a nuisance to all around her. This striking difference was brought out only when one of the sisters successfully got over the difficulties of the engagement period, while the other did not. For both, it hung by a hair whether the affair would be broken off. The younger, somewhat more placid, was the more decided, and she was able to find the right word at the right moment. The elder was more spoiled and more sensitive, consequently more influenced by her emotions, so that she could not find the right word, nor had she the courage to sacrifice her pride to put things straight afterwards. This little cause had a great effect, as we shall see. Originally the conditions were exactly the same for both sisters. It was the greater sensitiveness of the elder that made all the difference.

SENSITIVENESS AND REGRESSION

[391] The question now is, whence came this sensitiveness which had such unfortunate results? Analysis demonstrated the existence of an extraordinarily well-developed sexuality with an infantile, fantastic character; further, of an incestuous fantasy about the father. Assuming that these fantasies had long been alive and active in the patient, we have here a quick and very simple solution of the problem of sensitiveness. We can easily understand why the girl was so sensitive: she was completely shut up in her fantasies and had a secret attachment to her father. In these circumstances it would have been a miracle if she had been willing to love and marry another man.

[392] The further we pursue the development of these fantasies back to their source, following our need for causality, the greater become the difficulties of analysis, that is, the greater become the "resistances," as we called them. Finally we reach that impressive scene, that obscene act, whose improbability has already been established. This scene has exactly the character of a later fantasy-formation. Therefore, we have to conceive these difficulties, these "resistances," not—at least in this stage of the analysis—as defences against the conscious realization of a painful memory, but as a struggle against the construction of this fantasy.

[393] You will ask in astonishment: But what is it that compels the patient to weave such a fantasy? You will even be inclined to suggest that the analyst forced the patient to invent it, otherwise she would never have produced such an absurd idea. I do not venture to doubt that there have been cases where the analyst's need to find a cause, especially under the influence of the trauma theory, forced the patient to invent a fantasy of this kind. But the analyst, in his turn, would never have arrived at this theory had he not followed the patient's line of thought, thus taking part in that retrograde movement of libido which we call regression. He is simply carrying out to its logical conclusion what the patient is afraid to carry out, that is, a regression, a retreat of libido with all the consequences that this entails.

[394] Hence, in tracing the libido regression, the analysis does not always follow the exact path marked out by the historical development, but often that of a subsequently formed fantasy, based only in part on former

realities. In our case, too, the events were only partly real, and they got their enormous significance only afterwards, when the libido regressed. Whenever the libido seizes upon a certain reminiscence, we may expect it to be elaborated and transformed, for everything that is touched by the libido revives, takes on dramatic form, and becomes systematized. We have to admit that by far the greater part of the material became significant only later, when the regressing libido, seizing hold of anything suitable that lay in its path, had turned all this into a fantasy. Then that fantasy, keeping pace with the regressive movement of libido, came back at last to the father and put upon him all the infantile sexual wishes. Even so has it ever been thought that the golden age of Paradise lay in the past!

[395] As we know that the fantasy material brought out by analysis became significant only afterwards, we are not in a position to use this material to explain the onset of the neurosis; we should be constantly moving in a circle. The critical moment for the neurosis was the one when the girl and the man were both ready to be reconciled, but when the inopportune sensitiveness of the patient, and perhaps also of her partner, allowed the opportunity to slip by.

IS SENSITIVENESS PRIMARY?

[396] It might be said—and the psychoanalytic school inclines to this view—that the critical sensitiveness arose from a special psychological history which made this outcome a foregone conclusion. We know that in psychogenic neuroses sensitiveness is always a symptom of disunion with oneself, a symptom of the struggle between two divergent tendencies. Each of these tendencies has its psychological prehistory, and in our case it can clearly be shown that the peculiar resistance at the bottom of the patient's critical sensitiveness was in fact bound up historically with certain infantile sexual activities, and also with that so-called traumatic experience—things which may very well cast a shadow on sexuality. This would be plausible enough, were it not that the patient's sister had experienced pretty much the same things—including the exhibitionist—without suffering the same consequences, and without becoming neurotic.

[397] We would therefore have to assume that the patient experienced these things in a special way, perhaps more intensely and enduringly than her sister, and that the events of early childhood would have been more significant to her in the long run. If that had been true in so marked a degree, some violent effect would surely have been noticed even at the time. But in later youth the events of early childhood were as much over and done with for the patient as they were for her sister. Therefore, yet another conjecture is conceivable with regard to that critical sensitiveness, namely, that it did not come from her peculiar prehistory but had existed all along. An attentive observer of small children can detect, even in early infancy, any unusual sensitiveness. I once analysed a hysterical patient who showed me a letter written by her mother when the patient was two years old. Her mother wrote about her and her sister: she—the patient—was always a friendly and enterprising child, but her sister had difficulties in getting along with people and things. The first one in later life became hysterical, the other catatonic. These far-reaching differences, which go back into earliest childhood, cannot be due to accidental events but must be regarded as innate. From this standpoint we cannot assert that our patient's peculiar prehistory was to blame for her sensitiveness at the critical moment; it would be more correct to say that this sensitiveness was inborn and naturally manifested itself most strongly in any unusual situation.

[398] This excessive sensitiveness very often brings an enrichment of the personality and contributes more to its charm than to the undoing of a person's character. Only, when difficult and unusual situations arise, the advantage frequently turns into a very great disadvantage, since calm consideration is then disturbed by untimely affects. Nothing could be more mistaken, though, than to regard this excessive sensitiveness as in itself a pathological character component. If that were really so, we should have to rate about one quarter of humanity as pathological. Yet if this sensitiveness has such destructive consequences for the individual, we must admit that it can no longer be considered quite normal.

[399] We are driven to this contradiction when we contrast the two views concerning the significance of the psychological prehistory as sharply as we have done here. In reality, it is not a question of either one or the

other. A certain innate sensitiveness produces a special prehistory, a special way of experiencing infantile events, which in their turn are not without influence on the development of the child's view of the world. Events bound up with powerful impressions can never pass off without leaving some trace on sensitive people. Some of them remain effective throughout life, and such events can have a determining influence on a person's whole mental development. Dirty and disillusioning experiences in the realm of sexuality are especially apt to frighten off a sensitive person for years afterwards, so that the mere thought of sex arouses the greatest resistances.

[400] As the trauma theory shows, we are too much inclined, knowing of such cases, to attribute the emotional development of a person wholly, or at least very largely, to accidents. The old trauma theory went too far in this respect. We must never forget that the world is, in the first place, a subjective phenomenon. *The impressions we receive from these accidental happenings are also our own doing*. It is not true that the impressions are forced on us unconditionally; our own predisposition conditions the impression. A man whose libido is blocked will have, as a rule, quite different and very much more vivid impressions than one whose libido is organized in a wealth of activities. A person who is sensitive in one way or another will receive a deep impression from an event which would leave a less sensitive person cold.

[401] Therefore, in addition to the accidental impression, we have to consider the subjective conditions seriously. Our previous reflections, and in particular our discussion of an actual case, have shown that the most important subjective condition is regression. The effect of regression, as practical experience shows, is so great and so impressive that one might be inclined to attribute the effect of accidental occurrences solely to the mechanism of regression. Without any doubt, there are many cases where everything is dramatized, where even the traumatic experiences are pure figments of the imagination, and the few real events among them are afterwards completely distorted by fantastic elaboration. We can safely say that there is not a single case of neurosis in which the emotional value of the antecedent experience is not intensified by libido regression, and even when large tracts of infantile development seem to

be extraordinarily significant (as for instance the relationship to the parents), it is almost always a regression that gives them this value.

[402] The truth, as always, lies in the middle. The previous history certainly has a determining value, and this is intensified by regression. Sometimes the traumatic significance of the previous history comes more to the forefront, sometimes only its regressive meaning. These considerations naturally have to be applied to infantile sexual experiences as well. Obviously there are cases where brutal sexual experiences justify the shadow thrown on sexuality and make the later resistance to sex thoroughly comprehensible. (I would mention, by the way, that frightful impressions other than sexual can leave behind a permanent feeling of insecurity which may give the individual a hesitating attitude to reality.) Where real events of undoubted traumatic potency are absent—as is the case in most neuroses—the mechanism of regression predominates.

[403] It might be objected that we have no criterion by which to judge the potential effect of a trauma, since this is an extremely relative concept. That is not altogether true; we have such a criterion in the average normal person. Something that is likely to make a strong and abiding impression on a normal person must be considered as having a determining influence for neurotics also. But we cannot attribute determining importance, in neurosis either, to impressions which normally would disappear and be forgotten. In most cases where some event has had an unexpected traumatic effect, we shall in all probability find a regression, that is to say, a secondary fantastic dramatization. *The earlier in childhood an impression is said to have arisen, the more suspect is its reality*. Primitive people and animals have nothing like that capacity for reviving memories of unique impressions which we find among civilized people. Very young children are not nearly as impressionable as older children. The higher development of the mental faculties is an indispensable prerequisite for impressionability. We can therefore safely assume that the earlier a patient places some impressive experience in his childhood, the more likely it is to be a fantastic and regressive one. Deeper impressions are to be expected only from experiences in late childhood. At any rate, we generally have to attribute only regressive significance to the events of early infancy, that is, from the fifth year back. In later years, too,

regression can sometimes play an overwhelming role, but even so one must not attribute too little importance to accidental events. In the later course of a neurosis, accidental events and regression together form a vicious circle: retreat from life leads to regression, and regression heightens resistance to life.

THE TELEOLOGICAL SIGNIFICANCE OF REGRESSION

[404] (Before pursuing our argument further, we must turn to the question of what teleological significance should be attributed to regressive fantasies. We might be satisfied with the hypothesis that these fantasies are simply a substitute for real action and therefore have no further significance. That can hardly be so. Psychoanalytic theory inclines to see the reason for the neurosis in the fantasies (illusions, prejudices, etc.), as their character betrays a tendency which is often directly opposed to reasonable action. Indeed, it often looks as if the patient were really using his previous history only to prove that he cannot act reasonably, whereupon the analyst, who, like everyone else, is easily inclined to sympathize with the patient (i.e., to identify with him unconsciously), gets the impression that the patient's arguments constitute a real aetiology. In other cases the fantasies have more the character of wonderful ideals which put beautiful and airy phantasms in the place of crude reality. Here a more or less obvious megalomania is always present, aptly compensating for the patient's indolence and deliberate incompetence. But the decidedly sexual fantasies often reveal their purpose quite clearly, which is to accustom the patient to the thought of his sexual destiny, and so help him to overcome his resistance.

[405] If we agree with Freud that neurosis is an unsuccessful attempt at self-cure, we must allow the fantasies, too, a double character: on one hand a pathological tendency to resist, on the other a helpful and preparatory tendency. With a normal person the libido, when it is blocked by an obstacle, forces him into a state of introversion and makes him reflect. So, too, with a neurotic under the same conditions: an introversion ensues, with increased fantasy activity. But he gets stuck there, because he prefers the infantile mode of adaptation as being the

easier one. He does not see that he is exchanging his momentary advantage for a permanent disadvantage and has thus done himself a bad turn. In the same way, it is much easier and more convenient for the civic authorities to neglect all those troublesome sanitary precautions, but when an epidemic comes the sin of omission takes bitter revenge. If, therefore, the neurotic claims all manner of infantile alleviations, he must also accept the consequences. And if he is not willing to do so, then the consequences will overtake him.

[406] It would, in general, be a great mistake to deny any teleological value to the apparently pathological fantasies of a neurotic. They are, as a matter of fact, the first beginnings of spiritualization, the first groping attempts to find new ways of adapting. His retreat to the infantile level does not mean only regression and stagnation, but also the possibility of discovering a new life-plan. Regression is thus in very truth the basic condition for the act of creation. Once again I must refer you to my oft-cited book *Symbols of Transformation.)*

8. THERAPEUTIC PRINCIPLES OF PSYCHOANALYSIS

[407] With the concept of regression, psychoanalysis made probably one of the most important discoveries in this field. Not only were the earlier formulations of the genesis of neurosis overthrown or at least considerably modified, but the *actual conflict* received, for the first time, its proper valuation.

[408] In our earlier case of the lady and the horses, we saw that the symptomatological dramatization could only be understood when it was seen as an expression of the actual conflict. Here psychoanalytic theory joins hands with the results of the association experiments, of which I spoke in my lectures at Clark University. The association experiment, when conducted on a neurotic person, gives us a number of pointers to definite conflicts in his actual life, which we call complexes. These complexes contain just those problems and difficulties which have brought the patient into disharmony with himself. Generally we find a love-conflict of a quite obvious character. From the standpoint of the association experiment, neurosis appears as something quite different from what it seemed to be from the standpoint of earlier psychoanalytic theory. From that standpoint, neurosis seemed to be a formation having its roots in earliest infancy and overgrowing the normal psychic structure; considered from the standpoint of the association experiment, neurosis appears as a reaction to an actual conflict, which naturally is found just as often among normal people but is solved by them without too much difficulty. The neurotic, however, remains in the grip of the conflict, and his neurosis seems to be more or less the consequence of his having got stuck. We can say, therefore, that the results of the association experiment argue strongly in favour of the regression theory.

THE EVALUATION OF NEUROTIC FANTASIES

[409] With the help of the earlier, “historical” conception of neurosis, we thought we could understand why a neurotic with a powerful parental

complex has such great difficulties in adapting himself to life. But now that we know that normal persons have exactly the same complexes and, in principle, go through the same psychological development as a neurotic, we can no longer explain neurosis by the development of certain fantasy systems. The really explanatory approach now is a prospective one. We no longer ask whether the patient has a father or mother complex, or unconscious incest fantasies which tie him to his parents, for we know today that everybody has them. It was a mistake to believe that only neurotics have such things. We ask rather: What is the task which the patient does not want to fulfil? What difficulty is he trying to avoid?

[410] If a person tried always to adapt himself fully to the conditions of life, his libido would always be employed correctly and adequately. When that does not happen, it gets blocked and produces regressive symptoms. The non-fulfilment of the demands of adaptation, or the shrinking of the neurotic from difficulties, is, at bottom, the hesitation of every organism in the face of a new effort to adapt. (The training of animals provides instructive examples in this respect, and in many cases such an explanation is, in principle, sufficient. From this standpoint the earlier mode of explanation, which maintained that the resistance of the neurotic was due to his bondage to fantasies, appears incorrect. But it would be very one-sided to take our stand solely on a point of principle. There is *also* a bondage to fantasies, even though the fantasies are, as a rule, secondary. The neurotic's bondage to fantasies (illusions, prejudices, etc.) develops gradually, as a habit, out of innumerable regressions from obstacles since earliest childhood. All this grows into a regular habit familiar to every student of neurosis; we all know those patients who use their neurosis as an excuse for running away from difficulties and shirking their duty. Their habitual evasion produces a habit of mind which makes them take it for granted that they should live out their fantasies instead of fulfilling disagreeable obligations. And this bondage to fantasy makes reality seem less real to the neurotic, less valuable and less interesting, than it does to the normal person. As I explained earlier, the fantastic prejudices and resistances may also arise,

sometimes, from experiences that were not intended at all; in other words, were not deliberately sought disappointments and suchlike.)

[411] The ultimate and deepest root of neurosis appears to be the innate sensitiveness,[1] which causes difficulties even to the infant at the mother's breast, in the form of unnecessary excitement and resistance. The apparent aetiology of neurosis elicited by psychoanalysis is actually, in very many cases, only an inventory of carefully selected fantasies, reminiscences, etc., aiming in a definite direction and created by the patient out of the libido he did not use for biological adaptation. Those allegedly aetiological fantasies thus appear to be nothing but substitute formations, disguises, artificial explanations for the failure to adapt to reality. The aforementioned vicious circle of flight from reality and regression into fantasy is naturally very apt to give the illusion of seemingly decisive causal relationships, which the analyst as well as the patient believes in. Accidental occurrences intervene in this mechanism only as "mitigating circumstances." Their real and effective existence must, however, be acknowledged.

[412] I must admit that those critics are partly right who get the impression, from their reading of psychoanalytic case histories, that it is all fantastic and artificial. Only, they make the mistake of attributing the fantastic artefacts and lurid, far-fetched symbolisms to the suggestion and fertile imagination of the analyst, and not to the incomparably more fertile fantasy of his patients. In the fantasy material of a psychoanalytic case history there is, indeed, very much that is artificial. But the most striking thing is the active inventiveness of the patient. And the critics are not so wrong, either, when they say that their neurotic patients have no such fantasies. I do not doubt that most of their patients are totally unconscious of having any fantasies at all. When it is in the unconscious, a fantasy is "real" only when it has some demonstrable effect on consciousness, for instance in the form of a dream. Otherwise we can say with a clear conscience that it is not real. So anyone who overlooks the almost imperceptible effects of unconscious fantasies on consciousness, or dispenses with a thorough and technically irreproachable analysis of dreams, can easily overlook the fantasies of his patients altogether. We are therefore inclined to smile when we hear this oft-repeated objection.

[413] Nevertheless, we must admit that there is some truth in it. The regressive tendency of the patient, reinforced by the attentions of the psychoanalyst in his examination of the unconscious fantasy activity, goes on inventing and creating even during the analysis. One could even say that this activity is greatly increased in the analytical situation, since the patient feels his regressive tendency strengthened by the interest of the analyst and produces even more fantasies than before. For this reason our critics have often remarked that a conscientious therapy of the neurosis should go in exactly the opposite direction to that taken by psychoanalysis; in other words, that it is the first task of therapy to extricate the patient from his unhealthy fantasies and bring him back again to real life.

[414] The psychoanalyst, of course, is well aware of this, but he knows just how far one can go with this extricating of neurotics from their fantasies. As medical men, we should naturally never dream of preferring a difficult and complicated method, assailed by all the authorities, to a simple, clear, and easy one unless for a very good reason. I am perfectly well acquainted with hypnotic suggestion and Dubois' method of persuasion, but I do not use them because they are comparatively ineffective. For the same reason, I do not use "rééducation de la volonté" directly, as psychoanalysis gives me better results.

ACTIVE PARTICIPATION IN THE FANTASY

[415] But, if we do use psychoanalysis, we must go along with the regressive fantasies of our patients. Psychoanalysis has a much broader outlook as regards the evaluation of symptoms than have the usual psychotherapeutic procedures. These all start from the assumption that neurosis is an entirely pathological formation. In the whole of neurology hitherto, no one has ever thought of seeing in the neurosis an attempt at healing, or, consequently, of attributing to the neurotic formations a quite special teleological significance. But, like every illness, neurosis is only a compromise between the pathogenic causes and the normal function. Modern medicine no longer considers fever as the illness itself but as a purposive reaction of the organism. Similarly, psychoanalysis does not

conceive the neurosis as anti-natural and in itself pathological, but as having a meaning and a purpose.

[416] From this follows the inquiring and expectant attitude of psychoanalysis towards neurosis. In all cases it refrains from judging the value of a symptom, and tries instead to understand what tendencies lie beneath that symptom. If we were able to destroy a neurosis in the same way, for instance, as a cancer is destroyed, we would be destroying at the same time a large amount of useful energy. We save this energy, that is, we make it serve the purposes of the drive for recuperation, by pursuing the meaning of the symptoms and going along with the regressive movement of the patient. Those unfamiliar with the essentials of psychoanalysis will certainly have some difficulty in understanding how a therapeutic effect can be achieved when the analyst enters into the "harmful" fantasies of his patients. Not only the opponents of psychoanalysis but the patients themselves doubt the therapeutic value of such a method, which concentrates attention on the very things that the patient condemns as worthless and reprehensible, namely his fantasies. Patients will often tell you that their former doctors forbade them to have any concern with their fantasies, explaining that they could only consider themselves well when they were free, if only temporarily, from this terrible scourge. Naturally they wonder what good it will do when the treatment leads them back to the very place from which they consistently tried to escape.

[417] This objection can be answered as follows: it all depends on the attitude the patient takes towards his fantasies. Hitherto, the patient's fantasying was a completely passive and involuntary activity. He was lost in his dreams, as we say. Even his so-called "brooding" was nothing but an involuntary fantasy. What psychoanalysis demands of the patient is apparently the same thing, but only a person with a very superficial knowledge of psychoanalysis could confuse this passive dreaming with the attitude now required. What psychoanalysis asks of the patient is the exact opposite of what the patient has always done. He is like a man who has unintentionally fallen into the water and sunk, whereas psychoanalysis wants him to act like a diver. It was no mere chance

which led him to fall in just at that spot. There lies the sunken treasure, but only a diver can bring it to the surface.

[418] That is to say, when the patient judges them from a rational standpoint, he regards his fantasies as worthless and meaningless. In reality, however, they exert their great influence just because they are of such great importance. They are sunken treasures which can only be recovered by a diver; in other words the patient, contrary to his wont, must now deliberately turn his attention to his inner life. Where formerly he dreamed, he must now think, consciously and intentionally. This new way of thinking about himself has about as much resemblance to his former state of mind as a diver has to a drowning man. His former compulsion now has a meaning and a purpose, it has become *work*. The patient, assisted by the analyst, immerses himself in his fantasies, not in order to lose himself in them, but to salvage them, piece by piece, and bring them into the light of day. He thus acquires an objective vantage-point from which to view his inner life, and can now tackle the very thing he feared and hated. Here we have the basic principle of all psychoanalytic treatment.

THE TASK OF ADAPTATION

[419] Previously, because of his illness, the patient stood partly or wholly outside life. Consequently he neglected many of his duties, either in regard to social achievement or in regard to his purely human tasks. He must get back to fulfilling these duties if he wants to become well again. By way of caution, I would remark that "duties" are not to be understood here as general ethical postulates, but as duties to himself, by which again I do not mean egocentric interests—for a human being is also a social being, a fact too easily forgotten by individualists. A normal person feels very much more comfortable sharing a common virtue than possessing an individual vice, no matter how seductive it may be. He must already be a neurotic, or an otherwise unusual person, if he lets himself be deluded by special interests of this kind.

[420] The neurotic shrank from his duties and his libido turned away, at least partly, from the tasks imposed by reality. Consequently it became

introverted, directed towards his inner life. Because no attempt was made to master any real difficulties, his libido followed the path of regression, so that fantasy largely took the place of reality. Unconsciously—and very often consciously—the neurotic prefers to live in his dreams and fantasies. In order to bring him back to reality and to the fulfilment of his necessary tasks, psychoanalysis proceeds along the same “false” track of regression which was taken by the libido of the patient, so that at the beginning the analysis looks as if it were supporting his morbid proclivities. But psychoanalysis follows the false tracks of fantasy in order to restore the libido, the valuable part of the fantasies, to consciousness and apply it to the duties of the present. This can only be done by bringing up the unconscious fantasies, together with the libido attached to them. Were there no libido attached, we could safely leave these unconscious fantasies to their own shadowy existence. Unavoidably the patient, feeling confirmed in his regressive tendency by the mere fact of having started the analysis, will, amid increasing resistances, lead the analyst’s interest down to the depths of his unconscious shadow-world.

[421] It will readily be understood that every analyst, as a normal person, will feel in himself the greatest resistances to the regressive tendency of the patient, as he is quite convinced that this tendency is pathological. As a doctor, he believes he is acting quite rightly not to enter into his patient’s fantasies. He is understandably repelled by this tendency, for it is indeed repulsive to see somebody completely given up to such fantasies, finding only himself important and admiring himself unceasingly. Moreover, for the aesthetic sensibilities of the normal person, the average run of neurotic fantasies is exceedingly disagreeable, if not downright disgusting. The psychoanalyst, of course, must put aside all aesthetic value-judgments, just like every other doctor who really wants to help his patient. He must not shudder at dirty work. Naturally there are a great many patients who are physically ill and who do recover through the application of ordinary physical methods, dietetic or suggestive, without closer exploration and radical treatment. But severe cases can be helped only by a therapy based on an exact investigation and thorough knowledge of the illness. Our psychotherapeutic methods hitherto were general measures of this kind; in mild cases they do no

harm, on the contrary they are often of real use. But a great many patients prove inaccessible to these methods. If anything helps here, it is psychoanalysis, which is not to say that psychoanalysis is a cure-all. This is a sneer that comes only from ill-natured criticism. We know very well that psychoanalysis fails in certain cases. As everybody knows, we shall never be able to cure all illnesses.

[422] The "diving" work of analysis brings up dirty material, piece by piece, out of the slime, but it must first be cleaned before we can recognize its value. The dirty fantasies are valueless and are thrown aside, but the libido attached to them is of value and this, after the work of cleaning, becomes serviceable again. To the professional psychoanalyst, as to every specialist, it will sometimes seem that the fantasies have a value of their own, and not just the libido. But their value is no concern of the patient's. For the analyst these fantasies have only a scientific value, just as it may be of special interest to the surgeon to know whether the pus contains staphylococci or streptococci. To the patient it is all the same, and so far as he is concerned it is better for the analyst to conceal his scientific interest, lest the patient be tempted to take more pleasure than necessary in his fantasies. The aetiological significance which is attributed to these fantasies—incorrectly, to my mind—explains why so much space is given up to the extensive discussion of all forms of fantasy in the psychoanalytic literature. Once one knows that in this sphere absolutely nothing is impossible, the initial estimation of fantasies will gradually wear itself out, and with it the attempt to discover in them an aetiological significance. Nor will the most exhaustive discussion of case histories ever succeed in emptying this ocean. Theoretically the fantasies in each case are inexhaustible.

[423] In most cases, however, the production of fantasies ceases after a time, from which one must not conclude that the possibilities of fantasy are exhausted; the cessation only means that no more libido is regressing. The end of the regressive movement is reached when the libido seizes hold of the actualities of life and is used for the solution of necessary tasks. There are cases, and not a few of them, where the patient continues to produce endless fantasies, whether for his own pleasure or because of the mistaken expectations of the analyst. Such a mistake is especially

easy for beginners, since, blinded by psychoanalytic case histories, they keep their interest fixed on the alleged aetiological significance of the fantasies, and are constantly endeavouring to fish up more fantasies from the infantile past, vainly hoping to find there the solution of the neurotic difficulties. They do not see that the solution lies in action, in the fulfilment of certain necessary obligations to life. It will be objected that the neurosis is entirely due to the incapacity of the patient to carry out these tasks, and that, by analysing the unconscious, the therapist ought to enable him to do so, or at least give him the means of doing so.

[424] Put in this way, the objection is perfectly true, but we have to add that it is valid only when the patient is really conscious of the task he has to fulfil—conscious of it not only academically, in general theoretical outline, but also in detail. It is characteristic of neurotics to be wanting in this knowledge, although, because of their intelligence, they are well aware of the general duties of life, and struggle perhaps only too hard to fulfil the precepts of current morality. But for that very reason they know all the less, sometimes nothing at all, about the incomparably more important duties to themselves. It is not enough, therefore, to follow the patient blindfold on the path of regression, and to push him back into his infantile fantasies by an untimely aetiological interest. I often hear from patients who have got stuck in a psychoanalytic treatment: “My analyst thinks I must have an infantile trauma somewhere, or a fantasy I am still repressing.” Apart from cases where this conjecture happened to be true, I have seen others in which the stoppage was caused by the fact that the libido, hauled up by the analysis, sank back again into the depths for want of employment. This was due to the analyst directing his attention entirely to the infantile fantasies and his failure to see what task of adaptation the patient had to fulfil. The consequence was that the libido always sank back again, as it was given no opportunity for further activity.

[425] There are many patients who, quite on their own account, discover their life-tasks and stop the production of regressive fantasies fairly soon, because they prefer to live in reality rather than in fantasy. It is a pity that this cannot be said of all patients. A good many of them postpone the fulfilment of their life-tasks indefinitely, perhaps for ever, and prefer their

idle neurotic dreaming. I must emphasize yet again that by “dreaming” we do not mean a conscious phenomenon.

[426] In consequence of these facts and insights, the character of psychoanalysis has changed in the course of the years. If in its first stage psychoanalysis was a kind of surgery, which removed the foreign body, the blocked affect, from the psyche, in its later form it was a kind of historical method, which tried to investigate the genesis of the neurosis in all its details and to trace it back to its earliest beginnings.

THE TRANSFERENCE

[427] There is no doubt that this method owed its existence not only to a strong scientific interest but also to the personal “empathy” of the analyst, traces of which can clearly be seen in the psychoanalytic case material. Thanks to this personal feeling, Freud was able to discover wherein lay the therapeutic effect of psychoanalysis. While this was formerly sought in the discharge of the traumatic affect, it was now found that the fantasies brought out by analysis were all associated with the person of the analyst. Freud called this process the *transference*, because the patient transferred to the analyst the fantasies that were formerly attached to the memory-images of the parents. The transference is not limited to the purely intellectual sphere; rather, the libido that is invested in the fantasies precipitates itself, together with the fantasies, upon the analyst. All those sexual fantasies which cluster round the imago of the parents now cluster round him, and the less the patient realizes this, the stronger will be his unconscious tie to the analyst.

[428] This discovery is of fundamental importance in several ways. Above all, the transference is of great biological value to the patient. The less libido he gives to reality, the more exaggerated will be his fantasies and the more he will be cut off from the world. Typical of neurotics is their disturbed relationship to reality—that is to say, their reduced adaptation. The transference to the analyst builds a bridge across which the patient can get away from his family into reality. He can now emerge from his infantile milieu into the world of adults, since the analyst represents for him a part of the world outside the family.

[429] On the other hand, the transference is a powerful hindrance to the progress of the treatment, because the patient assimilates the analyst, who should stand for a part of the extrafamilial world, to his father and mother, so that the whole advantage of his new acquisition is jeopardized. The more he is able to see the analyst objectively, to regard him as he does any other individual, the greater becomes the advantage of the transference. The less he is able to see the analyst in this way, and the more he assimilates him to the father imago, the less advantageous the transference will be and the greater the harm it will do. The patient has merely widened the scope of his family by the addition of a quasi-parental personality. He himself is, as before, still in the infantile milieu and therefore maintains his infantile constellation. In this manner all the advantages of the transference can be lost.

[430] There are patients who follow the analysis with the greatest interest without making the slightest improvement, remaining extraordinarily productive in their fantasies although the whole previous history of their neurosis, even its darkest corners, seems to have been brought to light. An analyst under the influence of the historical view might easily be thrown into confusion, and would have to ask himself: What is there in this case still to be analysed? These are just the cases I had in mind before, when I said it is no longer a matter of analysing the historical material, but of action, of overcoming the infantile attitude. The historical analysis would show over and over again that the patient has an infantile attitude to the analyst, but it would not tell us how to alter it. Up to a certain point, this serious disadvantage of the transference applies to every case. It has gradually proved, even, that the part of psychoanalysis so far discussed, extraordinarily interesting and valuable though it may be from a scientific point of view, is in practice far less important than what now has to follow, namely, the analysis of the transference itself.

CONFESSION AND PSYCHOANALYSIS

[431] Before I discuss in detail this especially important part of the analysis, I should like to draw attention to a parallel between the first

stage of psychoanalysis and a certain cultural institution. By this I mean the religious institution of confession.

[432] Nothing makes people more lonely, and more cut off from the fellowship of others, than the possession of an anxiously hidden and jealously guarded personal secret. Very often it is “sinful” thoughts and deeds that keep them apart and estrange them from one another. Here confession sometimes has a truly redeeming effect. The tremendous feeling of relief which usually follows a confession can be ascribed to the readmission of the lost sheep into the human community. His moral isolation and seclusion, which were so difficult to bear, cease. Herein lies the chief psychological value of confession.

[433] Besides that, however, it has other consequences: through the transference of his secret and all the unconscious fantasies underlying it, a moral bond is formed between the patient and his father confessor. We call this a “transference relationship.” Anyone with psychoanalytic experience knows how much the personal significance of the analyst is enhanced when the patient is able to confess his secrets to him. The change this induces in the patient’s behaviour is often amazing. This, too, is an effect probably intended by the Church. The fact that by far the greater part of humanity not only needs guidance, but wishes for nothing better than to be guided and held in tutelage, justifies, in a sense, the moral value which the Church sets on confession. The priest, equipped with all the insignia of paternal authority, becomes the responsible leader and shepherd of his flock. He is the father confessor and the members of his parish are his penitent children.

[434] Thus priest and Church replace the parents, and to that extent they free the individual from the bonds of the family. In so far as the priest is a morally elevated personality with a natural nobility of soul and a mental culture to match, the institution of confession may be commended as a brilliant method of social guidance and education, which did in fact perform a tremendous educative task for more than fifteen hundred years. So long as the medieval Church knew how to be the guardian of art and science—a role in which her success was due, in part, to her wide tolerance of worldly interests—confession was an admirable instrument

of education. But it lost its educative value, at least for more highly developed people, as soon as the Church proved incapable of maintaining her leadership in the intellectual sphere—the inevitable consequence of spiritual rigidity. The more highly developed men of our time do not want to be guided by a creed or a dogma; they want to understand. So it is not surprising if they throw aside everything they do not understand; and religious symbols, being the least intelligible of all, are generally the first to go overboard. The sacrifice of the intellect demanded by a positive belief is a violation against which the conscience of the more highly developed individual rebels.

[435] So far as analysis is concerned, in perhaps the majority of cases the transference to and dependence on the analyst could be regarded as a sufficient end with a definite therapeutic effect, provided that the analyst was a commanding personality and in every way capable of guiding his patients responsibly and being a "father to his people." But a modern, mentally developed person strives, consciously or unconsciously, to govern himself and stand morally on his own feet. He wants to take the helm in his own hands; the steering has too long been done by others. He wants to understand; in other words, he wants to be an adult. It is much easier to be guided, but this no longer suits intelligent people today, for they feel that the spirit of the age requires them to exercise moral autonomy. Psychoanalysis has to reckon with this requirement, and has therefore to reject the demand of the patient for constant guidance and instruction. The analyst knows his own shortcomings too well to believe that he could play the role of father and guide. His highest ambition must consist only in educating his patients to become independent personalities, and in freeing them from their unconscious bondage to infantile limitations. He must therefore analyse the transference, a task left untouched by the priest. Through the analysis the unconscious—and sometimes conscious—tie to the analyst is cut, and the patient is set upon his own feet. That, at least, is the aim of the treatment.[2]

ANALYSIS OF THE TRANSFERENCE

[436] The transference introduces all sorts of difficulties into the relationship between analyst and patient because, as we have seen, the analyst is always more or less assimilated to the family. The first part of the analysis, the discovery of complexes, is fairly easy, thanks to the fact that everyone likes to unburden himself of his painful secrets. Also, he experiences a particular satisfaction in at last finding someone who has an understanding ear for all those things to which nobody would listen before. For the patient it is a singularly agreeable sensation to be understood and to have a doctor who is determined to understand him at all costs, and is willing to follow him, apparently, through all his devious ways. There are patients who even have a special "test" for this, a special question which the analyst has to go into; if he cannot or will not do this, or if he overlooks it, then he is no good. The feeling of being understood is especially sweet to all those lonely souls who are insatiable in their demand for "understanding."

[437] For patients with such an obliging disposition, the beginning of the analysis is, as a rule, fairly simple. The therapeutic effects, often considerable, which may appear about this time are easy to obtain, and for that reason they may seduce the beginner into a therapeutic optimism and analytical superficiality which bear no relation to the seriousness and peculiar difficulties of his task. The trumpeting of therapeutic successes is nowhere more contemptible than in psychoanalysis, for no one should know better than the psychoanalyst that the therapeutic result ultimately depends far more on the co-operation of nature and of the patient himself. The psychoanalyst may legitimately pride himself on his increased insight into the essence and structure of neurosis, an insight that greatly exceeds all previous knowledge in this field. But psychoanalytic publications to date cannot be acquitted of the charge of sometimes showing psychoanalysis in a false light. There are technical publications which give the uninitiated person the impression that psychoanalysis is a more or less clever trick, productive of astonishing results.

[438] The first stage of the analysis, when we try to understand, and in this way often relieve, the patient's feelings, is responsible for these therapeutic illusions. The improvements that may appear at the beginning of an analysis are naturally not really results of the treatment, but are

generally only passing alleviations which greatly assist the process of transference. After the initial resistances to the transference have been overcome, it turns out to be an ideal situation for a neurotic. He does not need to make any effort himself, and yet someone comes to meet him more than halfway, someone with an unwonted and peculiar wish to understand, who does not allow himself to get bored and is not put off by anything, although the patient sometimes does his utmost to rile him with his wilfulness and childish defiance. This forbearance is enough to melt the strongest resistances, so that the patient no longer hesitates to set the analyst among his family gods, i.e., to assimilate him to the infantile milieu.

[439] At the same time, the patient satisfies another need, that is, he achieves a relationship outside the family and thus fulfils a biological demand. Hence the patient obtains a double advantage from the transference relationship: a personality who on the one hand is expected to bestow on him a loving attention in all his concerns, and to that extent is equated with father and mother, but who, on the other hand, is outside the family and thus helps him to fulfil a vitally important and difficult duty without the least danger to himself. When, on top of that, this acquisition is coupled with a marked therapeutic effect, as not infrequently happens, the patient is fortified in his belief that his new-found situation is an excellent one. We can readily appreciate that he is not in the least inclined to give up all these advantages. If it were left to him, he would prefer to remain united with the analyst for ever. Accordingly, he now starts to produce numerous fantasies showing how this goal might be attained. Eroticism plays a large role here, and is exploited and exaggerated in order to demonstrate the impossibility of separation. The patient, understandably enough, puts up the most obstinate resistance when the analyst tries to break the transference relationship.

[440] We must not forget, however, that for a neurotic the acquisition of an extrafamilial relationship is one of life’s duties, as it is for everyone, and a duty which till then he has either not fulfilled at all or fulfilled in a very limited way. At this point I must energetically oppose the view one so often hears that an extrafamilial relationship always means a sexual

relationship. (In many cases one would like to say: it is precisely not that. It is a favourite neurotic misunderstanding that the right attitude to the world is found by indulgence in sex. In this respect, too, the literature of psychoanalysis is not free from misrepresentations; indeed there are publications from which no other conclusions can be drawn. This misunderstanding is far older than psychoanalysis, however, and so cannot be laid altogether at its door. The experienced medical man knows this advice very well, and I have had more than one patient who has acted according to this prescription. But when a psychoanalyst recommends it, he is making the same mistake as his patient, who believes that his sexual fantasies come from pent-up ("repressed") sexuality. If that were so, this recipe would naturally be a salutary one. It is not a question of that at all, but of regressive libido which exaggerates the fantasies because it evades the real task and strives back to the infantile level.) If we support this regressive tendency at all points we simply reinforce the infantile attitude from which the neurotic is suffering. He has to learn the higher adaptation which life demands from mature and civilized people. Those who have a decided tendency to sink lower will proceed to do so; they need no psychoanalysis for that.

[441] At the same time, we must be careful that we do not fall into the opposite extreme of thinking that psychoanalysis creates nothing but quite exceptional personalities. Psychoanalysis stands outside traditional morality; for the present it should adhere to no general moral standard. It is, and should be, only a means for giving the individual trends breathing-space, for developing them and bringing them into harmony with the rest of the personality. It should be a biological method, whose aim is to combine the highest subjective well-being with the most valuable biological performance. As man is not only an individual but also a member of society, these two tendencies inherent in human nature can never be separated, or the one subordinated to the other, without doing him serious injury.

[442] The best result for a person who undergoes an analysis is that he shall become in the end what he really is, in harmony with himself, neither good nor bad, just as he is in his natural state. Psychoanalysis cannot be considered a method of education, if by education we mean the topiary

art of clipping a tree into a beautiful artificial shape. But those who have a higher conception of education will prize most the method of cultivating a tree so that it fulfils to perfection its own natural conditions of growth. We yield too much to the ridiculous fear that we are at bottom quite impossible beings, that if everyone were to appear as he really is a frightful social catastrophe would ensue. Many people today take "man as he really is" to mean merely the eternally discontented, anarchic, rapacious element in human beings, quite forgetting that these same human beings have also erected those firmly established forms of civilization which possess greater strength and stability than all the anarchic undercurrents. (The strengthening of his social personality is one of the essential conditions for man's existence. Were it not so, humanity would cease to be. The selfishness and rebelliousness we meet in the neurotic's psychology are not "man as he really is" but an infantile distortion. In reality the normal man is "civic-minded and moral"; he created his laws and observes them, not because they are imposed on him from without—that is a childish delusion—but because he loves law and order more than he loves disorder and lawlessness.)

RESOLUTION OF THE TRANSFERENCE

[443] In order to resolve the transference, we have to fight against forces which are not merely neurotic but have a general significance for normal human beings. In trying to get the patient to break the transference relationship, we are asking of him something that is seldom, or never, demanded of the average person, namely, that he should conquer himself completely. Only certain religions demanded this of the individual, and it is this that makes the second stage of analysis so very difficult.

[444] (As you know, it is an habitual prejudice of children to think that love gives them the right to make demands. The infantile conception of loving is getting presents from others. Patients make demands in accordance with this definition, and thus behave no differently from most normal people, whose infantile cupidity is only prevented from reaching too high a pitch by their fulfilling their duties to life and by the satisfaction this affords the libido, and also because a certain lack of temperament does

not incline them from the start to passionate behaviour. The basic trouble with the neurotic is that, instead of adapting himself to life in his own special way, which would require a high degree of self-discipline, he makes infantile demands and then begins to bargain. The analyst will hardly be disposed to comply with the demands the patient makes on him personally, but circumstances may arise in which he will seek to buy his freedom with compromises. For instance, he might throw out hints of moral liberties which, if turned into a maxim, would bring about a general lowering of the cultural level. But in that way the patient merely sinks to the lower level and becomes inferior. Nor is it, in the end, a question of culture at all, but simply of the analyst buying his way out of the constricting transference situation by offering other, alleged advantages. It goes against the real interests of the patient to hold out these compensating advantages so enticingly; at that rate he will never be freed from his infantile cupidity and indolence. Only self-conquest can free him from these.

[445] The neurotic has to prove that he, just as much as a normal person, can live reasonably. Indeed, he must do more than a normal person, he must give up a large slice of his infantilism, which nobody asks a normal person to do.

[446] Patients often try to convince themselves, by seeking out special adventures, that it is possible to go on living in an infantile way. It would be a great mistake if the analyst tried to stop them. There are experiences which one must go through and for which reason is no substitute. Such experiences are often of inestimable value to the patient.

[447] Nowhere more clearly than at this stage of the analysis will everything depend on how far the analyst has been analysed himself. If he himself has an infantile type of desire of which he is still unconscious, he will never be able to open his patient’s eyes to this danger. It is an open secret that all through the analysis intelligent patients are looking beyond it into the soul of the analyst, in order to find there the confirmation of the healing formulae—or its opposite. It is quite impossible, even by the subtlest analysis, to prevent the patient from taking over instinctively the way in which his analyst deals with the

problems of life. Nothing can stop this, for personality teaches more than thick tomes full of wisdom. All the disguises in which he wraps himself in order to conceal his own personality avail him nothing; sooner or later he will come across a patient who calls his bluff. An analyst who from the first takes his profession seriously is faced with the inexorable necessity of testing out the principles of psychoanalysis on himself as well. He will be astonished to see how many apparently technical difficulties vanish in this way. Note that I am not speaking of the initial stage of analysis, which might be called the stage of unearthing the complexes, but of this final, extraordinarily tricky stage which is concerned with the resolution of the transference.

[448] I have frequently found that beginners look upon the transference as an entirely abnormal phenomenon that has to be "fought against." Nothing could be more mistaken. To begin with we have to regard the transference merely as a falsification, a sexualized caricature, of the social bond which holds human society together and which also produces close ties between people of like mind. This bond is one of the most valuable social factors imaginable, and it would be a cruel mistake to reject absolutely these social overtures on the part of the patient. It is only necessary to purge them of their regressive components, their infantile sexualism. If that is done, the transference becomes a most convenient instrument of adaptation.

[449] The only danger—and it is a great one—is that the unacknowledged infantile demands of the analyst may identify themselves with the parallel demands of the patient. The analyst can avoid this only by submitting to a rigorous analysis at the hands of another. He then learns to understand what analysis really means and how it feels to experience it on your own psyche. Every intelligent analyst will at once see how much this must redound to the benefit of his patients. There are analysts who believe that they can get along with a self-analysis. This is Munchausen psychology, and they will certainly remain stuck. They forget that one of the most important therapeutically effective factors is subjecting yourself to the objective judgment of another. As regards ourselves we remain blind, despite everything and everybody. The analyst, of all people, must give up all isolationist tactics and autoerotic mystification if he wants to

help his patients to become socially mature and independent personalities.

[450] I know that I am also at one with Freud when I set it up as a self-evident requirement that a psychoanalyst must discharge his own duties to life in the proper way. If he does not, nothing can stop his unutilized libido from automatically descending on his patients and in the end falsifying the whole analysis. Immature and incompetent persons who are themselves neurotic and stand with only one foot in reality generally make nothing but nonsense out of analysis. *Exempla sunt odiosa!* Medicine in the hand of a fool was ever poison and death. Just as we demand from a surgeon, besides his technical knowledge, a skilled hand, courage, presence of mind, and power of decision, so we must expect from an analyst a very serious and thorough psychoanalytic training of his own personality before we are willing to entrust a patient to him. I would even go so far as to say that the acquisition and practice of the psychoanalytic technique presuppose not only a specific psychological gift but in the very first place a serious concern with the moulding of one's own character.)

[451] The technique for resolving the transference is the same as the one we have already described. The problem of what the patient is to do with the libido he has withdrawn from the person of the analyst naturally occupies a large place. Here too the danger for the beginner is great, as he will be inclined to suggest or to give advice. For the patient the analyst's efforts in this respect are extremely convenient, and therefore fatal. At this important juncture, as everywhere in psychoanalysis, we have to let the patient and his impulses take the lead, even if the path seems a wrong one. Error is just as important a condition of life's progress as truth.

THE PROSPECTIVE FUNCTION OF DREAMS

[452] In this second stage of analysis, with its hidden reefs and shoals, we owe an enormous amount to dreams. At the beginning of the analysis, dreams helped us chiefly to discover the fantasies; but here they are often extremely valuable guides to the use of libido. Freud's work laid the foundation for an immense increase in our knowledge in regard to the

determination of the manifest dream content by historical material and wishful tendencies. He showed how dreams give access to a mass of subliminal material, mostly memories that have sunk below the threshold. In keeping with his genius for the purely historical method, Freud’s procedure is predominantly analytical. Although this method is incontestably of great value we ought not to adopt this standpoint exclusively, as a one-sided historical view does not take sufficient account of the teleological significance of dreams (stressed in particular by Maeder[3]). Unconscious thinking would be quite inadequately characterized if we considered it only from the standpoint of its historical determinants. For a complete evaluation we have unquestionably to consider its teleological or prospective significance as well. If we pursued the history of the English Parliament back to its earliest beginnings, we should undoubtedly arrive at an excellent understanding of its development and the way its present form was determined. But that would tell us nothing about its prospective function, that is, about the tasks it has to accomplish now and in the future.

[453] The same is true of dreams, whose prospective function alone was valued in the superstitions of all times and races. There may well be a good deal of truth in this view. Without presuming to say that dreams have prophetic foresight, it is nevertheless possible that we might find, in this subliminal material, combinations of future events which are subliminal simply because they have not yet attained the degree of clarity necessary for them to become conscious. Here I am thinking of those dim presentiments we sometimes have of the future, which are nothing but very faint, subliminal combinations of events whose objective value we are not yet able to apperceive.

[454] The future tendencies of the patient are elaborated with the help of these teleological components of the dream. If this work is successful, the patient passes out of the treatment and out of the semi-infantile transference relationship into a life which has been carefully prepared within him, which he has chosen himself, and to which, after mature deliberation, he can declare himself committed.

FUTURE USES OF PSYCHOANALYSIS

[455] As will readily be understood, psychoanalysis can never be used for polyclinical work. It must always remain in the hands of the few who, because of their innate educative and psychological capacities, have a particular aptitude and a special liking for this profession. Just as not every doctor makes a good surgeon, not everyone is fitted to be a psychoanalyst. The predominantly psychological nature of the work will make it difficult for the medical profession to monopolize it. Sooner or later other branches of science will master the method, either for practical reasons or out of theoretical interest. So long as orthodox science excludes psychoanalysis from general discussion as sheer nonsense, we cannot be surprised if other departments learn to master the material before the medical profession does. This is all the more likely as psychoanalysis is a general method of psychological research and a heuristic principle of the first rank in the domain of the humane sciences.

[456] It is chiefly the work of the Zurich school that has demonstrated the applicability of psychoanalysis as a method of investigation in mental disease. Psychoanalytic investigation of dementia praecox, for instance, has given us most valuable insights into the psychological structure of this remarkable disease. It would lead me too far afield to go at all deeply into the results of these investigations. The theory of the psychological determinants of this disease is a sufficiently vast territory in itself, and if I were to discuss the symbolistic problems of dementia praecox I would have to put before you a mass of material which I could not hope to deploy within the framework of these lectures, whose purpose is to provide a general survey.

[457] The question of dementia praecox has become so extraordinarily complicated because the recent incursion of psychoanalysis into the domains of mythology and comparative religion has afforded us deep insight into ethnological symbolism. Those who were familiar with the symbolism of dreams and of dementia praecox were astounded by the parallelism between the symbols found in modern individuals and those found in the history of the human race. Most startling of all is the parallelism between ethnic and schizophrenic symbols. The complicated relations between psychology and mythology make it impossible for me to discuss in detail my views on dementia praecox. For the same reason I

must refrain from discussing the results of the psychoanalytic investigation of mythology and comparative religion. The principal result of these investigations at present is the discovery of far-reaching parallels between ethnic and individual symbolisms. We cannot yet see what vast perspectives this ethnopsychology may open out. But, from all we know at present, we may expect that psychoanalytic research into the nature of subliminal processes will be enormously enriched and deepened by a study of mythology.

9. A CASE OF NEUROSIS IN A CHILD

[458] In these lectures I have had to confine myself to giving you a general account of the nature of psychoanalysis. Detailed discussion of the method and theory would have required a mass of case material, exposition of which would have detracted from a comprehensive view of the whole. But, in order to give you some idea of the actual process of psychoanalytic treatment, I have decided to present a fairly short analysis of an eleven-year-old girl. The case was analysed by my assistant, Miss Mary Moltzer. I must preface my remarks by saying that this case is no more typical of the length or course of an ordinary psychoanalysis than one individual is typical of all others. Nowhere is the abstraction of generally valid rules so difficult as in psychoanalysis, for which reason it is better not to make too many formulations. We must not forget that, notwithstanding the great uniformity of conflicts and complexes, every case is unique, because every individual is unique. Every case demands the analyst's individual interest, and in every case the course of analysis is different.

[459] In presenting this case, therefore, I am offering but a small section of the infinitely varied world of the psyche, showing all those apparently bizarre and arbitrary peculiarities which the whim of so-called chance scatters into a human life. It is not my intention to withhold any of the more interesting psychoanalytic details, as I do not want to evoke the impression that psychoanalysis is a rigidly formalistic method. The scientific needs of the investigator prompt him always to look for rules and categories in which the most alive of all living things can be captured. The analyst and observer, on the other hand, must eschew formulas and let the living reality work upon him in all its lawless profusion. Thus I shall try to present this case in its natural setting, and I hope I shall succeed in showing you how differently an analysis develops from what might have been expected on purely theoretical grounds.

[460] The case in question is that of an intelligent eleven-year-old girl of good family.

ANAMNESIS

[461] The clinical history is as follows: She had to leave school several times on account of sudden nausea and headaches, and was obliged to go to bed. In the morning she sometimes refused to get up and go to school. She suffered from bad dreams, was moody and unreliable. I informed the mother, who came to consult me, that these might be the signs of a neurosis, and that something special might be hidden behind them about which one would have to ask the child. This conjecture was not an arbitrary one, for every attentive observer knows that if children are so restless and bad-tempered something is worrying them.

[462] The child now confessed to her mother the following story. She had a favourite teacher, on whom she had a crush. During this last term she had fallen behind with her work, and she thought she had sunk in her teacher’s estimation. She then began to feel sick during his lessons. She felt not only estranged from her teacher, but even rather hostile to him. She directed all her friendly feelings to a poor boy with whom she usually shared the bread she took to school. She now gave him money as well, so that he could buy bread for himself. Once, in conversation with this boy, she made fun of her teacher and called him a goat. The boy attached himself to her more and more, and considered that he had the right to levy an occasional tribute from her in the form of a little present of money. Then she became afraid that the boy would tell the teacher she had called him a goat, and she promised him two francs if he would give her his solemn word never to say anything to the teacher. From that moment the boy began to blackmail her; he demanded money with threats, and persecuted her with his demands on the way to school. She was in despair. Her attacks of sickness were closely connected with this story; yet, after the affair had been settled as a result of this confession, her peace of mind was not restored as we would have expected.

[463] Very often, as I mentioned in the previous lecture, the mere relation of a painful episode has a favourable therapeutic effect. Generally this does not last very long, although on occasion it may be maintained for a long time. Such a confession is naturally a long way from being an analysis, despite the fact that there are many nerve specialists nowadays

who believe that an analysis is only a somewhat more extensive anamnesis or confession.

[464] Not long afterwards, the child had a violent attack of coughing and missed school for one day. After that she went back to school for one day and felt perfectly well. On the third day a renewed attack of coughing came on, with pains on the left side, fever and vomiting. She had a temperature of 103° F. The doctor feared pneumonia. But the next day everything had disappeared again. She felt quite well, and there was no trace of fever or nausea.

[465] But still our little patient wept the whole time and did not wish to get up. From this strange course of events I suspected a serious neurosis, and I therefore advised analytical treatment.

FIRST INTERVIEW

[466] The little girl seemed nervous and constrained, now and then giving a disagreeable forced laugh. She was first of all given an opportunity to talk about what it felt like to be allowed to stay in bed. We learn that it was especially nice then, as she always had company. Everybody came to see her; best of all, she could get herself read to by Mama, from a book with the story in it of a *prince who was ill and only got well again when his wish was fulfilled, the wish being that his little friend, a poor boy, might be allowed to stay with him*.

[467] The obvious relation between this story and her own little love-story, as well as its connection with her sickness, was pointed out to her, whereupon she began to weep, saying that she would rather go with the other children and play with them, or they would run away. This was at once allowed, and away she ran, but came back again in no time, somewhat crestfallen. It was explained to her that she had not run away because she was afraid her playmates would run away, but that she herself wanted to run away because of resistances.

SECOND INTERVIEW

[468] At the second interview she was less anxious and inhibited. The conversation was led round to the teacher, but she was too embarrassed to speak about him. Finally came the shamefaced admission that she liked him very much. It was explained to her that she need not be ashamed of that; on the contrary, her love was a guarantee that she would do her very best in his lessons. “So then I may like him?” asked the little patient with a happier face.

[469] This explanation justified the child in her choice of a love-object. She had, it seemed, been afraid to admit to herself her feelings for the teacher. It is not easy to explain why this should be so. It was previously assumed that the libido has great difficulty in seizing upon a person outside the family because it still finds itself caught in the incestuous bond—a very plausible view indeed, from which it is difficult to withdraw. On the other hand, it must be emphasized that her libido had taken vehement possession of the poor boy, and he too was someone outside the family, so that the difficulty cannot lie in transferring libido to an extra-familial object, but in some other circumstance. Her love for the teacher was for her a more difficult task, it demanded much more from her than her love for the boy, which did not require any moral effort on her part. The hint dropped in the analysis that love would enable her to do her best brought the child back to her real task, which was to adapt to the teacher.

[470] Now if the libido draws back from a necessary task, it does so for the very human reason of indolence, which is particularly marked not only in children but also in primitives and animals. Primitive inertia and laziness are the primary reason for not making the effort to adapt. The libido which is not used for this purpose stagnates, and will then make the inevitable regression to former objects or modes of adaptation. The result is a striking activation of the incest complex. The libido withdraws from the object which is so difficult to attain and which demands such great efforts, and turns instead to the easier ones, and finally to the easiest of all, the infantile fantasies, which are then elaborated into real incest fantasies. The fact that, whenever there is a disturbance of psychological adaptation, we always find an excessive development of these fantasies must likewise be conceived, as I pointed out before, as a regressive phenomenon. That is to say, the incest fantasy is of secondary and not of

causal significance, while the primary cause is the resistance of human nature to any kind of exertion. Accordingly, drawing back from certain tasks cannot be explained by saying that man prefers the incestuous relationship, rather he falls back into it because he shuns exertion. Otherwise we would have to say that resistance to conscious effort is identical with preference for the incestuous relationship. This would be obvious nonsense, since not only primitive man but animals too have a mighty dislike of all intentional effort, and are addicted to absolute laziness until circumstances prod them into action. Neither of primitive people nor of animals can it be asserted that preference for incestuous relationships is the cause of their aversion to efforts at adaptation, for, especially in the case of animals, there can be absolutely no question of an incestuous relationship.

[471] Characteristically, the child expressed joy not at the prospect of doing her best for the teacher but at being allowed to love him. That was the thing she heard first, because it suited her best. Her relief came from the confirmation that she was justified in loving him—even without making any special effort first.

[472] The conversation then went on to the story of the blackmail, which she told again in detail. We learn, furthermore, that she tried to force open her money-box, and when she did not succeed she tried to steal the key from her mother. She also made a clean breast of the other matter: she had made fun of the teacher because he was much nicer to the other girls than to her. But it was true that she had got worse at his lessons, especially in arithmetic. Once she did not understand something, but had not dared to ask for fear of losing the teacher’s esteem. Consequently she made mistakes, fell behind, and really did lose it. As a result, she got into a very unsatisfactory position with her teacher.

[473] About this time it happened that a girl in her class was sent home because she felt sick. Soon after, the same thing happened to her. In this way, she tried to get away from school, which she no longer liked. The loss of her teacher’s esteem led her, on the one hand, to insult him and, on the other, into the affair with the little boy, obviously as a compensation for her lost relationship with the teacher. The explanation

she was now given was a simple hint: she would be doing her teacher a good turn if she took pains to understand his lessons by asking questions in time. I may add that this hint had good results; from that moment the little girl became the best pupil and missed no more arithmetic lessons.

[474] A point worth stressing in the story of the blackmail is its compulsive character and the lack of freedom it shows in the girl. This is a quite regular phenomenon. As soon as anyone permits his libido to draw back from a necessary task, it becomes autonomous and, regardless of the protests of the subject, chooses its own goals and pursues them obstinately. It is therefore quite common for a person leading a lazy and inactive life to be peculiarly prone to the compulsion of libido, that is, to all kinds of fears and involuntary constraints. The fears and superstitions of primitives furnish the best proof of this, but the history of our own civilization, especially the civilization of antiquity, provides ample confirmation as well. Non-employment of the libido makes it ungovernable. But we must not believe that we can save ourselves permanently from the compulsion of libido by forced efforts. Only to a very limited extent can we consciously set tasks for the libido; other natural tasks are chosen by the libido itself because it is destined for them. If these tasks are avoided, even the most industrious life avails nothing, for we have to consider all the conditions of human nature. Innumerable neurasthenias from overwork can be traced back to this cause, for work done amid internal conflicts creates nervous exhaustion.

THIRD INTERVIEW

[475] The girl related a dream she had had when she was five years old, which made an unforgettable impression on her. “I’ll never forget the dream as long as I live,” she said. I would like to add here that such dreams are of quite special interest. The longer a dream remains spontaneously in the memory, the greater is the importance to be attributed to it. This is the dream: *“I was in a wood with my little brother, looking for strawberries. Then a wolf came and jumped at me. I fled up a staircase, the wolf after me. I fell down and the wolf bit me in the leg. I awoke in deadly fear.”*

[476] Before we take up the associations given us by the little girl, I will try to form an arbitrary opinion as to the possible content of the dream, and then see how our results compare with the associations given by the child. The beginning of the dream reminds us of the well-known fairytale of Little Red Riding-hood, which is, of course, known to every child. The wolf ate the grandmother first, then took her shape, and afterwards ate Little Red Ridinghood. But the hunter killed the wolf, cut open the belly, and Little Red Ridinghood sprang out safe and sound.

[477] This motif is found in countless myths all over the world, and is the motif of the Bible story of Jonah. The meaning immediately lying behind it is astro-mythological: the sun is swallowed by the sea monster and is born again in the morning. Of course, the whole of astro-mythology is at bottom nothing but psychology—unconscious psychology—projected into the heavens; for myths never were and never are made consciously, they arise from man's unconscious. This is the reason for the sometimes miraculous similarity or identity of myth-forms among races that have been separated from each other in space ever since time began. It explains, for instance, the extraordinary distribution of the cross symbol, quite independently of Christianity, of which America offers specially remarkable examples. It is not possible to suppose that myths were created merely in order to explain meteorological or astronomical processes; they are, in the first instance, manifestations of unconscious impulses, comparable to dreams. These impulses were actuated by the regressive libido in the unconscious. The material which comes to light is naturally infantile material—fantasies connected with the incest complex. Thus, in all these so-called solar myths, we can easily recognize infantile theories about procreation, birth, and incestuous relations. In the fairytale of Little Red Ridinghood it is the fantasy that the mother has to eat something which is like a child, and that the child is born by cutting open the mother's body. This fantasy is one of the commonest and can be found everywhere.

[478] From these general psychological considerations we can conclude that the child, in this dream, was elaborating the problem of procreation and birth. As to the wolf, we must probably put him in the father's place, for the child unconsciously attributed to the father any act of violence

towards the mother. This motif, too, is based on countless myths dealing with the violation of the mother. With regard to the mythological parallels, I would like to call your attention to the work of Boas,[1] which includes a magnificent collection of American Indian sagas; then the book by Frobenius, *Das Zeitalter des Sonnengottes;* and finally the works of Abraham, Rank, Riklin, Jones, Freud, Maeder, Silberer, and Spielrein,[2] and my own investigations in *Symbols of Transformation*.

[479] After these general reflections, which I give here for theoretical reasons but which naturally formed no part of the treatment, we will go on to see what the child has to tell us about her dream. Needless to say, she was allowed to speak about her dream just as she liked, without being influenced in any way. She picked first on the bite in the leg, and explained that *she had once been told by a woman who had had a baby that she could still show the place where the stork had bitten her*. This expression is, in Switzerland, a variant of the widespread symbolism of copulation and birth. Here we have a perfect parallelism between our interpretation and the association process of the child. For the first association she produced, quite uninfluenced, goes back to the problem we conjectured above on theoretical grounds. I know that the innumerable cases published in the psychoanalytic literature, which were definitely not influenced, have not been able to quash our critics' contention that we suggest our interpretations to the patients. This case, too, will convince no one who is determined to impute to us the crude mistakes of beginners—or, what is worse, falsification.

[480] After this first association the little patient was asked what the wolf made her think of. She answered, "I think of my father when he is angry." This, too, coincides absolutely with our theoretical considerations. It might be objected that these considerations were made expressly for this purpose and therefore lack general validity. I think this objection vanishes of itself as soon as one has the requisite psychoanalytic and mythological knowledge. The validity of a hypothesis can be seen only on the basis of the right knowledge, otherwise not at all.

[481] The first association put the stork in the place of the wolf; the association to the wolf now brings us to the father. In the popular myth

the stork stands for the father, for he brings the children. The apparent contradiction between the fairytale, where the wolf is the mother, and the dream, where the wolf is the father, is of no importance for the dream or the dreamer. We can therefore dispense with a detailed explanation. I have dealt with this problem of bisexual symbols in my book.[3] As you know, in the legend of Romulus and Remus both animals, the bird Picus and the wolf, were raised to the rank of parents.

[482] Her fear of the wolf in the dream is therefore her fear of the father. The dreamer explained that she was afraid of her father because he was very strict with her. He had also told her that we have bad dreams only when we have done something wrong. She then asked her father, "But what does Mama do wrong? She always has bad dreams."

[483] Once her father slapped her because she was sucking her finger. She kept on doing this despite his prohibition. Was this, perhaps, the wrong she had done? Hardly, because sucking the finger was simply a rather anachronistic infantile habit, of little real interest at her age, and serving more to irritate her father so that he would punish her by slapping. In this way she relieved her conscience of an unconfessed and much more serious "sin": *it came out that she had induced a number of girls of her own age to perform mutual masturbation*.

[484] It was because of these sexual interests that she was afraid of her father. But we must not forget that she had the wolf dream in her fifth year. At that time these sexual acts had not been committed. Hence we must regard the affair with the other girls at most as a reason for her present fear of her father, but that does not explain her earlier fear. Nevertheless, we may expect that it was something similar, some unconscious sexual wish in keeping with the psychology of the forbidden act just mentioned. The character and moral evaluation of this act are naturally far more unconscious to a child than to an adult. In order to understand what could have made an impression on the child so early, we have to ask what happened in her fifth year. *That was the year in which her younger brother was born*. So even then she was afraid of her father. The associations already discussed show us the unmistakable connection between her sexual interests and her fear.

[485] The problem of sex, which nature connects with positive feelings of pleasure, appears in the wolf dream in the form of fear, apparently on account of the bad father, who stands for moral education. The dream was therefore the first impressive manifestation of the sexual problem, obviously stimulated by the recent birth of a younger brother, when as we know all these questions become aired. But because the sexual problem was connected at all points with the history of certain pleasurable physical sensations which education devalues as "bad habits," it could apparently manifest itself only in the guise of moral guilt and fear.

[486] This explanation, plausible though it is, seems to me superficial and inadequate. We then attribute the whole difficulty to moral education, on the unproven assumption that education can cause a neurosis. This is to disregard the fact that even people with no trace of moral education become neurotic and suffer from morbid fears. Furthermore, moral law is not just an evil that has to be resisted, but a necessity born from the innermost needs of man. Moral law is nothing other than an outward manifestation of man's innate urge to dominate and control himself. This impulse to domestication and civilization is lost in the dim, unfathomable depths of man's evolutionary history and can never be conceived as the consequence of laws imposed from without. Man himself, obeying his instincts, created his laws. We shall never understand the reasons for the fear and suppression of the sexual problem in a child if we take into account only the moral influences of education. The real reasons lie much deeper, in human nature itself, perhaps in that tragic conflict between nature and culture, or between individual consciousness and collective feeling.

[487] Naturally, it would have been pointless to give the child a notion of the higher philosophical aspects of the problem; it would certainly have had not the slightest effect. It was sufficient to remove the idea that she was doing something wrong in being interested in the procreation of life. So it was made clear to her how much pleasure and curiosity she was bringing to bear on the problem of generation, and how her groundless fear was only pleasure turned into its opposite. The affair of her masturbation met with tolerant understanding, and the discussion was limited to drawing the child's attention to the aimlessness of her action.

At the same time, it was explained to her that her sexual actions were mainly an outlet for her curiosity, which she might satisfy in a better way. Her great fear of her father expressed an equally great expectation, which because of the birth of her little brother was closely connected with the problem of generation. These explanations justified the child in her curiosity. With that, a large part of the moral conflict was removed.

FOURTH INTERVIEW

[488] The little girl was now much nicer and much more confiding. Her former constrained and unnatural manner had quite disappeared. She brought a dream which she dreamt after the last interview. It ran: *“I am as tall as a church-spire and can see into every house. At my feet are very small children, as small as flowers are. A policeman comes. I say to him, ‘If you dare to make any remark, I shall take your sword and cut off your head.’* “

[489] In the analysis of the dream she made the following remark: “I would like to be taller than my father, because then he would have to obey me.” She at once associated the policeman with her father, who was a military man and had, of course, a sword. The dream clearly fulfils her wish. As a church-spire, she is much bigger than her father, and if he dares to make a remark he will be decapitated. The dream also fulfils the natural wish of the child to be “big,” i.e., grown-up, and to have children playing at her feet. In this dream she got over her fear of her father, and from this we may expect a significant increase in her personal freedom and feeling of security.

[490] On the theoretical side, we may regard this dream as a clear example of the compensatory significance and teleological function of dreams. Such a dream must leave the dreamer with a heightened sense of the value of her own personality, and this is of great importance for her personal well-being. It does not matter that the symbolism was not clear to the consciousness of the child, for the emotional effect of symbols does not depend on conscious understanding. It is more a matter of intuitive knowledge, the source from which all religious symbols derive

their efficacy. Here no conscious understanding is needed; they influence the psyche of the believer through intuition.

FIFTH AND SIXTH INTERVIEWS

[491] The child related the following dream which she had dreamt in the meantime: “*I was standing with my whole family on the roof. The windows of the houses on the other side of the valley shone like fire. The rising sun was reflected in them. Suddenly I saw that the house at the corner of our street was really on fire. The fire came nearer and nearer and took hold of our house. I ran into the street, and my mother threw all sorts of things after me. I held out my apron, and among other things she threw me a doll. I saw that the stones of our house were burning, but the wood remained untouched.*”

[492] The analysis of this dream presented peculiar difficulties and had to be extended over two sittings. It would lead me too far to describe the whole of the material this dream brought forth; I shall have to limit myself to what is most essential. The salient associations began with the peculiar image of the stones of the house burning but not the wood. It is sometimes worth while, especially with longer dreams, to take the most striking images and analyse them first. This is not the general rule but it may be excused here by the practical need for abbreviation.

[493] “It is queer, like in a fairytale,” said the little patient about this image. She was shown, with the help of examples, that fairytales always have a meaning. “But not all fairytales,” she objected. “For instance, the tale of Sleeping Beauty. What could that mean?” It was explained to her that Sleeping Beauty had to wait for a hundred years in an enchanted sleep until she could be set free. Only the hero whose love overcame all difficulties and who boldly broke through the thorny hedge could rescue her. Thus one often has to wait for a long time before one obtains one’s heart’s desire.

[494] This explanation was suited to the child’s understanding, and on the other hand was perfectly in accord with the history of this fairytale motif. The tale of Sleeping Beauty has obvious connections with an ancient

spring and fertility myth, and at the same time contains a problem which has a remarkably close affinity with the psychological situation of a rather precocious little girl of eleven. It belongs to a whole cycle of legends in which a virgin, guarded by a dragon, is rescued by a hero. Without wishing to embark on an interpretation of this myth, I would like to emphasize its astronomical or meteorological components, clearly brought out in the Edda. The earth, in the form of a maiden, is held prisoner by the winter, and is covered with ice and snow. The young spring sun, the fiery hero, melts her out of her frosty prison, where she had long awaited her deliverer.

[495] The association given by the little girl was chosen by her simply as an example of a fairytale without a meaning, and not as a direct association to the dream-image of the burning house. About this she only made the remark, “It is queer, like in a fairytale,” by which she meant impossible; for to say that stones burn is something completely impossible, nonsensical, and like a fairytale. The explanation she was given showed her that “impossible” and “like a fairytale” are only partly identical, since fairytales do have a great deal of meaning. Although this particular fairytale, from the casual way it was mentioned, seems to have nothing to do with the dream, it deserves special attention because it appeared, as though by chance, while the dream was being analysed. The unconscious came out with just this example, and this cannot be mere chance but is somehow characteristic of the situation at that moment. In analysing dreams we have to look out for these seeming accidents, for in psychology there are no blind accidents, much as we are inclined to assume that these things are pure chance. You can hear this objection as often as you like from our critics, but for a really scientific mind there are only causal relationships and no accidents. From the fact that the little girl chose Sleeping Beauty as an example we must conclude that there was some fundamental reason for this in the psychology of the child. This reason was the comparison or partial identification of herself with Sleeping Beauty; in other words, in the psyche of the child there was a complex which found expression in the Sleeping Beauty motif. The explanation given to the child took account of this inference.

[496] Nevertheless, she was not quite satisfied, and still doubted that fairytales have a meaning. As a further example of an incomprehensible fairytale she cited Snow White, who lay enclosed in a glass coffin, in the sleep of death. It is not difficult to see that Snow White belongs to the same cycle of myths as Sleeping Beauty. It contains even clearer indications of the myth of the seasons. The myth material chosen by the child points to an intuitive comparison with the earth, held fast by the winter's cold, awaiting the liberating sun of spring.

[497] This second example confirms the first one and the explanation we have given. It would be difficult to maintain that the second example, accentuating as it does the meaning of the first, was suggested by the explanation. The fact that the little girl gave Snow White as another example of a meaningless fairytale proves that she did not realize the identity of Snow White and Sleeping Beauty. We may therefore conjecture that Snow White arose from the same unconscious source as Sleeping Beauty, namely, from a complex concerned with the expectation of coming events. These events may be compared exactly with the deliverance of the earth from the prison of winter and its fertilization by the rays of the spring sun. As you know, from ancient times the fertilizing spring sun was associated with the symbol of the bull, the animal embodying the mightiest procreative power. Although we cannot yet see the connection between these insights and the dream, we will hold fast to what we have gained and proceed with our analysis.

[498] The next dream-image shows the little girl catching the doll in her apron. Her first association tells us that her attitude and the whole situation in the dream reminded her of *a picture she knew, showing a stork flying over a village, with little girls standing in the street holding out their aprons and shouting to the stork to bring them a baby*. She added that she herself had long wanted a baby brother or sister. This material, given spontaneously, is clearly related to the myth-motifs already discussed. It is evident that the dream was in fact concerned with the same problem of the awakening reproductive instinct. Of course, nothing of these connections was mentioned to the child.

[499] Then, abruptly, after a pause, came the next association: “Once, when I was five years old, I lay down in the street and a bicycle passed over my stomach.” This highly improbable story proved to be, as might be expected, a fantasy, which had become a paramnesia. Nothing of the kind had ever happened, but on the other hand we learn that at school *the little girls used to lie crosswise over each other’s bodies and trample with their legs*.

[500] Anyone who has read the analyses of children published by Freud and myself[4] will recognize in this childish game the same basic motif of trampling, which we considered must have a sexual undercurrent. This view, demonstrated by our earlier work, was borne out by the next association of our little patient: “I would much rather have a real baby than a doll.”

[501] All this highly remarkable material brought out by the stork fantasy suggests the typical beginnings of an infantile sexual theory, and at the same time shows us the point round which the little girl’s fantasies were revolving.

[502] It may be of interest to know that the motif of treading or trampling can be found in mythology. I have documented this in my book on libido.[5] The use of these infantile fantasies in the dream, the paramnesia about the bicyclist, and the tense expectation expressed in the Sleeping Beauty motif all show that the child’s inner interest was dwelling on certain problems that had to be solved. Probably the fact that her libido was attracted by the problem of generation was the reason why her interest flagged at school, so that she fell behind in her work. How very much this problem fascinates girls of twelve and thirteen I was able to show in a special case, published in “A Contribution to the Psychology of Rumour.”[6] It is the cause of all that smutty talk among children, and of mutual attempts at enlightenment which naturally turn out to be very nasty and often ruin the child’s imagination for good. Even the most careful protection cannot prevent them from one day discovering the great secret, and then probably in the dirtiest way. It would be far better for children to learn the facts of life cleanly and in good time, so that they would not need to be enlightened in ugly ways by their playmates.

[503] These and other indications showed that the moment had come for a certain amount of sexual enlightenment. The little girl listened attentively to the talk that followed, and then asked very seriously: “So then I really can’t have a child?” This question led to an explanation about sexual maturity.

SEVENTH INTERVIEW

[504] The little girl began by remarking that she perfectly understood why it was not yet possible for her to have a child; she had therefore renounced all idea of it. But this time she did not make a good impression. It turned out that she had lied to her teacher. She had been late to school, and told the teacher that she had had to go somewhere with her father and had therefore arrived late. In reality, she had been too lazy to get up in time. She told a lie because she was afraid of losing the teacher’s favour by confessing the truth. This sudden moral defeat requires an explanation. According to the principles of psychoanalysis, a sudden and striking weakness can only come about when the analysand does not draw from the analysis the conclusions that are necessary at the moment, but still keeps the door open to other possibilities. This means, in our case, that though the analysis had apparently brought the libido to the surface, so that an improvement of personality could occur, for some reason or other the adaptation was not made, and the libido slipped back along its old regressive path.

EIGHTH INTERVIEW

[505] The eighth interview proved that this was indeed the case. Our patient had withheld an important piece of evidence in regard to her ideas of sex, and one which contradicted the analyst’s explanation of sexual maturity. *She had not mentioned a rumour current in the school that a girl of eleven had got a baby from a boy of the same age*. This rumour was proved to be groundless; it was a fantasy, fulfilling the secret wishes of girls of this age. Rumours often start in this way, as I have tried to show in my paper on the psychology of rumour. They air the unconscious fantasies, and in this function they correspond to dreams and myths. This

rumour kept another way open: she need not wait, she could have a child already at eleven. The contradiction between the accepted rumour and the analyst’s explanation created resistances against the latter, as a result of which it was immediately devalued. All the other information and instruction fell to the ground at the same time, giving rise to momentary doubt and uncertainty. The libido then took to its former path and became regressive. This moment was the moment of the relapse.

NINTH INTERVIEW

[506] This interview contributed some important details to the history of her sexual problem. First came a significant dream fragment: *“I was with other children in a clearing in a wood, surrounded by beautiful fir-trees. It began to rain, there was thunder and lightning, and it grew dark. Then I suddenly saw a stork in the air.”*

[507] Before we start analysing this dream, I must mention its parallels with certain mythological ideas. To anyone familiar with the works of Adalbert Kuhn and Steinthal, to which Abraham[7] has recently drawn attention, the curious combination of thunderstorm and stork is not at all surprising. Since ancient times the thunderstorm has had the meaning of an earth-fecundating act, it is the cohabitation of Father Heaven and Mother Earth, where the lightning takes over the role of the winged phallus. The stork in flight is just the same thing, a winged phallus, and its psychosexual meaning is known to every child. But the psychosexual meaning of the thunderstorm is not known to everyone, and certainly not to our little patient. In view of the whole psychological constellation previously described, the stork must unquestionably be given a psychosexual interpretation. The fact that the thunderstorm is connected with the stork and, like it, has a psychosexual meaning seems difficult to accept at first. But when we remember that psychoanalytic research has already discovered a vast number of purely mythological connections in the unconscious psychic products, we may conclude that the psychosexual link between the two images is present also in this case. We know from other experiences that those unconscious strata which once produced mythological formations are still active in modern individuals

and are unceasingly productive. Only, the production is limited to dreams and to the symptomatology of the neuroses and psychoses, as the correction by reality is so strong in the modern mind that it prevents them from being projected upon the real world.

[508] To return to the analysis of the dream: the associations that led to the heart of this image began with the idea of *rain during a thunderstorm*. Her actual words were: “I think of water—my uncle was drowned in the water—it must be awful to be stuck in the water like that, in the dark—but wouldn’t the baby drown in the water, too? Does it drink the water that is in the stomach? Queer, when I was ill Mama sent my water to the doctor. I thought he was going to mix something with it like syrup, which babies grow from, and Mama would have to drink it.”

[509] We see with unquestionable clearness from this string of associations that the child connected psychosexual ideas specifically relating to fertilization with the rain during the thunderstorm.

[510] Here again we see that remarkable parallelism between mythology and the individual fantasies of our own day. This series of associations is so rich in symbolical connections that a whole dissertation could be written about them. The symbolism of drowning was brilliantly interpreted by the child herself as a pregnancy fantasy, an explanation given in the psychoanalytic literature long ago.

TENTH INTERVIEW

[511] The tenth interview was taken up with the child’s spontaneous description of infantile theories about fertilization and birth, which could now be dismissed as settled. The child had always thought that the urine of the man went into the body of the woman, and that from this the embryo would grow. Hence the child was in the water, i.e., urine, from the beginning. Another version was that the urine was drunk with the doctor’s syrup, the child grew in the head, the head was then split open to help the child grow, and one wore hats to cover this up. She illustrated this by a little drawing, showing a childbirth through the head. This idea is archaic and highly mythological. I need only remind you of the birth of

Pallas Athene, who came out of her father's head. The fertilizing significance of urine is also mythological; we find excellent proofs of this in the Rudra songs of the Rig-veda.[8] I should also mention something which the mother corroborated, that once the little girl, long before the analysis, declared that she saw a jack-in-a-box dancing on her younger brother's head—a fantasy which may well be the origin of this birth-theory.

[512] The drawing had a remarkable affinity with certain artefacts found among the Bataks of Sumatra. They are called magic wands or ancestor-columns, and consist of a number of figures standing one on top of another. The explanation given by the Bataks themselves of these columns, and generally regarded as nonsense, is in remarkable agreement with the mentality of a child, still caught in the infantile bonds. They assert that these superimposed figures are members of a family who, because they committed incest, were entwined by a snake while being bitten to death by another snake. This explanation runs parallel with the assumptions of our little patient, for her sexual fantasies, too, as we saw from the first dream, revolved round her father. Here, as with the Bataks, the primary condition is the incest relationship.

[513] A third version was the theory that the child grew in the intestinal canal. This version had its own symptomatic phenomenology thoroughly in accord with Freudian theory. The girl, acting on her fantasy that children were "sicked up," frequently tried to induce nausea and vomiting. She also performed regular pushing-exercises in the water-closet, in order to push the child out. In this situation it was not surprising that the first and most important symptoms in the manifest neurosis were those of nausea.

[514] We have now got so far with our analysis that we can cast a glance back at the case as a whole. We found, behind the neurotic symptoms, complicated emotional processes that were undoubtedly connected with these symptoms. If we may venture to draw general conclusions from such limited material, we can reconstruct the course of the neurosis somewhat as follows.

[515] At the gradual approach of puberty, the libido of the child produced in her an emotional rather than an objective attitude to reality. She developed a crush on her teacher, and this sentimental indulgence in starry-eyed fantasies obviously played a greater role than the thought of the increased efforts which such a love really demanded. Consequently, her attention fell off, and her work suffered. This upset her former good relationship with the teacher. He became impatient, and the girl, who had been made over-demanding by conditions at home, grew resentful instead of trying to improve her work. As a result, her libido turned away from the teacher as well as from her work and fell into that characteristically compulsive dependence on the poor young boy, who exploited the situation as much as he could. For when an individual consciously or unconsciously lets his libido draw back from a necessary task, the unutilized (so-called "repressed") libido provokes all sorts of accidents, within and without—symptoms of every description which force themselves on him in a disagreeable way. Under these conditions the girl's resistance to going to school seized on the first available opportunity, which soon presented itself in the form of the other girl who was sent home because she felt sick. Our patient duly copied this.

[516] Once out of school, the way was open to her fantasies. Owing to the libido regression, the symptom-creating fantasies were aroused in real earnest and acquired an influence which they never had before, for previously they had never played such an important role. But now they took on a highly significant content and seemed themselves to be the real reason why the libido regressed to them. It might be said that the child, with her fantasy-spinning nature, saw her father too much in the teacher, and consequently developed incestuous resistances against him. As I explained earlier, I think it is simpler and more probable to assume that it was temporarily convenient for her to see her teacher as the father. Since she preferred to follow the secret promptings of puberty rather than her obligations to the school and her teacher, she allowed her libido to pick on the little boy, from whom, as we saw in the analysis, she promised herself certain secret advantages. Even if the analysis had proved she really did have incestuous resistances against her teacher owing to the transference of the father-imago, these resistances would only have been

secondarily blown-up fantasies. The prime mover would in any case be laziness or convenience, or, to put it in more scientific language, the principle of least resistance.

[517] (I think there are cogent reasons for assuming—I mention this only in passing—that it is not always a perfectly legitimate interest in sexual processes and their unknown nature that accounts for the regression to infantile fantasies. For we find the same regressive fantasies even in adults who have long known all about sex, and here there is no legitimate reason. It is also my impression that young people in analysis often try to keep up their alleged ignorance, despite enlightenment, in order to direct attention there rather than to the task of adaptation. Although there is no doubt in my mind that children do exploit their real or pretended ignorance, it must on the other hand be stressed that young people have a right to be sexually enlightened. As I said before, for many children it would be a distinct advantage if this were decently done at home.

[518] Through the analysis it became clear that independently of the progressive development of the child's life a regressive movement had set in, which caused the neurosis, the disunion with herself.) By following this regressive tendency, the analysis discovered a keen sexual curiosity, circling round quite certain definite problems. The libido, caught in this labyrinth of fantasies, was made serviceable again as soon as the child was freed from the burden of mistaken infantile fantasies by being enlightened. This also opened her eyes to her own attitude to reality and gave her an insight into her true potentialities. The result was that she was able to look at her immature, adolescent fantasies in an objective and critical way, and to give up these and all other impossible desires, using her libido instead for a positive purpose, in her work and in obtaining the goodwill of her teacher. The analysis brought her great peace of mind, as well as marked intellectual improvement in school; for the teacher himself confirmed that the little girl soon became the best pupil in his class.

[519] (In principle, this analysis is no different from that of an adult. Only the sexual enlightenment would be dropped, but its place would be taken by something very similar, namely, enlightenment concerning the

infantilism of his previous attitude to reality and how to acquire a more reasonable one. Analysis is a refined technique of Socratic maieutics, and it is not afraid to tread the darkest paths of neurotic fantasy.)

[520] I hope that with the help of this very condensed example I may have succeeded in giving you some insight not only into the actual course of treatment, and into the difficulties of technique, but no less into the beauty of the human psyche and its endless problems. I have deliberately stressed certain parallels with mythology in order to indicate some of the uses to which psychoanalytic insights may be put. At the same time, I would like to point out the implications of this discovery. The marked predominance of mythological elements in the psyche of the child gives us a clear hint of the way the individual mind gradually develops out of the "collective mind" of early childhood, thus giving rise to the old theory of a state of perfect knowledge before and after individual existence.

[521] (These mythological references which we find in children are also met with in dementia praecox and in dreams. They offer a broad and fertile field of work for comparative psychological research. The distant goal to which these investigations lead is a phylogeny of the mind, which, like the body, has attained its present form through endless transformations. The rudimentary organs, as it were, which the mind still possesses can be found in full activity in other mental variants and in certain pathological conditions.)

[522] With these hints I have now reached the present position of our research, and have sketched out at least those insights and working hypotheses which define the nature of my present and future work. (I have endeavoured to propound certain views, which deviate from the hypotheses of Freud, not as contrary assertions but as illustrations of the organic development of the basic ideas Freud has introduced into science. It would not be fitting to disturb the progress of science by adopting the most contradictory standpoint possible and by making use of an entirely different nomenclature—that is the privilege of the very few; but even they find themselves obliged to descend from their lonely eminence after a time and once more take part in the slow progress of average

experience by which ideas are evaluated. I hope, also, that my critics will not again accuse me of having contrived my hypotheses out of thin air. I would never have ventured to override the existing ones had not hundreds of experiences shown me that my views fully stand the test in practice. No great hopes should be set on the results of any scientific work; yet if it should find a circle of readers, I hope it will serve to clear up various misunderstandings and remove a number of obstacles which bar the way to a better comprehension of psychoanalysis. Naturally my work is no substitute for lack of psychoanalytic experience. Anyone who wishes to have his say in these matters will have, now as then, to investigate his cases as thoroughly as was done by the psychoanalytic school.)

III

GENERAL ASPECTS OF PSYCHOANALYSIS

PSYCHOANALYSIS AND NEUROSIS

SOME CRUCIAL POINTS IN PSYCHOANALYSIS

PREFACES TO “COLLECTED PAPERS ON ANALYTICAL PSYCHOLOGY”

GENERAL ASPECTS OF PSYCHOANALYSIS[1]

[523] Psychoanalysis today is as much a science as a technique. From the results of the technique there has grown up, in the course of the years, a new psychological science which could be called "analytical psychology." I would willingly use Bleuler's expression "depth psychology" instead, if this kind of psychology were concerned only with the unconscious.

[524] Psychologists and doctors in general are by no means conversant with this particular branch of psychology, owing to the fact that its technical foundations are as yet comparatively unknown to them. The main reason for this is that the new method is of an essentially psychological nature, and therefore belongs neither to the realm of medicine nor to that of philosophy. The medical man has, as a rule, but little knowledge of psychology, and the philosopher has no medical knowledge. Consequently, there is a lack of suitable soil in which to plant the spirit of this new method. Furthermore, the method itself appears to many persons so arbitrary that they cannot reconcile its use with their scientific conscience. The formulations of Freud, the founder of the method, laid great stress on the sexual factors; this aroused strong prejudice and repelled many scientific men. I need hardly remark that such an antipathy is not a logical reason for rejecting a new method. In psychoanalysis, moreover, there is much discussion of case-histories, but little discussion of principle. This, too, has naturally led to the method being little understood and therefore to its being regarded as unscientific. For if we do not acknowledge the scientific character of the method, we cannot acknowledge the scientific character of its results.

[525] Before discussing the principles of the psychoanalytic method, I must mention two common prejudices against it. The first is that psychoanalysis is nothing but a rather deep and complicated form of *anamnesis*. Now it is well known that an anamnesis is based on the statements made by the patient's family, and on his own conscious self-knowledge in reply to direct questions. The psychoanalyst naturally

makes his anamnesis as carefully as any other specialist. But this is merely the patient's history and must not be confused with analysis. Analysis is the reduction of actual contents of consciousness, ostensibly of a fortuitous nature, to their psychological determinants. This process has nothing to do with the anamnestic reconstruction of the history of the illness.

[526] The second prejudice, which is based, as a rule, on a superficial knowledge of psychoanalytic literature, is that psychoanalysis is a *method of suggestion*, by which some kind of systematic teaching is instilled into the patient, thereby effecting a cure in the manner of mental healing or Christian Science. Many analysts, especially those who have practised psychoanalysis for a long time, previously used suggestion therapy, and therefore know very well what suggestion is and what it is not. They know that the psychoanalyst's method of working is diametrically opposed to that of the hypnotist. In direct contrast with suggestion therapy, the psychoanalyst does not attempt to force anything on his patient which the latter does not see for himself and find plausible with his own understanding. Faced with the constant demand of the neurotic for suggestions and advice, the analyst just as constantly endeavours to get him out of this passive attitude and make him use his common sense and powers of criticism in order to equip him for an independent life. We have often been accused of forcing interpretations upon patients, interpretations that are often quite arbitrary. I wish one of these critics would try forcing arbitrary interpretations on my patients, who are very often persons of great intelligence and highly cultured—indeed, not infrequently my own colleagues. The impossibility of such an undertaking would quickly be demonstrated. In psychoanalysis we are entirely dependent on the patient and on his powers of judgment, for the reason that the very nature of analysis consists in leading him to a knowledge of himself. The principles of psychoanalysis are so utterly different from those of suggestion therapy that on this point the two methods cannot be compared.

[527] An attempt has also been made to compare psychoanalysis with the ratiocinative method of Dubois,[2] which is an essentially rational procedure. But this comparison does not hold good, for the psychoanalyst

strictly avoids reasoning and arguing with his patients. Naturally he has to listen to their conscious problems and conflicts and take note of them, but not for the purpose of fulfilling their desire to obtain advice or instruction with regard to the conduct of their lives. The problems of a neurotic cannot be solved by advice and conscious reasoning. I do not doubt that good advice at the right time can produce good results, but I do not know how anyone can believe that the psychoanalyst can always give the right advice at the right moment. The neurotic conflict is frequently, indeed usually, of such a nature that advice cannot possibly be given. Furthermore, it is well known that the patient only wants authoritative advice in order to shuffle off the burden of responsibility, referring himself and others to the opinion of a higher authority. So far as reasoning and persuasion are concerned, their effect as a method of therapy is as little to be doubted as that of hypnosis. What I would like to stress here is simply its difference in principle from psychoanalysis.

[528] In contradistinction to all previous methods, psychoanalysis endeavours to overcome the disorders of the neurotic psyche through the unconscious, and not from the conscious side. In this work we naturally have need of the patient’s conscious contents, for only in this way can we reach the unconscious. The conscious content from which our work starts is the material supplied by the anamnesis. In many cases the anamnesis provides useful clues which make the psychic origin of his symptoms clear to the patient. This, of course, is necessary only when he is convinced that his neurosis is organic in origin. But even in those cases where the patient is convinced from the start of the psychic nature of his illness, a critical survey of the anamnesis can be of advantage, for it discloses a psychological context of which he was unaware before. In this way problems that need special discussion are frequently brought to the surface. This work may occupy many sittings. Finally, the elucidation of the conscious material comes to an end when neither the analyst nor the patient can contribute anything further of decisive importance. In the most favourable cases the end comes with the formulation of the problem which, very often, proves insoluble.

[529] Let us take the case of a man who was once healthy but developed a neurosis between the ages of thirty-five and forty. His position in life was

secure, and he had a wife and children. Parallel with his neurosis he developed an intense resistance to his professional work. He observed that the first symptoms of neurosis became noticeable when he had to overcome a particular difficulty in his career. Later they got worse with each successive difficulty that arose. Passing ameliorations occurred whenever fortune favoured him in his work. The problem that presented itself after a critical discussion of the anamnesis was as follows: the patient knew that he could improve his work and that the satisfaction resulting from this would bring about the much-desired improvement in his neurotic condition. But he was unable to do his work more efficiently because of his great resistance to it. This problem is rationally insoluble. Psychoanalytic treatment must therefore start at the critical point, his resistance to his work.

[530] Let us take another case. A woman of forty, mother of four children, became neurotic four years ago after the death of one of them. A new pregnancy, followed by the birth of another child, brought a great improvement in her condition. She now thought that if she could have yet another child she would be helped still further. She knew, however, that she could not have any more children, so she tried to devote her energies to philanthropic interests. But she failed to obtain the least satisfaction from this work. She noticed a distinct alleviation whenever she succeeded in giving real interest to something, however fleetingly, but she felt quite incapable of discovering anything that would bring her lasting interest and satisfaction. The rational insolubility of the problem is clear. Psychoanalytic work must begin with the question of what prevented the patient from developing any interest beyond her longing for a child.

[531] Since we cannot pretend that we know from the outset what the solution of such problems is, we have to rely on the clues furnished by the individuality of the patient. Neither conscious questioning nor rational advice can aid us in the discovery of these clues, for the obstacles which prevent us from finding them are hidden from the patient’s consciousness. There is, therefore, no clearly prescribed way of getting at the unconscious obstacles. The only rule that psychoanalysis lays down in this respect is: let the patient talk about anything that comes

into his head. The analyst must observe carefully what the patient says and, to begin with, simply take note of it without attempting to force his own opinions upon him. We notice, for instance, that the first-named patient began by talking about his marriage, which we had been told was normal. We now learn that he has difficulties with his wife and does not understand her in the least. This prompts the analyst to remark that evidently the patient's professional work is not his only problem, and that his relation to his wife also needs reviewing. This starts a train of associations all relating to the marriage. Then follow associations about the love-affairs he had before he was married. These experiences, recounted in detail, show that the patient was always rather peculiar in his more intimate relations with women, and that his peculiarity took the form of a childish egoism. This is a new and surprising point of view for him, and explains to him many of his misfortunes with women.

[532] We cannot in every case get as far as this on the principle of simply letting the patient talk; few patients have their psychic material so much on the surface. Furthermore, many patients have a real resistance against speaking freely about what occurs to them on the spur of the moment, some because it is too painful for them to tell it to an analyst whom they may not entirely trust, others because apparently nothing occurs to them and they force themselves to talk of things about which they are more or less indifferent. This trick of not talking to the point does not prove that the patient is *consciously* concealing certain painful contents; it can also occur quite unconsciously. In such cases it sometimes helps the patient to tell him that he need not force himself, but need only seize on the very first thoughts that come to him, no matter how unimportant or ridiculous they may seem. In certain cases even these instructions are of no use, and then the analyst has to resort to other measures. One of these is the association experiment, which usually gives apt information concerning the main tendencies of the patient at that moment.

[533] A second expedient is the analysis of dreams; this is the real instrument of psychoanalysis. We have already experienced so much opposition to dream analysis that a brief exposition of its principles may not be out of place. The interpretation of dreams, as well as the meaning given to them, is, as we know, in bad odour. It is not long since

oneiromancy was practised and believed in; nor is the time long past when even the most enlightened persons were still under the spell of superstition. It is therefore comprehensible that our age should still entertain a lively fear of superstitions that have been only partially overcome. This nervousness in regard to superstition is largely responsible for the opposition to dream-interpretation, but psychoanalysis is in no way to blame for this. We select the dream as an object not because we pay it the homage of superstitious admiration, but because it is a psychic product that is independent of consciousness. We ask for the patient's free associations, but he gives us little or nothing, or else something forced or irrelevant. A dream is a free association, a free fantasy, it is not forced, and is just as much a psychic phenomenon as an association.[3]

[534] I cannot disguise the fact that in practice, especially at the beginning of an analysis, we do not under all circumstances make complete and ideal analyses of the dreams. Usually we gather the dream-associations together until the problem which the patient is hiding from us becomes so clear that he can recognize it himself. This problem is then worked through consciously until it is cleared up as far as possible and we are once again confronted with an unanswerable question.

[535] You will now ask what is to be done when the patient does not dream at all. I can assure you that hitherto all patients, even those who claimed never to have dreamed before, began to dream when they went through analysis. On the other hand it frequently happens that patients who began by dreaming vividly are suddenly no longer able to remember their dreams. The empirical and practical rule which I have adopted is that the patient, if he does not dream, still has sufficient conscious material which he is keeping back for certain reasons. A common reason is: “I am in the analyst's hands and am quite willing to be treated by him. But the analyst must do the work, I shall remain passive in the matter.” Sometimes there are resistances of a more serious nature. For instance, patients who cannot admit certain moral defects in themselves project them upon the analyst, calmly assuming that since he is more or less deficient morally they cannot communicate certain unpleasant things to him.

[536] If, then, a patient does not dream from the beginning or ceases to dream, he is keeping back material which would be capable of conscious elaboration. Here the relationship between analyst and patient may be considered one of the chief obstacles. It can prevent them both, the analyst as well as the patient, from seeing the situation clearly. We must not forget that as the analyst shows, and must show, a searching interest in the psychology of his patient, so the patient, if he has an active mind, feels his way into the psychology of the analyst and adopts a corresponding attitude towards him. The analyst is blind to the attitude of his patient to the exact extent that he does not see himself and his own unconscious problems. For this reason I maintain that a doctor must himself be analysed before he practises analysis. Otherwise analysis may easily be a great disappointment to him, because he can, under certain circumstances, get absolutely stuck and then lose his head. He is then readily inclined to assume that psychoanalysis is nonsense, so as to avoid having to admit that he has run his vessel aground. If you are sure of your own psychology you can confidently tell your patient that he does not dream because there is conscious material still to be dealt with. I say you must be sure of yourself at such moments, for the criticisms and unsparing judgments to which you sometimes have to submit can be excessively disturbing to one who is unprepared to meet them. The immediate consequence of the analyst's losing his balance is that he begins to argue with his patient in order to maintain his influence over him. This, of course, renders all further analysis impossible.

[537] I have told you that, in the first instance, dreams need be used only as a source of material for analysis. At the beginning of an analysis it is not only unnecessary, but at times unwise, to give a so-called complete interpretation of a dream. A complete and really exhaustive interpretation is very difficult indeed. The interpretations you sometimes come across in the psychoanalytic literature are very often one-sided and, not infrequently, contestable formulations. I include among these the one-sided sexual reductions of the Viennese school. In view of the myriad-sidedness of the dream-material one must beware of all one-sided formulations. The many-sided meaning of a dream, rather than its singleness of meaning, is of the utmost value especially at the beginning

of the treatment. Thus, a patient had the following dream not long after her treatment had begun. *She was in a hotel in a strange city. Suddenly a fire broke out. Her husband and her father, who were with her, helped her in the rescue work.*

[538] The patient was intelligent, extraordinarily sceptical, and absolutely convinced that dream-analysis was nonsense. I had the greatest difficulty in inducing her to give it even one trial. I selected the fire, the most conspicuous event in the dream, as the starting-point for associations. The patient informed me that she had recently read in the newspapers that a certain hotel in Zurich had been burnt down; that she remembered the hotel because she had once stayed there. At the hotel she had made the acquaintance of a man, and from this a somewhat questionable love-affair developed. In connection with this story the fact came out that she had already had quite a number of similar adventures, all of them decidedly frivolous. This important bit of past history was brought out by the very first association. In her case it would have been pointless to make clear to her the very obvious meaning of the dream. With her frivolous attitude, of which her scepticism was only a special instance, she would have coldly repelled such an attempt. But after the frivolity of her attitude had been recognized and demonstrated to her from the material she herself had furnished, it was possible to analyse the dreams which followed much more thoroughly.

[539] It is, therefore, advisable in the beginning to use dreams for getting at the critical material through their associations. This is the best and most cautious procedure, especially for the beginner in psychoanalysis. An arbitrary translation of the dreams is exceedingly inadvisable. That would be a superstitious practice based on the assumption that dreams have well-established symbolic meanings. But there are no fixed symbolic meanings. There are certain symbols that recur frequently, but we are not in a position to get beyond very general statements. For instance, it is quite incorrect to assume that a snake, when it appears in dreams, always has a merely phallic meaning; just as incorrect as it is to deny that it may have a phallic meaning in some cases. Every symbol has at least two meanings. The very frequent sexual meaning of dream-symbols is at most one of them. I cannot, therefore, accept the exclusively sexual

interpretations which appear in certain psychoanalytic publications, as little as I can accept the interpretation of dreams as wish-fulfilments, for my experience has led me to regard these formulations as one-sided and inadequate. As an example I will tell you a very simple dream of a young man, a patient of mine. It was as follows: I *was going up a flight of stairs with my mother and sister. When we reached the top I was told that my sister was going to have a baby*.

[540] First I will show how, in accordance with the hitherto prevailing point of view, this dream may be translated sexually. We know that incest fantasies play a prominent role in the life of a neurotic, hence the image "with my mother and sister" could be understood as a hint in this direction. "Stairs" are alleged to have a well-established sexual meaning: they represent the sexual act because of the rhythmic climbing. The baby the sister is expecting is nothing but the logical consequence of these premises. Thus translated, the dream would be a clear fulfilment of so-called infantile wishes, which, as you know, are an important part of Freud's dream-theory.

[541] I have analysed this dream on the basis of the following reasoning. If I say that stairs are a *symbol* for the sexual act, by what right do I take the mother and sister and baby as *real*, that is, not symbolically? If, on the strength of the assertion that dream-images are symbolic, I assign a symbolic value to certain of these images, what right have I to exempt certain others? If I attach a symbolic value to the ascent of the stairs, I must also attach a symbolic value to the images called mother, sister, and baby. I therefore did not "translate" the dream but really analysed it. The result was surprising. I will give you the patient's associations to the individual dream-images word for word, so that you can form your own opinion of the material. I should say in advance that the young man had finished his studies at the university a few months previously, that he had found the choice of a profession too difficult to make, and that he there upon became neurotic. In consequence of this he gave up his work. His neurosis took, among other things, a manifestly homosexual form.

[542] His associations to *mother* were as follows: "I have not seen her for a long time, a very long time. I must really reproach myself for this, it is

wrong of me to neglect her so."

[543] *Mother*, then, stands for something that is neglected in an irresponsible manner. I asked the patient: "What is that?" and he replied, with considerable embarrassment: "My work."

[544] Associations to *sister:* "It is years since I have seen her. I long to see her again. Whenever I think of her I always remember the moment I said good-bye. I kissed her with real affection, and at that moment I understood for the first time what love for a woman can mean." It was at once clear to the patient that "sister" stood for "love for a woman."

[545] Associations to *stairs:* "Climbing up—getting to the top—making a career—growing up, becoming great."

[546] Associations to *baby:* "Newborn—renewal—rebirth—becoming a new man."

[547] One has only to hear this material to understand at once that the dream represents not so much the fulfilment of infantile wishes as the fulfilment of biological duties which the patient has neglected because of his neurotic infantilism. Biological justice, which is inexorable, often compels us to make up in dreams for the duties we have neglected in real life.

[548] This dream is a typical example of the prospective and finally-oriented function of dreams in general, especially stressed by my colleague Maeder. If we adhered to a one-sided sexual interpretation the real meaning of the dream would escape us. Sexuality in dreams is, in the first instance, a means of expression and by no means always the meaning and aim of the dream. The discovery of its prospective or final meaning is particularly important when the analysis is so far advanced that the eyes of the patient are turned more readily to the future than to his inner world and the past.

[549] As regards the handling of the symbolism, we learn from this example that there can be no dream-symbols whose meanings are fixed in every detail, but, at most, a frequent occurrence of symbols with fairly general meanings. So far as the specifically sexual meaning of dreams is

concerned, experience has led me to lay down the following practical rules:

[550] If dream-analysis at the beginning of the treatment shows that the dreams have an undoubtedly sexual meaning, this meaning is to be taken realistically; that is, it proves that the sexual problems of the patient need to be subjected to a careful review. For instance, if an incest fantasy is clearly shown to be a latent content of the dream, one must subject the patient's infantile relations with his parents and brothers and sisters, as well as his relations with other persons who are fitted to play the role of father or mother, to a thorough investigation. But if a dream that comes at a later stage of the analysis has, let us say, an incest fantasy as its essential content—a fantasy that we have reason to consider disposed of—concrete value should not under all circumstances be attached to it; it should be regarded as symbolic. The formula for interpretation is: the unknown meaning of the dream is expressed, by analogy, through a fantasy of incest. In this case symbolic and not real value must be attached to the sexual fantasy. If we did not get beyond the real value we should keep reducing the patient to sexuality, and this would arrest the progress of the development of his personality. The patient's salvation does not lie in thrusting him back again and again into primitive sexuality; this would leave him on a low cultural level whence he could never obtain freedom and complete restoration to health. Retrogression to a state of barbarism is no advantage at all for a civilized human being.

[551] The above-mentioned formula, according to which the sexuality of a dream is a symbolic or analogical expression of its meaning, naturally applies also to dreams occurring at the beginning of an analysis. But the practical reasons that have impelled us not to take the symbolic value of these sexual fantasies into consideration arise from the fact that a genuine realistic value must be attached to the abnormal sexual fantasies of a neurotic in so far as he allows his actions to be influenced by them. The fantasies not only hinder him in adapting better to his situation, they also lead him to all manner of real sexual acts, and occasionally even to incest, as experience shows. Under these circumstances, it would be of little use to consider the symbolic content only; the concrete aspect must be first dealt with.

[552] These statements are based, as you will have observed, on a different conception of the dream from that put forward by Freud. Indeed, experience has forced a different conception upon me. For Freud, the dream is essentially a symbolic disguise for repressed wishes which would come into conflict with the aims of the personality. I am obliged to regard the structure of a dream from a different point of view. For me the dream is, in the first instance, a subliminal picture of the actual psychological situation of the individual in his waking state. It gives us a résumé of the subliminal associative material constellated by the psychological situation of the moment. The volitional content of the dream, which Freud calls the repressed wish, is for me essentially a means of expression.

[553] The activity of consciousness represents, biologically speaking, the individual's struggle for psychological adaptation. Consciousness tries to adjust itself to the necessities of the moment, or, to put it differently: there are tasks ahead which the individual must overcome. In many cases the solution is, in the nature of things, unknown, for which reason consciousness always tries to find the solution by way of analogous experiences. We try to grasp the unknown future on the model of our experience in the past. We have no reason to suppose that the subliminal psychic material obeys other laws than the "supraliminal" material. The unconscious, like the conscious, mobilizes itself round the biological tasks and seeks solutions on the analogy of what has gone before, just as consciousness does. Whenever we wish to assimilate something unknown, we do so by means of analogy. A simple example of this is the well-known fact that when America was discovered by the Spaniards the Indians took the horses of the conquerors, which were unknown to them, for large pigs, because only pigs were familiar in their experience. This is the way we always recognize things, and it is also the essential reason for the existence of symbolism: it is a process of comprehension by means of analogy. The dream is a *subliminal* process of comprehension by analogy. The apparently repressed wishes are volitional tendencies which supply the unconscious dream-thought with a verbal means of expression. On this particular point I find myself in entire agreement with the views of Adler, another pupil of Freud's. As to the fact that the unconscious

expresses itself by means of volitional elements or tendencies, this is due to the archaic nature of dream-thinking, a problem I have discussed elsewhere.[4]

[554] Owing to our different conception of the structure of dreams, the further course of analysis assumes a rather different aspect. The symbolic evaluation of sexual fantasies in the later stages necessarily leads, not to a reduction of the personality to primitive tendencies, but to a broadening and continuous development of the patient's attitude; that is, it tends to make his thinking richer and deeper, thus giving him what has always been one of man's most powerful weapons in the struggle for adaptation. By following this new course consistently, I have come to the realization that the religious and philosophical driving forces—what Schopenhauer calls the "metaphysical need" of man—must receive positive consideration during the analytical work. They must not be destroyed by reducing them to their primitive sexual roots, but made to serve biological ends as psychologically valuable factors. In this way these driving forces assume once more the function that has been theirs from time immemorial.

[555] Just as primitive man was able, with the help of religious and philosophical symbols, to free himself from his original condition, so too the neurotic can free himself from his illness. It is hardly necessary for me to remark that I do not mean inoculating him with belief in a religious or philosophical dogma; I mean simply that there must be built up in him that same psychological attitude which was characterized by the living belief in a religious or philosophical dogma on earlier levels of culture. A religious or philosophical attitude is not the same thing as belief in a dogma. A dogma is a temporary intellectual formulation, the outcome of a religious and philosophical attitude conditioned by time and circumstances. But the attitude itself is a cultural achievement; it is a function that is exceedingly valuable from a biological point of view, for it gives rise to incentives that drive human beings to do creative work for the benefit of a future age and, if necessary, to sacrifice themselves for the welfare of the species.

[556] Thus man attains the same sense of unity and wholeness, the same confidence, the same capacity for self-sacrifice in his conscious existence that belong unconsciously and instinctively to wild animals. Every reduction, every digression from the path that has been laid down for the development of civilization, does nothing more than turn the human being into a crippled animal; it never makes a so-called natural man of him. I have had numerous successes and failures in the course of my analytical practice which have convinced me of the inexorable rightness of this kind of psychological orientation. We do not help the neurotic by relieving him of the demands made by civilization; we can help him only by inducing him to take an active part in the strenuous work of carrying on its development. The suffering he undergoes in performing this service takes the place of his neurosis. But whereas the neurosis and the troubles that attend it are never followed by the pleasant feeling of good work well done, of duty fearlessly performed, the suffering that comes from useful work and from victory over real difficulties brings with it those moments of peace and satisfaction which give the human being the priceless feeling that he has really lived his life.

PSYCHOANALYSIS AND NEUROSIS[1]

[557] After many years' experience I now know that it is extremely difficult to discuss psychoanalysis at public meetings and at congresses. There are so many misconceptions of the matter, so many prejudices against certain psychoanalytic views, that it is an almost impossible task to reach mutual understanding in a public discussion. I have always found a quiet conversation on the subject much more useful and fruitful than heated arguments *coram publico*. However, having been honoured by an invitation from the Committee of this Congress to speak as a representative of the psychoanalytic movement, I will do my best to discuss some of the fundamental theoretical problems of psychoanalysis. I must limit myself to this aspect of the subject because I am quite unable to put before my audience all that psychoanalysis means and strives for, and its various applications in the fields of mythology, comparative religion, philosophy, etc. But if I am to discuss certain theoretical problems fundamental to psychoanalysis, I must presuppose that my audience is familiar with the development and the main results of psychoanalytic research. Unfortunately, it often happens that people think themselves entitled to judge psychoanalysis who have not even read the literature. It is my firm conviction that no one is competent to form an opinion on this matter until he has studied the basic writings of the psychoanalytic school.

[558] In spite of the fact that Freud's theory of neurosis has been worked out in great detail, it cannot be said to be, on the whole, very clear or easy to understand. This justifies my giving you a short abstract of his fundamental views on the theory of neurosis.

[559] You are aware that the original theory that hysteria and the related neuroses have their origin in a trauma or sexual shock in early childhood was given up about fifteen years ago. It soon became evident that the sexual trauma could not be the real cause of the neurosis, for the simple reason that the trauma was found to be almost universal. There is scarcely a human being who has not had some sexual shock in early

youth, and yet comparatively few develop a neurosis in later life. Freud himself soon realized that many of the patients who related an early traumatic experience had only invented the story of the so-called trauma; it had never occurred in reality, but was a mere creation of fantasy. Moreover, on further investigation it became quite obvious that even if a trauma had actually occurred it was not always responsible for the whole of the neurosis, although it does sometimes look as if the structure of the neurosis depended entirely on the trauma. If a neurosis were the inevitable consequence of the trauma it would be quite incomprehensible why neurotics are not incomparably more numerous than they are.

[560] The apparently heightened effect of the shock was clearly due to the exaggerated and morbid fantasy of the patient. Freud also saw that this same fantasy activity manifested itself relatively early in bad habits, which he called infantile perversions. His new conception of the aetiology of neurosis was based on this insight, and he traced the neurosis back to some sexual activity in early infancy. This conception led to his recent view that the neurotic is “fixated” to a certain period of his early infancy, because he seems to preserve some trace of it, direct or indirect, in his mental attitude. Freud also makes the attempt to classify or to differentiate the neuroses, as well as dementia praecox, according to the stage of infantile development in which the fixation took place. From the standpoint of this theory, the neurotic appears to be entirely dependent on his infantile past, and all his troubles in later life, his moral conflicts and his deficiencies, seem to be derived from the powerful influences of that period. Accordingly, the main task of the treatment is to resolve this infantile fixation, which is conceived as an unconscious attachment of the sexual libido to certain infantile fantasies and habits.

[561] This, so far as I can see, is the essence of Freud’s theory of neurosis. But it overlooks the following important question: What is the cause of this fixation of libido to the old infantile fantasies and habits? We have to remember that almost everyone has at some time had infantile fantasies and habits exactly corresponding to those of a neurotic, yet he does not become fixated to them; consequently, he does not become neurotic later on. The aetiological secret of the neurosis, therefore, does not lie in the mere *existence* of infantile fantasies but in the so-called *fixation*. The

numerous statements of neurotics affirming the existence of infantile sexual fantasies are worthless in so far as they attribute an aetiological significance to them, for the same fantasies can be found in normal individuals as well, a fact which I have often proved. It is only the fixation which seems to be characteristic.

[562] It is therefore necessary to demand proof of the reality of this infantile fixation. Freud, an absolutely sincere and painstaking empiricist, would never have evolved this hypothesis had he not had sufficient grounds for it. These grounds are furnished by the results of psychoanalytic investigations of the unconscious. Psychoanalysis reveals the unconscious presence of numerous fantasies which have their roots in the infantile past and are grouped round the so-called "nuclear complex," which in men may be designated as the Oedipus complex, in women as the Electra complex. These terms convey their own meaning exactly. The whole tragic fate of Oedipus and Electra was acted out within the narrow confines of the family, just as a child's fate lies wholly within the family boundaries. Hence the Oedipus complex, like the Electra complex, is very characteristic of an infantile conflict. The existence of these conflicts in infancy has been proved by means of psychoanalytic research. It is in the realm of this complex that the fixation is supposed to have taken place. The extremely potent and effective existence of the nuclear complex in the unconscious of neurotics led Freud to the hypothesis that the neurotic has a peculiar fixation or attachment to it. Not the mere existence of this complex—for everybody has it in the unconscious—but the very strong attachment to it is what is typical of the neurotic. He is far more influenced by this complex than the normal person; many examples in confirmation of this can be found in every one of the recent psychoanalytic histories of neurotic cases.

[563] We must admit that this view is a very plausible one, because the hypothesis of fixation is based on the well-known fact that certain periods of human life, and particularly infancy, do sometimes leave determining traces behind them which are permanent. The only question is whether this is a sufficient explanation or not. If we examine persons who have been neurotic from infancy it seems to be confirmed, for we see the nuclear complex as a permanent and powerful agent throughout

life. But if we take cases which never show any noticeable trace of neurosis except at the particular time when they break down, and there are many such, this explanation becomes doubtful. If there is such a thing as fixation, it is not permissible to erect upon it a new hypothesis, claiming that at times during certain periods of life the fixation becomes loosened and ineffective, while at others it suddenly becomes strengthened. In these cases we find that the nuclear complex is as active and potent as in those which apparently support the theory of fixation. Here a critical attitude is justifiable, especially when we consider the oft-repeated observation that the moment of the outbreak of neurosis is not just a matter of chance; as a rule it is most critical. It is usually *the moment when a new psychological adjustment, that is, a new adaptation, is demanded*. Such moments facilitate the outbreak of a neurosis, as every experienced neurologist knows.

[564] This fact seems to me extremely significant. If the fixation were indeed real we should expect to find its influence constant; in other words, a neurosis lasting throughout life. This is obviously not the case. The psychological determination of a neurosis is only partly due to an early infantile predisposition; it must be due to some cause in the present as well. And if we carefully examine the kind of infantile fantasies and occurrences to which the neurotic is attached, we shall be obliged to agree that there is nothing in them that is specifically neurotic. Normal individuals have pretty much the same inner and outer experiences, and may be attached to them to an astonishing degree without developing a neurosis. Primitive people, especially, are very much bound to their infantility. It now begins to look as if this so-called fixation were a normal phenomenon, and that the importance of infancy for the later mental attitude is natural and prevails everywhere. The fact that the neurotic seems to be markedly influenced by his infantile conflicts shows that it is less a matter of fixation than of the peculiar use which he makes of his infantile past. It looks as if he exaggerated its importance and attributed to it a wholly artificial value. Adler, a pupil of Freud's, expresses a very similar view.

[565] It would be unjust to say that Freud limited himself to the hypothesis of fixation; he was also aware of the problem I have just discussed. He

called this phenomenon of reactivation or secondary exaggeration of infantile reminiscences "regression." But in Freud's view it appears as if the incestuous desires of the Oedipus complex were the real cause of the regression to infantile fantasies. If this were the case, we should have to postulate an unexpected intensity of the primary incestuous tendencies. This view led Freud to his recent comparison between what he calls the psychological "incest barrier" in children and the "incest taboo" in primitive man. He supposes that a desire for real incest led primitive man to frame laws against it; while to me it looks as if the incest taboo were only one among numerous taboos of all kinds, and were due to the typical superstitious fear of primitive man—a fear existing independently of incest and its prohibition. I am able to attribute as little strength to incestuous desires in childhood as in primitive humanity. I do not even seek the reason for regression in primary incestuous or any other sexual desires. I must admit that a purely sexual aetiology of neurosis seems to me much too narrow. I base this criticism not on any prejudice against sexuality but on an intimate acquaintance with the whole problem.

[566] I therefore suggest that psychoanalytic theory should be freed from the purely sexual standpoint. In place of it I should like to introduce an *energic viewpoint* into the psychology of neurosis.

[567] All psychological phenomena can be considered as manifestations of energy, in the same way that all physical phenomena have been understood as energic manifestations ever since Robert Mayer discovered the law of the conservation of energy. Subjectively and psychologically, this energy is conceived as *desire*. I call it *libido,* using the word in its original sense, which is by no means only sexual. Sallust uses it exactly as we do here when he says: "They took more pleasure in handsome arms and war horses than in harlots and revelry."[2]

[568] From a broader standpoint libido can be understood as vital energy in general, or as Bergson's *élan vital*. The first manifestation of this energy in the infant is the nutritive instinct. From this stage the libido slowly develops through numerous variants of the act of sucking into the sexual function. Hence I do not consider the act of sucking a sexual act. The pleasure in sucking can certainly not be considered as sexual pleasure,

but as pleasure in nutrition, for it is nowhere proved that pleasure is sexual in itself. This process of development is continued into adult life and is accompanied by constantly increasing adaptation to the external world. Whenever the libido, in the process of adaptation, meets an obstacle, an accumulation takes place which normally gives rise to an increased effort to overcome the obstacle. But if the obstacle seems to be insurmountable, and the individual abandons the task of overcoming it, the stored-up libido makes a regression. Instead of being employed for an increased effort, the libido gives up its present task and reverts to an earlier and more primitive mode of adaptation.

[569] The best examples of such regressions are found in hysterical cases where a disappointment in love or marriage has precipitated a neurosis. There we find those well-known digestive disorders, loss of appetite, dyspeptic symptoms of all sorts, etc. In these cases the regressive libido, turning back from the task of adaptation, gains power over the nutritive function and produces marked disturbances. Similar effects can be observed in cases where there is no disturbance of the nutritive function but, instead, a regressive revival of reminiscences from the distant past. We then find a reactivation of the parental imagos, of the Oedipus complex. Here the events of early infancy—never before important—suddenly become so. They have been regressively reactivated. Remove the obstacle from the path of life and this whole system of infantile fantasies at once breaks down and becomes as inactive and ineffective as before. But let us not forget that, to a certain extent, it is at work all the time, influencing us in unseen ways. This view, incidentally, comes very close to Janet’s hypothesis that the “parties supérieures” of a function are replaced by its “parties inférieures.” I would also remind you of Claparède’s conception of neurotic symptoms as emotional reflexes of a primitive nature.

[570] For these reasons I no longer seek the cause of a neurosis in the past, but in the present. I ask, what is the necessary task which the patient will not accomplish? The long list of his infantile fantasies does not give me any sufficient aetiological explanation, because I know that these fantasies are only puffed up by the regressive libido, which has not found its natural outlet in a new form of adaptation to the demands of life.

[571] You may ask why the neurotic has a special tendency not to accomplish his necessary tasks. Here let me point out that no living creature adjusts itself easily and smoothly to new conditions. The law of inertia is valid everywhere.

[572] A sensitive and somewhat unbalanced person, as a neurotic always is, will meet with special difficulties and perhaps with more unusual tasks in life than a normal individual, who as a rule has only to follow the well-worn path of an ordinary existence. For the neurotic there is no established way of life, because his aims and tasks are apt to be of a highly individual character. He tries to go the more or less uncontrolled and half-conscious way of normal people, not realizing that his own critical and very different nature demands of him more effort than the normal person is required to exert. There are neurotics who have shown their heightened sensitiveness and their resistance to adaptation in the very first weeks of life, in the difficulty they have in taking the mother's breast and in their exaggerated nervous reactions, etc. For this peculiarity in the neurotic predisposition it will always be impossible to find a psychological aetiology, because it is anterior to all psychology. This predisposition—you can call it "congenital sensitiveness" or what you like—is the cause of the first resistances to adaptation. As the way to adaptation is blocked, the biological energy we call libido does not find its appropriate outlet or activity, with the result that a suitable form of adaptation is replaced by an abnormal or primitive one.

[573] In neurosis we speak of an infantile attitude or of the predominance of infantile fantasies and wishes. In so far as infantile impressions are of obvious importance in normal people they will be equally influential in neurosis, but they have no aetiological significance; they are reactions merely, being chiefly secondary and regressive phenomena. It is perfectly true, as Freud says, that infantile fantasies determine the form and the subsequent development of neurosis, but this is not an aetiology. Even when we find perverted sexual fantasies whose existence can be demonstrated in childhood, we cannot consider them of aetiological significance. A neurosis is not really caused by infantile sexual fantasies, and the same must be said of the sexualism of neurotic fantasy in general. It is not a primary phenomenon based on a perverted sexual disposition,

but merely secondary and a consequence of the failure to apply the stored-up libido in a suitable way. I realize that this is a very old view, but this does not prevent it from being true. The fact that the patient himself very often believes that his infantile fantasies are the real cause of his neurosis does not prove that he is right in his belief, or that a theory based on this belief is right either. It may look as if it were so, and I must admit that very many cases do have that appearance. At all events, it is perfectly easy to understand how Freud arrived at this view. Everyone who has any psychoanalytic experience will agree with me here.

[574] To sum up: I cannot see the real aetiology of neurosis in the various manifestations of infantile sexual development and the fantasies to which they give rise. The fact that these fantasies are exaggerated in neurosis and occupy the foreground is a consequence of the stored-up energy or libido. The psychological trouble in neurosis, and the neurosis itself, can be formulated as *an act of adaptation that has failed*. This formulation might reconcile certain views of Janet's with Freud's view that a neurosis is, in a sense, an attempt at self-cure—a view which can be and has been applied to many other illnesses.

[575] Here the question arises as to whether it is still advisable to bring to light all the patient's fantasies by analysis, if we now consider them of no aetiological significance. Hitherto psychoanalysis has set about unravelling these fantasies because they were considered aetiologically important. My altered view of the theory of neurosis does not affect the psychoanalytic procedure. The technique remains the same. Though we no longer imagine we are unearthing the ultimate root of the illness, we have to pull up the sexual fantasies because the energy which the patient needs for his health, that is, for adaptation, is attached to them. By means of psychoanalysis the connection between his conscious mind and the libido in the unconscious is re-established. Thus the unconscious libido is brought under the control of the will. Only in this way can the split-off energy become available again for the accomplishment of the necessary tasks of life. Considered from this standpoint, psychoanalysis no longer appears as a mere reduction of the individual to his primitive sexual wishes, but, if rightly understood, as a highly moral task of immense educational value.

SOME CRUCIAL POINTS IN PSYCHOANALYSIS

A CORRESPONDENCE BETWEEN DR. JUNG AND DR. LOŸ[1]

Foreword

A few words may suffice to explain the reasons which led to this correspondence, and the purpose in publishing it.

After being introduced to the theory and practice of suggestion therapy by Professor Forel, I practised it for many years and still use it in suitable cases. When I became aware of the great significance of Freud's psychoanalytic works, I studied them and gradually began to take up analysis myself. I made contact with the nearest centre of psychoanalytic research, which was Zurich. Yet in technical matters I had, in the main, to rely on myself. Hence, when I met with failures, I had to ask myself who or what was to blame, I alone, because I did not know how to apply the "correct psychoanalytic method," or perhaps the method itself, which might not be suitable in all cases. A special stumbling-block for me was the interpretation of dreams: I could not convince myself that there was a generally valid symbolism, and that this symbolism was exclusively sexual, as many psychoanalysts declared. Their interpretations often seemed to me to bear the stamp of arbitrariness.

And so, when I read the following statement by Freud in the *Zentralblatt für Psychoanalyse*, in June 1912, the words seemed to come from my own heart: "Some years ago I gave as an answer to the question of how one can become an analyst: 'By analysing one's own dreams.' This preparation is no doubt enough for many people, but not for everyone who wishes to learn analysis. Nor can everyone succeed in interpreting his own dreams without outside help. I count it as one of the many merits of the Zurich school of analysis that they have laid increased emphasis on this requirement, and have embodied it in the demand that everyone who wishes to carry out analyses on other people shall first himself undergo an analysis by someone with expert knowledge. Anyone who takes up the work seriously should choose this course, which offers more than one advantage; the sacrifice involved in laying oneself open to another person without being driven to it by illness is amply rewarded. Not only is one's aim of learning to know what is hidden in one's own mind far more rapidly attained and with less expense of affect, but impressions and convictions will be gained in relation to oneself which will be sought in vain from studying books and attending lectures."[2]

Dr. Jung declared himself ready to undertake my analysis. A great obstacle arose, however: the distance between us. Thus, many questions which had come up in the analytical interviews and could not be discussed sufficiently thoroughly were settled by correspondence.

When the correspondence reached its present proportions I asked myself whether other colleagues might not find it as stimulating as I had done: psychoanalysts who were just beginning and who needed a guiding thread through the mounting tangle of psychoanalytic literature, practising physicians who perhaps knew of psychoanalysis only through the violent attacks it has had to endure (often from quite unqualified persons who have no experience of it).

I could only answer this question in the affirmative. I asked Dr. Jung to give his consent to my publishing the correspondence, which he readily did.

I do not doubt that the reader will, like me, give him the thanks that are his due; for a more concise and easily understandable account of the psychoanalytic method and of some of the problems it raises does not, to my knowledge, exist.

DR. R. LOŸ

Sanatorium L'Abri, Montreux-Territet,
14 December 1913

From Dr. Loÿ

12 January 1913

[576] What you said at our last interview was extraordinarily stimulating. I was expecting you to throw light on the interpretation of my own and my

patients' dreams from the standpoint of Freud's dream interpretation. Instead, you put before me an entirely new conception: the dream as a means, produced by the subconscious, of restoring the moral balance. That is certainly a fruitful thought. But still more fruitful, it seems to me, is your other suggestion. You conceive the tasks of psychoanalysis to be much deeper than I had ever imagined: it is no longer a question of getting rid of troublesome pathological symptoms, but of the analysand learning to know himself completely—not just his anxiety experiences—and on the basis of this knowledge building up and shaping his life anew. But he himself must be the builder; the analyst only furnishes him with the necessary tools.

[577] To begin with, I would ask you to consider what justification there is for the original procedure of Breuer and Freud, now entirely given up both by Freud himself and by you, but practised by Frank, for instance, as his only method: the "abreaction of inhibited affects under light hypnosis." Why did you give up the cathartic method? Please explain. More particularly, has light hypnosis in psychocatharsis a different value from suggestion during sleep, long practised in suggestion therapy? That is, has it only the value which the doctor attributes, or says he attributes to it, the value which the patient's faith gives it? In other words, is suggestion in the waking state equivalent to suggestion in the hypnoid state, as Bernheim now asserts, after having used suggestion for many years in hypnosis? You will tell me that we must talk of psychoanalysis, not of suggestion. What I really mean is this: is not the *suggestion* that psychocatharsis in the hypnoid state will produce a therapeutic effect (with limitations, naturally, the age of the patient, etc.) the main factor in the therapeutic effects of psychocatharsis? Frank says in his *Affektstörungen:* "These one-sided attitudes, suggestibility and suggestion, are almost entirely in abeyance in psychocatharsis under light sleep, so far as the content of the ideas reproduced is concerned."[3] Is that really true? Frank himself adds: "How can ruminating on the dreams of youth *in itself* lead to discharge of the stored-up anxiety, whether in the hypnoid state or any other? Must we not rather suppose that ruminating on them would make the anxiety states even greater?" (I have noticed this myself, far more than I liked.) Of course one says to the patient,

"First we must stir up, then afterwards comes peace." And it does come. But does it not come *in spite of the stirring-up process,* because gradually, by means of frequent talks *apart from* light hypnosis, the patient gains such confidence in the analyst that he becomes susceptible to the direct suggestion that an improvement and then a cure will follow? I go still further: in an analysis in the waking state, is not the patient's faith that the method employed will cure him, coupled with his growing confidence in the analyst, a main cause of his cure? And I go still further: in every therapeutic method systematically carried out is not faith in it, confidence in the doctor, a main cause of its success? I won't say the only cause, for one cannot deny that physical, dietetic, and chemical procedures, when properly selected, have their own effect in bringing about a cure, over and above the striking effects produced by indirect suggestion.

From Dr. Jung

28 January 1913

[578] With regard to your question concerning the applicability of the cathartic procedure, I can say that I adopt the following standpoint: every procedure is good if it helps. I therefore acknowledge every method of suggestion including Christian Science, mental healing, etc. "A truth is a truth, when it works." It is another question, though, whether a scientifically trained doctor can square it with his conscience to sell little bottles of Lourdes water because this suggestion is at times very helpful. Even the so-called highly scientific suggestion therapy employs the wares of the medicine-man and the exorcising shaman. And why not? The public is not much more advanced either and continues to expect miraculous cures from the doctor. And indeed, we must rate those doctors wise—worldly-wise in every sense—who know how to surround themselves with the aura of a medicine-man. They have not only the biggest practices but also get the best results. This is because, apart from the neuroses, countless physical illnesses are tainted and complicated with psychic material to an unsuspected degree. The medical exorcist betrays by his whole demeanour his full appreciation of that psychic

component when he gives the patient the opportunity of fixing his faith firmly on the mysterious personality of the doctor. In this way he wins the sick man's mind, which from then on helps him to restore his body to health. The cure works best when the doctor himself believes in his own formulae, otherwise he may be overcome by scientific doubt and so lose the proper convincing tone. I myself practised hypnotic suggestion-therapy for a time with enthusiasm. But then there befell me three dubious incidents which I would like to bring to your attention.

[579] One day a withered old peasant woman of about 56 came to me to be hypnotized for various neurotic troubles. She was not easy to hypnotize, was very restless, and kept opening her eyes —but at last I did succeed. When I woke her up again after about half an hour she seized my hand and with many words testified to her overflowing gratitude. I told her, "You are by no means cured yet, so keep your thanks till the end of the treatment." "I'm not thanking you for that," she whispered, blushing, "but because you were so *decent.*" She looked at me with a sort of tender admiration and departed. I gazed for a long time at the spot where she had stood. So decent? I asked myself, flabbergasted—good heavens, surely she hadn't imagined … ? This glimpse made me suspect for the first time that possibly the old reprobate, with the atrocious directness of feminine (at the time I called it "animal") instinct, understood more about the essence of hypnosis than I did with all my knowledge of the scientific profundity of the text-books. My innocence was gone.

[580] Next came a pretty, coquettish, seventeen-year-old girl with a very harassed-looking mama. She had suffered since early childhood from *enuresis nocturna* (which she used, among other things, to stop herself being sent to a finishing school in Italy). At once I thought of the old woman and her wisdom. I tried to hypnotize the girl; she went into fits of laughter and held up the hypnosis for twenty minutes. I kept my temper and thought: I know why you laugh, you have already fallen in love with me, but I will give you proof of my decency as a reward for wasting my time with your provocative laughter. At last I put her under. The effect was immediate. The enuresis stopped, and I thereupon informed the young lady that, instead of Wednesday, I would not see her again for hypnosis till the following Saturday. On Saturday she arrived with a cross

face, boding disaster. The enuresis had come back again. I thought of my wise old woman and asked, “When did it come back?” She (unsuspecting): “Wednesday night.” I thought to myself: There we have it, she wants to prove to me that I absolutely must see her on Wednesdays too; not to see me for a whole long week is too much for a tender loving heart. But I did not intend to pander to this annoying romance, so I said, “It would be quite wrong to continue the treatment under these circumstances. We must drop it altogether for three weeks, to give the enuresis a chance to stop. Then come again for treatment.” In my malicious heart I knew that I would be away on holiday and the course for hypnotic treatment would be finished. After the holiday my *locum tenens* told me that the young lady had been there with the news that the enuresis had vanished, but her disappointment at not seeing me was very keen. The old woman was right, I thought.

[581] The third case gave my joy in suggestion therapy its deathblow. This case really was the limit. A 65-year-old lady came hobbling into the consulting-room on a crutch. She had suffered from pain in the knee-joint for seventeen years, and this at times kept her chained to her bed for many weeks. No doctor had been able to cure her, and she had run through all the cures of present-day medicine. After letting the stream of her narrative pour over me for ten minutes, I said, “I will try to hypnotize you, perhaps that will do you good.” “Oh yes, please do!” she said, then leaned her head to one side and fell asleep before ever I said or did a thing. She passed into somnambulism and showed every form of hypnosis you could possibly desire. After half an hour I had the greatest difficulty in waking her; when at last she was awake she jumped up: “I am well, I am all right, you have cured me!” I tried to raise timid objections, but her praises drowned me. She could really walk. I blushed, and said embarrassed to my colleagues: “Behold the marvels of hypnotic therapy!” That day saw the death of my connection with therapy by suggestion; the notoriety aroused by this case shamed and depressed me. When, a year later, the good old lady returned, this time with a pain in her back, I was already sunk in hopeless cynicism; I saw written on her brow that she had just read in the paper the notice of the reopening of my course on hypnotism. That tiresome romanticism had provided her with a

convenient pain in the back so that she might have a pretext for seeing me, and again let herself be cured in the same spectacular fashion. This proved true in every particular.

[582] As you will understand, a man possessed of a scientific conscience cannot digest such cases with impunity. I was resolved to abandon suggestion altogether rather than allow myself to be passively transformed into a miracle-worker. I wanted to understand what really goes on in people's minds. It suddenly seemed to me incredibly childish to think of dispelling an illness with magical incantations, and that this should be the sole result of our efforts to create a psychotherapy. Thus the discovery of Breuer and Freud came as a veritable life-saver. I took up their method with unalloyed enthusiasm and soon recognized how right Freud was when, at a very early date, indeed as far back as *Studies on Hysteria*, he began to direct a searchlight on the circumstances of the so-called trauma. I soon discovered that, though traumata of clearly aetiological significance were occasionally present, the majority of them appeared very improbable. Many traumata were so unimportant, even so normal, that they could be regarded at most as a pretext for the neurosis. But what especially aroused my criticism was the fact that not a few traumata were simply inventions of fantasy and had never happened at all. This realization was enough to make me sceptical about the whole trauma theory. (I have discussed these matters in detail in my lectures on the theory of psychoanalysis.) I could no longer imagine that repeated experiences of a fantastically exaggerated or entirely fictitious trauma had a different therapeutic value from a suggestion procedure. It is good if it helps. If only one did not have a scientific conscience and that hankering after the truth! I recognized in many cases, particularly with intelligent patients, the therapeutic limitations of this method. It is merely a rule of thumb, convenient for the analyst because it makes no particular demands on his intellect or his capacity to adapt. The theory and practice are delightfully simple: "The neurosis comes from a trauma. The trauma is abreacted." If the abreacting takes place under hypnotism or with other magical accessories (dark room, special lighting, etc.), I think at once of my clever old woman, who opened my eyes not only to the magical influence of the mesmeric passes but to the nature of hypnotism itself.

[583] What alienated me once and for all from this comparatively effective, indirect method of suggestion, based as it is on an equally effective false theory, was the simultaneous recognition that behind the bewildering and deceptive maze of neurotic fantasies there is a *conflict* which may best be described as a moral one. With this there began for me a new era of understanding. Research and therapy now joined hands in the effort to discover the causes and the *rational* solution of the conflict. For me this meant psychoanalysis. While I was arriving at this insight, Freud had built up his sexual theory of neurosis, thus posing a mass of questions for discussion, all of which seemed worthy of the deepest consideration. I had the good fortune to collaborate with Freud for a long time, and to work with him on the problem of sexuality in neurosis. You know perhaps from some of my earlier works that I was always rather dubious about the significance of sexuality. This has now become the point on which I am no longer altogether of Freud's opinion.

[584] I have preferred to answer your questions in a somewhat inconsequential fashion. I will now catch up on the rest: light hypnosis and total hypnosis are simply varying degrees of intensity of unconscious susceptibility to the hypnotist. Who can draw sharp distinctions here? To a critical intelligence it is unthinkable that suggestibility and suggestion can be avoided in the cathartic method. They are present everywhere as general human attributes, even with Dubois[4] and the psychoanalysts, who all think they are working on purely rational lines. No technique and no self-effacement avails here; the analyst works willy-nilly, and perhaps most of all, through his personality, i.e., through suggestion. In the cathartic method, what is of far more importance to the patient than the conjuring up of old fantasies is the experience of being together so often with the analyst, his trust and belief in him personally and in his method. The belief, the self-confidence, perhaps also the devotion with which the analyst does his work, are far more important to the patient (imponderabilia though they may be) than the rehearsing of old traumata.[5]

[585] It is time we learnt from the history of medicine everything that has ever been of help, then perhaps we shall discover the really necessary therapy—that is, psychotherapy. Did not even the old apothecaries'

messes achieve brilliant cures, cures which faded only with the belief in their efficacy?!

[586] Because I know that, despite all rational safeguards, the patient does attempt to assimilate the analyst's personality, I have laid it down as a requirement that the psychotherapist must be just as responsible for the cleanness of his hands as the surgeon. I even hold it to be an indispensable prerequisite that the psychoanalyst should first submit himself to the analytical process, as his personality is one of the main factors in the cure.

[587] Patients read the analyst's character intuitively, and they should find in him a man with failings, admittedly, but also a man who strives at every point to fulfil his human duties in the fullest sense. Many times I have had the opportunity of seeing that the analyst is successful with his treatment just so far as he has succeeded in his own moral development. I think this answer will satisfy your question.

From Dr. Loÿ

2 February 1913

[588] You answer several of my questions in a decidedly affirmative tone, taking it as proved that in cures by the cathartic method the main role is played by faith in the analyst and his method and not by "abreacting" the real or imaginary traumata. I think so too. Equally I agree with your view that the old "apothecaries' messes," as well as the Lourdes cures or those of the mental healers, Christian Scientists, and persuasionists, are to be attributed to faith in the miracle-worker rather than to any of the methods employed.

[589] But now comes the ticklish point: the augur can remain an augur so long as he himself believes that the will of the gods is made manifest by the entrails of the sacrificial beast. When he no longer believes, he can ask himself: Shall I continue to use my augur's authority to promote the welfare of the State, or shall I make use of my newer, and I hope truer, convictions of today? Both ways are possible. The first is called

opportunism, the second the pursuit of truth and scientific honesty. For the doctor, the first way perhaps brings therapeutic success and fame, the second brings the reproach that such a man is not to be taken seriously. What I esteem most highly in Freud and his school is just this passionate desire for truth. On the other hand some people pronounce a different verdict: "It is impossible for a busy practitioner to keep pace with the development of the views of this investigator and his initiates" (Frank, *Affektstörungen*, Introduction, p. 2).

[590] One can easily disregard this little quip, but self-criticism needs to be taken more seriously. One can after all ask oneself: Since science is in continual flux, have I the right to ignore on principle any method or combination of methods by which I know I can get therapeutic results?

[591] Looking more closely at the fundamental reason for your aversion to the ancillary use of hypnosis (or semi-hypnosis; the degree matters nothing) in treatment by suggestion (which as you say every doctor and every therapeutic method makes use of willy-nilly, no matter what it is called), one must say that what has disgusted you with hypnotism is at bottom nothing but the so-called "transference" to the doctor, which you, with your purely psychoanalytic procedure, can eliminate as little as anybody else, and which actually plays an essential part in the success of the treatment. Your requirement that the psychoanalyst must be responsible for the cleanness of his hands—here I agree unreservedly—is the logical conclusion. But is the possible recourse to hypnosis in a psychotherapeutic procedure any more "augurish" than the unavoidable use of the "transference to the analyst" for therapeutic purposes? In either case we bank on faith as the healing agent. As for the feeling which the patient—whether man or woman—entertains for the analyst, is there never anything in the background save a conscious or unconscious sexual wish? In many cases your impression is certainly correct, and more than one woman has been frank enough to confess that the beginning of hypnosis was accompanied by a voluptuous sensation. But it is not true in all instances—or how would you explain the underlying feeling in the hypnotizing of one animal by another, e.g., snake and bird? Surely you would say that here the feeling of *fear* prevails, which is an inversion of libido, whereas in the hypnoid state that comes over the female before

she succumbs to the male it is the pure *libido sexualis* that predominates, though possibly still mixed with fear.

[592] However that may be, from your three cases I cannot draw any ethical distinction between "susceptibility to the hypnotist" and "transference to the analyst" that would condemn a possible combination of hypnosis with psychoanalysis, as an auxiliary. You will ask why I cling so much to the use of hypnosis, or rather of the hypnoid state. It is because I think there are cases that can be cured much more quickly in this way than by a purely psychoanalytic procedure. For example, in no more than five or six interviews I completely cured a fifteen-year-old girl who had suffered from *enuresis nocturna* even since infancy, but was otherwise perfectly sound, gifted, first in her class, etc. Previously she had tried all sorts of treatment without any result.

[593] Perhaps I ought to have sought out the psychoanalytic connections between the enuresis and her psychosexual disposition, explained it to her, etc., but I couldn't, the girl had only the short Easter holidays for treatment: so I just hypnotized her and the trouble vanished.

[594] In psychoanalysis I use hypnosis to help the patient overcome "resistance."

[595] Further, I use semi-hypnosis in conjunction with psychoanalysis to accelerate the "reconstruction" stage.

[596] To take an example, a patient afflicted with a washing mania was sent to me after a year's psychocathartic treatment with Dr. X. The symbolic meaning of her washing ceremonies had previously been explained to her, but she became more and more agitated during the "abreaction" of alleged traumata in childhood, because she had persuaded herself by auto-suggestion that she was too old to be cured, that she saw no "images," etc. So I used hypnosis to help her reduce the number of washings—"so that the anxiety feeling would stay away"—and to train her to throw things on the floor and pick them up again without washing her hands afterwards, etc.

[597] In view of these considerations I should, if you feel disposed to go further into the matter, be grateful if you would furnish me with more

convincing reasons why the hypnotic procedure is to be condemned, and explain how to do without it, or what to replace it with in such cases. Were I convinced, I would give it up as you have done; but what convinced you has not, so far, convinced me. *Si duo faciunt idem, non est idem*.

[598] I would now like to go on to another important matter to which you alluded, but only cursorily, and to put one question: Behind the neurotic fantasies there is almost always (or always) a moral conflict belonging to the present. That is perfectly clear to me. Research and therapy coincide; their task is: to seek the causes and the rational solution of the conflict.

[599] Good—But can the rational solution always be found? "Reasons of expediency" so often bar the way, varying with the type of patient (children, young girls and women, from "pious"—hypocritical!—Catholic or Protestant families). Again that accursed opportunism!—A colleague of mine was perfectly right when he began to give sexual enlightenment to a young French boy who was indulging in masturbation. Whereupon, like one possessed, in rushed a bigoted grandmother, and a disagreeable scene ensued. How to act in these and similar cases? What to do in cases where there is a moral conflict between love and duty (conflicts in marriage)—or in general between instinct and moral duty? What to do in the case of a girl afflicted with hysterical or anxiety symptoms, who is in need of love and has no chance to marry, or cannot find a suitable man, and, because she comes of "good family," wants to remain chaste? Simply try to get rid of the symptoms by suggestion? But that is wrong as soon as one knows of a better way.

[600] How is one to reconcile one's two consciences: that of the man who does not want to confine his fidelity to truth *intra muros,* and that of the doctor who *must* cure, or if he dares not cure according to his real convictions (owing to opportunist motives), must at least provide some alleviation? We live in the present, but with the ideas and the ideals of the future. That is *our* conflict. How to resolve it?

From Dr. Jung

4 February 1913

[601] … You have put me in a somewhat embarrassing position with your question in yesterday's letter. You have rightly guessed the spirit which dictated my last. I am glad you, too, acknowledge this spirit. There are not very many who can boast of such liberalism. I should deceive myself if I thought I was a practising physician. I am above all an investigator, and this naturally gives me a different attitude to many problems. In my last letter I purposely left the practical needs of the doctor out of account, chiefly in order to show you on what grounds one might be moved to give up hypnotic therapy. To anticipate a possible objection, let me say at once that I did not give up hypnosis because I wanted to avoid dealing with the basic forces of the human psyche, but because I wanted to battle with them directly and openly. When once I understood what kind of forces play a part in hypnotism I gave it up, simply to get rid of all the indirect advantages of this method. As we psychoanalysts find to our cost every day—and our patients also—we do not work with the "transference to the analyst,"[6] but *against it and in spite of it*. Hence we do not bank on the faith of the patient, but on his *criticism*. So much I would say for now about this delicate question.

[602] As your letter shows, we are at one in regard to the theoretical aspect of treatment by suggestion. We can therefore apply ourselves to the further task of reaching agreement on practical questions. Your remarks on the doctor's dilemma—whether to be a magician or a scientist—bring us to the heart of the matter. I strive not to be a fanatic—though there are not a few who accuse me of fanaticism. I struggle merely for the recognition of methods of research and their results, not for the application of psychoanalytic methods at all costs. I was a medical practitioner quite long enough to realize that practice obeys, and must obey, other laws than does the search for truth. One might almost say that the practitioner must submit first and foremost to the law of expediency. The investigator would be doing him a great wrong if he accused him of not using the "one true" scientific method. As I said to you in my last letter: "A truth is a truth, when it works." On the other hand, the practitioner must not reproach the investigator if in his search for truth and for new and perhaps better methods he tries out unusual procedures.

After all, it is not the practitioner who will have to bear the brunt, but the investigator and possibly his patient. The practitioner must certainly use those methods which he knows how to apply to the greatest advantage and which give him relatively the best results. My liberalism, as you see, extends even to Christian Science. But I deem it most uncalled for that Frank, a practising doctor, should cast aspersions on research in which he cannot participate—the very line of research to which he owes his own method. It is surely high time to stop this running down of every new idea. No one asks Frank and his confrères to be psychoanalysts. We grant them their right to existence, why should they always seek to curtail ours?

[603] As my own “cures” show you, I do not doubt the effect of suggestion. I merely had the feeling that I might be able to discover something still better. This hope has been justified. Not for ever shall it be said:

> If ever in this world we reach what’s good
> We call what’s better just a plain falsehood![7]

[604] I frankly confess that if I were doing your work I should often be in difficulties if I relied on psychoanalysis alone. I can scarcely imagine a general practice, especially in a sanatorium, with no other auxiliaries than psychoanalysis. It is true that at Bircher’s sanatorium in Zurich the principle of psychoanalysis has been adopted, at least by several of the assistants, but a whole series of other important educative influences are also brought to bear on the patients, without which things would probably go very badly. In my own purely psychoanalytic practice I have often regretted that I could not avail myself of other methods of re-education that are naturally at hand in an institution—but only, of course, in special cases where one is dealing with particularly uncontrolled, untrained patients. Which of us would assert that he has discovered the panacea? There are cases where psychoanalysis works worse than any other method. But who has ever claimed that psychoanalysis should be used always and everywhere? Only a fanatic could maintain such a view. Patients for whom psychoanalysis is suitable have to be selected. I unhesitatingly send cases I think unsuitable to other doctors. This does

not happen often, as a matter of fact, because patients have a way of sorting themselves out. Those who go to a psychoanalyst usually know quite well why they go to him and not to someone else. Moreover there are very many neurotics excellently suited for psychoanalysis. In these matters all schematism is to be abhorred. It is never quite wise to run your head against a brick wall. Whether simple hypnotism, or cathartic treatment, or psychoanalysis shall be used must be determined by the conditions of the case and the preference of the doctor. Every doctor will obtain the best results with the instrument he knows best.

[605] But, barring exceptions, I must say definitely that for me, as well as for my patients, psychoanalysis works better than any other method. This is not merely a matter of feeling; from manifold experiences I know many cases can still be helped by psychoanalysis that are refractory to all other methods of treatment. I know many colleagues whose experience is the same, even men engaged exclusively in practical work. It is scarcely credible that an altogether inferior method would meet with so much support.

[606] When once psychoanalysis has been applied in a suitable case, it is *imperative* that rational solutions of the conflicts should be found. The objection is at once advanced that many conflicts are intrinsically insoluble. People sometimes take this view because they think only of external solutions—which at bottom are not solutions at all. If a man cannot get on with his wife, he naturally thinks the conflict would be solved if he married someone else. When such marriages are examined they are seen to be no solution whatever. The old Adam enters upon the new marriage and bungles it just as badly as he did the earlier one. A real solution comes only from within, and then only because the patient has been brought to a different attitude.

[607] If an external solution is possible no psychoanalysis is necessary; but if an internal solution is sought, we are faced with the peculiar task of psychoanalysis. The conflict between “love and duty” must be solved on that level of character where “love and duty” are no longer opposites, which in reality they are not. Similarly, the familiar conflict between “instinct and conventional morality” must be solved in such a way that

both factors are taken sufficiently into account, and this again is possible only through a change of character. This change psychoanalysis can bring about. In such cases external solutions are worse than none at all. Naturally, expediency determines which road the doctor must ultimately follow and what is then his duty. I regard the conscience-searching question of whether he should remain true to his scientific convictions as a minor one in comparison with the far weightier question of how he can best help his patient. The doctor *must*, on occasion, be able to play the augur. *Mundus vult decipi*—but the curative effect is no deception. It is true that there is a conflict between ideal conviction and concrete possibility. But we should ill prepare the ground for the seed of the future were we to forget the tasks of the present, and sought only to cultivate ideals. That would be but idle dreaming. Do not forget that Kepler once cast horoscopes for money, and that countless artists are condemned to work for a living wage.

From Dr. Loÿ

9 February 1913

[608] The same passion for truth possesses us when we think of pure research, and the same wish to cure when we consider therapy. For the researcher, as for the doctor, we desire the fullest freedom in all directions—complete freedom to choose and practise the methods which promise the best fulfilment of their ends at any moment. On this last point we are at one, but it remains a postulate which we must prove to the satisfaction of others if we want recognition for our views.

[609] First and foremost there is one question that must be answered, an old question already asked in the Gospels: “What is truth?” I think clear definitions of fundamental ideas are everywhere necessary. How shall we contrive a working definition of the concept “Truth?” Perhaps an allegory may help us.

[610] Imagine a gigantic prism in front of the sun, so that its rays are broken up, but suppose man entirely ignorant of this fact. (I disregard the chemical, invisible, ultra-violet rays.) Men living in the blue-lit region

will say, “The sun sends forth blue light only.” They are right and yet they are wrong: from their standpoint they are capable of perceiving only a *fragment* of the truth. And so too with the inhabitants of the red, yellow, and intermediate regions. And they will all scourge and slay one another to force their fragmentary truth on the others— until, grown wiser through travelling in each other’s regions, they come to the unanimous view that the sun sends out light of different colours. That is a more comprehensive truth, but it is still not *the* truth. Only when a giant lens has recombined the split-up rays, and when the invisible, chemical, and heat rays have given proof of their specific effects, will a view arise more in accordance with the truth, and men will perceive that the sun emits white light which is split up by the prism into different rays with different qualities, and that these rays are recombined by the lens into a beam of white light.

[611] This example serves to show that the road to Truth leads through a series of comparative observations, the results of which must be controlled with the help of freely selected experiments until seemingly well-grounded hypotheses and theories can be put forward; but these hypotheses and theories will fall to the ground as soon as a single new observation or a single new experiment contradicts them.

[612] The way is toilsome, and in the end all we ever attain is a *relative* truth. But such relative truth suffices for the time being if it serves to explain the most important concatenations of fact in the past, to light up those of the present, and to predict those of the future, so that we are in a position to adapt through our knowledge. Absolute truth, however, would be accessible only to omniscience, having knowledge of all possible concatenations and combinations; but that is not possible for us, because the number of concatenations and combinations is infinite. Accordingly, we shall never know more than an approximate truth. Should new concatenations be discovered, new combinations be built up, the picture changes and with it the whole range of knowledge and action. To what new revolutions in daily life does not every new scientific discovery lead: how absurdly small was the beginning of the first theory of electricity, how inconceivably great the results!

[613] These are commonplaces, but one must continually repeat them when one sees how life is always made bitter for the innovators in every scientific field, and now especially so for the followers of the psychoanalytic school. Everyone admits these commonplaces so long as it is a matter of "academic" discussion, but only so long; as soon as a concrete case has to be considered, sympathies and antipathies rush to the forefront and darken judgment. Therefore the investigator must fight tirelessly, appealing to logic and honesty, for freedom of research in all fields, and must not allow despots of whatever political or religious persuasion to advance "reasons of expediency" in order to destroy or even restrict this freedom. Reasons of expediency may be and are in place elsewhere, but not here. Finally, we must make an end of the dictum of the Middle Ages, *philosophia ancilla theologiae*, as well as the founding of university chairs in favour of this or that political or religious party. All fanaticism is the enemy of science, which above all things must be independent.

[614] And when we turn from the search for Truth back to therapeutics, we see immediately that here again we are in agreement. In practice expediency *must* rule: the doctor from the yellow region must adapt himself to the patients in the yellow region, as must the doctor in the blue region to *his* patients; both have the same object in view. And the doctor who lives in the white light must take into consideration the past experiences of patients from the yellow or blue region, in spite or rather because of his wider knowledge. In such cases the way to healing will be long and difficult, may indeed lead more easily to a *cul-de-sac* than in cases where he has to deal with patients who, like himself, have already attained knowledge of the white light, or, in other words, when his patients have already "sorted themselves out." With these sorted-out patients the psychoanalyst is permitted to work exclusively with the methods of psychoanalysis; he can consider himself lucky that he does not need to "play the augur."

[615] Now, these methods of psychoanalysis, what are they? If I understand you aright, it is by and large a question of working directly and openly with the fundamental forces of the human psyche, to the end that the patient, be he sick or sound or in some stage in between—for sickness

and health flow into each other imperceptibly—shall have his mental eyes opened to the drama that is being enacted within him. He must learn to know the automatisms that are hostile to the development of his personality, and through this knowledge he must learn gradually to free himself from them; but he must also learn how to exploit and strengthen the favourable automatisms. He must learn to make his self-knowledge real and to control the workings of his mind so that a balance may be struck between feeling and reason. How large a part is played in all this by *suggestion?* I can hardly believe that suggestion can be avoided altogether till the patient feels really freed. This freedom, it goes without saying, is the main thing to strive for, and it must be an *active* freedom. The patient who simply obeys a suggestion obeys it only so long as the "transference to the analyst" remains in force.

[616] But in order to adjust himself to all circumstances the patient must have strengthened himself "from within." He should no longer need the crutches of faith but must be capable of tackling all theoretical and practical problems critically and of solving them himself. That is your view, isn't it, or have I not understood you correctly?

[617] I next ask, must not every single case be treated differently—within the limits of the psychoanalytic method? For if every case is a case by itself, it must surely require individual treatment.

[618] "Il n'y a pas de maladies, il n'y a que des malades," said a French doctor whose name escapes me. But broadly speaking, what course, from a technical point of view, does analysis take, and what deviations occur most frequently? That I would gladly learn from you. I take it for granted that all "augur's tricks," darkened rooms, masks, chloroform, etc., are out of the question.

[619] Psychoanalysis—purged so far as is humanly possible of suggestive influence—appears to have one essential difference from psychotherapy à la Dubois. With Dubois, all talk about the past is prohibited from the outset, and "moral reasons for recovery" are placed in the forefront; whilst psychoanalysis uses the subconscious material from the patient's past and present to promote self-knowledge. Another difference lies in the conception of morality: morals are above all "relative." But what

forms (in broad outline) should one give them at times when suggestion cannot be avoided? Expediency must decide, you will say. Agreed, as regards old people or grown-ups who have to live in a not very enlightened milieu. But if one is dealing with children, the seed of the future, isn't it a sacred duty to enlighten them about the shaky foundations of the so-called moral conceptions of the past, which have only a dogmatic basis, and to educate them to full freedom by courageously unveiling the truth? I ask this not so much with respect to the analysing doctor as with respect to the educator. Should not the founding of *progressive schools* be regarded as a task for the psychoanalyst?

From Dr. Jung

11 February 1913

[620] The relativity of "truth" has been known for ages and does not stand in the way of anything, and if it did would merely prevent belief in dogmas and authority. But it does not even do that.

[621] You ask me—or rather tell me—what psychoanalysis is. Before considering your views, permit me first to try to mark out the territory and give a definition of psychoanalysis.

[622] Psychoanalysis is first of all simply a method—but a method complying with all the rigorous requirements which the concept of a "method" implies today. Let me say at once that psychoanalysis is not an *anamnesis*, as those who know everything without learning it are pleased to believe. It is essentially a way of investigating unconscious associations which cannot be got at by exploring the conscious mind. Again, psychoanalysis is not a method of examination in the nature of an intelligence test, though this mistake is common in certain circles. Nor is it a method of catharsis for abreacting, with or without hypnosis, real or imaginary traumata.

[623] Psychoanalysis is a method which makes possible the analytical reduction of psychic contents to their simplest expression, and for

discovering the line of least resistance in the development of a harmonious personality. In neurosis there is no uniform direction of life because contrary tendencies frustrate and prevent psychological adaptation. Psychoanalysis, so far as we can judge at present, seems to be the only rational therapy of the neuroses.

[624] No programme can be formulated for the technical application of psychoanalysis. There are only general principles, and working rules for individual analysis. (For the latter I would refer you to Freud's work in Vol. I of the *Internationale Zeit-scrift für ärztliche Psychoanalyse.*[8]*)* My only working rule is to conduct the analysis as a perfectly ordinary, sensible conversation, and to avoid all appearance of medical magic.

[625] The main principle of psychoanalytic technique is to analyse the psychic contents that present themselves at a given moment. Any interference on the part of the analyst, with the object of forcing the analysis to follow a systematic course, is a gross mistake in technique. So-called chance is the law and order of psychoanalysis.

[626] At the beginning of the analysis the anamnesis and diagnosis naturally come first. The subsequent analytic procedure develops quite differently in every case. To give rules is almost impossible. All one can say is that very frequently, right at the beginning, a number of resistances have to be overcome, resistances against both the method and the analyst. Patients who have no notion of psychoanalysis must first be given some understanding of the method. With those who already know something of it there are very often misconceptions to be set right, and also all those objections to be answered which are levelled by scientific criticism. In either case the misconceptions are due to arbitrary interpretations, superficiality, and gross ignorance of the facts.

[627] If the patient is himself a doctor his habit of knowing better may prove extremely tiresome. With intelligent colleagues a thorough theoretical discussion is worth while. With the unintelligent and bigoted ones you begin quietly with the analysis. In the unconscious of such folk you have a confederate who never lets you down. The very first dreams demonstrate the wretched inadequacy of their criticism, so that from the whole beautiful edifice of supposedly scientific scepticism nothing

remains over but a little heap of personal vanity. I have had very amusing experiences in this respect.

[628] It is best to let the patients talk freely and to confine yourself to pointing out a connection here and there. When the conscious material is exhausted you go on to dreams, which give you the subliminal material. If people have no dreams, as they allege, or forget them, there is usually still some conscious material that ought to be produced and discussed, but is kept back owing to resistances. When the conscious is emptied then come the dreams, which as you know are the chief object of analysis.

[629] How the analysis is to be conducted and what is to be said to the patient depends, first, on the material to be dealt with; second, on the analyst's skill; and third, on the patient's capacity. I must emphasize that no one should undertake an analysis except on the basis of a sound knowledge of the subject, and this means a thorough knowledge of the existing literature. Without this, the work will only be bungled.

[630] I do not know what else to tell you beforehand. I must wait for further questions.

[631] As to the question of morality and education, let me say that these things belong to a later stage of the analysis, when they find—or should find—their own solution. You cannot make recipes out of psychoanalysis!

From Dr. Loÿ

16 February 1913

[632] You write that a sound knowledge of the literature is necessary for an introduction to psychoanalysis. I agree, but with one reservation: the more one reads of it the more clearly one sees how many contradictions there are among the different writers, and less and less does one know—until one has had sufficient personal experience—to which view to give adherence, since quite frequently assertions are made without any proof. For example, I had thought (strengthened in this view by my own

experience of suggestion therapy) that the transference to the analyst might be an essential condition of the patient's cure. But you write: "We psychoanalysts do not bank on the patient's *faith*, but on his *criticism."* As against this Stekel writes ("Aus-gänge der psychoanalytischen Kuren," *Zentralblatt für Psychoanalyse*, III, 1912–13, p. 176): "Love for the analyst can become a force conducive to recovery. Neurotics never get well for love of themselves, they get well for love of the analyst. They do it to please him …" Here again, surely, the accent is on the power of suggestion? And yet Stekel, too, thinks he is a psychoanalyst pure and simple. On the other hand you remark in your letter of January 28: "The personality of the analyst is one of the main factors in the cure." Should not this be translated as: When the analyst inspires respect in the patient and is worthy of his love, the patient will follow his example in order to please him, and will endeavour to get over his neurosis so as to fulfil his human duties in the widest sense of the word?

[633] I think one can only emerge from all this uncertainty when one has gained sufficient personal experience, and then one will also know which procedure is best suited to one's own personality and gives the best therapeutic results. This is another reason for submitting to an analysis oneself, to find out what one is. I am very much in agreement with your definition of psychoanalysis in its negative sense: psychoanalysis is neither an anamnesis nor a method of examination like an intelligence test, nor yet a psychocatharsis. But your definition in the positive sense, that "psychoanalysis is a method for discovering the line of least resistance in the development of a harmonious personality," seems to me to apply only to the laziness of the patient, but not to the releasing of sublimated libido for a new aim in life.

[634] You say that in neurosis there is no uniform direction because contrary tendencies prevent psychic adaptation. True, but will not psychic adaptation turn out quite differently according to whether the patient, now cured, re-directs his life simply to the avoidance of pain (line of least resistance) or to the attainment of the greatest pleasure? In the first case he would be more passive, and would simply reconcile himself to the "soberness of reality" (Stekel, p. 187). In the second case he would be "filled with enthusiasm" for something or other, or for some

person. But what determines whether he will be more active or more passive in his “second” life? In your opinion, does this determining factor appear spontaneously in the course of analysis, and should the analyst carefully avoid tilting the balance to one side or the other by his influence? Or will he, if he does not refrain from canalizing the patient’s libido in a definite direction, have to renounce the right to be called a psychoanalyst at all, and is he to be regarded as a “moderate” or a “radical”? (Fürtmuller, “Wandlungen in der Freud’schen Schule,” *Zentralblatt*, III, p. 191.) But I think you have already answered this question in advance when you write in your letter of February 11 : “Any interference on the part of the analyst is a gross mistake in technique. So-called chance is the law and order of psychoanalysis.” But, torn from its context, perhaps this sentence does not quite give your whole meaning.

[635] With regard to enlightening the patient about the psychoanalytic method before beginning the analysis, you appear to be in agreement with Freud and Stekel: better too little than too much. For knowledge pumped into a patient remains half-knowledge anyway, and half-knowledge begets “wanting to know better,” which only impedes progress. So, after a brief explanation, first let the patient talk, pointing out a connection here and there, then, after the conscious material is exhausted, go on to the dreams.

[636] But here another obstacle stands in my way, which I have already mentioned at our interview: you find the patient adopting the tone, language, or jargon of the analyst (whether from conscious imitation, transference, or plain defiance, so as to fight the analyst with his own weapons)—how then can you prevent his starting to produce all manner of fantasies as supposedly real traumata of early childhood, and *dreams* which are supposedly spontaneous but in reality, whether directly or indirectly, albeit involuntarily, are *suggested”?*

[637] I told you at the time that Forel (in *Der Hypnotismus)* made his patients dream just what he wanted, and I myself have easily repeated this experiment. But if the analyst wants to *suggest nothing,* must he keep silent most of the time and let the patient talk—except that, when interpreting the dreams, he may put his own interpretation to the patient?

From *Dr. Jung*

18 February 1913

[638] I cannot but agree with your observation that confusion reigns in psychoanalytic literature. Just at this moment different points of view are developing in the theoretical assessment of analytic results, not to mention the many individual deviations. Over against Freud's almost entirely causal conception there has developed, apparently in absolute contradiction to Freud, Adler's purely finalist view, though in reality it is an essential complement to Freud's theory. I hold rather to a middle course, taking account of both standpoints. It is not surprising that great disagreement prevails with regard to the ultimate questions of psychoanalysis when you consider how difficult they are. In particular, the problem of the therapeutic effect of psychoanalysis is bound up with the most difficult questions of all, so that it would indeed be astonishing if we had already reached final certitude.

[639] Stekel's remark is very characteristic. What he says about love for the analyst is obviously true, but it is simply a statement of fact and not a goal or a guiding principle of analytical therapy. If it were the goal, many cures, it is true, would be possible, but also many failures might result which could be avoided. The goal is to educate the patient in such a way that he will get well for his own sake and by reason of his own determination, and not in order to procure his analyst some kind of advantage—though of course it would be absurd from the therapeutic standpoint not to allow the patient to get well because he simply wants to do his analyst a good turn. The patient should know what he is doing, that's all. It is not for us to prescribe for him the ways by which he should get well. Naturally it seems to me (from the psychoanalytic point of view) an illegitimate use of suggestive influence if the patient is forced to get well out of love for his analyst. This kind of coercion sometimes takes a bitter revenge. The "you must and shall be saved" attitude is no more to be commended in the therapy of the neuroses than in any other department of life. Besides, it contradicts the principles of analytic treatment, which shuns all coercion and tries to let everything grow up

from within. I am not opposed, as you know, to suggestive influence in general, but merely to doubtful motivations. If the analyst demands that his patient shall get well out of love for him, the patient may easily reckon on reciprocal services, and will without doubt try to extort them. I can only utter a warning against any such practice. A far stronger motive for recovery—also a far healthier and ethically more valuable one—is the patient's thorough insight into the real situation, his recognition of things as they are and how they should be. If he is worth his salt he will then realize that he can hardly remain sitting in the morass of neurosis.

[640] I cannot agree with your interpretation of my remarks on the healing effect of the analyst's personality. I wrote[9] that his personality had a healing effect because the patient *reads* the personality of the analyst, and not that he gets well *out of love for* the analyst. The analyst cannot prevent him from beginning to behave towards his conflicts as he himself behaves, for nothing is finer than the empathy of a neurotic. *But every strong transference serves this purpose too*. If the analyst makes himself amiable to the patient, he simply buys off a lot of resistances which the patient ought to have overcome, and which he will quite certainly have to overcome later on. So nothing is gained by this technique; at most the beginning of the analysis is made easier for the patient, though in certain cases this is not without its uses. To have to crawl through a barbed-wire fence without having some enticing end in view testifies to an ascetic strength of will which you can expect neither from the ordinary person nor from the neurotic. Even Christianity, whose moral demands are set very high, has not scorned to dangle before us the kingdom of heaven as the goal and reward of earthly endeavour. In my view the analyst is entitled to speak of the advantages which follow from the ardours of analysis. Only, he should not represent himself or his friendship, by hints or promises, as a reward, unless he is seriously resolved to make it so.

[641] As to your criticism of my tentative definition of psychoanalysis, it must be observed that the road over a steep mountain is the line of least resistance when a ferocious bull awaits you in the pleasant valley road. In other words, the line of least resistance is a compromise with *all* eventualities, not just with laziness. It is a prejudice to think that the line of least resistance coincides with the path of inertia. (That's what we

thought when we dawdled over our Latin exercises at school.) Laziness is a temporary advantage only and leads to consequences which involve the worst resistances. On the whole, therefore, it does not coincide with the line of least resistance. Nor is life along the line of least resistance synonymous with the ruthless pursuit of selfish desires. Anyone who lived like that would soon realize with sorrow that he was not following the line of least resistance, because man is also a social being and not just a bundle of egoistic instincts, as some people pretend. You can see this best with primitives and domestic animals, who all have a well-developed social sense. Without some such function the herd could not exist at all. Man as a herd-animal, too, has not by any manner of means to subordinate himself to laws imposed from without; he carries his social imperatives within himself, *a priori*, as an inborn necessity. Here, as you see, I place myself in decided opposition to certain views—quite unjustified, in my opinion—which have been expressed here and there inside the psychoanalytic school.

[642] Accordingly the line of least resistance does not signify *eo ipso* the avoidance of pain so much as the just balancing of pain and pleasure. Painful activity by itself leads to no result but exhaustion. A man must be able to enjoy life, otherwise the effort of living is not worth while.

[643] What direction the patient's life should take in the future is not ours to judge. We must not imagine that we know better than his own nature, or we would prove ourselves educators of the worst kind. (Fundamental ideas of a similar nature have also been worked out by the Montessori school.[10]) Psychoanalysis is only a means for removing the stones from the path of development, and not a method (as hypnotism often claims to be) of putting things into the patient that were not there before. It is better to renounce any attempt to give direction, and simply try to throw into relief everything that the analysis brings to light, so that the patient can see it clearly and be able to draw suitable conclusions. Anything he has not acquired himself he will not believe in the long run, and what he takes over from authority merely keeps him infantile. He should rather be put in a position to take his own life in hand. The art of analysis lies in following the patient on all his erring ways and so gathering his strayed sheep together. Working to programme, on a preconceived system, we

spoil the best effects of analysis. I must therefore hold fast to the sentence you object to: “Any interference on the part of the analyst is a gross mistake in technique. So-called chance is the law and order of psychoanalysis.”

[644] As you must know, we still cannot give up the pedantic prejudice of wanting to correct nature and force our limited “truths” on her. But in the therapy of the neuroses we meet with so many strange, unforeseen and unforeseeable experiences that all hope should vanish of our knowing better and being able to prescribe the way. The roundabout way and even the wrong way are necessary. If you deny this you must also deny that the mistakes of history were necessary. That is the pedant’s-eye view of the world. This attitude is no good in psychoanalysis.

[645] The question as to how much the analyst involuntarily suggests to the patient is a very ticklish one. It certainly plays a much more important role than psychoanalysis has so far admitted. Experience has convinced me that patients rapidly begin to make use of ideas picked up from psychoanalysis, as is also apparent in their dreams. You get many impressions of this sort from Stekel’s book *Die Sprache des Traumes*. I once had a very instructive experience: a very intelligent lady had from the beginning long-drawn-out transference fantasies which appeared in the usual erotic guise. But she absolutely refused to admit their existence. Naturally she was betrayed by her dreams, in which, however, my person was always hidden under some other figure, often rather difficult to make out. A long series of such dreams finally compelled me to remark: “So, you see, it’s always like that, the person you are really dreaming about is replaced and masked by someone else in the manifest dream.” Till then she had obstinately denied this mechanism. But this time she could no longer evade it and had to admit my working rule—but only to play a trick on me. Next day she brought me a dream in which she and I appeared in a manifestly lascivious situation. I was naturally perplexed and thought of my rule. Her first association to the dream was the malicious question: “It’s always true, isn’t it, that the person you are really dreaming about is replaced by someone else in the manifest dream?”

[646] Clearly, she had made use of her experience to find a protective formula by which she could express her fantasies openly in a quite innocent way.

[647] This example shows at once how patients use insights they have gained from analysis. They use them for the purpose of symbolization. You get caught in your own net if you believe in fixed, unalterable symbols. That has happened to more than one psychoanalyst. It is therefore a fallacious and risky business to try to exemplify any particular theory with dreams arising from an analysis. Proof can only come from the dreams of demonstrably uninfluenced persons. In such cases one would have to exclude at most telepathic thought-reading. But if you concede this possibility, you would have to subject many other things to a rigorous scrutiny, including judicial verdicts.

[648] Although we must pay full attention to the element of suggestion, we should not go too far. The patient is not an empty sack into which we can stuff whatever we like; he brings his own particular contents with him which stubbornly resist suggestion and push themselves again and again to the fore. Analytic "suggestions" merely distort the expression, but not the content, as I have seen countless times. The expression varies without limit, but the content is fixed and can only be got at in the long run, and then with difficulty. Were it not so, suggestion therapy would be in every sense the most effective and rewarding and easiest therapy, a true panacea. Unfortunately it is not, as every honest hypnotist will readily admit.

[649] To come back to your question as to whether it is possible for patients to trick the analyst by making deceptive use—perhaps involuntarily—of his mode of expression, this is indeed a very serious problem. The analyst must exercise all possible care and self-criticism not to let himself be led astray by his patient's dreams. One can say that patients almost invariably use in their dreams, to a greater or lesser extent, the mode of expression learnt in analysis. Interpretations of earlier symbols will themselves be used again as fresh symbols in later dreams. It often happens, for instance, that sexual situations which appeared in earlier dreams in symbolic form will appear "undisguised" in later ones—once

more, be it noted, in symbolic form—as analysable expressions for ideas of a different nature hidden behind them. Thus the not infrequent dream of incestuous cohabitation is by no means an "undisguised" content, but a dream as freshly symbolic and capable of analysis as all others. You can only arrive at the paradoxical idea that such a dream is "undisguised" if you are pledged to the sexual theory of neurosis.

[650] That the patient may mislead the analyst for a longer or shorter time by means of deliberate deception and misrepresentation is possible, as in all other branches of medicine. But the patient injures himself most, since he has to pay for every deception or subterfuge with an aggravation of his symptoms, or with fresh ones. Deception is so obviously disadvantageous to himself that he can scarcely avoid relinquishing such a course for good.

[651] The technique of analysis we can best postpone for oral discussion.

From Dr. Loÿ

23 February 1913

[652] From your letter of 18 February I would like first to single out the end, where you so aptly assign the element of suggestion its proper place in psychoanalysis: "The patient is not an empty sack into which we can stuff whatever we like; he brings his own particular contents with him, with which you have always to reckon afresh" [*sic*]. With this I fully agree, as my own experience confirms it. And you add: involuntary analytic suggestions will leave this content intact, but the expression, Proteus-like, can be distorted without limit. Hence it would be a kind of "mimicry," by which the patient seeks to escape the analyst who is driving him into a corner and for the moment seems to him an enemy. Until at last, through the joint work of patient and analyst—the former spontaneously yielding up his psychic content, the latter only interpreting and explaining–the analysis succeeds in bringing so much light into the darkness of the patient's psyche that he can see the true relationships and, without any preconceived plan of the analyst's, draw the right conclusions and apply them to his future life. This new life will follow

the line of least resistance—or should we not rather say of least resistances—as a “compromise with all eventualities,” in a just balancing of pain and pleasure. It is not for us to decide arbitrarily for the patient how matters stand and what will benefit him; his own nature decides. In other words, we should take over approximately the role of a midwife, who can only bring out into the light of day a child already alive, but who has to avoid a number of mistakes if the child is to remain alive and the mother is not to be injured.

[653] All this is very clear to me because it is only an application to psychoanalytic procedure of a principle which should be generally valid: Never do violence to Nature! Hence I also see that the psychoanalyst must follow his patient’s apparently “erring ways” if the patient is ever to arrive at his own convictions and be freed once and for all from infantile reliance on authority. We ourselves as individuals have learnt and can only learn by making mistakes how to avoid them in the future, and mankind as a whole has created the conditions for its present and future stages of development quite as much by following the crooked path as by keeping to the straight one. Have not many neurotics—I do not know if you will agree, but I think so—become ill partly because their infantile faith in authority has gone to pieces? Now they stand before the wreckage of their faith, weeping over it, and terrified because they cannot find a substitute which would show them clearly where they have to turn. So they remain stuck between the infantilisms they are unwilling to renounce and the serious tasks of the present and future (moral conflict). I also see, particularly in such cases, how right you are in saying that it would be a mistake to try to replace their lost faith in authority by another faith in authority, which would be useful only as long as it lasted. This passes a verdict on the deliberate use of suggestive influence in psychoanalysis, and on regarding the “transference to the analyst” as the goal of analytic therapy. I no longer contest your dictum: “Every interference on the part of the analyst is a gross mistake in technique. So-called chance is the law and order of psychoanalysis.” Further, I am in entire agreement when you say that altruism [*sic*] must necessarily be innate in man as a herd-animal. The contrary would be the thing to wonder at.

[654] I am very much inclined to assume that not the egoistic but the altruistic instincts are primary. Love and trust of the child for the mother who feeds it, nurses, cherishes and pets it; love of man for wife, regarded as absorption in another's personality; love for offspring, care of them; love for kinsfolk, etc. Whereas the egoistic instincts owe their existence only to the desire for exclusive possession of the object of love, the desire to possess the mother exclusively, in opposition to the father and brother and sisters, the desire to have a woman for oneself alone, the desire for jewellery, clothes, etc. … But perhaps you will say I am being paradoxical and that the instincts, whether altruistic or egoistic, arise together in the heart of man, and that every instinct is ambivalent by nature. But I ask: are our feelings and instincts really ambivalent? Are they perhaps bipolar? Can the qualities of emotions be compared at all? Is love really the opposite of hate?

[655] Be that as it may, it is lucky that man carries his social imperatives within himself as an inborn necessity, otherwise our civilized humanity would be in a bad way, having to submit to laws imposed only from without: when the earlier religious faith in authority died out we would rapidly and infallibly fall into complete anarchy. We would then have to ask ourselves whether it would not be better to try to maintain by force an exclusively religious belief in authority, as the Middle Ages did. For the benefits of civilization, which strives to grant every individual as much outward freedom as is consistent with the freedom of others, would be well worth such a sacrifice as the sacrifice of free research. But the age of this use of force against nature is past, civilized mankind has abandoned these erroneous ways, not out of caprice, but obeying an inner need, and therefore we may look forward with joyful anticipation to the future. Mankind, advancing in knowledge and obeying its own law, will find its way across the ruins of faith in authority to the moral autonomy of the individual.

From Dr. Jung

March 1913

[656] At various places in your letters it has struck me that the problem of the "transference" seems to you particularly critical. Your feeling is entirely justified. The transference is indeed at present the central problem of analysis.

[657] You know that Freud regards the transference as a projection of infantile fantasies upon the analyst. To that extent it is an infantile-erotic relationship. However, seen from outside, and superficially, the thing does not always look like an infantile-erotic relationship by any means. So long as it is a case of a so-called positive transference, you can as a rule recognize the infantile-erotic content of the transference without much difficulty. But if it is a so-called negative transference, you see nothing but violent resistances which sometimes disguise themselves in theoretical, seemingly critical or sceptical forms. In a certain sense the determining factor in these relationships is the patient's relationship to authority, that is, in the last resort, to his father. In both forms of transference the analyst is treated as if he were the father—either with affection or with hostility. According to this view of the transference it acts as a resistance as soon as the question arises of resolving the infantile attitude. But this form of transference must be destroyed in so far as the aim of analysis is the patient's moral autonomy.

[658] A lofty aim, you will say. Lofty indeed, and far off, but still not altogether so remote, since it actually corresponds to one of the predominating trends of our stage of civilization—the urge towards individualization, which might serve as a motto for our whole epoch. (Cf. Müller-Lyer, *The Family.)* Anyone who does not believe in this ultimate aim but still adheres to the old scientific causalism will naturally tend to take only the hostile element out of the transference and let the patient remain in a positive relationship to the father, in accordance with the ideals of a past epoch. As we know, the Catholic Church is one of the most powerful organizations based on this tendency. I do not venture to doubt that there are very many people who feel happier under the coercion of others than when forced to discipline themselves (see Shaw's *Man and Superman).* None the less, we would be doing our neurotic patients a grievous wrong if we tried to force them all into the category of the coerced. Among neurotics, there are not a few who do not require

any reminders of their social duties and obligations, but are born and destined rather to be bearers of new cultural ideals. They are neurotic as long as they bow down before authority and refuse the freedom to which they are destined. As long as we look at life only retrospectively, as is the case in the psychoanalytic writings of the Viennese school, we shall never do justice to these persons and never bring them the longed-for deliverance. For in this way we train them only to be obedient children and thereby strengthen the very forces that made them ill—their conservative backwardness and submission to authority. Up to a point this is the right way to take with people suffering from an infantile insubordination who cannot *yet* adapt to authority. But the impulse which drives the others out of their conservative father-relationship is by no means an infantile wish for insubordination; it is a powerful urge to develop their own personality, and the struggle for this is for them an imperative duty. Adler's psychology does much greater justice to this situation than Freud's.

[659] For one type of person (called the infantile-rebel) a positive transference is, to begin with, an important achievement with a healing significance; for the other (the infantile-obedient) it is a dangerous backsliding, a convenient way of evading life's duties. For the first a negative transference denotes increased insubordination, hence a backsliding and an evasion of life's duties, for the second it is a step forward with a healing significance. (For the two types see Adler, "Trotz und Gehorsam," *Monatshefte für Pädagogik und Schulpolitik,* VIII, 1910.)

[660] So the transference must, as you see, be evaluated quite differently according to the type of case.

[661] The psychological process of transference—whether negative or positive—consists in a "libidinal investment" of the personality of the analyst, that is to say he stands for an emotional value. (As you know, by libido I mean very much what the ancients meant by the cosmogonic principle of Eros, or in modern language, "psychic energy.") The patient is bound to the analyst by ties of affection or resistance and cannot help following and imitating his psychic attitude. By this means he feels his

way along (empathy). And with the best will in the world and for all his technical skill the analyst cannot prevent it, for empathy works surely and instinctively in spite of conscious judgment, be it never so strong. If the analyst himself is neurotic and insufficiently adapted to the demands of life or of his own personality, the patient will copy this defect and reflect it in his own attitudes: with what results you can imagine.

[662] Accordingly I cannot regard the transference merely as a projection of infantile-erotic fantasies. No doubt that is what it is from one standpoint, but I also see in it, as I said in an earlier letter, a process of empathy and adaptation. From this standpoint, the infantile-erotic fantasies, in spite of their undeniable reality, appear rather as a means of comparison or as analogical images for something not yet understood than as independent wishes. This seems to me the real reason why they are unconscious. The patient, not knowing the right attitude, tries to grasp at the right relationship to the analyst by way of comparison and analogy with his infantile experiences. It is not surprising that he gropes back to just the most intimate relationships of his childhood in the attempt to discover the appropriate formula for his relationship to the analyst, for this relationship is very intimate too but differs from the sexual relationship as much as does that of a child to its parents. This latter relationship—child to parent—which Christianity has everywhere set up as a symbolic formula for human relationships in general, serves to restore to the patient that direct feeling of human fellowship of which he has been deprived by the incursions of sexual and social valuations (valuations from the standpoint of power, etc.). The purely sexual and other more or less primitive and barbaric valuations militate against a direct, purely human relationship, and this creates a damming up of libido which may easily give rise to neurotic formations. Through analysis of the infantile content of the transference fantasies the patient is brought back to a remembrance of the childhood relationship, which, stripped of its infantile qualities, gives him a clear picture of a direct human relationship over and above merely sexual valuations, etc. I can only regard it as a misconception to judge the child-relationship retrospectively as a merely sexual one, even though a certain sexual content cannot be denied.

[663] Recapitulating, I would like to say this of the positive transference:

> The patient's libido fastens on the person of the analyst in the form of expectation, hope, interest, trust, friendship, and love. The transference first produces a projection of infantile fantasies, often with a predominantly erotic tinge. At this stage it is, as a rule, of a decidedly sexual character, even though the sexual component remains relatively unconscious. But this emotional process serves as a bridge for the higher aspect of empathy, whereby the patient becomes conscious of the inadequacy of his own attitude through recognition of the analyst's attitude, which is accepted as being adapted to life's demands and as normal. Through remembrance of the childhood relationship with the help of analysis the patient is shown the way which leads out of the subsidiary, purely sexual or power values acquired in puberty and reinforced by social prejudice. This road leads to a purely human relationship and to an intimacy based not on the existence of sexual or power factors but on the value of personality. That is the road to freedom which the analyst should show his patient.

[664] I ought not to conceal from you at this point that the stubborn assertion of sexual values would not be maintained so tenaciously if they did not have a profound significance for that period of life in which propagation is of primary importance. The discovery of the value of human personality is reserved for a riper age. For young people the search for personality values is very often a pretext for evading their biological duty. Conversely, the exaggerated longing of an older person for the sexual values of youth is a short-sighted and often cowardly evasion of a duty which demands recognition of the value of personality and submission to the hierarchy of cultural values. The young neurotic shrinks back in terror from the expansion of life's duties, the old one from the dwindling of the treasures he has attained.

[665] This view of the transference is, as you will have observed, closely connected with the acceptance of biological "duties." By this I mean the tendencies or determinants that produce culture in man with the same logic as in the bird they produce the artfully woven nest, and antlers in the stag. The purely causal, not to say materialistic views of the last few

decades seek to explain all organic formation as the reaction of living matter, and though this is undoubtedly a heuristically valuable line of inquiry, as far as any real explanation goes it amounts only to a more or less ingenious postponement and apparent minimizing of the problem. I would remind you of Bergson's excellent criticism in this respect. External causes can account for at most half the reaction, the other half is due to the peculiar attributes of living matter itself, without which the specific reaction formation could never come about at all. We have to apply this principle also in psychology. The psyche does not merely *react*, it gives its own specific answer to the influences at work upon it, and at least half the resulting formation is entirely due to the psyche and the determinants inherent within it. Culture can never be understood as reaction to environment. That shallow explanation can safely be left to the past century. It is just these determinants that appear as psychological imperatives, and we have daily proof of their compelling power. What I call "biological duty" is identical with these determinants.

[666] In conclusion, I must take up one point which seems to have caused you uneasiness. That is the *moral* question. Among our patients we observe so many so-called immoral impulses that the thought involuntarily forces itself on the psychotherapist how it would be if all these desires were gratified. You will have seen from my earlier letters that these desires should not be taken too seriously. Mostly they are boundlessly exaggerated demands which are thrust to the forefront by the patient's dammed-up libido, usually against his will. The canalizing of libido for the fulfilment of life's simple duties is in most cases sufficient to reduce the pressure of these desires to zero. But in certain cases it is a recognized fact that "immoral" tendencies are not got rid of by analysis, but appear more and more clearly until it becomes evident that they belong to the biological duties of the individual. This is particularly true of certain sexual demands aiming at an individual evaluation of sexuality. This is not a question for pathology, it is a social quèstion of today which imperatively demands an ethical solution. For many it is a biological duty to work for a solution of this question, i.e., to find some sort of practical solution. (Nature, as we know, is not satisfied with theories.) Nowadays we have no real sexual morality, only a legalistic attitude to sexuality;

just as the Middle Ages had no real morality of money-making but only prejudices and a legalistic point of view. We are not yet far enough advanced to distinguish between moral and immoral behaviour in the realm of free sexual activity. This is clearly expressed in the customary treatment, or rather ill-treatment, of unmarried mothers. All the repulsive hypocrisy, the high tide of prostitution and of venereal diseases, we owe to the barbarous, wholesale legal condemnation of certain kinds of sexual behaviour, and to our inability to develop a finer moral sense for the enormous psychological differences that exist in the domain of free sexual activity.

[667] The existence of this exceedingly complicated and significant contemporary problem may serve to make clear to you why we so often find among our patients people who, because of their spiritual and social gifts, are quite specifically called to take an active part in the work of civilization—that is their biological destiny. We should never forget that what today seems to us a moral commandment will tomorrow be cast into the melting-pot and transformed, so that in the near or distant future it may serve as a basis for new ethical formations. This much we ought to have learnt from the history of civilization, that the forms of morality belong to the category of transitory things. The finest psychological tact is needed with these sensitive natures if they are to turn the dangerous corner of infantile irresponsibility, indolence, or licentiousness, and to give the patient a clear and unclouded vision of the possibility of morally autonomous behaviour. Five per cent on money lent is fair interest, twenty per cent is despicable usury. We have to apply this view to the sexual situation as well.

[668] So it comes about that there are many neurotics whose inner decency prevents them from being at one with present-day morality and who cannot adapt themselves so long as the moral code has gaps in it which it is the crying need of our age to fill. We deceive ourselves greatly if we think that many married women are neurotic merely because they are unsatisfied sexually or because they have not found the right man or because they have an infantile sexual fixation. The real reason in many cases is that they cannot recognize the cultural task that is waiting for them. We all have far too much the standpoint of the “nothing but”

psychology, that is, we still think that the new future which is pressing in at the door can be squeezed into the framework of what is already known. And so these people see only the present and not the future. It was of profound psychological significance when Christianity first proclaimed that the orientation to the future was the redeeming principle for mankind. In the past nothing can be altered, and in the present little, but the future is ours and capable of raising life's intensity to the highest pitch. A little span of youth belongs to us, all the rest belongs to our children.

[669] Thus your question about the significance of the loss of faith in authority answers itself. The neurotic is ill not because he has lost his old faith, but because he has not yet found a new form for his finest aspirations.

PREFACES TO “COLLECTED PAPERS ON ANALYTICAL PSYCHOLOGY”[1]

First Edition

[670] This volume contains a selection of articles and pamphlets on analytical psychology written at intervals during the past fourteen years.[2] These years have seen the development of a new discipline and, as is usual in such a case, have involved many changes of viewpoint, conception, and formulation.

[671] It is not my intention to present the fundamental concepts of analytical psychology in this book. The volume does, however, throw some light on a certain line of development which is especially characteristic of the Zurich school of psychoanalysis.

[672] As is well known, the merit of discovering the new analytical method of general psychology belongs to Professor Freud of Vienna. His original views have had to undergo many important modifications, some of them owing to the work done at Zurich, in spite of the fact that he himself is far from agreeing with the standpoint of this school.

[673] I cannot here explain the fundamental differences between the two schools but would mention only the following: The Viennese School adopts an exclusively sexualistic standpoint while that of the Zurich School is symbolistic. The Viennese School interprets the psychological symbol semiotically, as a sign or token of certain primitive psychosexual processes. Its method is analytical and causal. The Zurich School recognizes the scientific possibility of such a conception but denies its exclusive validity, for it does not interpret the psychological symbol semiotically only but also symbolistically, that is, it attributes a positive value to the symbol.

[674] The value of the symbol does not depend merely on historical causes; its chief importance lies in the fact that it has a meaning for the actual

present and for the future, in their psychological aspects. For the Zurich School the symbol is not merely a sign of something repressed and concealed, but is at the same time an attempt to comprehend and to point the way to the further psychological development of the individual. Thus we add a prospective meaning to the retrospective value of the symbol.

[675] The method of the Zurich School, therefore, is not only analytical and causal but synthetic and prospective, in recognition of the fact that the human mind is characterized by *fines* (aims) as well as by *causae*. This deserves particular emphasis, because there are two types of psychology, the one following the principle of hedonism, the other the power principle. The philosophical counterpart of the former type is scientific materialism and of the latter the philosophy of Nietzsche. The principle of the Freudian theory is hedonism, while the theory of Adler (one of Freud's earliest personal pupils) is founded on the power principle.

[676] The Zurich School, recognizing the existence of these two types (also remarked by the late Professor William James), considers that the views of Freud and Adler are one-sided and valid only within the limits of their corresponding type. Both principles exist in every individual though not in equal proportions.

[677] Thus, it is obvious that every psychological symbol has two aspects and should be interpreted in accordance with both principles. Freud and Adler interpret in the analytical and causal way, reducing to the infantile and primitive. Thus with Freud the conception of the "aim" is the fulfilment of the wish, while with Adler it is the usurpation of power. In their practical analytical work both authors take the standpoint which brings to light only infantile and grossly egoistic aims.

[678] The Zurich School is convinced that within the limits of a diseased mental attitude the psychology is such as Freud and Adler describe. It is, indeed, just on account of such an impossible and childish psychology that the individual is in a state of inner dissociation and hence neurotic. The Zurich School, therefore, in agreement with them so far, also reduces the psychological symbol (the fantasy-products of the patient) to his fundamental infantile hedonism or infantile desire for power. Freud and

Adler content themselves with the result of mere reduction, which accords with their scientific biologism and naturalism.

[679] But here a very important question arises. Can man obey the fundamental and primitive impulses of his nature without gravely injuring himself or his fellow beings? He cannot assert either his sexual desire or his desire for power unlimitedly in the face of limits which are very restrictive. The Zurich School has in view the end-result of analysis, and it regards the fundamental thoughts and impulses of the unconscious as symbols, indicative of a definite line of future development. We must admit, however, that there is *no scientific justification* for such a procedure, because our present-day science is based wholly on causality. But causality is only one principle, and psychology cannot be exhausted by causal methods only, because the mind lives by aims as well. Besides this controversial philosophical argument we have another of much greater value in favour of our hypothesis, namely that of *vital necessity*. It is impossible to live according to the promptings of infantile hedonism or according to a childish desire for power. If these are to be given a place they must be taken symbolically. Out of the symbolic application of infantile trends there evolves an attitude which may be termed philosophic or religious, and these terms characterize sufficiently well the lines of the individual's further development. The individual is not just a fixed and unchangeable complex of psychological facts; he is also an extremely variable entity. By an exclusive reduction to causes the primitive trends of a personality are reinforced; this is helpful only when these primitive tendencies are balanced by a recognition of their symbolic value. Analysis and reduction lead to causal truth; this by itself does not help us to live but only induces resignation and hopelessness. On the other hand, the recognition of the intrinsic value of a symbol leads to constructive truth and helps us to live; it inspires hopefulness and furthers the possibility of future development.

[680] The functional importance of the symbol is clearly shown in the history of civilization. For thousands of years the religious symbol proved a most efficacious device in the moral education of mankind. Only a prejudiced mind could deny such an obvious fact. Concrete values cannot take the place of the symbol; only new and more effective

symbols can be substituted for those that are antiquated and outworn and have lost their efficacy through the progress of intellectual analysis and understanding. The further development of the individual can be brought about only by means of symbols which represent something far in advance of himself and whose intellectual meanings cannot yet be grasped entirely. The individual unconscious produces such symbols, and they are of the greatest possible value in the moral development of the personality.

[681] Man almost invariably has philosophic and religious views concerning the meaning of the world and of his own life. There are some who are proud to have none. But these are exceptions outside the common path of mankind; they lack an important function which has proved itself to be indispensable to the human psyche.

[682] In such cases we find in the unconscious, instead of modern symbolism, an antiquated, archaic view of the world and of life. If a necessary psychological function is not represented in the sphere of consciousness it exists in the unconscious in the form of an archaic or embryonic prototype.

[683] This brief résumé may show the reader what he may expect *not* to find in this collection of papers. The essays are stations on the way toward the more general views developed above.

Küsnacht / Zurich, January 1916

Second Edition

[684] In agreement with my honoured collaborator, Dr. C. E. Long, I have made certain additions to the second edition of this book. It should especially be noted that a new chapter on “The Conception of the Unconscious”[3] has been added. This is a lecture I gave early in 1916 to the Zurich Society for Analytical Psychology. It provides a general survey of a most important problem in practical analysis, namely the relation of the ego to the psychological *non-ego*. Chapter XIV, “The Psychology of the Unconscious Processes,”[4] has been fundamentally

revised, and I have taken the opportunity to incorporate an article[5] that describes the results of more recent researches.

[685] In accordance with my usual method of working, my description is as generalized as possible. My habit in daily practice is to confine myself for some time to studying the human material. I then abstract as general a formula as possible from the data collected, obtaining from it a point of view and applying it in my practical work until it has been either confirmed, modified, or else abandoned. If it is confirmed, I publish it as a general viewpoint without giving the empirical material. I introduce the material amassed in the course of my practice only in the form of example or illustration. I therefore beg the reader not to consider the views I present as mere fabrications of my brain. They are, as a matter of fact, the results of extensive experience and ripe reflection.

[686] These additions will enable the reader of the second edition to familiarize himself with the recent views of the Zurich School.

[687] As regards the criticism encountered by the first edition of this work, I was pleased to find my writings were received with much more open-mindedness among English critics than was the case in Germany, where they are met with the silence born of contempt. I am particularly grateful to Dr. Agnes Savill for an exceptionally understanding criticism in the *Medical Press*. My thanks are also due to Dr. T. W. Mitchell for an exhaustive review in the *Proceedings of the Society for Psychical Research*.[6] This critic takes exception to my heresy respecting causality. He considers that I am entering upon a perilous, because unscientific, course when I question the sole validity of the causal viewpoint in psychology. I sympathize with him, but in my opinion the nature of the human mind compels us to take the finalistic view. It cannot be disputed that, psychologically speaking, we are living and working day by day according to the principle of directed aim or purpose as well as that of causality. A psychological theory must necessarily adapt itself to this fact. What is plainly directed towards a goal cannot be given an exclusively causalistic explanation, otherwise we should be led to the conclusion expressed in Moleschott's famous dictum: "Man ist was er isst" (Man *is* what he eats). We must always bear in mind that *causality is*

a point of view. It affirms the inevitable and immutable relation of a series of events: *a-b-c-z*. Since this relation is fixed, and according to the causal point of view must necessarily be so, looked at logically the order may also be reversed. *Finality is also a point of view*, and it is empirically justified by the existence of series of events in which the causal connection is indeed evident *but the meaning of which only becomes intelligible in terms of end-products (final effects)*. Ordinary life furnishes the best instances of this. The causal explanation must be mechanistic if we are not to postulate a metaphysical entity as first cause. For instance, if we adopt Freud's sexual theory and assign primary importance psychologically to the function of the genital glands, the brain is seen as an appendage of the genital glands. If we approach the Viennese concept of sexuality, with all its vague omnipotence, in a strictly scientific manner and reduce it to its physiological basis, we shall arrive at the first cause, according to which psychic life is for the most, or the most important part, tension and relaxation of the genital glands. If we assume for the moment that this mechanistic explanation is "true," it would be the sort of truth which is exceptionally tiresome and rigidly limited in scope. A similar statement would be that the genital glands cannot function without adequate *nourishment*, the inference being that sexuality is a subsidiary function of nutrition. The truth of this forms an important chapter in the biology of the lower forms of life.

[688] But if we wish to work in a really psychological way we shall want to know the *meaning* of psychological phenomena. After learning what kinds of steel the various parts of a locomotive are made of, and what iron-works and mines they come from, we do not really know anything about the locomotive's *function,* that is to say its *meaning*. But "function" as conceived by modern science is by no means exclusively a causal concept; it is especially a final or "teleological" one. For it is impossible to consider the psyche from the causal standpoint only; we are obliged to consider it also from the final point of view. As Dr. Mitchell remarks, it is impossible to think of causal determination as having at the same time a finalistic reference. That would be an obvious contradiction. But the theory of cognition does not need to remain on a pre-Kantian level. It is well known that Kant showed very clearly that the mechanistic and the

teleological viewpoints are not *constituent* (objective) principles—as it were, qualities of the object—but that they are purely *regulative* (subjective) principles of thought, and, as such, not mutually inconsistent. I can, for example, easily conceive the following thesis and antithesis:

Thesis: Everything came into existence according to mechanistic laws.

Antithesis: Some things did not come into existence according to mechanistic laws only.

Kant says to this: Reason cannot prove either of these principles because *a priori* the purely empirical laws of nature cannot give us a determinative principle regarding the potentiality of events.

[689] As a matter of fact, modern physics has necessarily been converted from the idea of pure mechanism to the finalistic concept of the conservation of energy, because the mechanistic explanation recognizes only reversible processes whereas the actual truth is that the processes of nature are irreversible. This fact led to the concept of an energy that tends towards relief of tension and hence towards a definitive final state.

[690] Obviously, I consider both these points of view necessary, the causal as well as the final, but would at the same time stress that since Kant's time we have come to realize that the two viewpoints are not antagonistic if they are regarded as regulative principles of thought and not as constituent principles of the process of nature itself.

[691] In speaking of the reviews of this book I must mention some that seem to me wide of the mark. I was once again struck by the fact that certain critics cannot distinguish between the theoretical explanation given by the author and the fantastic ideas produced by the patient. One of my critics is guilty of this confusion when discussing "On the Significance of Number Dreams." The associations to the quotation from the Bible in this paper are, as every attentive reader will perceive, not arbitrary explanations of my own but a cryptomnesic conglomeration emanating not from my brain at all but from that of the patient. Surely it is not difficult to see that this conglomeration of numbers corresponds exactly to the unconscious psychological function from which the whole mysticism of numbers originated, Pythagorean, cabalistic, and so forth, back to very early times.

[692] I am grateful to my serious reviewers, and should like here to express my thanks also to Mrs. Harold F. McCormick for her generous help in the production of this book.

IV

THE SIGNIFICANCE OF THE FATHER IN THE DESTINY OF THE INDIVIDUAL

INTRODUCTION TO KRANEFELDT’S “SECRET WAYS OF THE MIND”

FREUD AND JUNG: CONTRASTS

THE SIGNIFICANCE OF THE FATHER IN THE DESTINY OF THE INDIVIDUAL[1]

Foreword to the Second Edition

This little essay, written seventeen years ago, ended with the words: "It is to be hoped that experience in the years to come will sink deeper shafts into this obscure territory, on which I have been able to shed but a fleeting light, and will discover more about the secret workshop of the daemon who shapes our fate." Experience in later years has indeed altered and deepened many things; some of them have appeared in a different light, and I have seen how the roots of the psyche and of fate go deeper than the "family romance," and that not only the children but the parents, too, are merely branches of one great tree. While I was working on the mother-complex in my book *Wandlungen und Symbole der Libido,*[2] it became clear to me what the deeper causes of this complex are; why not only the father, but the mother as well, is such an important factor in the child's fate: not because they themselves have this or that human failing or merit, but because they happen to be—by accident, so to speak—the human beings who first impress on the childish mind those mysterious and mighty laws which govern not only families but entire nations, indeed the whole of humanity. Not laws devised by the wit of man, but the laws and forces of nature, amongst which man walks as on the edge of a razor.

I am letting this essay appear in unaltered form. There is nothing in it that is actually wrong—merely too simple, too naïve. The Horatian verse, which I then placed at the end, points to that deeper, darker background:

"Scit Genius natale comes qui temperat astrum,
Naturae deus humanae, mortalis in unum,
Quodque caput, vultu mutabilis, albus et ater."[3]

Küsnacht, December 1926

Foreword to the Third Edition

This essay was written nearly forty years ago, but this time I did not want to publish it in its original form. Since that time so many things have changed and taken on a new face that I felt obliged to make a number of corrections and additions to the original text. It was chiefly the discovery of the collective unconscious that raised new problems for the theory of complexes. Previously the personality appeared to be unique and as if rooted in nothing; but now, associated with the individually acquired causes of the complex, there was found to be a general human precondition, the inherited and inborn biological structure which is the instinctual basis of every human being. From it proceed, as throughout the whole animal kingdom, determining forces which inhibit or strengthen the more or less fortuitous constellations of individual life. Every normal human situation is provided for and, as it were, imprinted on this inherited structure, since it has happened innumerable times before in our long ancestry. At the same time the structure brings with it an inborn tendency to seek out, or to produce, such situations instinctively. A repressed content would indeed vanish into the void were it not caught and held fast in this pre-established instinctual substrate. Here are to be found those forces which offer the most obstinate resistance to reason and will, thus accounting for the conflicting nature of the complex.

I have tried to modify the old text in accordance with these discoveries and to bring it, in some degree, up to the level of our present knowledge.

October 1948

The Fates lead the willing, but drag the unwilling.
CLEANTHES

[693] Freud has pointed out that the emotional relationship of the child to the parents, and particularly to the father, is of a decisive significance in regard to the content of any later neurosis. This relationship is indeed the infantile channel along which the libido[4] flows back when it encounters any obstacles in later years, thus reactivating the long-forgotten psychic contents of childhood. It is ever so in life when we draw back before too great an obstacle, say the threat of some severe disappointment or the risk of some too far-reaching decision. The energy stored up for the solution of the task flows back and the old river-beds, the obsolete systems of the past, are filled up again. A man disillusioned in love falls back, as a substitute, upon some sentimental friendship[5] or false religiosity; if he is a neurotic he regresses still further back to the childhood

relationships he has never quite forsaken, and to which even the normal person is fettered by more than one chain—the relationship to father and mother.

[694] Every analysis carried out at all thoroughly shows this regression more or less plainly. One peculiarity which stands out in the works of Freud is that the relationship to the father seems to possess a special significance. (This is not to say that the father always has a greater influence on the moulding of the child's fate than the mother. His influence is of a specific nature and differs typically from hers.[6])

[695] The significance of the father in moulding the child's psyche may be discovered in quite another field—the study of the family.[7] The latest investigations show the predominating influence of the father's character in a family, often lasting for centuries. The mother seems to play a less important role. If this is true of heredity, we may expect it to be true also of the psychological influences emanating from the father.[8] The scope of the problem has been widened by the researches of my pupil, Dr. Emma Fürst, on the similarity of reaction-type within families.[9] She conducted association tests on 100 persons coming from 24 families. From this extensive material, so far only the results for nine families and 37 persons (all uneducated) have been worked out and published. But the calculations already permit some valuable conclusions. The associations were classified on the Kraepelin-Aschaffenburg scheme as simplified and modified by me, and the difference was then calculated between each group of qualities in a given subject and the corresponding group in every other subject. We thus get mean figures of the differences in reaction-type.

Non-related men	5.9
Non-related women	6.0
Related men	4.1
Related women	3.8

[696] Relatives, especially if they are women, therefore have on average a similar reaction-type. This means that the psychological attitude of relatives differs but slightly. Examination of the various relationships yielded the following results:

[697] The mean difference for husband and wife amounts to 4.7%. But the dispersion value for this mean figure is 3.7, which is high, indicating that the mean of 4.7 is composed of a very wide range of figures: there are married couples with great similarity in reaction-type and others with less.

[698] On the whole, fathers and sons, mothers and daughters, stand closer together:

Difference for fathers and sons:	3.1
Difference for mothers and daughters:	3.0

[699] Except for a few cases of married couples (where the difference dropped to 1.4), these are among the lowest figures. Fürst even had one case where a 45-year-old mother and her 16-year-old daughter differed by only 0.5. But it was just in this case that the mother and daughter differed from the father’s reaction-type by 11.8. The father was a coarse, stupid man and a drinker; the mother went in for Christian Science. In accordance with this, mother and daughter exhibited an extreme value-predicate type of reaction,[10] which in my experience is an important sign of a conflicting relationship to the object. Value-predicate types show excessive intensity of feeling and thus betray an unadmitted but nonetheless transparent desire to evoke answering feelings in the experimenter. This view agrees with the fact that in Fürst’s material the number of value-predicates increases with the age of the subject.

[700] The similarity of reaction-type in children and parents provides matter for thought. For the association experiment is nothing other than a small segment of the psychological life of a man, and everyday life is at bottom an extensive and greatly varied association experiment; in principle we react in one as we do in the other. Obvious as this truth is, it still requires some reflection—and limitation. Take the case of the 45-year-old mother and her 16-year-old daughter: the extreme value-predicate type of the mother is without doubt the precipitate of a whole life of disappointed hopes and wishes. One is not in the least surprised at a value-predicate type here. But the 16-year-old daughter had not really lived at all; she was not yet married, and yet she reacted as if she were her mother and had endless disillusions behind her. She had her mother’s attitude, and to that extent was identified with her mother. The mother’s attitude was explained by her relationship to the father. But the daughter was not married to the father and therefore did not need this attitude. She simply took it over from the environmental influences and later on will try to adapt herself to the world under the influence of this family problem. To the extent that an ill-assorted marriage is unsuitable, the attitude resulting from it will be unsuitable too. In order to adapt, the girl in later life will have to overcome the obstacles of her family milieu; if she does not, she will succumb to the fate to which her attitude predisposes her.

[701] Clearly such a fate has many possibilities. The glossing over of the family problem and the development of the negative of the parental character may take place deep within, unnoticed by anyone, in the form of inhibitions and conflicts which she herself does not understand. Or, as she grows up, she will come into conflict with the world of actualities, fitting in nowhere, until one stroke of fate after another gradually opens her eyes to her own infantile, unadapted qualities. The source of the infantile disturbance of adaptation is naturally the emotional relation to the parents. It is a kind of psychic contagion, caused, as we know, not by logical truths but by affects and their physical manifestations.[11] In the most formative period between the first and fifth year all the essential characteristics, which fit exactly into the parental mould, are already developed, for experience teaches us that the first signs[12] of the later conflict between the parental constellation and the individual's longing for independence occur as a rule before the fifth year.

[702] I would like to show, with the help of a few case-histories, how the parental constellation hinders the child's adaptation.[13]

Case 1

[703] A well-preserved woman of 55, dressed poorly but carefully, with a certain elegance, in black; hair carefully arranged; a polite, rather affected manner, fastidious in speech, devout. The patient might be the wife of a minor official or shopkeeper. She informed me, blushing and dropping her eyes, that she was the divorced wife of a common peasant. She had come to the clinic on account of depression, night terrors, palpitations, and nervous twitches in the arms—typical features of a mild climacteric neurosis. To complete the picture, the patient added that she suffered from severe anxiety-dreams; some man was pursuing her, wild animals attacked her, and so on.

[704] Her anamnesis began with the family history. (So far as possible I give her own words.) Her father was a fine, stately, rather corpulent man of imposing appearance. He was very happily married, for her mother worshipped him. He was a clever man, a master craftsman, and held a dignified position. There were only two children, the patient and an elder sister. The sister was the mother's and the patient the father's favourite. When she was five years old her father suddenly died of a stroke at the age of forty-two. She felt very lonely, and also that from then on she was treated by her mother and sister as the Cinderella. She noticed clearly enough that her mother preferred her sister to herself. The

mother remained a widow, her respect for her husband being too great to allow her to marry a second time. She preserved his memory "like a religious cult" and taught her children to do likewise.

[705] The sister married relatively young; the patient did not marry till she was twenty-four. She had never cared for young men, they all seemed insipid; her mind turned always to more mature men. When about twenty she became acquainted with a "stately" gentleman of over forty, to whom she was much drawn, but for various reasons the relationship was broken off. At twenty-four she got to know a widower who had two children. He was a fine, stately, rather corpulent man, with an imposing presence, like her father; he was forty-four. She married him and respected him enormously. The marriage was childless; his children by the first marriage died of an infectious disease. After four years of married life her husband died of a stroke. For eighteen years she remained his faithful widow. But at forty-six (just before the menopause) she felt a great need of love. As she had no acquaintances she went to a matrimonial agency and married the first comer, a peasant of about sixty who had already been twice divorced on account of brutality and perverseness; the patient knew this before marriage. She remained five unbearable years with him, then she also obtained a divorce. The neurosis set in a little later.

[706] For the reader with psychological[14] experience no further elucidation is needed; the case is too obvious. I would only emphasize that up to her forty-sixth year the patient did nothing but live out a faithful copy of the milieu of her early youth. The exacerbation of sexuality at the climacteric led to an even worse edition of the father-substitute, thanks to which she was cheated out of the late blossoming of her sexuality. The neurosis reveals, flickering under the repression, the eroticism of the aging woman who still wants to please (affectation).[15]

Case 2

[707] A man of thirty-four, of small build, with a clever, kindly expression. He was easily embarrassed, blushed often. He had come for treatment on account of "nervousness." He said he was very irritable, readily fatigued, had nervous stomach-trouble, was often so deeply depressed that he sometimes thought of suicide.

[708] Before coming to me for treatment he had sent me a circumstantial autobiography, or rather a history of his illness, in order to prepare me for his

visit. His story began: “My father was a very big and strong man.” This sentence awakened my curiosity; I turned over a page and there read: “When I was fifteen a big lad of nineteen took me into a wood and indecently assaulted me.”

[709] The numerous gaps in the patient’s story induced me to obtain a more exact anamnesis from him, which led to the following disclosures: The patient was the youngest of three brothers. His father, a big, red-haired man, was formerly a soldier in the Swiss Guard at the Vatican; later he became a policeman. He was a stern, gruff old soldier, who brought up his sons with military discipline; he issued commands, did not call them by name, but whistled for them. He had spent his youth in Rome, and during his gay life there had contracted syphilis, from the consequences of which he still suffered in old age. He was fond of talking about his adventures in early life. His eldest son (considerably older than the patient) was exactly like him, a big, strong man with red hair. The mother was an ailing woman, prematurely aged. Exhausted and tired of life, she died at forty when the patient was eight years old. He preserved a tender and beautiful memory of his mother.

[710] At school he was always the whipping-boy and always the object of his schoolfellows’ mockery. He thought his peculiar dialect might be to blame. Later he was apprenticed to a strict and unkind master, with whom he stuck it out for over two years, under conditions so trying that all the other apprentices ran away. At fifteen the assault already mentioned took place, together with several other, milder homosexual experiences. Then fate packed him off to France. There he made the acquaintance of a man from the south, a great boaster and Don Juan. He dragged the patient to a brothel; he went unwillingly and out of fear, and found he was impotent. Later he went to Paris, where his eldest brother, a master-mason and the replica of his father, was leading a dissolute life. The patient stayed there a long time, badly paid and helping his sister-in-law out of pity. The brother often took him along to a brothel, but he was always impotent.

[711] One day his brother asked him to make over to him his inheritance, 6,000 francs. The patient consulted his second brother, who was also in Paris, and who urgently tried to dissuade him from handing over the money, because it would only be squandered. Nevertheless the patient went and gave his inheritance to his brother, who naturally ran through it in the shortest possible time. And the second brother, who would have dissuaded him, was also let in for 500 francs. To my astonished question why he had so light-heartedly given the money to his

brother without any guarantee he replied: well, he asked for it. He was not a bit sorry about the money, he would give him another 6,000 francs if he had it. The eldest brother afterwards went to the bad altogether and his wife divorced him.

[712] The patient returned to Switzerland and remained for a year without regular employment, often suffering from hunger. During this time he made the acquaintance of a family and became a frequent visitor. The husband belonged to some peculiar sect, was a hypocrite, and neglected his family. The wife was elderly, ill, and weak, and moreover pregnant. There were six children, all living in great poverty. For this woman the patient developed a warm affection and shared with her the little he possessed. She told him her troubles, saying she felt sure she would die in childbed. He promised her (although he possessed nothing) that he would take charge of the children and bring them up. The woman did die in childbed, but the orphanage interfered and allowed him only one child. So now he had a child but no family, and naturally could not bring it up by himself. He thus came to think of marrying. But as he had never yet fallen in love with a girl he was in great perplexity.

[713] It then occurred to him that his elder brother was divorced from his wife, and he resolved to marry her. He wrote to her in Paris, saying what he intended. She was seventeen years older than he, but not averse to his plan. She invited him to come to Paris to talk matters over. But on the eve of the journey fate willed that he should run an iron nail into his foot, so that he could not travel. After a while, when the wound was healed, he went to Paris and found that he had imagined his sister-in-law, now his fiancée, to be younger and prettier than she really was. The wedding took place, however, and three months later the first coitus, on his wife’s initiative. He himself had no desire for it. They brought up the child together, he in the Swiss and she in the Parisian fashion, as she was a French woman. At the age of nine the child was run over and killed by a cyclist. The patient then felt very lonely and dismal at home. He proposed to his wife that they should adopt a young girl, whereupon she broke out into a fury of jealousy. Then, for the first time in his life, he fell in love with a young girl, and simultaneously the neurosis started with deep depression and nervous exhaustion, for meanwhile his life at home had become a hell.

[714] My suggestion that he should separate from his wife was dismissed out of hand, on the ground that he could not take it upon himself to make the old woman unhappy on his account. He obviously preferred to go on being tormented, for the memories of his youth seemed to him more precious than any present joys.

[715] This patient, too, moved all through his life in the magic circle of the family constellation. The strongest and most fateful factor was the relationship to the father; its masochistic-homo-sexual colouring is clearly apparent in everything he did. Even the unfortunate marriage was determined by the father, for the patient married the divorced wife of his elder brother, which amounted to marrying his mother. At the same time, his wife was the mother-substitute for the woman who died in childbed. The neurosis set in the moment the libido was withdrawn from the infantile relationship and for the first time came a bit nearer to an individually determined goal. In this as in the previous case, the family constellation proved to be by far the stronger, so that the narrow field of neurosis was all that was left over for the struggling individuality.

Case 3

[716] A 36-year-old peasant woman, of average intelligence, healthy appearance, and robust build, mother of three healthy children. Comfortable economic circumstances. She came to the clinic for the following reasons: for some weeks she had been terribly wretched and anxious, slept badly, had terrifying dreams, and also suffered by day from anxiety and depression. She stated that all these things were without foundation, she herself was surprised at them, and had to admit that her husband was quite right when he insisted that it was all “stuff and nonsense.” Nevertheless, she simply could not get over them. Often strange thoughts came into her head; she was going to die and would go to hell. She got on very well with her husband.

[717] Examination of the case yielded the following results. Some weeks before, she happened to take up some religious tracts which had long lain about the house unread. There she was informed that people who swore would go to hell. She took this very much to heart, and ever since then had been thinking that she must stop people swearing or she would go to hell too. About a fortnight before she read these tracts her father, who lived with her, had suddenly died of a stroke. She was not actually present at his death, but arrived only when he was already dead. Her terror and grief were very great.

[718] In the days following his death she thought much about it all, wondering why her father had to die so suddenly. During these meditations she suddenly remembered that the last words she had heard her father say were: “I am one of those who have got into the devil’s clutches.” This memory filled her with trepidation, and she recalled how often her father had sworn savagely. She also

began to wonder whether there was really a life after death, and whether her father was in heaven or hell. It was during these musings that she came across the tracts and began to read them, until she came to the place where it said that people who swore would go to hell. Then great fear and terror fell upon her; she covered herself with reproaches, she ought to have stopped her father's swearing and deserved to be punished for her negligence. She would die and would be condemned to hell. From that hour she was filled with sorrow, grew moody, tormented her husband with her obsessive ideas, and shunned all joy and conviviality.

[719] The patient's life-history was as follows: She was the youngest of five brothers and sisters and had always been her father's favourite. Her father gave her everything she wanted if he possibly could. If she wanted a new dress and her mother refused it, she could be sure her father would bring her one next time he went to town. Her mother died rather early. At twenty-four she married the man of her choice, against her father's wishes. The father flatly disapproved of her choice although he had nothing particular against the man. After the wedding she made her father come and live with them. That seemed the obvious thing, she said, since the others had never suggested having him with them. He was, as a matter of fact, a quarrelsome, foul-mouthed old drunkard. Husband and father-in-law, as may easily be imagined, did not get on at all. There were endless squabbles and altercations, in spite of which the patient would always dutifully fetch drink for her father from the inn. All the same, she admitted her husband was right. He was a good, patient fellow with only one failing: he did not obey her father enough. She found that incomprehensible, and would rather have seen her husband knuckle under to her father. When all's said and done, a father is still a father. In the frequent quarrels she always took her father's part. But she had nothing to say against her husband, and he was usually right in his protests, but even so one must stand by one's father.

[720] Soon it began to seem to her that she had sinned against her father by marrying against his will, and she often felt, after one of these incessant wrangles, that her love for her husband had died. And since her father's death it was impossible to love him any more, for his disobedience had usually been the cause of her father's fits of raging and swearing. At one time the quarrelling had become too much for the husband, and he induced his wife to find a room for her father elsewhere, where he lived for two years. During this time husband and wife lived together peaceably and happily. But by degrees she began to reproach herself for letting her father live alone; in spite of everything he was her father. And in the end, despite her husband's protests, she fetched her father

home again because, as she said, at bottom she loved her father better than her husband. Scarcely was the old man back in the house than the strife broke out again. And so it went on till the father's sudden death.

[721] After this recital she broke into a string of lamentations: she must get a divorce from her husband, she would have done so long ago but for the children. She had committed a great wrong, a grievous sin, when she married her husband against her father's wishes. She ought to have taken the man her father wanted her to have; he, certainly, would have obeyed her father, and then everything would have been all right. Oh, she wailed, her husband was not nearly as nice as her father, she could do anything with her father, but not with her husband. Her father had given her everything she wanted. And now she wanted most of all to die, so that she could be with her father.

[722] When this outburst was over, I asked curiously why she had refused the husband her father had proposed?

[723] It seems that the father, a small peasant on a lean little holding, had taken on as a labourer, just at the time when his youngest daughter was born, a wretched little boy, a foundling. The boy developed in a most unpleasant fashion: he was so stupid that he could not learn to read or write, or even to speak properly. He was an absolute blockhead. As he approached manhood a series of ulcers developed on his neck, some of which opened and continually discharged pus, giving this dirty, ugly creature a truly horrible appearance. His intelligence did not grow with his years, so he stayed on as a farm-labourer without any recognized wage.

[724] To this oaf the father wanted to marry his favourite daughter.

[725] The girl, fortunately, had not been disposed to yield, but now she regretted it, for this idiot would unquestionably have been more obedient to her father than her good man had been.

[726] Here, as in the foregoing case, it must be clearly understood that the patient was not at all feeble-minded. Both possessed normal intelligence, although the blinkers of the infantile constellation kept them from using it. That appears with quite remarkable clearness in this patient's life-story. The father's authority is never even questioned. It makes not the least difference to her that he was a quarrelsome old drunkard, the obvious cause of all the bickering and dissension; on the contrary, her husband must bow down before this bogey, and finally our patient even comes to regret that her father did not succeed in completely destroying her life's happiness. So now she sets about destroying it herself,

through her neurosis, which forces on her the wish to die so that she may go to hell—whither, be it noted, her father has already betaken himself.

[727] If ever we are disposed to see some demonic power at work controlling mortal destiny, surely we can see it here in these melancholy, silent tragedies working themselves out, slowly and agonizingly, in the sick souls of our neurotics. Some, step by step, continually struggling against the unseen powers, do free themselves from the clutches of the demon who drives his unsuspecting victims from one cruel fatality to another; others rise up and win to freedom, only to be dragged back later to the old paths, caught in the noose of the neurosis. You cannot even maintain that these unhappy people are always neurotics or "degenerates." If we normal people examine our lives,[16] we too perceive how a mighty hand guides us without fail to our destiny, and not always is this hand a kindly one.[17] Often we call it the hand of God or of the devil, (thereby expressing, unconsciously but correctly, a highly important psychological fact: that the power which shapes the life of the psyche has the character of an autonomous personality. At all events it is felt as such, so that today in common speech, just as in ancient times, the source of any such destiny appears as a daemon, as a good or evil spirit.

[728] (The personification of this source goes back in the first place to the father, for which reason Freud was of the opinion that all "divine" figures have their roots in the father-imago. It can hardly be denied that they do derive from this imago, but what we are to say about the father-imago itself is another matter. For the parental imago is possessed of a quite extraordinary power; it influences the psychic life of the child so enormously that we must ask ourselves whether we may attribute such magical power to an ordinary human being at all. Obviously he possesses it, but we are bound to ask whether it is really his property. Man "possesses" many things which he has never acquired but has inherited from his ancestors. He is not born as a *tabula rasa*, he is merely born unconscious. But he brings with him systems that are organized and ready to function in a specifically human way, and these he owes to millions of years of human development. Just as the migratory and nest-building instincts of birds were never learnt or acquired individually, man brings with him at birth the ground-plan of his nature, and not only of his individual nature but of his collective nature. These inherited systems correspond to the human situations that have existed since primeval times: youth and old age, birth and death, sons and daughters, fathers and mothers, mating, and so on. Only the individual consciousness experiences these things for the first time, but not the bodily system and the unconscious. For them they are only the habitual functioning of

instincts that were preformed long ago. “You were in bygone times my wife or sister,” says Goethe, clothing in words the dim feelings of many.

[729] (I have called this congenital and pre-existent instinctual model, or pattern of behaviour, the *archetype*. This is the imago that is charged with the dynamism we cannot attribute to an individual human being. Were this power really in our hands and subject to our will, we would be so crushed with responsibility that no one in his right senses would dare to have children. But the power of the archetype is not controlled by us; we ourselves are at its mercy to an unsuspected degree. There are many who resist its influence and its compulsion, but equally many who identify with the archetype, for instance with the *patris potestas* or with the queen ant. And because everyone is in some degree “possessed” by his specifically human preformation, he is held fast and fascinated by it and exercises the same influence on others without being conscious of what he is doing. The danger is just this unconscious identity with the archetype: not only does it exert a dominating influence on the child by suggestion, it also causes the same unconsciousness in the child, so that it succumbs to the influence from outside and at the same time cannot oppose it from within. The more a father identifies with the archetype, the more unconscious and irresponsible, indeed psychotic, both he and his child will be. In the case we have discussed, it is almost a matter of “folie à deux.”)[18]

[730] In our case, it is quite obvious what the father was doing, and why he wanted to marry his daughter to this brutish creature: he wanted to keep her with him and make her his slave for ever. What he did is but a crass exaggeration of what is done by thousands of so-called respectable, educated parents, who nevertheless pride themselves on their progressive views. The fathers who criticize every sign of emotional independence in their children, who fondle their daughters with ill-concealed eroticism and tyrannize over their feelings, who keep their sons on a leash or force them into a profession and finally into a “suitable” marriage, the mothers who even in the cradle excite their children with unhealthy tenderness, who later make them into slavish puppets and then at last ruin their love-life out of jealousy: they all act no differently in principle from this stupid, boorish peasant. (They do not know what they are doing, and they do not know that by succumbing to the compulsion they pass it on to their children and make them slaves of their parents and of the unconscious as well. Such children will long continue to live out the curse laid on them by their parents, even when the parents are long since dead. “They know not what they do.” Unconsciousness is the original sin.)[19]

Case 4

[731] An eight-year-old boy, intelligent, rather delicate-looking, brought to me by his mother on account of enuresis. During the consultation the child clung all the time to his mother, a pretty, youthful woman. The marriage was a happy one, but the father was strict, and the boy (the eldest child) was rather afraid of him. The mother compensated for the father's strictness by a corresponding tenderness, to which the boy responded so much that he never got away from his mother's apron-strings. He never played with his school-fellows, never went alone into the street unless he had to go to school. He feared the boys' roughness and violence and played thoughtful games at home or helped his mother with the housework. He was extremely jealous of his father, and could not bear it when the father showed tenderness to the mother.

[732] I took the boy aside and asked him about his dreams. Very often he dreamt of a *black snake that wanted to bite his face*. Then he would cry out, and his mother had to come to him from the next room and stay by his bedside.

[733] In the evening he would go quietly to bed. But when falling asleep it seemed to him that a *wicked black man with a sword or a gun was lying on his bed, a tall thin man who wanted to kill him*. The parents slept in the next room. The boy often dreamt that something dreadful was going on in there, as if there were *great black snakes or evil men who wanted to kill Mama*. Then he would cry out, and Mama came to comfort him. Every time he wet his bed he called his mother, who would then have to change the bedclothes.

[734] The father was a tall thin man. Every morning he stood naked at the wash-stand in full view of the boy, to perform a thorough ablution. The boy also told me that at night he often started up from sleep at the sound of strange noises in the next room; then he was always horribly afraid that something dreadful was going on in there, a struggle of some kind, but his mother would quiet him and say it was nothing.

[735] It is not difficult to see what was happening in the next room. It is equally easy to understand the boy's aim in calling out for his mother: he was jealous and was separating her from the father. He did this also in the daytime whenever he saw his father caressing her. Thus far the boy was simply the father's rival for his mother's love.

[736] But now comes the fact that the snake and the wicked man threaten him as well: the same thing happens to him as happens to his mother in the next room.

To that extent he identifies with his mother and thus puts himself in a similar relationship to the father. This is due to his homosexual component, which feels feminine towards the father. (The bed-wetting is in this case a substitute for sexuality. Pressure of urine in dreams and also in the waking state is often an expression of some other pressure, for instance of fear, expectation, suppressed excitement, inability to speak, the need to express an unconscious content, etc. In our case the substitute for sexuality has the significance of a premature masculinity which is meant to compensate the inferiority of the child.

[737] (Although I do not intend to go into the psychology of dreams in this connection, the motif of the black snake and of the black man should not pass unmentioned. Both these terrifying spectres threaten the dreamer as well as his mother. "Black" indicates something dark, the unconscious. The dream shows that the mother-child relationship is menaced by unconsciousness. The threatening agency is represented by the mythological motif of the "father animal"; in other words the father appears as threatening. This is in keeping with the tendency of the child to remain unconscious and infantile, which is decidedly dangerous. For the boy, the father is an anticipation of his own masculinity, conflicting with his wish to remain infantile. The snake's attack on the boy's face, the part that "sees," represents the danger to consciousness (blinding).)[20]

[738] This little example shows what goes on in the psyche of an eight-year-old child who is over-dependent on his parents, the blame for this lying partly on the too strict father and the too tender mother. (The boy's identification with his mother and fear of his father are in this individual instance an infantile neurosis, but they represent at the same time the original human situation, the clinging of primitive consciousness to the unconscious, and the compensating impulse which strives to tear consciousness away from the embrace of the darkness. Because man has a dim premonition of this original situation behind his individual experience, he has always tried to give it generally valid expression through the universal motif of the divine hero's fight with the mother dragon, whose purpose is to deliver man from the power of darkness. This myth has a "saving," i.e., therapeutic significance, since it gives adequate expression to the dynamism underlying the individual entanglement. The myth is not to be causally explained as the consequence of a personal father-complex, but should be understood teleologically, as an attempt of the unconscious itself to rescue consciousness from the danger of regression. The ideas of "salvation" are not subsequent rationalizations of a father-complex; they are, rather, archetypally preformed mechanisms for the development of consciousness.)[21]

[739] What we see enacted on the stage of world-history happens also in the individual. The child is guided by the power of the parents as by a higher destiny. But as he grows up, the struggle between his infantile attitude and his increasing consciousness begins. The parental influence, dating from the early infantile period, is repressed and sinks into the unconscious, but is not eliminated; by invisible threads it directs the apparently individual workings of the maturing mind. Like everything that has fallen into the unconscious, the infantile situation still sends up dim, premonitory feelings, feelings of being secretly guided by otherworldly influences. (Normally these feelings are not referred back to the father, but to a positive or negative deity. This change is accomplished partly under the influence of education, partly spontaneously. It is universal. Also, it resists conscious criticism with the force of an instinct, for which reason the soul *(anima)* may fittingly be described as *naturaliter religiosa*. The reason for this development, indeed its very possibility, is to be found in the fact that the child possesses an inherited system that anticipates the existence of parents and their influence upon him. In other words, behind the father stands the archetype of the father, and in this pre-existent archetype lies the secret of the father's power, just as the power which forces the bird to migrate is not produced by the bird itself but derives from its ancestors.

[740] It will not have escaped the reader that the role which falls to the father-imago in our case is an ambiguous one. The threat it represents has a dual aspect: fear of the father may drive the boy out of his identification with the mother, but on the other hand it is possible that his fear will make him cling still more closely to her. A typically neurotic situation then arises: he wants and yet does not want, saying yes and no at the same time.

[741] This double aspect of the father-imago is characteristic of the archetype in general: it is capable of diametrically opposite effects and acts on consciousness rather as Yahweh acted towards Job—ambivalently. And, as in the Book of Job, man is left to take the consequences. We cannot say with certainty that the archetype always acts in this way, for there are experiences which prove the contrary. But they do not appear to be the rule.)[22]

[742] An instructive and well-known example of the ambivalent behaviour of the father-imago is the love-episode in the Book of Tobit.[23] Sara, the daughter of Raguel, of Ecbatana, desires to marry. But her evil fate wills it that seven times, one after the other, she chooses a husband who dies on the wedding-night. It is the evil spirit Asmodeus, by whom she is persecuted, that kills these men. She prays to Yahweh to let her die rather than suffer this shame again, for she is

despised even by her father’s maidservants. The eighth bridegroom, her cousin Tobias, the son of Tobit, is sent to her by God. He too is led into the bridal chamber. Then old Raguel, who had only pretended to go to bed, goes out and thoughtfully digs his son-in-law’s grave, and in the morning sends a maid to the bridal chamber to make sure that he is dead. But this time Asmodeus’ role is played out, for Tobias is alive.

[743] (The story shows father Raguel in his two roles, as the inconsolable father of the bride and the provident digger of his son-in-law’s grave. Humanly speaking he seems beyond reproach, and it is highly probable that he was. But there is still the evil spirit Asmodeus and his presence needs explaining. If we suspect old Raguel personally of playing a double role, this malicious insinuation would apply only to his sentiments; there is no evidence that he committed murder. These wicked deeds transcend the old man’s daughter-complex as well as Sara’s father-complex, for which reason the legend fittingly ascribes them to a demon. Asmodeus plays the role of a jealous father who will not give up his beloved daughter and only relents when he remembers his own positive aspect, and in that capacity at last gives Sara a pleasing bridegroom. He, significantly enough, is the eighth: the last and highest stage.[24] Asmodeus stands for the negative aspect of the father archetype, for the archetype is the genius and daemon of the personal human being, “the god of human nature, changeful of countenance, white and black.”[25] The legend offers a psychologically correct explanation: it does not attribute superhuman evil to Raguel, it distinguishes between man and daemon, just as psychology must distinguish between what the human individual is and can do and what must be ascribed to the congenital, instinctual system, which the individual has not made but finds within him. We would be doing the gravest injustice to Raguel if we held him responsible for the fateful power of this system, that is, of the archetype.

[744] (The potentialities of the archetype, for good and evil alike, transcend our human capacities many times, and a man can appropriate its power only by identifying with the daemon, by letting himself be possessed by it, thus forfeiting his own humanity. The fateful power of the father complex comes from the archetype, and this is the real reason why the *consensus gentium* puts a divine or daemonic figure in place of the father. The personal father inevitably embodies the archetype, which is what endows his figure with its fascinating power. The archetype acts as an amplifier, enhancing beyond measure the

effects that proceed from the father, so far as these conform to the inherited pattern.)[26]

INTRODUCTION TO KRANEFELDT'S "SECRET WAYS OF THE MIND"[1]

[745] At the present time, one can well say, it is still quite impossible to draw up a comprehensive and hence a proper picture of all that commonly goes by the much abused name "psychoanalysis." What the layman usually understands by "psychoanalysis"—a medical dissection of the soul for the purpose of disclosing hidden causes and connections—touches only a small part of the phenomena in question. Even if we regard psychoanalysis from a wider angle—in agreement with Freud's conception of it—as essentially a medical instrument for the cure of neurosis, this broader point of view still does not exhaust the nature of the subject. Above all, psychoanalysis in the strictly Freudian sense is not only a therapeutic method but a psychological theory, which does not confine itself in the least to the neuroses and to psychopathology in general but attempts also to bring within its province the normal phenomenon of the dream and, besides this, wide areas of the humane sciences, of literature and the creative arts, as well as biography, mythology, folklore, comparative religion, and philosophy.

[746] It is a somewhat curious fact in the history of science—but one that is in keeping with the peculiar nature of the psychoanalytic movement—that Freud, the creator of psychoanalysis (in, the narrower sense), insists on identifying the method with his sexual theory, thus placing upon it the stamp of dogmatism. This declaration of "scientific" infallibility caused me, at the time, to break with Freud, for to me dogma and science are incommensurable quantities which damage one another by mutual contamination. Dogma as a factor in religion is of inestimable value precisely because of its absolute standpoint. But when science dispenses with criticism and scepticism it degenerates into a sickly hot-house plant. One of the elements necessary to science is extreme uncertainty. Whenever science inclines towards dogma and shows a tendency to be impatient and fanatical, it is concealing a doubt which in all probability is

justified and explaining away an uncertainty which is only too well founded.

[747] I emphasize this unfortunate state of affairs not because I want to make a critical attack on Freud's theories, but rather to point out to the unbiased reader the significant fact that Freudian psychoanalysis, apart from being a scientific endeavour and a scientific achievement, is a psychic symptom which has proved to be more powerful than the analytical art of the master himself. As Maylan's book on "Freud's tragic complex"[2] has shown, it would not be at all difficult to derive Freud's tendency to dogmatize from the premises of his own personal psychology—indeed, he taught this trick to his disciples and practised it more or less successfully himself—but I do not wish to turn his own weapons against him. In the end no one can completely outgrow his personal limitations; everyone is more or less imprisoned by them—especially when he practises psychology.

[748] I find these technical defects uninteresting and believe it is dangerous to lay too much stress on them, as it diverts attention from the one important fact: that even the loftiest mind is most limited and dependent just at the point where it seems to be freest. In my estimation the creative spirit in man is not his personality at all but rather a sign or symptom of a contemporary movement of thought. His personality is important only as the mouthpiece of a conviction arising out of an unconscious, collective background—a conviction that robs him of his freedom, forces him to sacrifice himself and to make mistakes which he would criticize mercilessly in others. Freud is borne along by a particular current of thought which can be traced back to the Reformation. Gradually it freed itself from innumerable veils and disguises, and it is now turning into the kind of psychology which Nietzsche foresaw with prophetic insight—the discovery of the psyche as a new fact. Some day we shall be able to see by what tortuous paths modern psychology has made its way from the dingy laboratories of the alchemists, via mesmerism and magnetism (Kerner, Ennemoser, Eschimayer, Baader, Pas-savant, and others), to the philosophical anticipations of Schopenhauer, Carus, and von Hartmann; and how, from the native soil of everyday experience in Liébeault and, still earlier, in Quimby (the spiritual father of Christian Science),[3] it

finally reached Freud through the teachings of the French hypnotists. This current of ideas flowed together from many obscure sources, gaining rapidly in strength in the nineteenth century and winning many adherents, amongst whom Freud is not an isolated figure.

[749] What is designated today by the catchword "psychoanalysis" is not in reality a uniform thing, but comprises in itself many different aspects of the great psychological problem of our age. Whether or not the public at large is conscious of this problem does not alter the fact of its existence. In our time the psyche has become something of a problem for everyone. Psychology has acquired a power of attraction which is really astounding. It explains the surprising, world-wide spread of Freudian psychoanalysis, which has had a success comparable only to that of Christian Science, theosophy, and anthroposophy—comparable not only in its success but also in its essence, for Freud's dogmatism comes very close to the attitude of religious conviction that characterizes these movements. Moreover, all four movements are decidedly psychological. When we add to this the almost unbelievable rise of occultism in every form in all civilized parts of the Western world, we begin to get a picture of this current of thought, everywhere a little taboo yet nonetheless compelling. Similarly, modern medicine shows significant leanings towards the spirit of Paracelsus, and is becoming increasingly aware of the importance of the psyche in somatic diseases. Even the traditionalism of criminal law is beginning to yield to the claims of psychology, as we can see from the suspension of sentences and the more and more frequent practice of calling in psychological experts.

[750] So much for the positive aspects of this psychological movement. But these aspects are balanced on the other side by equally characteristic negative ones. Already at the time of the Reformation the conscious mind had begun to break away from the metaphysical certainties of the Gothic age, and this separation became more acute and widespread with every passing century. At the beginning of the eighteenth century the world saw the truths of Christianity publicly dethroned for the first time, and at the beginning of the twentieth the government of one of the largest countries on earth is making every effort to stamp out the Christian faith as if it were a disease. Meanwhile, the intellect of the white man as a whole has

outgrown the authority of Catholic dogma, and Protestantism has succeeded in splitting itself into more than four hundred denominations through the most trivial quibbles. These are obvious negative aspects, and they explain why people increasingly flock to any movement from which they expect a helpful truth to come.

[751] Religions are the great healing-systems for the ills of the soul. Neuroses and similar illnesses arise, one and all, from psychic complications. But once a dogma is disputed and questioned, it has lost its healing power. A person who no longer believes that a God who knows suffering will have mercy on him, will help and comfort him and give his life a meaning, is weak and a prey to his own weakness and becomes neurotic. The innumerable pathological elements in the population constitute one of the most powerful factors that lend support to the psychological tendencies of our time.

[752] Another and by no means unimportant contingent is formed by all those who, after a period of belief in authority, have awakened with a kind of resentment and find a satisfaction mixed with self-torture in advocating a so-called new truth which is destructive of their old, still-smouldering convictions. Such people can never keep their mouths shut and, because of the weakness of their conviction and their fear of isolation, must always flock together in proselytizing bands, thus at least making up in quantity for their doubtful quality.

[753] Finally, there are those who are earnestly searching for something, who are thoroughly convinced that the soul is the seat of all psychic sufferings and at the same time the dwelling-place of all the healing truths that have ever been announced as glad tidings to suffering humanity. From the soul come the most senseless conflicts, yet we also look to it for a solution or at least a valid answer to the tormenting question: why?

[754] One does not have to be neurotic to feel the need of healing, and this need exists even in people who deny with the deepest conviction that any such healing is possible. In a weak moment they cannot help glancing inquisitively into a book on psychology, even if only to find a recipe for adroitly bringing a refractory marriage partner to reason.

[755] These entirely different interests on the part of the public are reflected in the variations on the theme of “psychoanalysis.” The Adlerian school, which grew up side by side with Freud, lays particular stress on the social aspect of the psychic problem and, accordingly, has differentiated itself more and more into a system of social education. It denies, not only in theory but in practice, all the essentially Freudian elements of psychoanalysis, so much so that with the exception of a few theoretical principles the original points of contact with the Freudian school are almost unrecognizable. For this reason Adler’s “individual psychology” can no longer be included in the concept of “psychoanalysis.” It is an independent system of psychology, the expression of a different temperament and a wholly different view of the world.

[756] No one who is interested in “psychoanalysis” and who wants to get anything like an adequate survey of the whole field of modern psychiatry should fail to study the writings of Adler. He will find them extremely stimulating, and in addition he will make the valuable discovery that exactly the same case of neurosis can be explained in an equally convincing way from the standpoint of Freud or of Adler, despite the fact that the two methods of explanation seem diametrically opposed to one another. But things that fall hopelessly apart in theory lie close together without contradiction in the paradoxical soul of man: every human being has a power instinct as well as a sexual instinct. Consequently, he displays both of these psychologies, and every psychic impulse in him has subtle overtones coming from the one side as much as the other.

[757] Since it has not been established how many primary instincts exist in man or in animals, the possibility at once arises that an ingenious mind might discover a few more psychologies, apparently contradicting all the rest and yet productive of highly satisfactory explanations. But these discoveries are not just a simple matter of sitting down and evolving a new psychological system out of, shall we say, the artistic impulse. Neither Freud’s nor Adler’s psychology came into existence in this way. Rather, as if they were fated by an inner necessity, both investigators confessed their ruling principle, putting on record their own personal psychology and hence also their way of observing other people. This is a

question of deep experience and not an intellectual conjuring-trick. One could wish that there were more confessions of this sort; they would give us a more complete picture of the psyche's potentialities.

[758] My own views and the school I have founded are equally psychological, and are therefore subject to the same limitations and criticisms that I have allowed myself to urge against these other psychologists. So far as I myself can pass judgment on my own point of view, it differs from the psychologies discussed above in this respect, that it is not monistic but, if anything, dualistic, being based on the principle of opposites, and possibly pluralistic, since it recognizes a multiplicity of relatively autonomous psychic complexes.

[759] It will be seen that I have deduced a theory from the fact that contradictory and yet satisfactory explanations are possible. Unlike Freud and Adler, whose principles of explanation are essentially reductive and always return to the infantile conditions that limit human nature, I lay more stress on a constructive or synthetic explanation, in acknowledgment of the fact that tomorrow is of more practical importance than yesterday, and that the Whence is less essential than the Whither. For all my respect for history, it seems to me that no insight into the past and no re-experiencing of pathogenic reminiscences—however powerful it may be—is as effective in freeing man from the grip of the past as the construction of something new. I am of course very well aware that, without insight into the past and without an integration of significant memories that have been lost, nothing new and viable can be created. But I consider it a waste of time and a misleading prejudice to rummage in the past for the alleged specific causes of illness; for neuroses, no matter what the original circumstances from which they arose, are conditioned and maintained by a wrong attitude which is present all the time and which, once it is recognized, must be corrected *now* and not in the early period of infancy. Nor is it enough merely to bring the causes into consciousness, for the cure of neurosis is, in the last analysis, a moral problem and not the magic effect of rehearsing old memories.

[760] My views differ further from those of Freud and Adler in that I give an essentially different value to the unconscious. Freud, who attributes an infinitely more important role to the unconscious than Adler (this school allows it to disappear completely into the background), has a more religious temperament than Adler and for this reason he naturally concedes an autonomous, if negative, function to the psychic non-ego. In this respect I go several steps further than Freud. For me the unconscious is not just a receptacle for all unclean spirits and other odious legacies from the dead past—such as, for instance, that deposit of centuries of public opinion which constitutes Freud's "superego." It is in very truth the eternally living, creative, germinal layer in each of us, and though it may make use of age-old symbolical images it nevertheless intends them to be understood in a new way. Naturally a new meaning does not come ready-made out of the unconscious, like Pallas Athene springing fully-armed from the head of Zeus; a living effect is achieved only when the products of the unconscious are brought into serious relationship with the conscious mind.

[761] In order to interpret the products of the unconscious, I also found it necessary to give a quite different reading to dreams and fantasies. I did not reduce them to personal factors, as Freud does, but—and this seemed indicated by their very nature—I compared them with the symbols from mythology and the history of religion, in order to discover the meaning they were trying to express. This method did in fact yield extremely interesting results, not least because it permitted an entirely new reading of dreams and fantasies, thus making it possible to unite the otherwise incompatible and archaic tendencies of the unconscious with the conscious personality. This union had long seemed to me the end to strive for, because neurotics (and many normal people, too) suffer at bottom from a dissociation between conscious and unconscious. As the unconscious contains not only the sources of instinct and the whole prehistoric nature of man right down to the animal level, but also, along with these, the creative seeds of the future and the roots of all constructive fantasies, a separation from the unconscious through neurotic dissociation means nothing less than a separation from the source of all life. It therefore seemed to me that the prime task of the

therapist was to re-establish this lost connection and the life-giving co-operation between conscious and unconscious. Freud depreciates the unconscious and seeks safety in the discriminating power of consciousness. This approach is generally mistaken and leads to desiccation and rigidity wherever a firmly established consciousness already exists; for, by holding off the antagonistic and apparently hostile elements in the unconscious, it denies itself the vitality it needs for its own renewal.

[762] Freud's approach is not always mistaken, however, for consciousness is not always firmly established. This presupposes a good deal of experience of life and a certain amount of maturity. Young people, who are very far from knowing who they really are, would run a great risk if they obscured their knowledge of themselves still further by letting the "dark night of the soul" pour into their immature, labile consciousness. Here a certain depreciation of the unconscious is justified. Experience has convinced me that there are not only different temperaments ("types"), but different stages of psychological development, so that one can well say that there is an essential difference between the psychology of the first and the second half of life. Here again I differ from the others in maintaining that the same psychological criteria are not applicable to the different stages of life.

[763] If, to all these considerations, one adds the further fact that I distinguish between extraverts and introverts, and again distinguish each of them by the criterion of its most differentiated function (of which I can clearly make out four), it will be evident that hitherto my main concern as an investigator in the field of psychology has been to break in rudely upon a situation which, seen from the other two standpoints, is simple to the point of monotony, and to call attention to the inconceivable complexity of the psyche as it really is.

[764] Most people have wanted to ignore these complexities, and have frankly deplored their existence. But would any physiologist assert that the body is simple? Or that a living molecule of albumen is simple? If the human psyche is anything, it must be of unimaginable complexity and diversity, so that it cannot possibly be approached through a mere

psychology of instinct. I can only gaze with wonder and awe at the depths and heights of our psychic nature. Its non-spatial universe conceals an untold abundance of images which have accumulated over millions of years of living development and become fixed in the organism. My consciousness is like an eye that penetrates to the most distant spaces, yet it is the psychic non-ego that fills them with non-spatial images. And these images are not pale shadows, but tremendously powerful psychic factors. The most we may be able to do is misunderstand them, but we can never rob them of their power by denying them. Beside this picture I would like to place the spectacle of the starry heavens at night, for the only equivalent of the universe within is the universe without; and just as I reach this world through the medium of the body, so I reach that world through the medium of the psyche.

[765] Thus I cannot regret the complications introduced into psychology by my own contributions, for scientists have always deceived themselves very thoroughly when they thought they had discovered how simple things are.

[766] In this introduction I hope I have conveyed to the reader that the psychological endeavours summed up in the layman's idea of "psychoanalysis" ramify very much further historically, socially, and philosophically than the term indicates. It may also become clear that the field of research presented in this book is far from being a distinct, easily delimited territory. On the contrary it is a growing science, which is only just beginning to leave its medical cradle and become a psychology of human nature.

[767] The exposition that now follows is not intended to describe the whole range of present-day psychological problems. It confines itself to surveying the beginnings of modern psychology and the elementary problems which fall chiefly within the province of the physician. I have included in my introduction a number of wider considerations so as to give the reader a more general orientation.

FREUD AND JUNG: CONTRASTS[1]

[768] The difference between Freud's views and my own ought really to be dealt with by someone who stands outside the orbit of those ideas which go under our respective names. Can I be credited with sufficient impartiality to rise above my own ideas? Can any man do this? I doubt it. If I were told that someone had rivalled Baron Munchausen by accomplishing such a feat, I should feel sure that his ideas were borrowed ones.

[769] It is true that widely accepted ideas are never the personal property of their so-called author; on the contrary, he is the bondservant of his ideas. Impressive ideas which are hailed as truths have something peculiar about them. Although they come into being at a definite time, they are and have always been timeless; they arise from that realm of creative psychic life out of which the ephemeral mind of the single human being grows like a plant that blossoms, bears fruit and seed, and then withers and dies. Ideas spring from something greater than the personal human being. Man does not make his ideas; we could say that man's ideas make him.

[770] Ideas are, inevitably, a fatal confession, for they bring to light not only the best in us, but our worst insufficiencies and personal shortcomings as well. This is especially the case with ideas about psychology. Where should they come from except from our most subjective side? Can our experience of the objective world ever save us from our subjective bias? Is not every experience, even in the best of circumstances, at least fifty-per-cent subjective interpretation? On the other hand, the subject is also an objective fact, a piece of the world; and what comes from him comes, ultimately, from the stuff of the world itself, just as the rarest and strangest organism is none the less supported and nourished by the earth which is common to all. It is precisely the most subjective ideas which, being closest to nature and to our own essence, deserve to be called the truest. But: "What is truth?"

[771] For the purposes of psychology, I think it best to abandon the notion that we are today in anything like a position to make statements about the nature of the psyche that are "true" or "correct." The best that we can achieve is true expression. By true expression I mean an open avowal and detailed presentation of everything that is subjectively observed. One person will stress the *forms* into which he can work this material, and will therefore believe that he is the creator of what he finds within himself. Another will lay most weight on *what* is observed; he will therefore speak of it as a phenomenon, while remaining conscious of his own receptive attitude. The truth probably lies between the two: true expression consists in giving form to what is observed.

[772] The modern psychologist, however ambitious, can hardly claim to have achieved more than this. Our psychology is the more or less successfully formulated confession of a few individuals, and so far as each of them conforms more or less to a type, his confession can be accepted as a fairly valid description of a large number of people. And since those who conform to other types none the less belong to the human species, we may conclude that this description applies, though less fully, to them too. What Freud has to say about sexuality, infantile pleasure, and their conflict with the "reality principle," as well as what he says about incest and the like, can be taken as the truest expression of his personal psychology. It is the successful formulation of what he himself subjectively observed. I am no opponent of Freud's; I am merely presented in that light by his own short-sightedness and that of his pupils. No experienced psychiatrist can deny having met with dozens of cases whose psychology answers in all essentials to that of Freud. By his own subjective confession, Freud has assisted at the birth of a great truth about man. He has devoted his life and strength to the construction of a psychology which is a formulation of his own being.

[773] Our way of looking at things is conditioned by what we are. And since other people have a different psychology, they see things differently and express themselves differently. Adler, one of Freud's earliest pupils, is a case in point. Working with the same empirical material as Freud, he approached it from a totally different standpoint. His way of looking at things is at least as convincing as Freud's, because he too represents a

psychology of a well-known type. I know that the followers of both schools flatly assert that I am in the wrong, but I may hope that history and all fair-minded persons will bear me out. Both schools, to my way of thinking, deserve reproach for overemphasizing the pathological aspect of life and for interpreting man too exclusively in the light of his defects. A convincing example of this in Freud’s case is his inability to understand religious experience, as is clearly shown in his book *The Future of an Illusion*.

[774] For my part, I prefer to look at man in the light of what in him is healthy and sound, and to free the sick man from just that kind of psychology which colours every page Freud has written. I cannot see how Freud can ever get beyond his own psychology and relieve the patient of a suffering from which the doctor himself still suffers. It is the psychology of neurotic states of mind, definitely one-sided, and its validity is really confined to those states. Within these limits it is true and valid even when it is in error, for error also belongs to the picture and carries the truth of a confession. But it is not a psychology of the healthy mind, and—this is a symptom of its morbidity—it is based on an uncriticized, even an unconscious, view of the world which is apt to narrow the horizon of experience and limit one’s vision. It was a great mistake on Freud’s part to turn his back on philosophy. Not once does he criticize his assumptions or even his personal psychic premises. Yet to do so was necessary, as may be inferred from what I have said above; for had he critically examined his own foundations he would never have been able to put his peculiar psychology so naïvely on view as he did in *The Interpretation of Dreams*. At all events, he would have had a taste of the difficulties I have met with. I have never refused the bitter-sweet drink of philosophical criticism, but have taken it with caution, a little at a time. All too little, my opponents will say; almost too much, my own feeling tells me. All too easily does self-criticism poison one’s naïveté, that priceless possession, or rather gift, which no creative person can do without. At any rate, philosophical criticism has helped me to see that every psychology—my own included—has the character of a subjective confession. And yet I must prevent my critical powers from destroying my creativeness. I know well enough that every word I utter carries with

it something of myself—of my special and unique self with its particular history and its own particular world. Even when I deal with empirical data I am necessarily speaking about myself. But it is only by accepting this as inevitable that I can serve the cause of man's knowledge of man—the cause which Freud also wished to serve and which, in spite of everything, he has served. Knowledge rests not upon truth alone, but upon error also.

[775] It is perhaps here, where the question arises of recognizing that every psychology which is the work of one man is subjectively coloured, that the line between Freud and myself is most sharply drawn.

[776] A further difference seems to me to consist in this, that I try to free myself from all unconscious and therefore uncriticized assumptions about the world in general. I say "I try," for who can be sure that he has freed himself from all of his unconscious assumptions? I try to save myself from at least the crassest prejudices, and am therefore disposed to recognize all manner of gods provided only that they are active in the human psyche. I do not doubt that the natural instincts or drives are forces of propulsion in psychic life, whether we call them sexuality or the will to power; but neither do I doubt that these instincts come into collision with the spirit, for they are continually colliding with something, and why should not this something be called "spirit"? I am far from knowing what spirit is in itself, and equally far from knowing what instincts are. The one is as mysterious to me as the other; nor can I explain the one as a misunderstanding of the other. There are no misunderstandings in nature, any more than the fact that the earth has only one moon is a misunderstanding; misunderstandings are found only in the realm of what we call "understanding." Certainly instinct and spirit are beyond my understanding. They are terms which we posit for powerful forces whose nature we do not know.

[777] My attitude to all religions is therefore a positive one. In their symbolism I recognize those figures which I have met with in the dreams and fantasies of my patients. In their moral teachings I see efforts that are the same as or similar to those made by my patients when, guided by their own insight or inspiration, they seek the right way to deal with the

forces of psychic life. Ceremonial ritual, initiation rites, and ascetic practices, in all their forms and variations, interest me profoundly as so many techniques for bringing about a proper relation to these forces. My attitude to biology is equally positive, and to the empiricism of natural science in general, in which I see a herculean attempt to understand the psyche by approaching it from the outside world, just as religious gnosis is a prodigious attempt of the human mind to derive knowledge of the cosmos from within. In my picture of the world there is a vast outer realm and an equally vast inner realm; between these two stands man, facing now one and now the other, and, according to temperament and disposition, taking the one for the absolute truth by denying or sacrificing the other.

[778] This picture is hypothetical, of course, but it offers a hypothesis which is so valuable that I will not give it up. I consider it heuristically and empirically justified and, moreover, it is confirmed by the *consensus gentium*. This hypothesis certainly came to me from an inner source, though I might imagine that empirical findings had led to its discovery. Out of it has grown my theory of types, and also my reconciliation with views as different from my own as those of Freud.

[779] I see in all that happens the play of opposites, and derive from this conception my idea of psychic energy. I hold that psychic energy involves the play of opposites in much the same way as physical energy involves a difference of potential, that is to say the existence of opposites such as warm and cold, high and low, etc. Freud began by taking sexuality as the only psychic driving force, and only after my break with him did he take other factors into account. For my part, I have summed up the various psychic drives or forces—all constructed more or less *ad hoc*— under the concept of energy, in order to eliminate the almost unavoidable arbitrariness of a psychology that deals purely with power-drives. I therefore speak not of separate drives or forces but of “value intensities.”[2] By this I do not mean to deny the importance of sexuality in psychic life, though Freud stubbornly maintains that I do deny it. What I seek is to set bounds to the rampant terminology of sex which vitiates all discussion of the human psyche, and to put sexuality itself in its proper place.

[780] Common-sense will always return to the fact that sexuality is only one of the biological instincts, only one of the psychophysiological functions, though one that is without doubt very far-reaching and important. But—what happens when we can no longer satisfy our hunger? There is, quite obviously, a marked disturbance today in the psychic sphere of sex, just as, when a tooth really hurts, the whole psyche seems to consist of nothing but toothache. The kind of sexuality described by Freud is that unmistakable sexual obsession which shows itself whenever a patient has reached the point where he needs to be forced or tempted out of a wrong attitude or situation. It is an overemphasized sexuality piled up behind a dam, and it shrinks at once to normal proportions as soon as the way to development is opened. Generally it is being caught in the old resentments against parents and relations and in the boring emotional tangles of the "family romance" that brings about the damming up of life's energies, and this stoppage unfailingly manifests itself in the form of sexuality called "infantile." It is not sexuality proper, but an unnatural discharge of tensions that really belong to quite another province of life. That being so, what is the use of paddling about in this flooded country? Surely, straight thinking will grant that it is more important to open up drainage canals, that is, to find a new attitude or way of life which will offer a suitable gradient for the pent-up energy. Otherwise a vicious circle is set up, and this is in fact what Freudian psychology appears to do. It points no way that leads beyond the inexorable cycle of biological events. In despair we would have to cry out with St. Paul: "Wretched man that I am, who will deliver me from the body of this death?" And the spiritual man in us comes forward, shaking his head, and says in Faust's words: "Thou art conscious only of the single urge," namely of the fleshly bond leading back to father and mother or forward to the children that have sprung from our flesh—"incest" with the past and "incest" with the future, the original sin of perpetuation of the "family romance." There is nothing that can free us from this bond except that opposite urge of life, the spirit. It is not the children of the flesh, but the "children of God," who know freedom. In Ernst Barlach's tragedy *The Dead Day*, the mother-daemon says at the end: "The strange thing is that man will not learn that God is his father." That is what Freud would never learn, and what all those who

share his outlook forbid themselves to learn. At least, they never find the key to this knowledge. Theology does not help those who are looking for the key, because theology demands faith, and faith cannot be made: it is in the truest sense a gift of grace. We moderns are faced with the necessity of rediscovering the life of the spirit; we must experience it anew for ourselves. It is the only way in which to break the spell that binds us to the cycle of biological events.

[781] My position on this question is the third point of difference between Freud's views and my own. Because of it I am accused of mysticism. I do not, however, hold myself responsible for the fact that man has, always and everywhere, spontaneously developed a religious function, and that the human psyche from time immemorial has been shot through with religious feelings and ideas. Whoever cannot see this aspect of the human psyche is blind, and whoever chooses to explain it away, or to "enlighten" it away, has no sense of reality. Or should we see in the father-complex which shows itself in all members of the Freudian school, and in its founder as well, evidence of a notable release from the fatalities of the family situation? This father-complex, defended with such stubbornness and oversensitivity, is a religious function misunderstood, a piece of mysticism expressed in terms of biological and family relationships. As for Freud's concept of the "superego," it is a furtive attempt to smuggle the time-honoured image of Jehovah in the dress of psychological theory. For my part, I prefer to call things by the names under which they have always been known.

[782] The wheel of history must not be turned back, and man's advance toward a spiritual life, which began with the primitive rites of initiation, must not be denied. It is permissible for science to divide up its field of inquiry and to operate with limited hypotheses, for science must work in that way; but the human psyche may not be so parcelled out. It is a whole which embraces consciousness, and it is the mother of consciousness. Scientific thought, being only one of the psyche's functions, can never exhaust all its potentialities. The psychotherapist must not allow his vision to be coloured by pathology; he must never allow himself to forget that the ailing mind is a human mind and that, for all its ailments, it unconsciously shares the whole psychic life of man. He must even be

able to admit that the ego is sick for the very reason that it is cut off from the whole, and has lost its connection not only with mankind but with the spirit. The ego is indeed the "place of fears," as Freud says in *The Ego and the Id*, but only so long as it has not returned to its "father" and "mother." Freud founders on the question of Nicodemus: "How can a man be born when he is old? Can he enter the second time into his mother's womb, and be born?" (John 3:4). History repeats itself, for—to compare small things with great—the question reappears today in the domestic quarrel of modern psychology.

[783] For thousands of years, rites of initiation have been teaching rebirth from the spirit; yet, strangely enough, man forgets again and again the meaning of divine procreation. Though this may be poor testimony to the strength of the spirit, the penalty for misunderstanding is neurotic decay, embitterment, atrophy, and sterility. It is easy enough to drive the spirit out of the door, but when we have done so the meal has lost its savour—the salt of the earth. Fortunately, we have proof that the spirit always renews its strength in the fact that the essential teaching of the initiations is handed on from generation to generation. Ever and again there are human beings who understand what it means that God is their father. The equal balance of the flesh and the spirit is not lost to the world.

[784] The contrast between Freud and myself goes back to essential differences in our basic assumptions. Assumptions are unavoidable, and this being so it is wrong to pretend that we have no assumptions. That is why I have dealt with fundamental questions; with these as a starting-point, the manifold and detailed differences between Freud's views and my own can best be understood.

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902) On Simulated Insanity (1903)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of

Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3 THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)
The Content of the Psychoses (1908/1914)
On Psychological Understanding (1914)
A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)
On the Importance of the Unconscious in Psychopathology (1914)
On the Problem of Psychogenesis in Mental Disease (1919)
Mental Disease and the Psyche (1928)
On the Psychogenesis of Schizophrenia (1939)
Recent Thoughts on Schizophrenia (1957)
Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)
Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's “Secret Ways of the Mind” (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931. 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY
On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE
On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)

Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS
Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)
RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF
The Ego
The Shadow
The *Syzygy*: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy

†PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1,938/1940)
A Psychological Approach to the Dogma of the Trinity (1942/1948)
Transformation Symbolism in the Mass (1942/1954)
Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)
Brother Klaus (1933)
Psychotherapists or the Clergy (1932)
Psychoanalysis and the Cure of Souls (1928)
Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)
Yoga and the West (1936)
Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)
The Psychology of Eastern Meditation (1943)
The Holy Men of India: Introduction to Zimmer’s “Der Weg zum Selbst” (1944)
Foreword to the “I Ching” (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)
Introduction to the Religious and Psychological Problems of Alchemy
Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)
Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)
AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY
The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE
Paracelsus (192g)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY
GENERAL PROBLEMS OF PSYCHOTHERAPY
Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)
SPECIFIC PROBLEMS OF PSYCHOTHERAPY
The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY
Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE
Miscellaneous Writings

19. GENERAL BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

See also:
C. G. JUNG: LETTERS
Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé
Translations from the German by R.F.C. Hull.
VOL. 1: 1906–1950

VOL. 2: 1951–1961

THE FREUD / JUNG LETTERS
Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

C. G. JUNG SPEAKING: Interviews and Encounters
Edited by William McGuire and R.F.C. Hull

C. G. JUNG: Word and Image
Edited by Aniela Jaffé

Supplementary Volume A:
THE ZOFINGIA LECTURES
Edited by William McGuire, translated by Jan Van Heurck,
introduction by Marie-Louise von Franz

SELECTED LETTERS OF C. G. JUNG, 1909–1961
Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé
Translations from the German by R.F.C. Hull

DREAM ANALYSIS
Notes of the Seminar Given in 1928–1930
Edited by William McGuire

THE ESSENTIAL JUNG
Selected and introduced by Anthony Storr

[1] [First published as “Die Hysterielehre Freuds: Eine Erwiderung auf die Aschaffenburgsche Kritik,” *Münchener medizinische Wochenschrift* (Munich), LIII : 47 (Nov. 1906).—EDITORS.]

[2] [Aschaffenburg, “Die Beziehungen des sexuellen Lebens zur Entstehung von Nerven- und Geisteskrankheiten,” in the same organ, no. 37 (Sept. 1906). Originally an address (to a congress of neurologists and psychiatrists, Baden-Baden, May 1906) criticizing Freud’s “Bruchstück einer Hysterie-analyse,” which had been first published in 1905 (i.e., “Fragment of an Analysis of a Case of Hysteria”). See Jones, *Freud: Life and Work*, II, p. 12.—EDITORS.]

[3] [The earlier form “psychanalysis” *(Psychanalyse)* is used throughout this and the next paper.—EDITORS.]

[4] *Studies in Word Association*. [Vol. I of *Diagnostische Assoziationsstudien*, which the author actually cited here, was published in 1906, before the present paper. It reprinted Jung’s “Psychoanalyse und Assoziationsexperiment” (“Psychoanalysis and Association Experiments,” in *Experimental Researches*, Coll. Works, Vol. 2), originally published in the *Journal für Psychologie und Neurologie* (Leipzig), VII (1905). This paper, which discussed Freud’s theory of hysteria and commented on the “Fragment of an Analysis” (see n. 2, supra), was Jung’s first significant publication on the subject of psychoanalysis.—EDITORS.]

[5] Untitled note in the *Zentralblatt für Nervenheilkunde und Psychiatrie*, XXIX (1906), 322. [The first review (pub. April) of Freud’s “Fragment of an Analysis of a Case of Hysteria”; see n. 2, supra. Jung’s paper cited in n. 4, supra, is earlier, however, and is probably the first discussion of the “Dora analysis.”—EDITORS.]

[1] [Translated from “Die Freud’sche Hysterietheorie,” *Monatsschrift für Psychiatrie und Neurologie* (Berlin), XXIII (1908), 310–22. Originally a report to the First International Congress of Psychiatry and Neurology, Amsterdam, September 1907. Aschaffenburg also addressed the Congress, publishing his paper in the same organ, XXII (1907), 564ff. For an account of this event, see Jones, *Freud: Life and Work*, II, pp. 125ff.— EDITORS.]

[2] [L. Binswanger, “Freud’sche Mechanismen in der Symptomatologie von Psychosen” (1906). Cf. Jones, II, pp. 36f.—EDITORS.]

[3] [“Thatsächliches und Hypothetiscbes über das Wesen der Hysterie” (1890). Cf. Breuer and Freud, *Studies on Hysteria*, Standard Edn., p. 203.—EDITORS.]

[4] [Emil Raimann, Vienna psychiatrist, critic of Freud, See Jones, I, pp. 395f., and II, p. 122.—EDITORS.]

[5] [“Freud’s Psycho-Analytic Procedure” and “On Psychotherapy” appear to be the publications Jung referred to. Cf., however, “Fragment of an Analysis of a Case of Hysteria” (1905), Standard Edn., p. 12.— EDITORS.]

[6] [Paul Dubois, of Bern, treated neurosis by “persuasion.”—EDITORS.]

[7] Freud’s concept of sexuality includes roughly everything covered by the concept of the instinct for the preservation of the species.

[8] [Heymann Steinthal (1823–99), German philologist and philosopher. Cf. *Symbols of Transformation*, index, s.v.—EDITORS.]

[1] [Written in French. Translated by Philip Mairet from “L’Analyse des Iêves,” *Année psychologique* (Paris), XV (1909), 160–67, and revised by R. F. C. Hull.—EDITORS.]

[2] It might be objected that such a supposition is not permissible, as there is a great deal of difference between a song and a dream. But thanks to the researches of Freud we now know that all the products of any dreaming state have something in common. First, they are all variations on the complex, and second, they are only a kind of symbolic expression of the complex. That is why I think I am justified in making this supposition.

[3] See *Experimental Researches*, Coll. Works, Vol. 2.

[4] [See the bibliography for fuller data.—EDITORS.]

[1] [Originally published as “Ein Beitrag zur Psychologie des Gerüchtes,” *Zentralblatt für Psychoanalyse* (Wiesbaden), I (1910/11): 3, 81–90. Previously translated in *Collected Papers on Analytical Psychology* (London and New York, 1916; 2nd edn., 1917).—EDITORS.]

[2] [Her sister. Cf. par. 119.—EDITORS.]

[3] [*Aufsitzen* in the original. The word (usually intransitive) means both to ‘sit on a person’s back’ and to ‘mount’ a horse or vehicle. As applied to a steamer, its use is quite exceptional. The ambiguity can be preserved in English only by alternating between ‘ride’ and ‘get on.’—TRANS.]

[4] Cf. the duplication of attributes in dementia praecox in my “The Psychology of Dementia Praecox.”

[5] Cf. my “Psychic Conflicts in a Child.”

[6] [It may be not without significance that, used transitively, the word *aufsitzen*— literally, ‘sit a person up’—means ‘to deceive,’ ‘to make a fool of,’ someone, or, as we might say today in this context, ‘to take him for a ride.’—TRANS.]

[1] [Originally published as “Ein Beitrag zur Kenntnis des Zahlentraumes,” *Zentralblatt für Psychoanalyse* (Wiesbaden), I (1910/11), 567–72. Previously translated by M. D. Eder in *Collected Papers on Analytical Psychology* (London and New York, 1916; 2nd edn., 1917).—EDITORS.]

[2] [Day and month.]

[3] [Month and year.]

[4] [Sometimes called in German *Apostelgeschichte St Lucae.*— TRANS.]

[5] The husband’s principal trouble was a pronounced mother complex.

[6] *From India to the Planet Mars* (1900); “Nouvelles Observations sur un cas de somnambulisme avec glossolalie” (1901).

[7] Cf. *Psychiatrie Studies*, pais. 139ff. and 166ff.

[1] [Originally published in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen*, III (1911), 309–28. The article by Prince (1854–1929) was published in the *Journal of Abnormal Psychology* (Boston), V (1910), 139–95. For Prince's relations with the early psychoanalytical movement, see Jones, *Life and Work*, II, passim.—EDITORS.]

[2] *American Journal of Psychology*, XXI (1910), 283ff.

[3] I should not omit to mention that James J. Putnam, professor of neurology in Harvard Medical School, has tested and made medical use of psychoanalysis. (See Putnam, "Persönliche Erfahrungen mit Freuds psychoanalytischer Methode," 1911.) [And Putnam's "Personal Impressions of Sigmund Freud and His Work" (1909–10). Adolf Meyer, August Hoch, and Edward Wheeler Scripture also practised in America.—EDITORS.]

[4] [The lectures were first published (in English translation) in the *American Journal of Psychology*, XXI (1910). For Freud's, see "Five Lectures on Psycho-Analysis," Standard Edn., XI. The three lectures by Jung, entitled "The Association Method," were republished in *Collected Papers on Analytical Psychology* (1916). For the first two, "The Association Method" and "The Familial Constellations," see Vol. 2 in the *Collected Works;* the third, "Psychic Conflicts in a Child," appears in Vol. 17 in its later, revised form of 1946.—EDITORS.]

[5] As is well known, Professor Hoche, of Freiburg im Breisgau, described Freud and his school as afflicted with epidemic insanity. Participants in the congress accepted this diagnosis without rebuttal and with applause. [Alfred E. Hoche, "Eine psychische Epidemie unter Arzten," Versammlung Sud-West Deutscher Irrenärzte, Baden-Baden, May 1910. See Jones, *Life and Work*, II, 131.—EDITORS]

[6] It is especially to be regretted that the learned men—or to be more accurate, the men who today go in for learning—all too often have an interest which is merely national and stops at the frontier. It would be a great relief to psychoanalysts if more Binet, Janet, and Flournoy were read in Germany.

[7] Those who did so were the ones who openly sided with Freud. Isserlin, on the other hand, contented himself with criticizing the method *a priori*, having no practical knowledge of the matter. Bleuler did what he could, under the circumstances, to answer him ("Die Psychoanalyse Freuds," 1910).

[8] In order to give the reader some idea of the experience the psychoanalyst possesses of dream analysis I would mention that, on average, I analyse eight dreams per working day. That makes about two thousand a year. Similar figures probably hold good for most psychoanalysts. Freud himself has immense experience in analysing dreams.

[9] "The Mechanism and Interpretation of Dreams," p. 145.

[10] For the practised analyst the dream itself is so clear that it can be read directly.

[11] [Orig. 1910.—EDITORS.]

[12] See Dream 5.

[13] Analysis by rumour. Cf. supra, "A Contribution to the Psychology of Rumour."

[14] ["Learn how to handle women, that make sure,
Since all the aches and sighs that come to vex
The tender sex
The doctor knows one little place to cure.

A bedside manner sets their hearts at ease,
And then they’re yours for treatment as you please.”

—*Faust*, Part One, trans. by Wayne, p. 98.]

[15] A pounder is a pestle or club.

[16] Cf. “A Contribution to the Psychology of Rumour,” par. 106.

[17] *Symbols of Transformation*. [The first part of the original, *Wandlungen und Symbole der Libido*, appeared in the same issue of the *Jahrbuch* as the present article.—EDITORS.]

[18] [“Association, Dream, and Hysterical Symptoms” (orig. 1906) in *Experimental Researches*, Coll. Works, Vol. 2.—EDITORS.]

[19] The dream is a typical fantasy of revenge for scorned love and contains in the torture (as in the pounding) scene the boundless gratitude of the patient. Hence the mysterious scene in the cave, which is so scandalous that she will be struck blind at the sight of it. Proof of this can be found in the details of the cave scene.

[20] “Remarks on Dr. Morton Prince’s article, ‘The Mechanism and Interpretation of Dreams’” (1910–11).

[1] [Translated from “Zur Kritik über Psychoanalyse,” *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig), II (1910), 743–46.—EDITORS.]

[2] In *Neurologisches Centralblatt* (Leipzig), XXIX : 6 (March 16, 1910).

[4] J. A. Haslebacher, “Psychoneurosen und Psychoanalyse,” *Correspondenzblatt für Schweizer Ärzte* (Basel), XL:7 (March 1, 1910), 184–96.

[5] “Ich bin klein, mein Herz ist rein.”

[1] [Translated from “Zur Psychoanalyse,” *Wissen und Leben* (Zurich; former title of the *Neue Schweizer Rundschau)*, V (1912), 711–14. An introductory editorial note stated: “A series of communications pro and con Freudian theories in the *Neue Zürcher Zeitung* seems to prove that remarkable misunderstanding and prejudice with respect to modern psychology are the rule with the general public. Since all this impassioned wrangling was more likely to confuse than to enlighten, we have asked Dr. Karl Jung (*sic*) for a few closing words, which should be the more welcome for calming ruffled tempers.”—EDITORS.]

[2] [See the preceding article.—EDITORS.]

[3] [*Neue Bahnen der Psychologie*, published in *Raschers Jahrbuch für Schweizer Art und Kunst* (Zurich), 1912. Trans. as “New Paths in Psychology,” *Two Essays on Analytical Psychology*, pars. 407ff.—EDITORS.]

[4] [Presumably *Wandlungen und Symbole der Libido*, Part I of which appeared in the *Jahrbuch* in 1911. Part II, the second chapter of which is devoted to the concept and the genetic theory of the libido, appeared early in 1912.—EDITORS.]

[1] [*Pragmatism* (1907), p. 53.]

[1] [The Clark Lectures. See par. 154, n. 4, supra.—EDITORS.]

[2] [First published 1895; partially trans. by A. A. Brill in *Selected Papers on Hysteria and Other Neuroses* (New York, 1909; later edns.); trans. in Standard Edn. of Freud, II (1955).—EDITORS.]

[3] [“Five Lectures on Psycho-Analysis”; see par. 154, n. 4, supra—EDITORS.]

[4] [Probably Herbert W. Page, British psychiatrist, who published on this subject; see Bibliography.—EDITORS.]

[5] (“Gefühl und Erinnerung,” in Kraepelin, *Psychologische Arbeiten*, VI, pt. 2, p. 237.)

[6] [*Studies on Hysteria*, pp. 106ff.]

[7] [By 1912, two volumes of Freud’s *Sammlungen kleiner Schriften zur Neurosenlehre* had appeared, in 1906 and 1909 (another in 1913). The various contents of these volumes were trans., regrouped, in the *Collected Papers* (1924 ff.), and, further rearranged, in the Standard Edn. The precise reference here is unavailable.—EDITORS.]

[8] [This case is fully reported in *Two Essays on Analytical Psychology*, pars. 8ff., 417ff.—EDIIORS.]

[9] [See infra, pars. 297ff. and 355ft.—EDITORS.]

[10] [First Published in 1905.]

[6] [The first paper in *The Psychogenesis of Mental Disease*, Collected Works, Vol.3.]

[7] (It might be objected that dementia praecox is characterized not only by the introversion of sexual libido but also by a regression to the infantile level, and that this constitutes the difference between the anchorite and the schizophrenic. This is certainly correct, but it would still have to be proved that in dementia praecox it is regularly and exclusively the erotic interest which goes into a regression. It seems to me rather difficult to prove this, because erotic interest would then have to be understood as the "Eros" of the old philosophers. But that can hardly be meant. I know cases of dementia praecox where all regard for self-preservation disappears, but not the very lively erotic interests.)

[8] ["The Psycho-Sexual Differences between Hysteria and Dementia Praecox.']

[9] [Pars. 278–80 and 274–75 reappear with certain modifications and additions in *Symbols of Transformation*, pars. 192ff.—EDITORS.]

[10] [Pars. 290–91 likewise recur with small changes in *Symbols of Transformation*, par. 206.—EDITORS.]

[11] (I must ask the reader not to misunderstand my figurative way of speaking. It is, of course, not libido as energy that gradually frees itself from the function of nutrition, but libido as a function, which is bound up with the slow changes of organic growth.)

[1] (It may not be superfluous to remark that there are still people who believe that psychologists swallow the lies of their patients. That is quite impossible. Lies are fantasies, and we deal in fantasies.)

[2] (Introversion does not mean that libido simply accumulates inactively. But it is used for the creation of fantasies and illusions when the introversion results in regression to an infantile mode of adaptation. Introversion can also lead to action on a rational plane.)

[3] [See infra, pars. 693ff.]

[4] (I am discounting the inherited organic similarity which is natutally responsible for many things but by no means all.)

This was originally written in English and published as "On Psychological Understanding," *Journal of Abnormal Psychology* (Boston), IX (1915). Later in 1914, translated into German and published as a supplement to *Der Inhalt der Psychose*. See *The Psychogenesis of Mental Disease*, pp. 179ff.—EDITORS.]

[6] [Savill, "Psychoanalysis" (1916); Mitchell (1916).—EDITORS.]

[1] [First published as “Die Bedeutung des Vaters für das Schicksal des Einzelnen,” *Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig), I (1909). 155–73. This was translated by M. D. Eder under the present title and published in *Collected Papers on Analytical Psychology* (London and New York. 1916; 2nd edn., 1917). The German original of the article was reprinted (1909) as a pamphlet, and a second edition in this form appeared (Vienna, 1927) with a brief foreword. A third edition, much revised and expanded, with a new foreword, was published in 1949 (Zurich). The present version is a translation of the third edition. Passages which the author added to that version are given in pointed brackets ( ) in the text, while any of significance which they replaced, or which were omitted, are given in square brackets [] in the footnotes (as translated from the 1909 version).—EDITORS.]

[2] [Revised (1952) and translated as *Symbols of Transformation.*— EDITORS.]

[3] “[(Why this should be so) only the Genius knows—that companion who rules the star of our birth, the god of human nature, mortal though he be in each single life, and changeful of countenance, white and black.”—Horace, *Epistles*, II, II, 187–89.—TRANS.]

[4] [*Orig. footnote:* Libido is what earlier psychologists called “will” or “tendency.” The Freudian expression is a *denominatio a potiori. Jahrbuch*, I (1909), 155.]

[5] [*In orig., also:* masturbation.]

[6] (I have discussed this question on two occasions: *Symbols of Transformation* (in regard to the son), and “Psychological Aspects of the Mother Archetype” (in regard to the daughter).)

[7] Sommer, *Familienforschung und Vererbungslehre* (1907); Joerger, “Die Familie Zero” (1905); Ziermer, “Genealogische Studien über die Vererbung geistiger Eigenschaften” (1908).

[8] [*Orig.:* These experiences, and those gained more particularly in an analysis carried out conjointly with Dr. Otto Gross, have impressed upon me the soundness of this view.] [For Gross, cf. Jones, *Freud: Life and Work*, II, p. 33.—EDITORS.]

[9] “Statistical Investigations on Word-Associations and on Familial Agreement in Reaction Type among Uneducated Persons” (orig. 1907).

[10] By this I mean reactions where the response to the stimulus-word is always a subjectively toned predicate instead of an objective relationship, e.g., *flower / nice, frog / horrible, piano / frightful, salt / bad, singing / sweet, cooking / useful*

[11] Vigouroux and Juquelier, *La Contagion mentale* (1904), ch. 6.

[12] [*Orig.:* … of the struggle between repression and libido (Freud) …]

[13] [*Orig.:* It must suffice to present only the chief events, i.e., those of sexuality.]

[14] [*Orig.:* psychanalytical.]

[15] [*Orig.:* … but dares not acknowledge her sexuality.]

[16] [*Orig.:* … from the psychanalytic standpoint …]

[17] “Throughout we believe ourselves to be the masters of our deeds. But reviewing our lives, and chiefly taking our misfortunes and their consequences into consideration, we often cannot account for our doing this act and omitting that, making it appear as if our steps had been guided by a power foreign to us. Therefore Shakespeare says:

‘Fate show thy force: ourselves we do not owe;
What is decreed must be, and be this so!’”

—Schopenhauer, “On Apparent Design in the Fate of the Individual,” *Parerga and Paralipomena* (trans. by Irvine, p. 26).

[18] [*Orig.:* … for the power of the infantile constellation has provided highly convincing material for the religions in the course of the millennia.

[All this is not to say that we should cast the blame for original sin upon our parents. A sensitive child, whose sympathies are only too quick to reflect in his psyche the excesses of his parents, bears the blame for his fate in his own character. But, as our last case shows, this is not always so, for the parents can (and unfortunately only too often do) instil the evil into the child’s soul, preying upon his ignorance in order to make him the slave of their complexes.]

[19] [*Orig.:* It will be asked, wherein lies the magic power of the parents to bind their children to themselves, often for the whole of their lives? The psychoanalyst knows that it is nothing but sexuality on both sides.

[We are always trying not to admit the child’s sexuality. But this is only because of wilful ignorance, which happens to be very prevalent again just now.*

[I have not given any real analysis of these cases. We therefore do not know what happened to these puppets of fate when they were children. A profound insight into the living soul of a child, such as we have never had before, is given in Freud’s contribution to the present semi-annual volume of the *Jahrbuch*[“Analysis of a Phobia in a Five-year-old Boy”]. If I venture, after Freud’s masterly presentation, to offer another small contribution to the study of the child-psyche, it is because psychoanalytic case-histories seem to me always valuable.

[* *Orig. footnote:* This was seen at the Amsterdam Congress in 1907 [First International Congress of Psychiatry and Neurology; cf. the second paper in this vol.—EDITORS], when an eminent French savant assured us that Freud’s theory was nothing but “une plaisanterie.” This gentleman had evidently read neither Freud’s latest writings nor mine, and knew far less about the subject than a little child. This pronouncement, so admirably grounded, met with the approbation of a well-known German professor in his report to the Congress. One can but bow before such thoroughness. At the same Congress a noted German neurologist immortalized his name with the following brilliant argument: “If in Freud’s view hysteria really does rest on repressed affects, then the whole German army must be hysterical.”]

[20] [*Orig.:* It is not difficult to see, from the Freudian standpoint, what the bed-wetting means in this case. Micturition dreams give us the clue. Here I would refer the reader to an analysis of this kind in my paper “The Analysis of Dreams” (cf. supra, pars. 82f.). Bed-wetting must be regarded as an infantile sexual substitute, and even in the dream-life of adults it is easily used as a cloak for the pressure of sexual desire.]

[21] [*Orig.:* The infantile attitude, it is evident, is nothing but infantile sexuality. If we now survey all the far-reaching possibilities of the infantile constellation, we are obliged to say that *in essence our life’s fate is identical with the fate of our sexuality*. If Freud and his school devote themselves first and foremost to tracing out the individual’s sexuality, it is certainly not in order to excite piquant sensations but to gain a deeper insight into the driving forces that determine the individual’s fate. In this we are not saying too much, but rather understating the case. For, when we strip off the veils shrouding the problems of individual destiny, we at once widen our field of vision from the history of the individual to the history of nations. We can take a look, first of all, at the history of religion, at the

history of the fantasy systems of whole peoples and epochs. The religion of the Old Testament exalted the paterfamilias into the Jehovah of the Jews, whom the people had to obey in fear and dread. The patriarchs were a stepping-stone to the Deity. The neurotic fear in Judaism, an imperfect or at any rate unsuccessful attempt at sublimation by a still too barbarous people, gave rise to the excessive severity of Mosaic law, the compulsive ceremonial of the neurotic.* Only the prophets were able to free themselves from it; for them the identification with Jehovah, complete sublimation, was successful. They became the fathers of the people. Christ, the fulfiller of their prophecies, put an end to this fear of God and taught mankind that the true relation to the Deity is love. Thus he destroyed the compulsive ceremonial of the law and was himself the exponent of the personal loving relationship to God. Later, the imperfect sublimations of the Christian Mass resulted once again in the ceremonial of the Church, from which only those of the numerous saints and reformers who were really capable of sublimation were able to break free. Not without cause, therefore, does modern theology speak of the liberating effect of "inner" or "personal" experience, for always the ardour of love transmutes fear and compulsion into a higher, freer type of feeling.

[* *Orig. footnote:* Cf. Freud, *Zeitschrift für Religionspsychologie* (1907).] [I.e., "Obsessive Acts and Religious Practices."—EDITORS.]

[22] [*Orig.:* These are the roots of the first religious sublimations. In the place of the father with his constellating virtues and faults there appears on the one hand an altogether sublime deity, and on the other hand the devil, who in modern times has been largely whittled away by the realization of one's own moral responsibility. Sublime love is attributed to the former, low sexuality to the latter. As soon as we enter the field of neurosis, this antithesis is stretched to the limit. God becomes the symbol of the most complete sexual repression, the devil the symbol of sexual lust. Thus it is that the conscious expression of the father-constellation, like every expression of an unconscious complex when it appears in consciousness, acquires its Janus face, its positive and its negative components.]

[23] Chs. 3 : 7ff. and 8 : 1ff.

[24] (Cf. the axiom of Maria and the discussion of 3 and 4, 7 and 8, in *Psychology and Alchemy*, pars. 201ff. and 209.)

[25] (Horace, *Epistles*, II, 2, 187–89.)

[26] [*Orig.:* Unfortunately medical etiquette forbids me to report a case of hysteria which fits this pattern exactly, except that there were not seven husbands but only three, unluckily chosen under all the ominous signs of an infantile constellation. Our first case, too, belongs to this category, and in our third case we see the old peasant at work, preparing to dedicate his daughter to a like fate.

[As a pious and dutiful daughter (cf. her prayer in Tobit, ch. 3), Sara has brought about the usual sublimation and splitting of the father-complex, on the one hand elevating her infantile love into the worship of God, and on the other turning the obsessive power of the father into the persecuting demon Asmodeus. The story is beautifully worked out and shows father Raguel in his two roles, as the inconsolable father of the bride and the provident digger of his son-in-law's grave, whose fate he foresees.

[This pretty fable has become a classic example in my analytical work, for we frequently meet with cases where the father-demon has laid his hand upon his daughter, so that her whole life long, even when she does marry, there is never a true inward union, because her husband's image never succeeds in obliterating the unconscious and continually operative infantile father-ideal. This is true not only of daughters, but also of sons. An excellent example of this kind of father-constellation can be found in Brill's recently published "Psychological Factors in Dementia Praecox" (1908).

[In my experience it is usually the father who is the decisive and dangerous object of the child's fantasy, and if ever it happened to be the mother I was able to discover behind her a grandfather to whom she belonged in her heart.

[I must leave this question open, because my findings are not sufficient to warrant a decision. It is to be hoped that experience in the years to come will sink deeper shafts into this obscure territory, on which I have been able to shed but a fleeting light, and will discover more about the secret workshop of the demon who shapes our fate, of whom Horace says:

"Scit Genius natale comes qui temperat astrum,
Naturae deus humanae, mortalis in unum,
Quodque caput, vultu mutabilis, albus et ater."]

MANUFACTURED IN THE U. S. A.

EDITORIAL NOTE

As the author's Foreword indicates, the volume from which the present translation has been made is an extensive revision, published in 1952, of *Wandlungen und Symbole der Libido*, published in 1912.* The reasons for this revision and its extent are explained by Dr. Jung and need no further comment here.

The present translation differs in certain respects from the revised Swiss edition. First of all, the number of illustrations has been reduced. In the Swiss edition, these had been inserted to amplify the text rather than to illustrate. It seemed to the Editors that the illustrations sometimes had the disadvantage of interrupting the text unduly, and after careful consideration it was decided that only those having a direct relevance to the text should be included. Among these, some new photographs and substitutions have been used. Secondly, an appendix containing the complete Miller fantasies has been added. Since these were available only in a French text published in 1906 in the *Archives de psychologie*, a translation by Philip Mairet has been provided. The textual quotations are also from this translation. Other differences from the Swiss edition result from bringing the volume into conformity with the general plan for the Collected Works. A bibliography has been added, and accordingly the references in the footnotes have been somewhat shortened.

In respect to the quotations from various languages, special mention must be made of the work of Dr. A. Wasserstein and Dr. Marie-Louise von Franz in checking and translating some of the Latin and Greek texts. The philological material has been checked over by Dr. Leopold Stein.

EDITORIAL NOTE TO THE SECOND EDITION

For this edition, appearing ten years after the first, bibliographical citations and entries have been revised in the light of subsequent publications in the *Collected Works* and in the Standard Edition of Freud's works, some translations have been substituted in quotations, and other essential corrections have been made, but there have been no changes of substance in the text.

TRANSLATOR'S NOTE

During the preparation of this volume, the text of the original English translation by Beatrice M. Hinkle, first published in America in 1916 under the title *Psychology of the Unconscious*, was freely consulted. Certain of the quotations of poetry there rendered by Louis Untermeyer have been taken over into the present edition, sometimes with slight modifications. For some of the quotations from *Faust*, I am indebted to Philip Wayne, both for extracts from his published version of Part 1 and for passages from Part 2 specially translated for this volume. Quotations from Latin and Greek sources are taken when possible from existing translations, but mostly they are of a composite nature, resulting from comparison of the existing translations with the original texts and with the German versions used by the author, who in some cases translated direct from the originals. For the purpose of comparison, reference is sometimes made, in square brackets, to an existing translation although it has not been quoted.

For the 1974 printing, the Author's Note to the first American/English edition has been added on p. xxx.

NOTE OF ACKNOWLEDGMENT

Grateful acknowledgment is made to the following publishers and others for the reproduction of illustrations or for permission to quote:

Allen and Unwin, London, for a passage from Freud’s *The Interpretation of Dreams;* O. W. Barth, Munich: a plate from Wachlmayr, *Das Christgeburtsbild der frühen Sakralkunst;* Professor W. Norman Brown: passages from his translation of the Rig-Veda; Bruckmann Verlag, Munich: an illustration from J. J. Bernoulli, *Die erhaltenen Darstellungen Alexanders des Grossen;* Clarendon Press, Oxford: a passage from John Tod-hunter’s translation of Heine and an illustration from the catalogue of the Palazzo dei Conservatori, Rome, edited by H. S. Jones for the British School at Rome; Diederichs Verlag, Düsseldorf: a plate from Wirth, *Der Aufgang der Menschheit;* Dodd, Mead and Co., New York: for the use of material originally appearing in Beatrice Hinkle’s translation of Jung’s *Psychology of the Unconscious;* Folkwang Verlag, Hagen i. W.: a plate from Fuhrmann, *Reich der Inka;* Friedrichsen Verlag, Hamburg: figures from Danzel, *Symbole, Dämonen, und heilige Türme;* Harcourt, Brace and Co.: passages from Untermeyer’s translation of Heine and Cornford’s translation of Plato’s *Timaeus;* Harvard University Press: passages from the Loeb Classical Library editions of Ovid, Seneca, Virgil, and the Homeric Hymns; William Heinemann, London: passages from the Thomas and Guillemard translation of Rostand’s *Cyrano de Bergerac;* Hoepli, Milan: a plate from Prampolini, *La Mitologia nella vita dei popoli;* The Hogarth Press; quotations from the Standard Edition of the Works of Sigmund Freud and the Collected Papers of Sigmund Freud; Houghton Mifflin Co., Boston: passages from Longfellow’s *Hiawatha;* H. Speiser's translations in *Ancient Near Eastern Texts;* Reimer Verlag, Berlin: a plate from LeCoq, *Die Buddhistische Spätantike in Mittelasien;* Schwann Verlag, Düsseldorf: a plate from Clemen, *Die romanische Wandmalerei des Rheinlands;* Seeman Verlag, Cologne: a plate from Cohn, *Buddha in der Kunst des Ostens;* Sheed and Ward, New York: passages from F. J. Sheed's translation of the *Confessions* of St. Augustine; Stubenrauch Verlag, Berlin: a plate from Spiess, *Marksteine der Volkskunst;* Editions Tel, Paris: a photograph of Strasbourg Cathedral, by Marc Foucault; Mr. Philip Wayne: passages from his unpublished translation of *Faust*, Part II.

VOLUME 5
SYMBOLS OF TRANSFORMATION

TABLE OF CONTENTS

LIST OF PLATES

For full documentation of sources, see the Bibliography, P = photograph.

Frontispiece. The Ostian head of Mithras

Roman. Museo Laterano, Rome. P: Museum, courtesy of Torgil Magnusson.

I*a*. Expulsion of the demons

Anonymous engraving, 17th century. P: Courtesy of Dr. Jolande Jacobi.

I*b*. Sun-god

Shamanistic Eskimo idol, Alaska. P: From Wirth, *Der Aufgang der Menschheit*, *Pl*. XI, fig. 1.

II. Romulus and Remus with the She-Wolf

Painted wood, northern Italian, medieval. Victoria and Albert Museum, London, P: Museum, Crown copyright.

III. Christ in the Virgin's womb

Upper Rhenish Master, Germany, *c*. 1400. Formerly Staatliche Gemäldegalerie, Berlin. P: From Wachlmayr, *Das Christgeburtsbild*, p. 4.

IV*a*. Boar-headed mother goddess: shakti of boar-headed vishnu

Relief, northern India, 7th century. British Museum, P: Museum.

IV*b*. Scenes from the Eleusinian Mysteries

From a burial urn, Rome, 1st century A.D. Formerly in the Kircher Museum, Rome. Reconstructed drawing from *Bullettino della Commissione Archeologica Comunale di Roma*, VII (1879), 2nd series, Pls. II–III.

V*a*. Veneration of the Buddha's teachings as a sun-wheel

Stupa of Amaravati, India, 2nd century A.D. Government Museum, Madras. P Guirand, *Mythologie générale*, p. 330.

V*b*. The Son of Man between the Seven Candlesticks

Universitätsbibliothek, Tübingen: Beatus Commentary, Theol. Lat. fol. 561, fol. 3^{v}. P: E. Surkamp, courtesy of the Bibliothek.

VI. The initiation of Apuleius

Title-page, Book XI, Apuleius, *Les Metamorphoses* (1648), p. 346.

VII. The winged sun-disc, above the King

Throne of Tut-Ankh-Amon, 14th century B.C. P: Courtesy of the Griffith Institute, Ashmolean Museum, Oxford.

VIII. The Overshadowing of Mary

Tempera painting on wood, Erfurt Cathedral, 1620–40. P: From Spiess, *Marksteine der Volkskunst*, II, fig. 112.

IX*a*. Winged sun-moon disc and tree of life

Hittite relief, Sakjegeuzi, northern Syria. P: From *Orientalische Literaturzeitung*, XII (1909) : 9, Pl. II, fig-2.

IX*b*. Crucifixion, and the serpent lifted up

Thaler struck by the goldsmith Hieronymus Magdeburger of Annaberg. P: Courtesy of the Ciba Archives, Basel.

X. “Sin”

Painting by Franz Stuck (1863–1928), Germany. Bayerische Staatliche Gemäldesammlung, Munich. P: Gallery.

XI*a*. The King, attended, sacrifices to the sun-god

Stele of King Nabupaliddina, Babylon, 870 B.C. British Museum. P: Museum.

XI*b* The fertility god Frey

Bronze figure, Södermanland, Sweden. Drawings from Montelius, *Opuscula*, p. 406.

XII. Phanes in the egg

Orphic relief, Modena Museum. P: From *Revue archéologique*, 3rd series, XL (1902), Pl. I, facing p. 432.

XIII*a*. The fire-god Tjintya

Wood-carving, Bali. P: Courtesy of the Ciba Archives, Basel.

XIII*b*. Agni on the ram, with fire-sticks

Teak processional carving, southern India. Musée Guimet, Paris. P: Museum.

XIV*a*. The nourishing earth-mother

Vault painting, Limburg Cathedral, *c*. 1235. P: From Clemen, *Die romanischen Wandmalereien*, Pl. 51.

XIV*b*. Gorgon

Detail from a Greek vase. Louvre. P: Archives photographiques.

XV. The Churning of the Milky Ocean

Miniature painting, Rajput School, India. Musée Guimet, Paris. P: Museum.

XVI. Kihe Wahine, goddess of goblins and lizards

Kou wood with human teeth, Hawaii. P: Friedrich Hewicker, from Tischner, *Oceanic Art*, pl. 89.

XVII. Female figure with head-dress symbolizing kingly power

King's incense bowl, Yoruba, West Africa. Hesse State Museum, Darmstadt. P: P. Hirlmann, Darmstadt.

XVIII. The crowned hermaphrodite

From a manuscript, "De alchimia," attributed to Thomas Aquinas, *c*. 1520. Rijksuniversiteit Bibliotheek, Leiden, Codex Vossianus Chymicus 29, fol. 91. P: Courtesy of the Library.

XIX. Gilgamesh with the herb of immortality

Relief, palace of Assurnasirpal II (885–860 B.C.), Nimrud, Assyria. Metropolitan Museum of Art, New York. P: Courtesy of the Museum.

XX*a*. The horned Alexander

Coin of Lysimachus, 3rd century B.C. P: From Bernoulli, *Die Darstellungen Alexanders*, Pl. VIII, fig. 4.

XX*b*. The Dadophors with raised and lowered torches

From a Mithraic marble bas-relief. Museum, Palermo. P: Randazzo.

XXI*a*. The god Men, on the cock

Attic wall-relief. National Museum, Athens. P: Alison Frantz, Athens.

XXI*b*. American Indian dancer, in ceremonial head-dress

New Mexico. P: George Hight, Gallup.

XXII*a*. The New Jerusalem (Revelation, ch. 21)

From a Bible illustrated and printed by Matthaeus Merian, Amsterdam, 1650.

XXII*b*. A man and woman devoured by the Terrible Mother

Shaman’s amulet, walrus ivory, Tlingit Indians, Alaska, 19th century. American Museum of Natural History, New York. P: Courtesy of the Museum.

XXIII. Ardhanari: Shiva and Parvati united

Polychrome clay, India, 19th century. Victoria and Albert Museum, London. P Courtesy of Bush Collection, Columbia University, New York.

XXIV*a*. Mithras and Helios

Fragment from the Mithraeum near Klagenfurt. Carinthian State Museum, Klagenfurt. P: W. Prugger, courtesy of the Museum.

XXIV*b*. Diana of Ephesus, with the mural crown

Alabaster and bronze, Roman, 2nd century A.D. National Museum, Naples. P: Anderson.

XXV. Lingam with yoni

Angkor Wat, Cambodia, *c*. 12th century. P: Eliot Elisofon, copyright by Time, Inc.

XXVI. The Fountain of Life

Icon, Constantinople School, 17th century. Coll. Dr. S. Amberg, Ettiswil, near Lucerne. P: Courtesy of Dr. Jolande Jacobi.

XXVII. Stoup, with arms encircling belly

Church at Kilpeck, Herefordshire, early 12th century. P: Courtesy of Dr. C. A. Meier, Zurich.

XXVIII. Hook for hanging

Painted wood, northern New Guinea. Rijksmuseum voor Volkenkunde, Leiden, P: Museum.

XXIX. The Goddess in the Lingam

Cambodia, 14th century. Musée Guimet, Paris. P: Museum.

XXX*a*. Mater Ecclesia

From the manuscript "Scivias" of St. Hildegarde of Bingen, Germany, 12th century. Formerly in the Nassauische Landesbibliothek, Wiesbaden; destroyed in the second World War. P: Library.

XXX*b*. The cow-headed Hathor

Bronze, Serapeum of Saqqara, late period. Cairo Museum. P: From Daressy, "Statues de divinités," no. 39134.

XXXI. The Tree of Life

Bronze vessel, Egypt, 7th-6th century B.C. Louvre. P: Archives photographiques.

XXXII*a*. Jackal-headed Anubis bending over a mummy

From a tomb, Der el-Medinah, Thebes, XXth Dynasty. P: A. Gaddis, Luxor.

XXXII*b*. The sun-eating lion of alchemy

From a manuscript, St. Gall Bibliothek, 17th century. P: Courtesy of the Ciba Archives, Basel.

XXXIII. The Mithraic sacrifice creating fruitfulness

The Heddernheim Relief, reverse. Nassauisches Landesmuseum, Wiesbaden, P: From Cumont, *Textes et monuments*, II, Pl. VIII.

XXXIV. Demon eating the sun

Stone, eastern Java, 15th century. Rijksmuseum voor Volkenkunde, Leiden, P: Museum.

XXXV. Buddhist tree of the dead

Wood carving, China. Museum für Völkerkunde, Berlin; destroyed in the second World War. P: Museum.

XXXVI. Christ on the Tree of Life

Painting, Strasbourg School. Strasbourg Gallery. P: Braun.

XXXVII. The Cross on Adam’s grave

Detail over west door, Strasbourg Cathedral, *c*. 1280. P: Marc Foucault, from Thibout, *La Cathédrale de Strasbourg*, pl 4.

XXXVIII*a*. Lamia bearing off a new-born babe

From the frieze “Tomb of the Harpies,” Acropolis of Xanthos. British Museum. P: Museum.

XXVIII*b*. The devouring mother

Shaman’s amulet, walrus tusk, Tlingit Indians, Alaska. American Museum of Natural History, New York. P: Courtesy of the Museum.

XXXIX. The wak-wak tree with its human fruit

From a Turkish history of the West Indies, Woodcut from a history of the West Indies by Ta’rikh al-Hind al-Gharbi, Constantinople, 1730.

XL. Mithras sacrificing the bull

The Heddernheim Relief. Nassauisches Landesmuseum, Wiesbaden. P: Cumont, *Textes et monuments*, II PI. VII.

XLI*a*. The cross of Palenque

Mayan relief, Yucatán, Mexico. Drawing from Maudslay, in *Biologia Centrali-Americana: Archaeology*, IV, pl. 76.

XLI*b*. The shaping of the world-egg: Ptah working on a potter’s wheel

Egypt. Painting from Budge, *The Gods of the Egyptians*, I, p. 500.

XLII. Regeneration in the mother’s body

Wooden figure, Nootka Indians, Vancouver Island, Canada. American Museum of Natural History, New York, P: Courtesy of the Museum.

XLIII. Mock crucifixion

Graffito, wall of the Imperial Cadet School, Palatine, Rome. Museo delle Terme (formerly in the Kircher Coll.), Rome. P: Anderson.

XLIV. Aion, with the signs of the zodiac

Rome, and-3rd century. Museo Profano, Vatican. P: Alinari.

XLV. Death the archer

Detail from an engraving by the "Master of 1464," German School. From *Publications of the International Chalcographical Society*, 1888, Pl. I.

XLVI*a*. The lotus growing out of Vishnu's navel, with Brahma inside

Relief, Vijayanagar, India. P: From Guirand, *Mythologie générale*, p. 320.

XLVI*b*. Ixion on the wheel

From a Cumaean vase. P: From Archaeologisches Institut des Deutschen Reiches, *Annali*, XLV (1873), Pl. IK.

XLVII. Vishnu as a fish

Zinc figurine, India, 19th century. Victoria and Albert Museum, London. P: Museum.

XLVIII. The witch Rangda, thief of children

Painted wood, Bali. P: L. Fritz, Berlin, from Prampolini, *La Mitologia*, II, p. 416.

XLIX*a*. Mithras carrying the bull

Relief, Castle of Stockstadt, Germany. P: From Drexel, "Das Kastell Stockstadt," Pl. XIII, fig. 5.

XLIX*b*. Queen Maya's dream of the Buddha's conception

Relief, Gandhara. P: From Le Coq, *Die Buddhistische Spätantike*, I, PI. 14a.

L*a*. The Hathor Cow, suckling Queen Hatshepsut

Relief, Anubis Chapel, Temple of Der el-Bahri, XVIIIth Dynasty. P: Metropolitan Museum of Art, New York.

L*b*. The goddess Artio with bears: a Roman parallel to Artemis

Bronze group, dedicated to the goddess of Licinia Sabinilla, from Muri, near Bern. Historical Museum, Bern. P: Museum.

LI. The Mistress of the Beasts

Greek hydria, 600 B.C., found near Bern. Historical Museum, Bern. P: Museum.

LII. A corn-god

Clay vessel, Chimbote culture, Peru. P: From Fuhrmann, *Reich der Inka*, I, pl. 59.

LIII. Basket of Isis, with snake

Marble altar from Caligula’s temple to Isis, Rome. Museo Capitolino, Rome. P: Deutsches Archaeologisches Institut, Rome.

LIV. Matuta, an Etruscan Pietà

Fifth century B.C. Museo Archeologico, Florence. P: Alinari.

LV. The Tree of Enlightenment

Pillar relief, stupa of Bharhut, India, 1st century B.C. P: From Cohn, *Buddha in der Kunst des Ostens*, fig. 3, p. xxiv.

LVI. The Vision of Ezekiel

Bible of Manerius (French manuscript). Bibliothèque Nationale, Paris, MS. Lat. 11534. P: Bibliothèque.

LVII*a*. Cista and serpent

Silver coin, Ephesus, 57 B.C. British Museum. P: Museum.

LVII*b*. The sacrifice to the snake deity

Votive tablet, Sialesi (Eteonis), Boeotia. P: Courtesy of the Ciba Archives, Basel.

LVIII. Triple-bodied Hecate

Roman. Museum of the Palazzo dei Conservatori, Rome. P: From Jones, *Catalogue*.

LIX*a*. The self-consuming dragon

From Lambsprinck’s symbols in the *Musaeum Hermeticum* (1678), p. 353.

LIX*b*. Circle of gods

Balinese drawing. Courtesy of the Ciba Archives, Basel.

LX. Christ surrounded by the Evangelists

Relief, Church at Arles-sur-Tech, Pyrénées-orientales, 11th century. P: Archives photographiques, Paris.

LXI*a*. The Serpent Mystery

Altar to the Lares, Pompeii. P: Courtesy of the Ciba Archives, Basel.

LXI*b*. Priapus with snake

Roman. Museo Archeologico, Verona. P: Courtesy of Dr. G. Mardersteig.

LXII. Devouring monster

Stone, Belahan, eastern Java, 11th century. Rijksmuseum voor Volkenkunde, Leiden. P: Museum.

LXIII*a*. The regenerative symbol of the Haloa Festival

From a Greek vase, by the Pan Painter. P: From Deubner, *Attische Feste*, pl. 4, fig. 2.

LXIII*b*. Mixing-pot with lion and snake

Detail from the Heddernheim Relief (cf. PL XL). Nassauisches Landesmuseum, Wiesbaden. P: From Cumont, *Textes et monuments*, II, Pl. VII.

LXIV. Rubens: *The Last Judgment*

1618–20. Alte Pinakothek, Munich. P: Bayerische Staatliche Gemäldesammlung.

LIST OF TEXT FIGURES

13. Odysseus as a Cabiric dwarf, with Circe

From a bowl by the Cabiri Painter (?), *c*. 400 B.C. British Museum. Drawing from Wolters and Bruns, *Das Kabirenheiligtum bei Theben*, I, pl. 29.

14. The banquet of the Cabir

From a bowl by the Cabiri Painter, *c*. 435 B.C. National Museum, Athens. Drawing from Wolters and Bruns, *Das Kabirenheligtum bet Theben*, I, pl. 29.

15. The phallic plough

From a Greek vase. Museo Archeologico, Florence. Drawing from Dieterich, *Mutter Erde*, p. 108.

16. The twirling-stick

From an Aztec hieroglyph-painting. Drawing courtesy of the Ciba Archives, Basel.

17. The first three labours of Heracles

Classical sarcophagus relief. Drawing by Gori in *Inscriptiones antiquae graecae et romanae*, 1783; from Robert, *Die antiken Sarkophag-Reliefs*, III, Part 1, Pl. XXXIX, fig. 128 (detail).

18. Priest with a fish-mask, representing Oannes

Relief, Nimrud. Drawing from Jeremias, *Das Alte Testament im Lichte des alten Orients*, fig. 2.

19. Androgynous divinity

Late Babylonian gem. Drawing from Lajard, *Mémoire*, p. 161.

20. Cybele and her son-lover Attis

Roman coin. Drawing from Roscher, *Lexikon*, II, Part 1, col. 1647.

21. Noah in the Ark

Enamelled altar of Nicholas of Verdun, 1186, Klosterneuburg, near Vienna. Drawing from Ehrenstein, *Das Alte Testament im Bilde*, Ch. IV, fig. 31, p. 106.

22. The Great Whore of Babylon

New Testament engraving by H. Burgkmaier; from Worringer, Die *altdeutsche Buchillustration*, fig. 88, p. 136.

23. Osiris in the cedar-coffin

Relief, Dendera, Egypt. Drawing from Budge, *Osiris and the Egyptian Resurrection*, I, p. 5.

24. Nut giving birth to the Sun

Relief, Egypt. Drawing from Budge, *The Gods of the Egyptians*, II, p. 101.

25. The Divine Cow

From the tomb of Seti I, Egypt. Drawing from Erman, *Die Religion der Agypter*, p. 15.

26. The human cross

Woodcut from Agrippa of Nettesheim, *De occulta philosophia*, p. 157.

27. The life-giving *crux ansata*

Egypt. Drawing from Budge, *The Gods of the Egyptians*, II, p. *24*.

28. Wotan riding the eight-legged horse Sleipnir

Tombstone, Götland, Sweden, c. A.D. 1000. Drawing from Gray and McCulloch, *The Mythology of All Races*, II, Pl. VIII.

29. The Devil riding off with a witch

Woodcut from Olaus Magnus, *Historia de gentibus septentrionalibus*, Rome, 1555; from de Givry, *Le Musée des Sorciers*, p. 207, fig. 164.

30. Quetzalcoatl devouring a man

From the Codex Borbonicus, Aztec, 16th century. Library of the Palais Bourbon, Paris. Drawing from Danzel, “Altmexi-kanische Symbolik,” p. 235.

31. The moon as the abode of souls

Chalcedon gem, 1st century B.C. Drawing from Chapouthier, *Les Dioscures*, fig. 67, p. 324.

32. The woman in the moon

Tattoo pattern, Haida Indians, Northwest America. Drawing from Danzel, *Symbole*, pl. 35.

33. Vidarr’s fight with the Fenris-Wolf

Relief from a cross, Churchyard of Gosforth, Cumberland. Rubbing from Gray and MacCulloch, *Mythology of All Races*, II, Pl. XXI.

34. Hecate of Samothrace

Gnostic gem. Engraving from *Archäologische Zeitung*, XV, 98–99 (1857), Atlas, Pl. XCIX.

35. The assault by the dragon

From Vitruvius, *De architectura*, Book I, p. 9.

36. Prajapati with the world-egg

India. Drawing from Müller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. II, fig. 21.

37. Agathodaimon serpent

Antique gem. Engraving from Macarius, *Abraxas*, Pl. XV, fig. 63. Courtesy of the United States Geological Survey Library, Washington.

38. World plan

From an Aztec codex. Drawing from Danzel, *Mexiko I*, pl. 53.

39. The four corners of the zodiac: sun and moon in centre

Coptic. Woodcut from Kircher, *Oedipus Aegyptiacus*.

40. The womb of the World Mother

Wooden bowl, Congo. Museum für Völkerkunde, Hamburg. Drawing from Danzel, *Symbole*, pl. 88.

41. Marduk fighting Tiamat

Assyrian cylinder seal. Drawing from Jeremias, *Das Alte Testament*, fig. 14.

42. The sacred tree of Attis

Relief from an altar to Cybele. Drawing from Gressmann, *Die orientalischen Religionen*, fig. 41, p. 99.

43. Antique cameo

Formerly in a museum of Florence. Drawing from Bachofen, *Versuch über die Gräbersymbolik*, Pl. II, fig. 1.

FOREWORD TO THE FOURTH (SWISS) EDITION[1]

I have long been conscious of the fact that this book, which was written thirty-seven years ago, stood in urgent need of revision, but my professional obligations and my scientific work never left me sufficient leisure to settle down in comfort to this unpleasant and difficult task. Old age and illness released me at last from my professional duties and gave me the necessary time to contemplate the sins of my youth. I have never felt happy about this book, much less satisfied with it: it was written at top speed, amid the rush and press of my medical practice, without regard to time or method. I had to fling my material hastily together, just as I found it. There was no opportunity to let my thoughts mature. The whole thing came upon me like a landslide that cannot be stopped. The urgency that lay behind it became clear to me only later: it was the explosion of all those psychic contents which could find no room, no breathing-space, in the constricting atmosphere of Freudian psychology and its narrow outlook. I have no wish to denigrate Freud, or to detract from the extraordinary merits of his investigation of the individual psyche. But the conceptual framework into which he fitted the psychic phenomenon seemed to me unendurably narrow. I am not thinking here of his theory of neurosis, which can be as narrow as it pleases if only it is adequate to the empirical facts, or of his theory of dreams, about which different views may be held in all good faith; I am thinking more of the reductive causalism of his whole outlook, and the almost complete disregard of the teleological directedness which is so characteristic of everything psychic. Although Freud's book *The Future of an Illusion* dates from his later years, it gives the best possible account of his earlier views, which move within the confines of the outmoded rationalism and scientific materialism of the late nineteenth century.

As might be expected, my book, born under such conditions, consisted of larger or smaller fragments which I could only string together in an unsatisfying manner. It was an attempt, only partially successful, to create a wider setting for medical psychology and to bring the whole of the psychic phenomenon within its purview. One of my principal aims was to free medical psychology from the subjective and personalistic bias that characterized its outlook at that time, and to make it possible to understand the unconscious as an objective and collective psyche. The personalism in the views of Freud and Adler that went hand in hand with the individualism of the nineteenth century failed to satisfy me because, except in the case of instinctive dynamisms (which actually have too little place in Adler), it left no room for objective, impersonal facts. Freud, accordingly, could see no objective justification for my attempt, but suspected personal motives.

Thus this book became a landmark, set up on the spot where two ways divided. Because of its imperfections and its incompleteness it laid down the programme to be followed for the next few decades of my life. Hardly had I finished the manuscript when it struck me what it means to live with a myth, and what it means to live without one. Myth, says a Church Father, is "what is believed always, everywhere, by everybody"; hence the man who thinks he can live without myth, or outside it, is an exception. He is like one uprooted, having no true link either with the past, or with the ancestral life which continues within him, or yet with contemporary human society. He does not live in a house like other men, does not eat and drink like other men, but lives a life of his own, sunk in a subjective mania of his own devising, which he believes to be the newly discovered truth. This plaything of his reason never grips his vitals. It may occasionally lie heavy on his stomach, for that organ is apt to reject the products of reason as indigestible. The psyche is not of today; its ancestry goes back many millions of years. Individual consciousness is only the flower and the fruit of a season, sprung from the perennial rhizome beneath the earth; and it would find itself in better accord with the truth if it took the existence of the rhizome into its calculations. For the root matter is the mother of all things.

So I suspected that myth had a meaning which I was sure to miss if I lived outside it in the haze of my own speculations. I was driven to ask myself in all seriousness: "What is the myth you are living?" I found no answer to this question, and had to admit that I was not living with a myth, or even in a myth, but rather in an uncertain cloud of theoretical possibilities which I was beginning to regard with increasing distrust. I did not know that I was living a myth, and even if I had known it, I would not have known what sort of myth was ordering my life without my knowledge. So, in the most natural way, I took it upon myself to get to know "my" myth, and I regarded this as the task of tasks, for—so I told myself—how could I, when treating my patients, make due allowance for the personal factor, for my personal equation, which is yet so necessary for a knowledge of the other person, if I was unconscious of it? I simply had to know what unconscious or preconscious myth was forming me, from what rhizome I sprang. This resolve led me to devote many years of my life to investigating the subjective contents which are the products of unconscious processes, and to work out methods which would enable us, or at any rate help us, to explore the manifestations of the unconscious. Here I discovered, bit by bit, the connecting links that I should have known about before if I was to join up the fragments of my book. I do not know whether I have succeeded in this task now, after a lapse of thirty-seven years. Much pruning had to be done, many gaps filled. It has proved impossible to preserve the style of 1912, for I had to incorporate many things that I found out only many years later. Nevertheless I have tried, despite a number of radical interventions, to leave as much of the original edifice standing as possible, for the sake of continuity with previous editions. And although the alterations are considerable, I do not think one could say that it has turned into a different book. There can be no question of that because the whole thing is really only an extended commentary on a practical analysis of the prodromal stages of schizophrenia. The symptoms of the case form the Ariadne thread to guide us through the labyrinth of symbolistic parallels, that is, through the amplifications which are absolutely essential if we wish to establish the meaning of the archetypal context. As soon as these parallels come to be worked out they take up an incredible amount of space, which is why expositions of case histories are such an arduous task. But that is only to be expected: the deeper you go, the broader the base becomes. It certainly does not become narrower, and it never by any chance ends in a point—in a psychic trauma, for instance. Any such theory presupposes a knowledge of the traumatically affected psyche which no human being possesses, and which can only be laboriously acquired by investigating the workings of the unconscious. For this a great deal of comparative material is needed, and it cannot be dispensed with any more than in comparative anatomy. Knowledge of the subjective contents of consciousness means very little, for it tells us next to nothing about the real, subterranean life of the psyche. In psychology as in every science a fairly wide knowledge of other subjects is among the requisites for research work. A nodding acquaintance with the theory and pathology of neurosis is totally inadequate, because medical knowledge of this kind is merely information about an illness, but not knowledge of the soul that is ill. I wanted, so far as lay within my power, to redress that evil with this book—then as now.

This book was written in 1911, in my thirty-sixth year. The time is a critical one, for it marks the beginning of the second half of life, when a metanoia, a mental transformation, not infrequently occurs. I was acutely conscious, then, of the loss of friendly relations with Freud and of the lost comradeship of our work together. The practical and moral support which my wife gave me at that difficult period is something I shall always hold in grateful remembrance.

September, 1950 C. G. JUNG

FOREWORD TO THE THIRD (GERMAN) EDITION

The new edition of this book appears essentially unaltered, except for a few textual improvements which hardly affect its content.

This book has to perform the thankless task of making clear to my contemporaries that the problems of the human psyche cannot be tackled with the meagre equipment of the doctor’s consulting-room, any more than they can be tackled with the layman’s famous “understanding of the world and human nature.” Psychology cannot dispense with the contribution made by the humane sciences, and certainly not with that made by the history of the human mind. For it is history above all that today enables us to bring the huge mass of empirical material into ordered relationships and to recognize the functional significance of the collective contents of the unconscious. The psyche is not something unalterably given, but a product of its own continuous development. Hence altered glandular secretions or aggravated personal relationships are not the sole causes of neurotic conflicts; these can equally well be caused by historically conditioned attitudes and mental factors. Scientific and medical knowledge is in no sense sufficient to grasp the nature of the soul, nor does the psychiatric understanding of pathological processes help to integrate them into the totality of the psyche. Similarly, mere rationalization is not an adequate instrument. History teaches us over and over again that, contrary to rational expectation, irrational factors play the largest, indeed the decisive, role in all processes of psychic transformation.

It seems as if this insight were slowly making headway with the somewhat drastic assistance of contemporary events.

November, 1937 C. G. JUNG

FOREWORD TO THE SECOND (GERMAN) EDITION

In this second edition the text of the book remains, for technical reasons, unaltered. The reappearance of this book after twelve years, without alterations, does not mean that I did not consider certain emendations and improvements desirable. But such improvements would have affected details only, and not anything essential. The views and opinions I expressed in the book I would still maintain, in substance and in principle, today. I must ask the reader to bear patiently with a number of minor inaccuracies and uncertainties of detail.

This book has given rise to a good deal of misunderstanding. It has even been suggested that it represents my method of treatment. Apart from the fact that such a method would be a practical impossibility, the book is far more concerned with working out the fantasy material of an unknown young American woman, pseudonymously known as Frank Miller. This material was originally published by my respected and fatherly friend, the late Théodore Flournoy, in the *Archives de psychologie* (Geneva). I had the great satisfaction of hearing from his own lips that I had hit off the young woman's mentality very well. Valuable confirmation of this reached me in 1918, through an American colleague who was treating Miss Miller for the schizophrenic disturbance which had broken out after her sojourn in Europe. He wrote to say that my exposition of the case was so exhaustive that even personal acquaintance with the patient had not taught him "one iota more" about her mentality. This confirmation led me to conclude that my reconstruction of the semi-conscious and unconscious fantasy processes had evidently hit the mark in all essential respects.

There is, however, one very common misunderstanding which I feel I ought to point out to the reader. The copious use of comparative mythological and etymological material necessitated by the peculiar nature of the Miller fantasies may evoke the impression, among certain readers, that the purpose of this book is to propound mythological or etymological hypotheses. This is far from my intention, for if it had been, I would have undertaken to analyse a particular myth or whole corpus of myths, for instance an American Indian myth-cycle. For that purpose I would certainly not have chosen Longfellow's *Hiawatha*, any more than I would have used Wagner's *Siegfried* had I wished to analyse the cycle of the younger Edda. I use the material quoted in the book because it belongs, directly or indirectly, to the basic assumptions of the Miller fantasies, as I have explained more fully in the text. If, in this work, various mythologems are shown in a light which makes their psychological meaning more intelligible, I have mentioned this insight simply as a welcome by-product, without claiming to propound any general theory of myths. The real purpose of this book is confined to working out the implications of all those historical and spiritual factors which come together in the involuntary products of individual fantasy. Besides the obvious personal sources, creative fantasy also draws upon the forgotten and long buried primitive mind with its host of images, which are to be found in the mythologies of all ages and all peoples. The sum of these images constitutes the collective unconscious, a heritage which is potentially present in every individual. It is the psychic correlate of the differentiation of the human brain. This is the reason why mythological images are able to arise spontaneously over and over again, and to agree with one another not only in all the corners of the wide earth, but at all times. As they are present always and everywhere, it is an entirely natural proceeding to relate mythologems, which may be very far apart both temporally and ethnically, to an individual fantasy system. The creative substratum is everywhere this same human psyche and this same human brain, which, with relatively minor variations, functions everywhere in the same way.

Küsnacht/Zurich, November, 1924

C. G. JUNG

AUTHOR’S NOTE TO THE FIRST AMERICAN/ENGLISH EDITION

My task in this work has been to investigate an individual fantasy system, and in the doing of it problems of such magnitude have been uncovered that my endeavour to grasp them in their entirety has necessarily meant only a superficial orientation toward those paths the opening and exploration of which may possibly crown the work of future investigators with success.

I am not in sympathy with the attitude which favours the repression of certain possible working hypotheses because they are perhaps erroneous, and so may possess no lasting value. Certainly I endeavoured as far as possible to guard myself from error, which might indeed become especially dangerous upon these dizzy heights, for I am entirely aware of the risks of these investigations. However, I do not consider scientific work as a dogmatic contest, but rather as a work done for the increase and deepening of knowledge.

This contribution is addressed to those having similar ideas concerning science.

In conclusion, I must render thanks to those who have assisted my endeavours with valuable aid, especially my dear wife and my friends, to whose disinterested assistance I am deeply indebted.

C. G. JUNG

Zurich [1916?]

I

Therefore theory, which gives facts their value and significance, is often very useful, even if it is partially false, because it throws light on phenomena which no one has observed, it forces an examination, from many angles, of facts which no one has hitherto studied, and provides the impulse for more extensive and more productive researches.…

Hence it is a moral duty for the man of science to expose himself to the risk of committing error, and to submit to criticism in order that science may continue to progress. A writer … has launched a vigorous attack on the author, saying that this is a scientific ideal which is very limited and very paltry.… But those who are endowed with a mind serious and impersonal enough not to believe that everything they write is the expression of absolute and eternal truth will approve of this theory, which puts the aims of science well above the miserable vanity and paltry *amour propre* of the scientist.

I

INTRODUCTION

[1] Anyone who can read Freud's *Interpretation of Dreams* without being outraged by the novelty and seemingly unjustified boldness of his procedure, and without waxing morally indignant over the stark nakedness of his dream-interpretations, but can let this extraordinary book work upon his imagination calmly and without prejudice, will not fail to be deeply impressed at that point[1] where Freud reminds us that an individual conflict, which he calls the incest fantasy, lies at the root of that monumental drama of the ancient world, the Oedipus legend. The impression made by this simple remark may be likened to the uncanny feeling which would steal over us if, amid the noise and bustle of a modern city street, we were suddenly to come upon an ancient relic—say the Corinthian capital of a long-immured column, or a fragment of an inscription. A moment ago, and we were completely absorbed in the hectic, ephemeral life of the present; then, the next moment, something very remote and strange flashes upon us, which directs our gaze to a different order of things. We turn away from the vast confusion of the present to glimpse the higher continuity of history. Suddenly we remember that on this spot where we now hasten to and fro about our business a similar scene of life and activity prevailed two thousand years ago in slightly different forms; similar passions moved mankind, and people were just as convinced as we are of the uniqueness of their lives. This is the impression that may very easily be left behind by a first acquaintance with the monuments of antiquity, and it seems to me that Freud's reference to the Oedipus legend is in every way comparable. While still struggling with the confusing impressions of the infinite variability of the individual psyche, we suddenly catch a glimpse of the simplicity and grandeur of the Oedipus tragedy, that perennial highlight of the Greek theatre. This broadening of our vision has about it

something of a revelation. For our psychology, the ancient world has long since been sunk in the shadows of the past; in the schoolroom one could scarcely repress a sceptical smile when one indiscreetly calculated the matronly age of Penelope or pictured to oneself the comfortable middle-aged appearance of Jocasta, and comically compared the result with the tragic tempests of eroticism that agitate the legend and drama. We did not know then—and who knows even today?—that a man can have an unconscious, all-consuming passion for his mother which may undermine and tragically complicate his whole life, so that the monstrous fate of Oedipus seems not one whit overdrawn. Rare and pathological cases like that of Ninon de Lenclos and her son [2] are too remote from most of us to convey a living impression. But when we follow the paths traced out by Freud we gain a living knowledge of the existence of these possibilities, which, although too weak to compel actual incest, are yet sufficiently strong to cause very considerable psychic disturbances. We cannot, to begin with, admit such possibilities in ourselves without a feeling of moral revulsion, and without resistances which are only too likely to blind the intellect and render self-knowledge impossible. But if we can succeed in discriminating between objective knowledge and emotional value-judgments, then the gulf that separates our age from antiquity is bridged over, and we realize with astonishment that Oedipus is still alive for us. The importance of this realization should not be underestimated, for it teaches us that there is an identity of fundamental human conflicts which is independent of time and place. What aroused a feeling of horror in the Greeks still remains true, but it is true for us only if we give up the vain illusion that we are *different*, i.e., morally better, than the ancients. We have merely succeeded in forgetting that an indissoluble link binds us to the men of antiquity. This truth opens the way to an understanding of the classical spirit such as has never existed before—the way of inner sympathy on the one hand and of intellectual comprehension on the other. By penetrating into the blocked subterranean passages of our own psyches we grasp the living meaning of classical civilization, and at the same time we establish a firm foothold outside our own culture from which alone it is possible to gain an objective understanding of its foundations. That at least is the hope we draw from the rediscovery of the immortality of the Oedipus problem.

[2] This line of inquiry has already yielded fruitful results: to it we owe a number of successful advances into the territory of the human mind and its history. These are the works of Riklin,[3] Abraham,[4] Rank,[5] Maeder,[6] and Jones,[7] to which there has now been added Silberer’s valuable study entitled “Phantasie und Mythos.” Another work which cannot be overlooked is Pfister’s contribution to Christian religious psychology.[8] The *leitmotiv* of all these works is to find a clue to historical problems through the application of insights derived from the activity of the unconscious psyche in modern man. I must refer the reader to the works specified if he wishes to inform himself of the extent and nature of the insights already achieved. The interpretations are sometimes uncertain in particulars, but that does not materially detract from the total result. It would be significant enough if this merely demonstrated the far-reaching analogy between the psychological structure of the historical products and those of modern individuals. But the analogy applies with particular force to the symbolism, as Riklin, Rank, Maeder, and Abraham have shown, and also to the individual mechanisms governing the unconscious elaboration of motifs.

[3] Psychological investigators have hitherto turned their attention mainly to the analysis of individual problems. But, as things are at present, it seems to me imperative that they should broaden the basis of this analysis by a comparative study of the historical material, as Freud has already tried to do in his study of Leonardo da Vinci.[9] For, just as psychological knowledge furthers our understanding of the historical material, so, conversely, the historical material can throw new light on individual psychological problems. These considerations have led me to direct my attention more to the historical side of the picture, in the hope of gaining fresh insight into the foundations of psychology. In my later writings [10] I have concerned myself chiefly with the question of historical and ethnological parallels, and here the researches of Erich Neumann have made a massive contribution towards solving the countless difficult problems that crop up everywhere in this hitherto little

explored territory. I would mention above all his key work, *The Origins and History of Consciousness*,[11] which carries forward the ideas that originally impelled me to write this book, and places them in the broad perspective of the evolution of human consciousness in general.

II

TWO KINDS OF THINKING

[4] As most people know, one of the basic principles of analytical psychology is that dream-images are to be understood symbolically; that is to say, one must not take them literally, but must surmise a hidden meaning in them. This ancient idea of dream symbolism has aroused not only criticism, but the strongest opposition. That dreams should have a meaning, and should therefore be capable of interpretation, is certainly neither a strange nor an extraordinary idea. It has been known to mankind for thousands of years; indeed it has become something of a truism. One remembers having heard even at school of Egyptian and Chaldaean dream-interpreters. Everyone knows the story of Joseph, who interpreted Pharaoh's dreams, and of Daniel and the dream of King Nebuchadnezzar; and the dream-book of Artemidorus is familiar to many of us. From the written records of all times and peoples we learn of significant and prophetic dreams, of warning dreams and of healing dreams sent by the gods. When an idea is so old and so generally believed, it must be true in some way, by which I mean that it is *psychologically true*.

[5] For modern man it is hardly conceivable that a God existing outside ourselves should cause us to dream, or that the dream foretells the future prophetically. But if we translate this into the language of psychology, the ancient idea becomes much more comprehensible. The dream, we would say, originates in an unknown part of the psyche and prepares the dreamer for the events of the following day.

[6] According to the old belief, a god or demon spoke to the sleeper in symbolic language, and the dream-interpreter had to solve the riddle. In modern speech we would say that the dream is a series of images which are apparently contradictory and meaningless, but that it contains material which yields a clear meaning when properly translated.

[7] Were I to suppose my readers to be entirely ignorant of dream-analysis, I should be obliged to document this statement with numerous examples. Today, however, these things are so well known that one must be sparing in the use of case-histories so as not to bore the public. It is an especial inconvenience that one cannot recount a dream without having to add the history of half a lifetime in order to represent the individual foundations of the dream. Certainly there are typical dreams and dream-motifs whose meaning appears to be simple enough if they are regarded from the point of view of sexual symbolism. One can apply this point of view without jumping to the conclusion that the content so expressed must also be sexual in origin. Common speech, as we know, is full of erotic metaphors which are applied to matters that have nothing to do with sex; and conversely, sexual symbolism by no means implies that the interests making use of it are by nature erotic. Sex, as one of the most important instincts, is the prime cause of numerous affects that exert an abiding influence on our speech. But affects cannot be identified with sexuality inasmuch as they may easily spring from conflict situations—for instance, many emotions spring from the instinct of self-preservation.

[8] It is true that many dream-images have a sexual aspect or express erotic conflicts. This is particularly clear in the motif of *assault*. Burglars, thieves, murderers, and sexual maniacs figure prominently in the erotic dreams of women. It is a theme with countless variations. The instrument of murder may be a lance, a sword, a dagger, a revolver, a rifle, a cannon, a fire-hydrant, a watering-can; and the assault may take the form of a burglary, a pursuit, a robbery, or it may be someone hidden in the cupboard or under the bed. Again, the danger may be represented by wild animals, for instance by a horse that throws the dreamer to the ground and kicks her in the stomach with his hind leg; by lions, tigers, elephants with threatening trunks, and finally by snakes in endless variety. Sometimes the snake creeps into the mouth, sometimes it bites the breast like Cleopatra's legendary asp, sometimes it appears in the role of the paradisal serpent, or in one of the variations of Franz Stuck, whose snake-pictures bear significant titles like "Vice," "Sin," or "Lust" (cf. pl. x). The mixture of anxiety and lust is perfectly expressed in the sultry

atmosphere of these pictures, and far more crudely than in Mörike’s piquant little poem:

Girl’s First Love Song

What’s in the net? I feel
Frightened and shaken!
Is it a sweet-slipping eel
Or a snake that I’ve taken?

Love’s a blind fisherman,
Love cannot see;
Whisper the child, then,
What would love of me?

It leaps in my hands! This is
Anguish unguessed.
With cunning and kisses
It creeps to my breast.

It bites me, O wonder!
Worms under my skin.
My heart bursts asunder,
I tremble within.

Where go and where hide me?
The shuddersome thing
Rages inside me,
Then sinks in a ring.

What poison can this be?
O that spasm again!
It burrows in ecstasy
Till I am slain.[1]

[9] All these things seem simple and need no explanation to be intelligible. Somewhat more complicated is the following dream of a young woman. She dreamt that she saw *the triumphal Arch of Constantine. Before it stood a cannon, to the right a bird, to the left a man. A cannon-ball shot out of the muzzle and hit her; it went into her pocket, into her purse. There it remained, and she held the purse as if there were something very precious inside it. Then the picture faded, and all she could see was the stock of the cannon, with Constantine’s motto*

above it: "In hoc signo vinces." The sexual symbolism of this dream is sufficiently obvious to justify the indignant surprise of all innocent-minded people. If it so happens that this kind of realization is entirely new to the dreamer, thus filling a gap in her conscious orientation, we can say that the dream has in effect been interpreted. But if the dreamer has known this interpretation all along, then it is nothing more than a repetition whose purpose we cannot ascertain. Dreams and dream-motifs of this nature can repeat themselves in a never-ending series without our being able to discover—at any rate from the sexual side—anything in them except what we know already and are sick and tired of knowing. This kind of approach inevitably leads to that "monotony" of interpretation of which Freud himself complained. In these cases we may justly suspect that the sexual symbolism is as good a *façon de parler* as any other and is being used as a dream-language. "Canis panem somniat, piscator pisces." Even dream-language ultimately degenerates into jargon. The only exception to this is in cases where a particular motif or a whole dream repeats itself because it has never been properly understood, and because it is necessary for the conscious mind to reorient itself by recognizing the compensation which the motif or dream expresses. In the above dream it is certainly a case either of ordinary unconsciousness, or of repression. One can therefore interpret it sexually and leave it at that, without going into all the niceties of the symbolism. The words with which the dream ends—"In hoc signo vinces"—point to a deeper meaning, but this level could only be reached if the dreamer became conscious enough to admit the existence of an erotic conflict.

[10] These few references to the symbolic nature of dreams must suffice. We must accept dream symbolism as an accomplished fact if we wish to treat this astonishing truth with the necessary degree of seriousness. It is indeed astonishing that the conscious activity of the psyche should be influenced by products which seem to obey quite other laws and to follow purposes very different from those of the conscious mind.

[11] How is it that dreams are symbolical at all? In other words, whence comes this capacity for symbolic representation, of which we can discover no trace in our conscious thinking? Let us examine the matter a little more closely. If we analyse a train of thought, we find that we begin

with an “initial” idea, or a “leading” idea, and then, without thinking back to it each time, but merely guided by a sense of direction, we pass on to a series of separate ideas that all hang together. There is nothing symbolical in this, and our whole conscious thinking proceeds along these lines.[1a] If we scrutinize our thinking more closely still and follow out an intensive train of thought—the solution of a difficult problem, for instance—we suddenly notice that we are *thinking in words*, that in very intensive thinking we begin talking to ourselves, or that we occasionally write down the problem or make a drawing of it, so as to be absolutely clear. Anyone who has lived for some time in a foreign country will certainly have noticed that after a while he begins to think in the language of that country. Any very intensive train of thought works itself out more or less in verbal form—if, that is to say, one wants to express it, or teach it, or convince someone of it. It is evidently directed *outwards*, to the outside world. To that extent, directed or logical thinking is reality-thinking,[2] a thinking that is adapted to reality,[3] by means of which we imitate the successiveness of objectively real things, so that the images inside our mind follow one another in the same strictly causal sequence as the events taking place outside it.[4] We also call this “thinking with directed attention.” It has in addition the peculiarity of causing fatigue, and is for that reason brought into play for short periods only. The whole laborious achievement of our lives is adaptation to reality, part of which consists in directed thinking. In biological terms it is simply a process of psychic assimilation that leaves behind a corresponding state of exhaustion, like any other vital achievement.

[12] The material with which we think is *language* and *verbal concepts*—something which from time immemorial has been directed outwards and used as a bridge, and which has but a single purpose, namely that of communication. So long as we think directedly, we think *for* others and speak *to* others.[5] Language was originally a system of emotive and imitative sounds—sounds which express terror, fear, anger, love, etc., and sounds which imitate the noises of the elements: the rushing and gurgling of water, the rolling of thunder, the roaring of the wind, the cries of the animal world, and so on; and lastly, those which represent a combination of the sound perceived and the emotional reaction to it.[6] A large number

of onomatopoeic vestiges remain even in the more modern languages; note, for instance, the sounds for running water: *rauschen, rieseln, rûschen, rinnen, rennen, rush, river, ruscello, ruisseau, Rhein*. And note *Wasser, wissen, wissern, pissen, piscis, Fisch*.

[13] Thus, language, in its origin and essence, is simply a system of signs or symbols that denote real occurrences or their echo in the human soul.[7] We must emphatically agree with Anatole France when he says:

> What is thinking? And how does one think? We think with words; that in itself is sensual and brings us back to nature. Think of it! a metaphysician has nothing with which to build his world system except the perfected cries of monkeys and dogs. What he calls profound speculation and transcendental method is merely the stringing together, in an arbitrary order, of onomatopoeic cries of hunger, fear, and love from the primeval forests, to which have become attached, little by little, meanings that are believed to be abstract merely because they are loosely used. Have no fear that the succession of little cries, extinct or enfeebled, that composes a book of philosophy will teach us so much about the universe that we can no longer go on living in it.[8]

[14] So our directed thinking, even though we be the loneliest thinkers in the world, is nothing but the first stirrings of a cry to our companions that water has been found, or the bear been killed, or that a storm is approaching, or that wolves are prowling round the camp. There is a striking paradox of Abelard's which intuitively expresses the human limitations of our complicated thought-process: "Speech is generated by the intellect and in turn generates intellect." The most abstract system of philosophy is, in its method and purpose, nothing more than an extremely ingenious combination of natural sounds.[9] Hence the craving of a Schopenhauer or a Nietzsche for recognition and understanding, and the despair and bitterness of their loneliness. One might expect, perhaps, that a man of genius would luxuriate in the greatness of his own thoughts and renounce the cheap approbation of the rabble he despises; yet he succumbs to the more powerful impulse of the herd instinct. His seeking and his finding, his heart's cry, are meant for the herd and must be heeded by them. When I said just now that directed thinking is really thinking in words, and quoted that amusing testimony of Anatole France as drastic proof, this might easily give rise to the misunderstanding that directed thinking is after all "only a matter of words." That would certainly be going too far. Language must be taken in a wider sense than speech, for speech is only the outward flow of thoughts formulated for

communication. Were it otherwise, the deaf-mute would be extremely limited in his thinking capacity, which is not the case at all. Without any knowledge of the spoken word, he too has his “language.” Historically speaking, this ideal language, this directed thinking, is derived from primitive words, as Wundt has explained:

> A further important consequence of the interaction of sound and meaning is that many words come to lose their original concrete significance altogether, and turn into signs for general ideas expressive of the apperceptive functions of relating and comparing, and their products. In this way abstract thought develops, which, because it would not be possible without the underlying changes of meaning, is itself the product of those psychic and psychophysical interchanges in which the development of language consists.[10]

[15] Jodl[11] rejects the identity of language and thought on the ground that the same psychic fact can be expressed in different ways in different languages. From this he infers the existence of a “supra-linguistic” type of thinking. No doubt there is such a thing, whether one elects to call it “supra-linguistic” with Jodl or “hypological” with Erdmann. Only, it is not logical thinking. My views coincide with those of Baldwin, who says:

> The transition from pre-judgmental to judgmental meaning is just that from knowledge which has social confirmation to that which gets along without it. The meanings utilized for judgment are those already developed in their presuppositions and implications through the confirmations of social intercourse. Thus the personal judgment, trained in the methods of social rendering, and disciplined by the interaction of its social world, projects its content into that world again. In other words, the platform for all movement into the assertion of individual judgment—the level from which new experience is utilized—is *already and always socialized;* and it is just this movement that we find reflected in the actual result as the sense of the “appropriateness” or synnomic character of the meaning rendered.…
>
> Now the development of thought, as we are to see in more detail, is by a method essentially of trial and error, of experimentation, of *the use of meanings as worth more than they are as yet recognized to be worth*. The individual must use his old thoughts, his established knowledge, his grounded judgments, for the embodiment of his new inventive constructions. He erects his thought as we say “schematically”—in logical terms, problematically, conditionally, disjunctively—projecting into the world an opinion still personal to himself, as if it were true. *Thus all discovery proceeds*. But this is, from the linguistic point of view, still to use the current language, still to work by meanings already embodied in social and conventional usage.
>
> By this experimentation both thought and language are together advanced.…
>
> Language grows, therefore, just as thought does, *by never losing its synnomic* or dual reference; its meaning is both personal and social.…
>
> Language is the register of tradition, the record of racial conquest, the deposit of all the gains made by the genius of individuals.… The social “copy-system” thus established reflects the

> judgmental processes of the race, and in turn becomes the training-school of the judgment of new generations.…
>
> Most of the training of the self, whereby the vagaries of personal reaction to fact and image are reduced to the funded basis of sound judgment, comes through the use of speech. When the child speaks, he lays before the world his suggestion for a general or common meaning; the reception it gets confirms or refutes him. In either case he is instructed. His next venture is from a platform of knowledge on which the newer item is more nearly convertible into the common coin of effective intercourse. The point to notice here is not so much the exact mechanism of the exchange—secondary conversion—by which this gain is made, as the training in judgment that the constant use of it affords. In each case, effective judgment is the common judgment.… Here the object is to point out that it is secured by the development of a function *whose rise is directly* ad hoc … *—the function of speech*.
>
> In language, therefore, to sum up the foregoing, we have the tangible—the actual and historical—instrument of the development and conservation of psychic meaning. It is the material evidence and proof of *the concurrence of social and personal judgment*. In it synnomic meaning, judged as “appropriate,” becomes “social” meaning, held as socially generalized and acknowledged.[12]

[16] Baldwin’s argument lays ample stress on the limitations imposed on thought by language,[13] which are of the greatest importance both subjectively and objectively, i.e., psychologically and socially—so great, indeed, that we must ask ourselves whether the sceptical Mauthner [14] was not right in his view that thinking is speech and nothing more. Baldwin is more cautious and reserved, but at bottom he is plainly in favour of the primacy of speech.

[17] Directed thinking or, as we might also call it, *thinking in words*, is manifestly an instrument of culture, and we shall not be wrong in saying that the tremendous work of education which past centuries have devoted to directed thinking, thereby forcing it to develop from the subjective, individual sphere to the objective, social sphere, has produced a readjustment of the human mind to which we owe our modern empiricism and technics. These are absolutely new developments in the history of the world and were unknown to earlier ages. Inquiring minds have often wrestled with the question of why the first-rate knowledge which the ancients undoubtedly had of mathematics, mechanics, and physics, coupled with their matchless craftsmanship, was never applied to developing the rudimentary techniques already known to them (e.g., the principles of simple machines) into a real technology in the modern sense of the word, and why they never got beyond the stage of inventing amusing curiosities. There is only one answer to this: the ancients, with a

few illustrious exceptions, entirely lacked the capacity to concentrate their interest on the transformations of inanimate matter and to reproduce the natural process artificially, by which means alone they could have gained control of the forces of nature. What they lacked was training in directed thinking.[15] The secret of cultural development is the *mobility and disposability of psychic energy*. Directed thinking, as we know it today, is a more or less modern acquisition which earlier ages lacked.

[18] This brings us to a further question: What happens when we do not think directedly? Well, our thinking then lacks all leading ideas and the sense of direction emanating from them.[16] We no longer compel our thoughts along a definite track, but let them float, sink or rise according to their specific gravity. In Kuelpe's view,[17] thinking is a sort of "inner act of the will," and its absence necessarily leads to an "automatic play of ideas." William James regards non-directed thinking, or "merely associative" thinking, as the ordinary kind. He expresses himself as follows:

> Much of our thinking consists of trains of images suggested one by another, of a sort of spontaneous revery of which it seems likely enough that the higher brutes should be capable. This sort of thinking leads nevertheless to rational conclusions both practical and theoretical.
>
> As a rule, in this sort of irresponsible thinking the terms which come to be coupled together are empirical concretes, not abstractions.[18]

[19] We can supplement James's definitions by saying that this sort of thinking does not tire us, that it leads away from reality into fantasies of the past or future. At this point thinking in verbal form ceases, image piles on image, feeling on feeling,[19] and there is an ever-increasing tendency to shuffle things about and arrange them not as they are in reality but as one would like them to be. Naturally enough, the stuff of this thinking which shies away from reality can only be the past with its thousand-and-one memory images. Common speech calls this kind of thinking "dreaming."

[20] Anyone who observes himself attentively will find that the idioms of common speech are very much to the point, for almost every day we can see for ourselves, when falling asleep, how our fantasies get woven into our dreams, so that between daydreaming and night-dreaming there is not

much difference. We have, therefore, two kinds of thinking: directed thinking, and dreaming or fantasy-thinking. The former operates with speech elements for the purpose of communication, and is difficult and exhausting; the latter is effortless, working as it were spontaneously, with the contents ready to hand, and guided by unconscious motives. The one produces innovations and adaptation, copies reality, and tries to act upon it; the other turns away from reality, sets free subjective tendencies, and, as regards adaptation, is unproductive.[20]

[21] As I have indicated above, history shows that directed thinking was not always as developed as it is today. The clearest expression of modern directed thinking is science and the techniques fostered by it. Both owe their existence simply and solely to energetic training in directed thinking. Yet at the time when the forerunners of our present-day culture, such as the poet Petrarch, were just beginning to approach nature in a spirit of understanding,[21] an equivalent of our science already existed in scholasticism.[22] This took its subjects from fantasies of the past, but it gave the mind a dialectical training in directed thinking. The one goal of success that shone before the thinker was rhetorical victory in disputation, and not the visible transformation of reality. The subjects he thought about were often unbelievably fantastic; for instance, it was debated how many angels could stand on the point of a needle, whether Christ could have performed his work of redemption had he come into the world in the shape of a pea, etc., etc. The fact that these problems could be posed at all—and the stock metaphysical problem of how to know the unknowable comes into this category—proves how peculiar the medieval mind must have been, that it could contrive questions which for us are the height of absurdity. Nietzsche glimpsed something of the background of this phenomenon when he spoke of the “glorious tension of mind” which the Middle Ages produced.

[22] On a historical view, the scholastic spirit in which men of the intellectual calibre of St. Thomas Aquinas, Duns Scotus, Abelard, William of Ockham, and others worked is the mother of our modern scientific method, and future generations will see clearly how far scholasticism still nourishes the science of today with living

undercurrents. It consisted essentially in a dialectical gymnastics which gave the symbol of speech, the word, an absolute meaning, so that words came in the end to have a substantiality with which the ancients could invest their Logos only by attributing to it a mystical value. The great achievement of scholasticism was that it laid the foundations of a solidly built intellectual function, the *sine qua non* of modern science and technology.

[23] If we go still further back into history, we find what we call science dissolving in an indistinct mist. The culture-creating mind is ceaselessly employed in stripping experience of everything subjective, and in devising formulas to harness the forces of nature and express them in the best way possible. It would be a ridiculous and unwarranted presumption on our part if we imagined that we were more energetic or more intelligent than the men of the past—our material knowledge has increased, but not our intelligence. This means that we are just as bigoted in regard to new ideas, and just as impervious to them, as people were in the darkest days of antiquity. We have become rich in knowledge, but poor in wisdom. The centre of gravity of our interest has switched over to the materialistic side, whereas the ancients preferred a mode of thought nearer to the fantastic type. To the classical mind everything was still saturated with mythology, even though classical philosophy and the beginnings of natural science undeniably prepared the way for the work of “enlightenment.”

[24] Unfortunately, we get at school only a very feeble idea of the richness and tremendous vitality of Greek mythology. All the creative power that modern man pours into science and technics the man of antiquity devoted to his myths. This creative urge explains the bewildering confusion, the kaleidoscopic changes and syncretistic regroupings, the continual rejuvenation, of myths in Greek culture. We move in a world of fantasies which, untroubled by the outward course of things, well up from an inner source to produce an ever-changing succession of plastic or phantasmal forms. This activity of the early classical mind was in the highest degree artistic: the goal of its interest does not seem to have been how to understand the real world as objectively and accurately as possible, but how to adapt it aesthetically to subjective fantasies and expectations.

There was very little room among the ancients for that coldness and disillusionment which Giordano Bruno's vision of infinite worlds and Kepler's discoveries brought to mankind. The naïve man of antiquity saw the sun as the great Father of heaven and earth, and the moon as the fruitful Mother. Everything had its demon, was animated like a human being, or like his brothers the animals. Everything was conceived anthropomorphically or theriomorphically, in the likeness of man or beast. Even the sun's disc was given wings or little feet to illustrate its motion (pl. I*b*). Thus there arose a picture of the universe which was completely removed from reality, but which corresponded exactly to man's subjective fantasies. It needs no very elaborate proof to show that children think in much the same way. They too animate their dolls and toys, and with imaginative children it is easy to see that they inhabit a world of marvels.

[25] We also know that the same kind of thinking is exhibited in dreams. The most heterogeneous things are brought together regardless of the actual conditions, and a world of impossibilities takes the place of reality. Freud finds that the hallmark of waking thought is *progression:* the advance of the thought stimulus from the systems of inner or outer perception through the endopsychic work of association to its motor end, i.e., innervation. In dreams he finds the reverse: regression of the thought stimulus from the pre-conscious or unconscious sphere to the perceptual system, which gives the dream its peculiar atmosphere of sensuous clarity, rising at times to almost hallucinatory vividness. Dream-thinking thus regresses back to the raw material of memory. As Freud says: "In regression the fabric of the dream-thoughts is resolved into its raw material."[23] The reactivation of original perceptions is, however, only one side of regression. The other side is regression to infantile memories, and though this might equally well be called regression to the original perceptions, it nevertheless deserves special mention because it has an importance of its own. It might even be considered as an "historical" regression. In this sense the dream can, with Freud, be described as a modified memory—modified through being projected into the present. The original scene of the memory is unable to effect its own revival, so has to be content with returning as a dream.[24] In Freud's view it is an

essential characteristic of dreams to "elaborate" memories that mostly go back to early childhood, that is, to bring them nearer to the present and recast them in its language. But, in so far as infantile psychic life cannot deny its archaic character, the latter quality is the especial peculiarity of dreams. Freud expressly draws attention to this:

> Dreams, which fulfil their wishes along the short path of regression, have merely preserved for us in that respect a sample of the psychical apparatus's primary method of working, a method which was abandoned as being inefficient. What once dominated waking life, while the mind was still young and incompetent, seems now to have been banished into the night—just as the primitive weapons, the bows and arrows, that have been abandoned by adult men, turn up once more in the nursery.[25]

[26] These considerations [26] tempt us to draw a parallel between the mythological thinking of ancient man and the similar thinking found in children,[27] primitives, and in dreams. This idea is not at all strange; we know it quite well from comparative anatomy and from evolution, which show that the structure and function of the human body are the result of a series of embryonic mutations corresponding to similar mutations in our racial history. The supposition that there may also be in psychology a correspondence between ontogenesis and phylogenesis therefore seems justified. If this is so, it would mean that infantile thinking [28] and dream-thinking are simply a recapitulation of earlier evolutionary stages.

[27] In this regard, Nietzsche takes up an attitude well worth noting:

> In sleep and in dreams we pass through the whole thought of earlier humanity.… What I mean is this: as man now reasons in dreams, so humanity also reasoned for many thousands of years when awake; the first cause which occurred to the mind as an explanation of anything that required explanation was sufficient and passed for truth.… This atavistic element in man's nature still manifests itself in our dreams, for it is the foundation upon which the higher reason has developed and still develops in every individual. Dreams carry us back to remote conditions of human culture and give us a ready means of understanding them better. Dream thinking comes so easily to us now because this form of fantastic and facile explanation in terms of the first random idea has been drilled into us for immense periods of time. To that extent dreaming is a recreation for the brain, which by day has to satisfy the stern demands of thought imposed by a higher culture.…
>
> From this we can see how *lately* the more acute logical thinking, the strict discrimination of cause and effect, has been developed, since our rational and intellectual faculties still involuntarily hark back to those primitive forms of reasoning, and we pass about half our lives in this condition.[29]

[28] Freud, as we have seen, reached similar conclusions regarding the archaic nature of dream-thinking on the basis of dream-analysis. It is therefore not such a great step to the view that myths are dreamlike structures. Freud himself puts it as follows: “The study of constructions of folk-psychology such as these is far from being complete, but it is extremely probable that myths, for instance, are distorted vestiges of the wishful phantasies of whole nations, the [age-long] dreams of youthful humanity.”[30] In the same way Rank [31] regards myth as the collective dream of a whole people.[32]

[29] Riklin has drawn attention to the dream mechanism in fairytales,[33] and Abraham has done the same for myths. He says: “The myth is a fragment of the superseded infantile psychic life of the race”; and again: “The myth is therefore a fragment preserved from the infantile psychic life of the race, and dreams are the myths of the individual.”[34] The conclusion that the myth-makers thought in much the same way as we still think in dreams is almost self-evident. The first attempts at myth-making can, of course, be observed in children, whose games of make-believe often contain historical echoes. But one must certainly put a large question-mark after the assertion that myths spring from the “infantile” psychic life of the race. They are on the contrary the most mature product of that young humanity. Just as those first fishy ancestors of man, with their gill-slits, were not embryos, but fully developed creatures, so the myth-making and myth-inhabiting man was a grown reality and not a four-year-old child. Myth is certainly not an infantile phantasm, but one of the most important requisites of primitive life.

[30] It might be objected that the mythological proclivities of children are implanted by education. This objection is futile. Has mankind ever really got away from myths? Everyone who has his eyes and wits about him can see that the world is dead, cold, and unending. Never yet has he beheld a God, or been compelled to require the existence of such a God from the evidence of his senses. On the contrary, it needed the strongest inner compulsion, which can only be explained by the irrational force of instinct, for man to invent those religious beliefs whose absurdity was long since pointed out by Tertullian. In the same way one can withhold

the material content of primitive myths from a child but not take from him the need for mythology, and still less his ability to manufacture it for himself. One could almost say that if all the world's traditions were cut off at a single blow, the whole of mythology and the whole history of religion would start all over again with the next generation. Only a very few individuals succeed in throwing off mythology in epochs of exceptional intellectual exuberance—the masses never. Enlightenment avails nothing, it merely destroys a transitory manifestation, but not the creative impulse.

[31] Let us now turn back to our earlier reflections.

[32] We were speaking of the ontogenetic recapitulation of phylogenetic psychology in children, and we saw that archaic thinking is a peculiarity of children and primitives. We now know that this same thinking also occupies a large place in modern man and appears as soon as directed thinking ceases. Any lessening of interest, or the slightest fatigue, is enough to put an end to the delicate psychological adaptation to reality which is expressed through directed thinking, and to replace it by fantasies. We wander from the subject and let our thoughts go their own way; if the slackening of attention continues, we gradually lose all sense of the present, and fantasy gains the upper hand.

[33] At this point the important question arises: How are fantasies made, and what is their nature? From the poets we learn much, from scientists little. It was the psychotherapists who first began to throw light on the subject. They showed that fantasies go in typical cycles. The stammerer fancies himself a great orator, which actually came true in the case of Demosthenes, thanks to his enormous energy; the poor man fancies himself a millionaire, the child a grown-up. The oppressed wage victorious war on the oppressor, the failure torments or amuses himself with ambitious schemes. All seek compensation through fantasy.

[34] But just where do the fantasies get their material? Let us take as an example a typical adolescent fantasy. Faced by the vast uncertainty of the future, the adolescent puts the blame for it on the past, saying to himself: "If only I were not the child of my very ordinary parents, but the child of a rich and elegant count and had merely been brought up by foster-

parents, then one day a golden coach would come and the count would take his long-lost child back with him to his wonderful castle," and so on, just as in a Grimms' fairy-story which a mother tells to her children. With a normal child the fantasy stops short at the fleeting idea, which is soon over and forgotten. There was a time, however, in the ancient world, when the fantasy was a legitimate truth that enjoyed universal recognition. The heroes—Romulus and Remus (pl. II), Moses, Semiramis, and many others—were foundlings whose real parents had lost them.[35] Others were directly descended from the gods, and the noble families traced their descent from the heroes and gods of old. Hence the fantasy of our adolescent is simply a re-echo of an ancient folk-belief which was once very widespread. The fantasy of ambition therefore chooses, among other things, a classical form which at one time had real validity. The same is true of certain erotic fantasies. Earlier on we mentioned the dream of sexual assault: the robber who breaks in and does something dangerous. That too is a mythological theme and in days gone by was undoubtedly a reality.[36] Quite apart from the fact that rape was a common occurrence in prehistoric times, it was also a popular theme of mythology in more civilized epochs. One has only to think of the rape of Persephone, of Deianira, Europa, and of the Sabine women. Nor should we forget that in many parts of the earth there are marriage customs existing today which recall the ancient marriage by capture.

[35] One could give countless examples of this kind. They would all prove the same thing, namely that what, with us, is a subterranean fantasy was once open to the light of day. What, with us, crops up only in dreams and fantasies was once either a conscious custom or a general belief. But what was once strong enough to mould the spiritual life of a highly developed people will not have vanished without trace from the human soul in the course of a few generations. We must remember that a mere eighty generations separate us from the Golden Age of Greek culture. And what are eighty generations? They shrink to an almost imperceptible span when compared with the enormous stretch of time that separates us from Neanderthal or Heidelberg man. I would like in this connection to call attention to the pointed remarks of the great historian Ferrero:

> It is a very common belief that the further man is separated from the present in time, the more he differs from us in his thoughts and feelings; that the psychology of humanity changes from century to century, like fashions or literature. Therefore, no sooner do we find in past history an institution, a custom, a law, or a belief a little different from those with which we are familiar, than we immediately search for all manner of complicated explanations, which more often than not resolve themselves into phrases of no very precise significance. And indeed, man does not change so quickly; his psychology at bottom remains the same, and even if his culture varies much from one epoch to another, it does not change the functioning of his mind. The fundamental laws of the mind remain the same, at least during the short historical periods of which we have knowledge; and nearly all the phenomena, even the most strange, must be capable of explanation by those common laws of the mind which we can recognize in ourselves.[37]

[36] The psychologist should accept this view without qualification. The Dionysian phallagogies, the chthonic mysteries of classical Athens, have vanished from our civilization, and the theriomorphic representations of the gods have dwindled to mere vestiges, like the Dove, the Lamb, and the Cock adorning our church towers. Yet all this does not alter the fact that in childhood we go through a phase when archaic thinking and feeling once more rise up in us, and that all through our lives we possess, side by side with our newly acquired directed and adapted thinking, a fantasy-thinking which corresponds to the antique state of mind. Just as our bodies still retain vestiges of obsolete functions and conditions in many of their organs, so our minds, which have apparently outgrown those archaic impulses, still bear the marks of the evolutionary stages we have traversed, and re-echo the dim bygone in dreams and fantasies.

[37] The question of where the mind’s aptitude for symbolical expression comes from brings us to the distinction between the two kinds of thinking—the directed and adapted on the one hand, and the subjective, which is actuated by inner motives, on the other. The latter form, if not constantly corrected by adapted thinking, is bound to produce an overwhelmingly subjective and distorted picture of the world. This state of mind has been described in the first place as infantile and autoerotic, or, with Bleuler, as “autistic,” which clearly expresses the view that the subjective picture, judged from the standpoint of adaptation, is inferior to that of directed thinking. The ideal instance of autism is found in schizophrenia, whereas infantile autoeroticism is more characteristic of neurosis. Such a view brings a perfectly normal process like non-directed fantasy-thinking dangerously close to the pathological, and this must be ascribed less to

the cynicism of doctors than to the circumstance that it was the doctors who were the first to evaluate this type of thinking. Non-directed thinking is in the main subjectively motivated, and not so much by conscious motives as—far more—by unconscious ones. It certainly produces a world-picture very different from that of conscious, directed thinking. But there is no real ground for assuming that it is nothing more than a distortion of the objective world-picture, for it remains to be asked whether the mainly unconscious inner motive which guides these fantasy-processes is not itself an *objective fact*. Freud himself has pointed out on more than one occasion how much unconscious motives are grounded on instinct, which is certainly an objective fact. Equally, he half admitted their archaic nature.

[38] The unconscious bases of dreams and fantasies are only apparently infantile reminiscences. In reality we are concerned with primitive or archaic thought-forms, based on instinct, which naturally emerge more clearly in childhood than they do later. But they are not in themselves infantile, much less pathological. To characterize them, we ought therefore not to use expressions borrowed from pathology. So also the myth, which is likewise based on unconscious fantasy-processes, is, in meaning, substance, and form, far from being infantile or the expression of an autoerotic or autistic attitude, even though it produces a world-picture which is scarcely consistent with our rational and objective view of things. The instinctive, archaic basis of the mind is a matter of plain objective fact and is no more dependent upon individual experience or personal choice than is the inherited structure and functioning of the brain or any other organ. Just as the body has its evolutionary history and shows clear traces of the various evolutionary stages, so too does the psyche.[38]

[39] Whereas directed thinking is an altogether conscious phenomenon,[39] the same cannot be said of fantasy-thinking. Much of it belongs to the conscious sphere, but at least as much goes on in the half-shadow, or entirely in the unconscious, and can therefore be inferred only indirectly.[40] Through fantasy-thinking, directed thinking is brought into contact with the oldest layers of the human mind, long buried beneath the

threshold of consciousness. The fantasy-products directly engaging the conscious mind are, first of all, waking dreams or daydreams, to which Freud, Flournoy, Pick, and others have devoted special attention; then ordinary dreams, which present to the conscious mind a baffling exterior and only make sense on the basis of indirectly inferred unconscious contents. Finally, in split-off complexes there are completely unconscious fantasy-systems that have a marked tendency to constitute themselves as separate personalities.[41]

[40] All this shows how much the products of the unconscious have in common with mythology. We should therefore have to conclude that any introversion occurring in later life regresses back to infantile reminiscences which, though derived from the individual's past, generally have a slight archaic tinge. With stronger introversion and regression the archaic features become more pronounced.

[41] This problem merits further discussion. Let us take as a concrete example Anatole France's story of the pious Abbé Oegger.[42] This priest was something of a dreamer, and much given to speculative musings, particularly in regard to the fate of Judas: whether he was really condemned to everlasting punishment, as the teaching of the Church declares, or whether God pardoned him after all. Oegger took up the very understandable attitude that God, in his supreme wisdom, had chosen Judas as an instrument for the completion of Christ's work of redemption.[43] This necessary instrument, without whose help humanity would never have had a share in salvation, could not possibly be damned by the all-good God. In order to put an end to his doubts, Oegger betook himself one night to the church and implored God to give him a sign that Judas was saved. Thereupon he felt a heavenly touch on his shoulder. The next day he went to the archbishop and told him that he was resolved to go out into the world to preach the gospel of God's unending mercy.

[42] Here we have a well-developed fantasy-system dealing with the ticklish and eternally unresolved question of whether the legendary figure of Judas was damned or not. The Judas legend is itself a typical motif, namely that of the mischievous betrayal of the hero. One is reminded of Siegfried and Hagen, Baldur and Loki: Siegfried and Baldur were both

murdered by a perfidious traitor from among their closest associates. This myth is moving and tragic, because the noble hero is not felled in a fair fight, but through treachery. At the same time it is an event that was repeated many times in history, for instance in the case of Caesar and Brutus. Though the myth is extremely old it is still a subject for repetition, as it expresses the simple fact that envy does not let mankind sleep in peace. This rule can be applied to the mythological tradition in general: it does not perpetuate accounts of ordinary everyday events in the past, but only of those which express the universal and ever-renewed thoughts of mankind. Thus the lives and deeds of the culture-heroes and founders of religions are the purest condensations of typical mythological motifs, behind which the individual figures entirely disappear.[44]

[43] But why should our pious Abbé worry about the old Judas legend? We are told that he went out into the world to preach the gospel of God's unending mercy. Not long afterwards he left the Catholic Church and became a Swedenborgian. Now we understand his Judas fantasy: *he* was the Judas who betrayed his Lord. Therefore he had first of all to assure himself of God's mercy in order to play the role of Judas undisturbed.

[44] Oegger's case throws light on the mechanism of fantasies in general. The conscious fantasy may be woven of mythological or any other material; it should not be taken literally, but must be interpreted according to its meaning. If it is taken too literally it remains unintelligible, and makes one despair of the meaning and purpose of the psychic function. But the case of the Abbé Oegger shows that his doubts and his hopes are only apparently concerned with the historical person of Judas, but in reality revolve round his own personality, which was seeking a way to freedom through the solution of the Judas problem.

[45] Conscious fantasies therefore illustrate, through the use of mythological material, certain tendencies in the personality which are either not yet recognized or are recognized no longer. It will readily be understood that a tendency which we fail to recognize and which we treat as non-existent can hardly contain anything that would fit in with our conscious character. Hence it is mostly a question of things which we regard as immoral or impossible, and whose conscious realization meets

with the strongest resistances. What would Oegger have said had one told him in confidence that he was preparing himself for the role of Judas? Because he found the damnation of Judas incompatible with God's goodness, he proceeded to think about this conflict. That is the *conscious* causal sequence. Hand in hand with this goes the *unconscious* sequence: because he wanted to be Judas, or had to be Judas, he first made sure of God's goodness. For him Judas was the symbol of his own unconscious tendency, and he made use of this symbol in order to reflect on his own situation—its direct realization would have been too painful for him. There must, then, be typical myths which serve to work out our racial and national complexes. Jacob Burckhardt seems to have glimpsed this truth when he said that every Greek of the classical period carries in himself a little bit of Oedipus, and every German a little bit of Faust.[45]

[46] The problems with which the simple tale of the Abbé Oegger confronts us will meet us again when we examine another set of fantasies, which owe their existence this time to the exclusive activity of the unconscious. We are indebted to a young American woman, known to us by the pseudonym of Miss Frank Miller, for a series of fantasies, partly poetical in form, which Théodore Flournoy made available to the public in 1906, in the *Archives de psychologie* (Geneva), under the title "Quelques faits d'imagination créatrice subconsciente."[46]

III

THE MILLER FANTASIES: ANAMNESIS

[47] Experience has taught us that whenever anyone tells us his fantasies or his dreams, he is concerned not only with an urgent and intimate problem but with the one that is most painful for him at the moment.[1] Since, in the case of Miss Miller, we have to do with a complicated fantasy system, we shall have to give attention to details which I can best discuss by keeping to Miss Miller's own account. In the first section, entitled "Phenomena of Transitory Suggestion or of Instantaneous Autosuggestion," she gives a number of examples of her unusual suggestibility, which she herself regards as a symptom of her nervous temperament. She seems to possess an extraordinary capacity for identification and empathy; for instance she identifies herself to such a degree with the wounded Christian de Neuvillette in *Cyrano de Bergerac* that she feels a piercing pain in her own breast, the very place where the hero receives his death wound.

[48] One might describe the theatre, somewhat unaesthetically, as an institution for working out private complexes in public. The enjoyment of comedy, or of the blissful dénouement of the plot, is the direct result of identifying one's own complexes with those personified by the actors, while the enjoyment of tragedy lies in the thrilling yet satisfying feeling that what is happening to somebody else may very well happen to you. The palpitations of our author at the sight of the dying Christian mean that there is a complex in her awaiting a similar solution, which whispers a soft "today to you, tomorrow to me"; and lest there should be any doubt as to the critical moment, Miss Miller adds that she felt the pain in her breast "when Sarah Bernhardt throws herself upon him to stanch the bleeding of his wound." The critical moment, therefore, is when the love between Christian and Roxane comes to a sudden end. If we examine Rostand's play as a whole, we shall be struck by certain passages whose

effect it is not so easy to escape, and which we must emphasize here because they are of importance for everything that follows. Cyrano de Bergerac of the long ugly nose, on account of which he undertakes innumerable duels, loves Roxane, who is in love with Christian, because she thinks he is the author of the beautiful verses which really come from Cyrano's pen. Cyrano is the misunderstood one whose passionate love and noble soul no one suspects, the hero who sacrifices himself for others and, in the evening of life, with his dying breath, reads her once more Christian's last letter, the verses of which he has composed himself:

Roxane, adieu! I soon must die!
This very night, beloved; and I
Feel my soul heavy with a love untold.
I die! No more, as in the days of old,
My loving, longing eyes will feast
On your least gesture—ay, the least!
I mind me of the way you touch your cheek
So softly with your finger, as you speak!
Ah me! I know that gesture well!
My heart cries out! I cry "Farewell!
My life, my love, my jewel, my sweet,
My heart was yours in every beat!"[2]

[49] Whereupon Roxane recognizes him as the true beloved. But it is already too late, death comes, and in an agonized delirium Cyrano rouses himself, draws his sword:

Why, I do believe
He dares to mock my nose! Ho! insolent!
(*He raises his sword*)
What say you? It is useless? Ay, I know!
But who fights ever hoping for success?
I fought for lost cause, and for fruitless quest!
You there, who are you?—You are thousands! Ah!
I know you now, old enemies of mine!
Falsehood!
(*He strikes the air with his sword*)
Have at you! Ha! and Compromise!
Prejudice! Treachery! …
(*He strikes*)

Surrender, I?
Parley? No, never! You too, Folly, you?
I know that you will lay me low at last;
Let be! Yet I fall fighting, fighting still!
You strip from me the laurel and the rose!
Take all! Despite you there is yet one thing
I hold against you all; and when tonight
I enter Christ's fair courts, and lowly bowed,
Sweep with doffed casque the heavens' threshold blue,
One thing is left that, void of stain or smutch,
I bear away despite you—my *panache!* [3]

[50] Cyrano, who beneath his hideous exterior hides a soul so much more beautiful, is full of misunderstood yearnings, and his final triumph lies in his departing with a clean shield—"void of stain or smutch." The author's identification with the dying Christian, who in himself is not a very inspiring figure, tells us that a sudden end is destined for her love, just as for Christian's. But, as we have seen, the tragic intermezzo with Christian is played against a background of far wider significance, namely Cyrano's unrequited love for Roxane. The identification with Christian is probably only a cover. That this is so will become clear in the course of our analysis.

[51] The identification with Christian is followed by an extraordinarily plastic memory of the sea, evoked by a photograph of a steamer plunging through the waves. ("I felt the throb of the engines, the heave of the waves, the roll of the ship.") We may here hazard the conjecture that the sea-voyages of our author were associated with particularly impressive memories which bit deep into her soul and, through unconscious sympathy, threw the screen memory into particularly vivid relief. We shall see later how far these conjectured memories hang together with the problem touched on above.

[52] The example that now follows is remarkable: Once, while she was having a bath, Miss Miller wound a towel round her hair to prevent it from getting wet. At that moment she had the following vivid impression: "… it seemed to me, for one moment and with an almost breath-taking clarity, that I was on a pedestal, a veritable Egyptian statue with all its details; stiff-limbed, one foot forward, holding insignia in my

hand, etc.” So Miss Miller is now identifying herself with an Egyptian statue, obviously on the basis of an unrecognized similarity. What she means is: I am like an Egyptian statue, just as stiff, wooden, sublime, and impassible, qualities for which the Egyptian statue is proverbial.

[53] The next example lays stress on the personal influence she wields over a certain artist:

> However, I succeeded in making him draw landscapes, such as those of Lake Geneva, where he had never been, and he used to pretend that I could make him depict things that he had never seen and give him the sense of a surrounding atmosphere that he had never felt; in short, that I was using him as he himself used his pencil; that is, simply as an instrument.

[54] This remark stands in abrupt contrast to the fantasy of the Egyptian statue. Miss Miller evidently has an unspoken need to emphasize her almost magical influence over another person. This, too, could not have happened without an inner compulsion, such as is particularly noticeable in one who often does *not* succeed in establishing a real emotional relationship. She will then solace herself with the idea of her almost magical powers of suggestion.

[55] With that, we come to the end of the examples illustrating the autosuggestibility and suggestive influence of our author. The examples are neither particularly striking nor particularly interesting in this respect, but are all the more valuable from the psychological point of view because they allow us to glimpse some of her personal problems. Most of the examples show how liable Miss Miller was to succumb to the powers of suggestion, how the libido gained control of certain impressions and intensified them, which would naturally not have been possible but for the free-floating energy placed at her disposal by her lack of relation to reality.

IV

THE HYMN OF CREATION

[56] The second section in the Miller material bears the title: " 'Glory to God': A Dream Poem."

[57] In 1898, as a girl of twenty, Miss Miller went on a long journey through Europe. We leave the description to her:

> After the long and rough voyage from New York to Stockholm, then to St. Petersburg and Odessa, it was a real pleasure [*une véritable volupté]*[1] to leave the world of cities, of roaring streets, of business—in short, of the earth—and enter the world of waves, sky, and silence.… I spent hours on end on the deck of the ship, dreaming, stretched out in a deck chair. All the histories, legends, and myths of the different countries I saw in the distance came back to me confusedly, dissolved in a kind of luminous mist in which real things seemed to lose their being, while dreams and ideas took on the aspect of the only true reality. At first I even avoided all company and kept to myself, lost in my reveries, where everything I had ever known that was truly great, beautiful, and good came back to mind with renewed life and vigour. I also spent a good part of my days writing to absent friends, reading, or scribbling little bits of poetry in remembrance of the various places we visited. Some of these poems were of a rather serious character.

[58] It may perhaps seem superfluous to go into all these details more closely. But if we remember what we said above, that when people let their unconscious speak it always blurts out the most intimate things, then even the smallest detail often has a meaning. Miss Miller is here describing a "state of introversion": after the life of the cities, with their many impressions, had absorbed her interest (with that suggestive power which, as we have seen, forcibly produced the impression), she breathed freely again on the sea and became wholly engrossed in her inner world, deliberately cutting herself off from the environment, so that things lost their reality and dreams became truth. We know from psychopathology that there is a certain mental disturbance[2] which is initiated by the patient's shutting out reality more and more and sinking into his fantasies, with the result that as reality loses its hold, the determining

power of the inner world increases. This process leads up to a climax when the patient suddenly becomes more or less conscious of his dissociation from reality: in a sort of panic he begins making pathological efforts to get back to his environment. These attempts spring from the compensating desire for re-association and seem to be the psychological rule, valid not only for pathological cases but also, to a lesser degree, for normal people.

[59] One might therefore expect that after this prolonged introversion, which even impaired her sense of reality for a time, Miss Miller would succumb to a new impression of the external world, and one whose suggestive influence would be at least as great as that of her reveries. Let us proceed with her narrative:

> But as the voyage drew near its end, the ship's officers outdid themselves in kindness and amiability [*se montrèrent tout ce qu'il y a de plus empresses et aimables*], and I passed many an amusing hour teaching them English.
>
> Off the coast of Sicily, in the port of Catania, I wrote a sea-chanty, which, however, was little more than an adaptation of a well-known song about the sea, wine and love ("Brine, wine and damsels fine"). The Italians are all good singers, as a rule; and one of the officers, singing at night as he stood watch on deck, had made a great impression on me and had given me the idea of writing some words that could be fitted to his melody.
>
> Soon afterwards, I nearly did what the proverb says, "See Naples and die," for in the port of Naples I began by being very ill (though not dangerously so); then I recovered sufficiently to go ashore and visit the principal sights of the city in a carriage. This outing tired me extremely; and as we were intending to visit Pisa the next day, I soon returned on board and went to bed early, without thinking of anything more serious than the good looks of the officers and the ugliness of Italian beggars.

[60] One is slightly disappointed at meeting here, instead of the powerful impression one expected, an apparently insignificant episode, a mere flirtation. Nevertheless one of the officers, a singer, had evidently made a considerable impression on her. The concluding remark—without thinking of anything more serious than the good looks of the officers—does, it is true, tone it down somewhat. Even so, the assumption that this impression had no little influence on her mood is supported by the fact that a poem in honour of the singer was immediately forthcoming. One is only too ready to make light of such an experience and to accept the assurance of those concerned that everything is quite simple and not at all important. I am inclined to pay rather more attention to it, because

experience has shown that an impression which comes after an introversion of that kind has a profound effect and may possibly have been underestimated by Miss Miller herself. The sudden, passing attack of sickness requires psychological explanation, though this is not possible for lack of data. But the phenomena about to be described can only be understood as arising out of a convulsion that reaches into the very depths of her being:

> From Naples to Leghorn is one night by boat, during which I slept moderately well—my sleep is rarely deep or dreamless—and it seemed to me that my mother's voice woke me up just at the end of the following dream, which must, therefore, have taken place immediately before waking.
>
> First, I was vaguely conscious of the words "when the morning stars sang together," which served as the prelude, if I may so put it, to an involved idea of creation and to mighty chorales reverberating through the universe. But, with the confusion and strange contradiction characteristic of dreams, all this was mixed up with choruses from oratorios given by one of the leading musical societies of New York, and with indistinct memories of Milton's *Paradise Lost*. Then, slowly, out of this medley, words appeared, and a little later they arranged themselves in three stanzas, in my handwriting, on a sheet of ordinary blue-lined writing-paper, in a page of my old poetry album that I always carry about with me: in short, they appeared to me exactly as they did in reality, a few minutes later, in my book.

[61] Miss Miller then wrote down the following poem, which she rearranged slightly a few months later, in order to make it more nearly, in her opinion, like the dream original:

First Version

When God had first made Sound,
A myriad ears sprang into being
And throughout all the Universe Rolled a mighty echo:
"Glory to the God of Sound!"

When beauty (light) first was given by God,
A myriad eyes sprang out to see
And hearing ears and seeing eyes
Again gave forth that mighty song:
"Glory to the God of Beauty (Light)!"

When God has first given Love,
A myriad hearts lept up;
And ears full of music, eyes all full of Beauty,
Hearts all full of love sang:
"Glory to the God of Love!"

Second Version (more exact)

When the Eternal first made Sound
A myriad ears sprang out to hear,
And throughout all the Universe
There rolled an echo deep and clear:
“All glory to the God of Sound!”

When the Eternal first made Light,
A myriad eyes sprang out to look,
And hearing ears and seeing eyes,
Once more a mighty choral took:
“All glory to the God of Light!”

When the Eternal first gave Love,
A myriad hearts sprang into life;
Ears filled with music, eyes with light,
Pealed forth with hearts with love all rife:
“All glory to the God of Love!”

[62] Before we examine her attempts to get at the roots of this subliminal creation through her own associations, let us take a quick look at the material already in hand. The impression of the ship has already received due emphasis, so it ought not to be difficult to lay hold of the dynamic processes responsible for this poetic revelation. It was suggested further back that Miss Miller may have considerably underestimated the scope of the erotic impression she had received. This assumption is the more probable in that experience has shown that relatively weak erotic impressions are often underestimated. One can see this most clearly in cases where an erotic relationship is regarded as impossible on social or moral grounds (for instance between parents and children, brothers and sisters, older and younger men, etc.). If the impression is comparatively slight, it does not exist at all for the persons concerned; if it is strong, then a tragic dependence develops which can lead to all sorts of trouble. This lack of judgment can go unbelievably far—a mother who sees her small son having an erection in her own bed; a sister who half-playfully embraces her brother; a twenty-year-old daughter who still sits herself in her father’s lap and then has “strange” sensations in her “tummy.” And yet they are all highly indignant when anyone speaks of “sexuality.”

There is a certain kind of education that tacitly aims at knowing as little as possible about these unmentionable facts in the background, and which shrouds them in the deepest ignorance.[3] No wonder, then, that most people's judgment in regard to the scope of erotic impressions is precarious and inadequate. Miss Miller was, as we have seen, quite prepared for a *deep* impression. But not many of the feelings it aroused seem to have come to the surface, for the dream had to repeat the lesson over again. We know from analytical experience that the initial dreams of patients at the beginning of an analysis are of especial interest, not least because they often bring out a critical evaluation of the doctor's personality which previously he would have asked for in vain. They enrich the patient's *conscious* impression of the doctor, often on very important points, and they frequently contain erotic comments which the unconscious had to make in order to counterbalance the patient's underestimation and uncertain appraisal of the impression. Expressed in the drastic and hyperbolic manner peculiar to dreams, the impression often appears in almost unintelligible form owing to the incongruity of the symbolism. A further peculiarity, which seems due to the historical stratification of the unconscious, is that when an impression is denied conscious recognition it reverts to an earlier form of relationship. That explains why young girls, at the time of their first love, have great difficulty in expressing themselves owing to disturbances brought about by regressive reactivation of the father-imago.[4]

[63] We may suppose that something similar has happened to Miss Miller, for the idea of a masculine Creator-God is apparently derived from the father-imago,[5] and aims, among other things, at replacing the infantile relation to the father in such a way as to enable the individual to emerge from the narrow circle of the family into the wider circle of society. Naturally this is far from exhausting the meaning of the dream-image.

[64] In the light of these reflections, the poem and its prelude appear as the religiously and poetically formulated product of an introversion that has regressed back to the father-imago. Despite inadequate apperception of the operative impression, its essential ingredients have been built into the substitute product, as marks of its origin, so to speak. The operative

impression was the handsome officer singing in the night-watch—“When the morning stars sang together—whose image opened out a new world to the girl (“Creation”).

[65] This “creator” created first Sound, then Light, and then Love. That Sound should be the first thing created has parallels in the “creative word” in Genesis, in Simon Magus, where the voice corresponds to the sun,[6] in the sounds or cries of lamentation mentioned in *Poimandres*,[7] and in God’s laughter at the creation of the world (*κοσμοποιία*) in a Leiden Papyrus.[8] Hence we may hazard the conjecture, which will be amply confirmed later on, that there was the following chain of association: the singer—the singing morning star—the God of Sound—the Creator—the God of Light—of the sun—of fire—and of Love. Most of these expressions are also characteristic of the language of love and are found wherever speech is heightened by emotion.

[66] Miss Miller has tried to understand this unconscious creation by means of a procedure which agrees in principle with the methods of psychological analysis and therefore leads to the same results. But, as is usually the case with laymen and beginners, she gets stuck at associations which bring the underlying complex to light only in an indirect way. Nevertheless, a simple procedure, a mere matter of carrying the thought to its logical conclusion, is enough to help one find the meaning.

[67] Miss Miller finds it astonishing, first of all, that her unconscious fantasy does not, like the Biblical account of the Creation, put light in the first place, but sound. There now follows a truly *ad hoc* theoretical explanation. She says:

> It may be of interest to recall that Anaxagoras, too, makes the cosmos arise out of chaos by means of a whirlwind [9]—which does not normally occur without producing a noise. But at that time I had not yet made a study of philosophy and I knew nothing either of Anaxagoras or of his theories about the *νοῦς* which I found I had been unconsciously following. I was in equally complete ignorance of the name of Leibniz and consequently of his doctrine “dum Deus calculat fit mundus.”

The allusions to Anaxagoras and Leibniz both refer to creation through thought, so that divine thought alone is held capable of producing a new material reality—a reference which seems unintelligible at first, but will soon become more understandable.

[68] We come now to the associations from which Miss Miller mainly derives her unconscious creation:

> In the first place, there is Milton's *Paradise Lost*, of which we had a fine edition at home, illustrated by Gustave Doré, and which I have known well since childhood. Then the Book of Job, which has been read aloud to me ever since I can remember. Now, if you compare my first line with the first words of *Paradise Lost*, you find it is in the same metre (◡—/◡—/◡—/◡—):
>
> Of man's first disobedience …
>
> When the Eternal first made sound. Moreover, the general idea of my poem is slightly reminiscent of various passages in Job, and also of one or two places in Handel's [10] oratorio *The Creation* (which appeared in the confusion at the beginning of the dream).

[69] So the "lost paradise," which is as we know closely associated with the beginning of the world, is defined more precisely through the line "Of man's first disobedience"—a clear reference to the Fall, which in this connection is not without significance. I know the objection which everyone will raise here, namely that Miss Miller could just as well have chosen any other line as an example, that she picked on the first suitable one purely by accident, and that its content was equally accidental. The criticism levelled at the association method generally operates with arguments of this kind. The misunderstanding arises from the fact that the law of psychic causality is never taken seriously enough: there are no accidents, no "just as wells." It *is* so, and there is a very good reason why it is so. It is a fact that Miss Miller's poem is associated with the Fall, and this focuses our attention on the very same problem whose existence we have already surmised. Unfortunately, the author neglects to tell us which passages in Job came into her mind, so we can only make broad conjectures. First of all, the analogy to *Paradise Lost:* Job loses everything he has, because Satan made God doubt his integrity. In the same way, paradise was lost through the temptation of the serpent, and mankind was cast out into a life of earthly travail. The idea, or rather the mood, expressed by this recollection of *Paradise Lost* is Miss Miller's feeling of having lost something which was somehow connected with Satanic temptation. Like Job, she is an innocent victim because she did not succumb to the temptation. Job's sufferings are not understood by his friends; [11] none of them knows that Satan has a hand in the game and that Job is really innocent. Indeed, he never wearies of protesting his innocence. Does this, perhaps, give us a clue? We know that certain

neurotics and mentally diseased people continually defend their innocence against nonexistent attacks; but on closer inspection one discovers that in defending their innocence apparently without cause they are simply indulging in a self-deceiving manoeuvre, which derives its energy from those very impulses whose unpleasant character is plainly revealed by the content of the alleged accusations and calumnies.[12]

[70] Job suffers doubly, firstly through the loss of his fortune, secondly through the lack of understanding of his friends, a theme that can be traced all through the book. The misery of being misunderstood reminds us of the figure of Cyrano de Bergerac: he too suffers doubly—on one side through unrequited love, on the other through misunderstanding. He falls, as we have already seen, in the last hopeless struggle against "Falsehood, Compromise, Prejudice, Treachery, and Folly":

> You strip from me the laurel and the rose!

[71] Job laments:

> God hath delivered me to the ungodly,
> and turned me over into the hands of the wicked.
> I was at ease, but he hath broken me asunder:
> he hath also taken me by my neck, and shaken me to pieces,
> and set me up for his mark.
> His archers compass me round about,
> he cleaveth my reins asunder, and doth not spare;
> he poureth out my gall upon the ground.
> He breaketh me with breach upon breach,
> he runneth upon me like a giant.[13]

[72] The emotional analogy lies in having to suffer a hopeless struggle against overwhelming odds. It is as if this struggle were accompanied from afar by the clangour of "creation," as if it constellated in the unconscious a wonderful and mysterious image that has not yet forced its way into the light of the upper world. We surmise, rather than know, that this struggle has got something to do with creation, with the unending battle between affirmation and negation. The allusions to Rostand's *Cyrano* through the identification with Christian, to Milton's *Paradise Lost*, to the sorrows of Job, misunderstood by his friends, plainly betray

that in the soul of the poet there is something that identifies with these ideas. She too has suffered like Job, has lost paradise, and dreams of "creation"—creation through thought—and of fructification through the rushing wind of the pneuma.

[73] We submit ourselves once more to Miss Miller's guidance:

> I remember that, at the age of fifteen, I was very much excited by an article my mother had read to me, about "the Idea spontaneously creating its own object," and I passed almost the whole night without sleep, wondering what it could all mean.—From the age of nine to sixteen, I used to go on Sundays to a Presbyterian church, where the pastor was a highly cultivated man, now president of a well-known college. And in one of the earliest memories I have of him, I see myself, still quite a little girl, sitting in our large pew in church and struggling to keep myself awake, without being able to understand what in the world he meant when he spoke to us of "Chaos," "Cosmos," and "the Gift of Love."

[74] There are, then, fairly early memories of the awakening of puberty (nine to sixteen), which connect the idea of the cosmos born of chaos with the "Gift of Love." The medium in which this happy connection took place is the memory of a much-respected ecclesiastic who spoke those dark words. From the same period comes the memory of her excitement over the "Idea spontaneously creating its own object." Two ways of creation are here hinted at: creative thought, and the mysterious reference to the "Gift of Love."

[75] During the latter part of my medical studies I had an opportunity of gaining, through long observation, a deep insight into the soul of a fifteen-year-old girl. I then discovered, to my astonishment, what the contents of unconscious fantasies are like, and how far removed they are from what a girl of this age shows in her outward demeanour and from what an outsider would suspect. They were far-reaching fantasies of a positively mythical nature: the girl saw herself, in her split-off fantasy, as the racial mother of uncounted generations of men.[14] Even allowing for the markedly poetic cast of her imagination, there still remained elements that are probably common to all girls of her age, for the unconscious is infinitely more common to all men than are the contents of their individual consciousnesses. The unconscious is, in fact, the condensation of the average run of historical experience.

[76] Miss Miller's problem at this age was the common human problem: How am I to be creative? Nature knows only one answer to that: Through a child (the gift of love). But—how does one get a child? Here arises the problem which, as experience has shown, is connected with the father,[15] so that it cannot be tackled properly because too much preoccupation with the father at once brings up the incest-barrier. The strong and natural love that binds the child to the father turns away, during the years when the child is outgrowing the family circle, to the higher forms of the father, to authority, to the "Fathers" of the Church and to the father-god visibly represented by them, where there is even less possibility of coming to grips with the problem. Nevertheless, mythology is not lacking in consolations. Did not the Word become flesh? And did not the divine pneuma enter into the Virgin's womb? (pl. III.) The whirlwind of Anaxagoras was that same divine *nous* which produced the world out of itself. Why do we cherish the image of the Immaculate Mother even to this day? Because it is still comforting and speaks without words or noisy sermons to the comfortless, saying, "I too have become a mother"—through the "Idea spontaneously creating its own object." I believe there would be reason enough for a sleepless night if those adolescent fantasies once got hold of this idea—the consequences would indeed be incalculable.

[77] Everything psychic has a lower and a higher meaning, as in the profound saying of late classical mysticism: "Heaven above, Heaven below, stars above, stars below, all that is above also is below, know this and rejoice."[16] Here we lay our finger on the secret symbolical significance of everything psychic. We would be doing less than justice to the intellectual originality of our author if we were content to trace back the excitement of that sleepless night simply and solely to the sexual problem in its narrower sense. That would be only one half of the meaning, and the lower half at that. The other half is ideal creation as a substitute for real creation.

[78] With personalities who are obviously capable of intellectual effort, the prospect of spiritual fruitfulness is something worthy of their highest aspirations, and for many people it is actually a vital necessity. This other side of the fantasy also explains the excitement, for we are concerned

here with a thought that contains a presentiment of the future—one of those thoughts which, to quote Maeterlinck,[17] spring from the “inconscient supérieur,” from the “prospective potency” of a subliminal synthesis.[18] I have had occasion to observe, in the course of my daily professional work (though this is an experience about whose certainty I must express myself with all the caution which the complexity of the material enjoins), that in certain cases of long-standing neurosis a dream, often of visionary clarity, occurs about the time of the onset of the illness or shortly before, which imprints itself indelibly on the mind and, when analysed, reveals to the patient a hidden meaning that anticipates the subsequent events of his life.[19] I am inclined to attribute a similar meaning to the excitement of that restless night, because the later events, so far as Miss Miller consciously or unconsciously reveals them to us, are entirely of a nature to confirm our supposition that we must take that moment as foreshadowing a future life-aim.

[79] Miss Miller ends her string of associations with the following comment:

> It [the dream] seems to me to result from a mixture in my mind of *Paradise Lost*, *Job*, and *The Creation*, with notions like the “Idea spontaneously creating its own object,” the “Gift of Love”, “Chaos,” and “Cosmos.”

[80] Thus, like little bits of coloured glass in a kaleidoscope, fragments of philosophy, aesthetics, and religion are blended together in her mind, so she tells us—

> … under the stimulation of the voyage and of countries fleetingly seen, coupled with the vast silence and impalpable charm of the sea—to produce this beautiful dream. There was only this and nothing more. “Only this, and nothing more!”

[81] With these words Miss Miller shows us politely but emphatically out. Her parting words of negation make one curious to know exactly what position they are intended to negate. “There was only this and nothing more” must refer to “the impalpable charm of the sea”; so presumably the handsome young officer who sang so melodiously during the watches of the night is long since forgotten, and nobody is to know, least of all the dreamer, that he was a star of the morning who heralded the dawning of a new day.[20] One should, however, avoid pacifying oneself or the reader

with soothing phrases like “There was only this,” for something might easily give them the lie the next moment. This is what happens to Miss Miller, who immediately adds, “Only this, and nothing more!” but without giving the source. The quotation comes from Poe’s poem “The Raven,” and the operative stanza runs:

While I nodded, nearly napping, suddenly there came a tapping,
As of some one gently rapping, rapping at my chamber door.
“‘Tis some visitor,” I muttered, “tapping at my chamber door—
Only this, and nothing more.”

[82] A spectral raven knocks nightly at his door and reminds the poet of his irrevocably lost “Lenore.” The raven’s name is “Nevermore,” and he croaks his horrible “Nevermore” as a refrain to every verse. Old memories come back tormentingly, and each time the spectre repeats inexorably: “Nevermore.” In vain the poet seeks to frighten away the dismal guest, shouting at the raven:

“Be that word our sign of parting, bird or fiend!” I shrieked upstarting—
“Get thee back into the tempest and the Night’s Plutonian shore!
Leave no black plume as a token of the lie thy soul hath spoken!
Leave my loneliness unbroken!—quit the bust above my door!
Take thy beak from out my heart, and take thy form from off my door!”
Quoth the raven, “Nevermore!”

[83] The words “Only this and nothing more!,” which apparently skip so lightly over the situation, are taken from a poem which depicts in an affecting manner the poet’s despair over a lost love.[21] Their quotation gives the show away completely. Miss Miller evidently underestimated the impression which the night-watching singer had made upon her, and its far-reaching consequences. This under-estimation is precisely the reason why the problem was not worked out consciously and why it produced those “psychological riddles”, [22] The impression goes on working in the unconscious and throws up symbolical fantasies. First it is the “morning stars [that] sang together,” then *Paradise Lost*, then the yearning clothes itself in ecclesiastical garb, speaks darkly of “World Creation” and finally rises to a religious hymn, where it at last finds its way to freedom. But the hymn bears in its own peculiarities the marks of its origin: by the devious route of the father-imago relationship, the night-

watching singer becomes the Creator, the God of Sound, of Light and of Love. This is not to say that the idea of God derives from the loss of a lover and is nothing but a substitute for the human object. What is evidently in question here is the displacement of libido on to a *symbolical* object, with the result that the latter is turned into a sort of substitute. It is in itself a perfectly genuine experience, though, like everything else, it can be put to improper use.

[84] The winding path of the libido seems to be a *via dolorosa;* at any rate, *Paradise Lost* and the parallel reference to Job lead one to that conclusion. The initial hints of identification with Christian, which really points to Cyrano, prove that the long way round is a way of suffering, just as it was when mankind, after the Fall, had to bear the burden of earthly life, or when Job suffered under the power of God and Satan and became the unsuspecting plaything of two superhuman forces. *Faust* offers the same spectacle of a wager with God:

> MEPHISTOPHELES: What do you wager? You will lose him yet,
> Provided *you* give *me* permission
> To steer him gently in the course I set.[23]

[85] Compare with this the passage in Job, where Satan says:

> But put forth thine hand now, and touch all that he hath, and he will curse thee to thy face.[24]

[86] While in Job the two great forces are characterized simply as good and evil, the immediate problem is a definitely erotic one in *Faust*, where the devil is aptly characterized by the appropriate role of tempter. This aspect is lacking in Job, but at the same time Job is not conscious of the conflict within his own soul, and he never ceases to inveigh against the arguments of his friends who want to convince him of the evil in his heart. To that extent, one could say that Faust is the more conscious in that he openly admits his psychic conflicts.

[87] Miss Miller acts like Job: she admits nothing, and pretends that good and evil come from outside. Hence her identification with Job is significant in this respect also. But there is another, very important analogy still to be mentioned: the procreative urge—which is how love must be regarded from the natural standpoint—remains the essential

attribute of the God whom Miss Miller apparently derives from the erotic impression, for which reason he is praised in the hymn as Creator. We see the same thing in Job. Satan is the destroyer of Job's fruitfulness, but God is the All-Fruitful: therefore, at the end of the book, he addresses a paean filled with lofty poetic beauty to his own creative power, but it is curious to note that he gives chief consideration to two highly unsympathetic representatives of the animal kingdom, Behemoth and Leviathan, both expressive of the crudest force conceivable in nature.

[88] Miss Miller uses the text of the Authorized Version, which, like Luther's version, is very suggestive:

> Behold now behemoth, which I made with thee;
> he eateth grass as an ox.
> Lo now, his strength is in his loins,
> and his force is in the navel of his belly.
> He moveth his tail like a cedar:
> the sinews of his stones are wrapped together.
> His bones are as strong pieces of brass;
> his bones are like bars of iron.
> He is the chief of the ways of God.…
>
> Canst thou draw out leviathan with an hook?
> or his tongue with a cord which thou lettest down?
> Canst thou put an hook into his nose?
> or bore his jaw through with a thorn?
> Will he make many supplications unto thee?
> will he speak soft words unto thee?
> Will he make a covenant with thee?
> wilt thou take him for a servant for ever? [25]

[89] God speaks thus in order to parade his power and omnipotence forcibly before Job's eyes. God is as Behemoth and Leviathan: [26] the fruitfulness and abundance of Nature, the ungovernable wildness and licentiousness of Nature, the overwhelming danger of unchained power.[27] What was it that destroyed Job's earthly paradise? The unchained power of Nature. God, so the poet gives us to understand, has simply shown his other side for once, the side we call the Devil, and let loose all the terrors of Nature upon the unfortunate Job. The God who created such

monstrosities, at the very thought of which we poor weak mortals stiffen with fear, must certainly harbour within himself qualities which give one pause. This God dwells in the heart, in the unconscious.[28] That is the source of our fear of the unspeakably terrible, and of the strength to withstand the terror. Man, that is to say his conscious ego, is a mere bagatelle, a feather whirled hither and thither with every gust of wind, sometimes the sacrificed and sometimes the sacrificer, and he cannot hinder either. The Book of Job shows us God at work both as creator and destroyer. Who is this God? An idea that has forced itself upon mankind in all parts of the earth and in all ages and always in similar form: an otherworldly power which has us at its mercy, which begets and kills—an image of all the necessities and inevitablenesses of life. Since, psychologically speaking, the God-image is a complex of ideas of an archetypal nature, it must necessarily be regarded as representing a certain sum of energy (libido) which appears in projection.[29] In most of the existing religions it seems that the formative factor which creates the attributes of divinity is the father-imago, while in the older religions it was the mother-imago. These attributes are omnipotence, a sternly persecuting paternalism ruling through fear (Old Testament), and a loving paternalism (New Testament). In certain pagan conceptions of divinity the maternal element is strongly emphasized, and there is also a wide development of the animal or theriomorphic element.[30] (Pl. IV *a.)* The God-concept is not only an image, but an elemental force. The primitive power which Job's Hymn of Creation vindicates, absolute and inexorable, unjust and superhuman, is a genuine and authentic attribute of the natural power of instinct and fate which "leads us into life," which makes "all the world become guilty before God" (Romans 3: 19) and against which all struggle is in vain. Nothing remains for mankind but to work in harmony with this will. To work in harmony with the libido does not mean letting oneself drift with it, for the psychic forces have no uniform direction, but are often directly opposed to one another. A mere letting go of oneself leads in the shortest space of time to the most hopeless confusion. It is often difficult, if not impossible, to feel the ground-current and to know the true direction; at any rate collisions, conflicts, and mistakes are scarcely avoidable.

[90] As we have seen, the religious hymn unconsciously produced by Miss Miller appears in the place of the erotic problem. It derives its material for the most part from reminiscences which were reactivated by the introverted libido. Had this "creation" not come off, Miss Miller would inevitably have yielded to the erotic impression, either with the usual consequences, or else with a negative result which would have replaced the lost happiness by a correspondingly strong feeling of regret. Opinions, as we know, are deeply divided over the value of solving an erotic conflict like Miss Miller's in this way. It is thought to be much more beautiful and noble to let an erotic tension resolve itself unnoticed into the sublime feelings of religious poetry, in which perhaps other people can find joy and consolation, and that it is a kind of unjustified fanaticism for truth to complain about the unconsciousness of such a solution. I would not like to decide this question one way or the other, but would prefer to find out the meaning and purpose of the apparently devious path followed by the libido, and of the apparent self-deception, in the case of a so-called unnatural and unconscious solution. There are no "purposeless" psychic processes; that is to say, it is a hypothesis of the greatest heuristic value that the psyche is essentially purposive and directed.

[91] That the root-cause of the poem has been shown to be the love-episode is an explanation that does not amount to very much at present, for the question of purpose still remains to be settled. Only the discovery of the purpose can provide a satisfactory answer to psychological questions. Were there not a secret purposiveness bound up with the supposedly devious path of the libido or with the supposed *repression*, it is certain that such a process could not take place so easily, so naturally, and so spontaneously. Also, it would hardly occur so frequently in this form, or in some other like it. There is no doubt that this transformation of libido moves in the same direction as, broadly speaking, the cultural modification, conversion, or displacement of natural drives. It must be a well-trodden path which is so habitual that we hardly notice the conversion ourselves, if at all. Between the normal psychic transformation of instinctual drives and the present case there is, however, a certain difference: we cannot rid ourselves of the suspicion

that the critical experience—the singer—was assiduously overlooked; in other words, that there was a certain amount of "repression." This latter term should really be used only when it is a voluntary act of which one cannot help being conscious. Nervous persons can successfully hide voluntary decisions of this kind from themselves up to a point, so that it looks as if the act of repression were completely unconscious. The context[31] of associations provided by the author herself is so impressive that she must have felt this background in a fairly lively fashion, and must therefore have transformed the situation through a more or less conscious act of repression.

[92] Repression, however, is an illegitimate way of evading the conflict, for it means pretending to oneself that it does not exist. What then becomes of the repressed conflict? Clearly, it continues to exist, even though not conscious to the subject. As we have seen already, the repression leads to regressive reactivation of an earlier relationship or type of relatedness, in this case the reactivation of the father-imago. "Constellated" (i.e., activated) unconscious contents are, so far as we know, always projected; that is, they are either discovered in external objects, or are said to exist outside one's own psyche. A repressed conflict and its affective tone must reappear *somewhere*. The projection caused by repression is not something that the individual consciously does or makes; it follows automatically and, as such, is not recognized unless there are quite special conditions which enforce its withdrawal.

[93] The "advantage" of projection consists in the fact that one has apparently got rid of the painful conflict once and for all. Somebody else or external circumstances now have the responsibility. In the present case, the reactivated father-imago gives rise to a hymn addressed to the deity in his specifically paternal aspect—hence the emphasis on the Father of all things, Creator, etc. The deity thus takes the place of the human singer; and earthly love is replaced by the heavenly. Although it cannot be proved from the material available, it is nevertheless highly improbable that Miss Miller was so unaware of the conflicting nature of the situation that the apparently effortless transformation of the erotic impression into feelings of religious exaltation cannot be explained as an act of repression. If this view is correct, then the picture of the father-god

is a projection and the procedure responsible for this a self-deceiving manoeuvre undertaken for the illegitimate purpose of *making a real difficulty unreal*, that is, of juggling it out of existence.

[94] If, however, a product like the hymn came into being *without* an act of repression, i.e., unconsciously and spontaneously, then we are confronted with an entirely natural and automatic process of transformation. In that case the creator-god who emerges from the father-imago is no longer a product of repression or a substitute, but a natural and inevitable phenomenon. Natural transformations of this kind, without any semi-conscious elements of conflict, are to be found in all genuine acts of creation, artistic or otherwise. But to the degree that they are causally connected with an act of repression they are coloured by complexes which neurotically distort them and stamp them as *ersatz* products. With a little experience it would not be difficult to determine their origin by their character, and to see how far their genealogy is the result of repression. Just as in natural birth no repression is needed to bring or “project” a living creature into the world, so artistic and spiritual creation is a natural process even when the figure projected is divine. This is far from being always a religious, philosophical, or even a denominational question, but is a universal phenomenon which forms the basis of all our ideas of God, and these are so old that one cannot tell whether they are derived from a father-imago, or vice versa. (The same must be said of the mother-imago as well.)

[95] The God-image thrown up by a spontaneous act of creation is a living figure, a being that exists in its own right and therefore confronts its ostensible creator autonomously. As proof of this it may be mentioned that the relation between the creator and the created is a *dialectical* one, and that, as experience shows, man has often been the person who is addressed. From this the naïve-minded person concludes, rightly or wrongly, that the figure produced exists in and for itself, and he is inclined to assume that it was not he who fashioned it, but that it fashioned itself in him—a possibility which no amount of criticism can disprove, since the genesis of this figure is a natural process with a teleological orientation in which the cause anticipates the goal. As it is a natural process, it cannot be decided whether the God-image is created or

whether it creates itself. The naïve intellect cannot help taking its autonomy into account and putting the dialectical relationship to practical use. It does this by calling upon the divine presence in all difficult or dangerous situations, for the purpose of unloading all its unbearable difficulties upon the Almighty and expecting help from that quarter.[32] In the psychological sense this means that complexes weighing on the soul are *consciously* transferred to the God-image. This, it should be noted, is the direct opposite of an act of repression, where the complexes are handed over to an unconscious authority, inasmuch as one prefers to forget them. But in any religious discipline it is of the highest importance that one should remain conscious of one's difficulties—in other words, of one's sins. An excellent means to this end is the mutual confession of sin (James 5: 16), which effectively prevents one from *becoming* unconscious.[33] These measures aim at keeping the conflicts conscious, and that is also a *sine qua non* of the psychotherapeutic procedure. Just as medical treatment appoints the person of the doctor to take over the conflicts of his patients, so Christian practice appoints the Saviour, "in whom we have redemption through his blood, the forgiveness of sins."[34] He is the deliverer and redeemer of our guilt, a God who stands above sin, who "committed no sin, no guile was found on his lips,"[35] who "himself bore our sins in his body on the tree."[36] "So Christ was once sacrificed to take away the sins of many."[37] This God is characterized as being himself innocent and a self-sacrificer. The conscious projection at which Christian education aims therefore brings a double psychic benefit: firstly, one keeps oneself conscious of the conflict ("sin") of two mutually opposing tendencies, thus preventing a known suffering from turning into an unknown one, which is far more tormenting, by being repressed and forgotten; and secondly, one lightens one's burden by surrendering it to God, to whom all solutions are known. But, as we have said, the divine figure is in the first place a psychic image, a complex of archetypal ideas which faith equates with a metaphysical entity. Science has no competence to pass judgment on this equation: on the contrary, it must pursue its explanations without resorting to any such hypostasis. It can only establish that instead of an objective human being there appears an apparently subjective figure, i.e., a complex of ideas. This complex, as experience has shown, possesses a certain functional autonomy and has proved itself to be a psychic existent. That is what psychological experience is primarily concerned with, and to that extent this experience can be an object of science. Science can only establish the existence of psychic factors, and provided that we do not overstep these limits with professions of faith, in all so-called metaphysical problems we find ourselves confronted exclusively with psychic existents. These, in accordance with their nature, are intimately interwoven with the individual personality and are therefore subject to all manner of variations, unlike the postulates of faith whose uniformity and permanence are guaranteed by tradition and by institutional religion. The epistemological boundaries set by the scientific standpoint make it inevitable that the religious figure appears essentially as a psychic factor which can only be separated theoretically from the individual psyche. And the more it is so separated, the more it loses its plasticity and concreteness, since it owes its explicit form and vitality precisely to its intimate connection with the individual psyche. The scientific approach makes the divine figure, which faith posits as being the supreme certainty, into a variable and hardly definable quantity, although it cannot cast doubt on its actuality (in the psychological sense). Science therefore puts, in place of the certainty of faith, the uncertainty of human knowledge. The resultant change of attitude is not without serious consequences for the individual: his conscious mind sees itself isolated in a world of psychic factors, and only the utmost caution and conscientiousness can prevent him from assimilating them and from identifying them with himself. This danger is all the greater because, in his immediate experience of dreams, visions, etc., the religious figures show a marked tendency to appear in the most varied forms; they often clothe themselves so convincingly in the stuff of the individual psyche that it remains a moot point whether they are not in the last resort produced by the subject himself. That is an illusion of the conscious mind, but a very common one.[38] In reality all inner experience springs from the unconscious, over which we have no control. *But the unconscious is nature, which never deceives: only we deceive ourselves*. Thus, inasmuch as the scientific approach disregards metaphysics, basing itself entirely on verifiable experience, it plunges us straight into the uncertainty which is conditioned by the variability of everything psychic. It emphasizes outright the subjectivity of religious experience, thereby offering an open threat to the solidarity of faith. This long-felt and ever-present danger is countered by the institution of the Christian community, whose psychological significance is best expressed in the command in the Epistle of James: “Confess your sins to one another.”[39] Again, it is emphasized as being especially important to preserve the community through mutual love; the Pauline commands leave no doubts on this score:

> Through love be servants of one another.[40]
>
> Let brotherly love continue.[41]
>
> And let us consider how to stir up one another to love and good works, not neglecting to meet together.…[42]

[96] Fellowship in the Christian community appears to be a condition of salvation, or however one chooses to describe the desired state. The First Epistle of John expresses similar views:

> He who loves his brother abides in the light.… But he who hates his brother is in the darkness.…[43]
>
> No man has ever seen God; if we love one another, God abides in us and his love is perfected in us.[44]

[97] We have already referred to the mutual confession of sin and the transference of psychic difficulties to the divine figure. Between it and man there thus arises an intimate bond. Yet man should be bound through love not to God alone, but also to his fellows. The latter relation, indeed, seems to be just as essential as the former. If God dwells in us only when we love our brother, we might be led to suppose that love is even more important than God. This is not so absurd when we consider the words of Hugh of St. Victor:

> You have great power, O Love; you alone could draw God down from heaven to earth. O how strong is your bond with which even God could be bound.… You brought him bound with your bonds, you brought him wounded with your arrows, … you wounded him who was invulnerable, you bound him who was invincible, you drew down him who was immovable, the Eternal you made mortal.… O Love, how great is your victory![45]

> Accordingly, love would seem to be no trifling thing: it is God himself.[46] But, on the other hand, "love" is an extreme example of anthropomorphism and, together with hunger, the immemorial psychic driving-force of humanity. It is, psychologically considered, a function of relationship on the one hand and a feeling-toned psychic condition on the other, which, as we have seen, practically coincides with the God-image. There can be no doubt that love has an instinctual determinant; it is an activity peculiar to mankind, and, if the language of religion defines God as "love," there is always the great danger of confusing the love which works in man with the workings of God. This is an obvious instance of the above-mentioned fact that the archetype is inextricably interwoven with the individual psyche, so that the greatest care is needed to differentiate the collective type, at least conceptually, from the personal psyche. In practice, however, this differentiation is not without danger if human "love" is thought of as the prerequisite for the divine presence (I John 4: 12).

[98] No doubt this presents those who would like to keep the man-to-God relationship free from psychology with no small problem. But for the psychologist the situation is not so complicated. "Love," in his experience, proves to be the power of fate par excellence, whether it manifests itself as base *concupiscentia* or as the most spiritual affection. It is one of the mightiest movers of humanity. If it is conceived as "divine," this designation falls to it with absolute right, since the mightiest force in the psyche has always been described as "God." Whether we believe in God or not, whether we marvel or curse, the word "God" is always on our lips. Anything psychically powerful is invariably called "God." At the same time "God" is set over against man and expressly set apart from him. But love is common to both. It belongs to man in so far as he is its master, and to the daemon if ever he becomes its object or its victim. This means, psychologically, that the libido, regarded as the force of desire and aspiration, as psychic energy in the widest sense, stands in part at the disposal of the ego, and in part confronts the ego autonomously, sometimes influencing it so powerfully that it is either put in a position of unwilling constraint, or else discovers in the libido itself a new and unexpected source of strength. Since the relation of the unconscious to the conscious mind is not merely mechanical or complementary, but rather compensatory, taking its cue from the anfractuosities of the conscious attitude, the intelligent character of this unconscious activity can hardly be denied. Experiences like these make it immediately understandable why the God-image is so often regarded as a personal being.

[99] Now, since a man's *spiritual vocation* in the widest sense has been thrust upon him to an increasing degree by the unconscious,[47] this naturally gave rise to the view that the God-image was a spirit who required man's spirit. This is not an invention of Christianity or of philosophy, but a common human experience to which even the atheist bears witness. (The important thing is *what* he talks about, not whether he agrees with it or not.) The other definition of God therefore asserts: "God is spirit."[48] The pneumatic God-image has been further attenuated as the Logos, and this gives the "love of God" that peculiarly abstract quality which is also apparent in the idea of "Christian love."

[100] It is this "spiritual love," which is actually far more appropriate to the God-image than to man, that is supposed to hold the human community together:

> Welcome one another, therefore, as Christ has welcomed you, for the glory of God.[49]

[101] It is obvious that, since Christ "welcomed" men with "divine" love, men's love for one another should also have, and indeed *can* have, a "spiritual" and "divine" quality. However, it is not so obvious from the psychological point of view, since, as a rule, the energy of an archetype is not at the disposal of the conscious mind. Hence the specifically human forms of love are, very rightly, not regarded as either "spiritual" or "divine." The energy of an archetype communicates itself to the ego only when the latter has been influenced or gripped by an autonomous action of the archetype. From this psychological fact one would have to conclude that the man who practises a spiritual form of love has already been gripped by something akin to a *donum gratiae*, for he could hardly be expected to be capable of usurping, on his own resources, a divine action such as that love is. But by virtue of the *donum amoris* he becomes capable of taking God's place in this respect. It is a psychological fact that an archetype can seize hold of the ego and even compel it to act as it—the archetype—wills. A man can then take on archetypal dimensions and exercise corresponding effects; he can appear in the place of God, so that it is not only possible, but quite sensible, for other men to act towards him as they act towards God. We know that, in the Catholic Church, this possibility has become an institution whose psychological

efficacy cannot be doubted. From this intimate relationship there arises a community of an archetypal order which is distinguished from all other communities by the fact that its aim or purpose is not immanent in mankind and not directed to utilitarian ends, but is a transcendental symbol whose nature corresponds to the peculiarity of the ruling archetype.

[102] The closer relations between men thus made possible by such a community produce a psychological intimacy which touches on the personal instinctual sphere of “human” love and therefore harbours certain dangers. Above all, the power and sex instincts are inevitably constellated. Intimacy creates various short-cuts between people and is only too likely to lead to the very thing from which Christianity seeks to deliver them, namely to those all-too-human attractions and their necessary consequences, which had already been the bane of the highly civilized man at the beginning of our Christian era. Religious experience in antiquity was frequently conceived as bodily union with the deity,[50] and certain cults were saturated with sexuality of every kind. Sexuality was all too close to the relations of people with one another. The moral degeneracy of the first centuries of the Christian era produced a moral reaction which then, in the second and third centuries, after germinating in the darkness of the lowest strata of society, expressed itself at its purest in the two mutually antagonistic religions, Christianity and Mithraism These religions strove after precisely that higher form of social intercourse symbolized by a projected (“incarnate”) idea (the Logos), whereby all the strongest impulses of man—which formerly had flung him from one passion to another and seemed to the ancients like the compulsion of evil stars, *Heimarmene,*[51] or like what we psychologists would call the *compulsion of libido*[52]—could be made available for the maintenance of society. As one example among many others, I would cite St. Augustine’s description of the fate of Alypius, in his *Confessions:*

> But at Carthage the maelstrom of ill morals—and especially the passion for idle spectacles—had sucked him in, his special madness being for gladiatorial shows.… As a result of what he had heard me say, he wrenched himself out of the deep pit in which he had chosen to be plunged and in the darkness of whose pleasures he had been so woefully blinded. He braced his mind and shook it till all the filth of the Games fell away from it and he went no more.…

In pursuit of the worldly career whose necessity his parents were always dinning into his ears, he had gone before me to Rome to study Law; and there he had been, incredibly, carried away again by an incredible passion for gladiatorial shows. He had turned from such things and utterly detested them. But it happened one day that he met some friends and fellow students coming from dinner: and though he flatly refused and vigorously resisted, they used friendly violence and forced him along with them to the amphitheatre on a day of these cruel and murderous Games. He protested: “Even if you drag my body to the place, can you force me to turn my mind and my eyes on the show? Though there, I shall not be there, and so I shall defeat both you and it.”

Hearing this his companions led him on all the faster, wishing to discover whether he could do as he had said. When they had reached the Arena and had got such seats as they could, the whole place was in a frenzy of hideous delight. He closed up the door of his eyes and forbade his mind to pay attention to things so evil. If only he could have stopped his ears too! For at a certain critical point in the fight, the vast roar of the whole audience beat upon him. His curiosity got the better of him, and thinking that he would be able to treat the sight with scorn—whatever the sight might be—he opened his eyes, and was stricken with a deeper wound in the soul than the man he had opened his eyes to see suffered in the body. He fell more miserably than the gladiator whose fall had set the crowd to that roar—a roar which had entered his ears and unlocked his eyes, so that his soul was stricken and beaten down. But in truth the reason was that its courage had so far been only audaciousness, and it was weak because it had relied upon itself when it should have trusted only in You. Seeing the blood he drank deep of the savagery. He did not turn away but fixed his gaze upon the sight. He drank in all the frenzy, with no thought of what had happened to him, revelled in the wickedness of the contest, and was drunk with lust for blood. He was no longer the man who had come there but one of the crowd to which he had come, a fit companion for those who had brought him.

What more need I say? He continued to gaze, shouted, grew hot, and when he departed took with him a madness by which he was goaded to come back again, not only with those who at first took him there, but even more than they and leading on others.[53]

[103] One can take it as certain that man’s domestication cost him the heaviest sacrifices. An age which created the Stoic ideal must doubtless have known why and against what it was set up. The age of Nero provides an effective foil for the celebrated passage from the forty-first letter of Seneca to Lucilius:

> We push one another into vice. And how can a man be recalled to salvation, when he has none to restrain him, and all mankind to urge him on? …

If you see a man who is unterrified in the midst of dangers, untouched by desires, happy in adversity, peaceful amid the storm, who looks down upon men from a higher plane, and views the gods on a footing of equality, will not a feeling of reverence for him steal over you? Will you not say: “This quality is too great and too lofty to be regarded as resembling this petty body in which it dwells. A divine power has descended upon that man.” When a soul rises superior to other souls, when it is under control, when it passes through every experience as if it were of small account, when it smiles at our fears and at our prayers, it is stirred by a force from heaven. A thing like this cannot stand upright unless it be propped by the divine. Therefore, a greater part of it abides in that place from whence it came down to earth. Just as the rays of the sun do indeed touch the earth but still abide at the source from which they are sent, even so the great and hallowed soul, which has

> come down in order that we may have a nearer knowledge of divinity, does indeed associate with us, but still cleaves to its origin; on that source it depends, thither it turns its gaze and strives to go, and it concerns itself with our doings only as a being superior to ourselves.[54]

[104] The men of that age were ripe for identification with the word made flesh, for the founding of a community united by an idea,[55] in the name of which they could love one another and call each other brothers.[56] The old idea of a *μεσίτης*, of a mediator in whose name new ways of love would be opened, became a fact, and with that human society took an immense stride forward. This was not the result of any speculative, sophisticated philosophy, but of an elementary need in the great masses of humanity vegetating in spiritual darkness. They were evidently driven to it by the profoundest inner necessities, for humanity does not thrive in a state of licentiousness.[57] The meaning of these cults—Christianity and Mithraism—is clear: moral subjugation of the animal instincts.[58] The spread of both these religions betrays something of that feeling of redemption which animated their first adherents, and which we can scarcely appreciate today. We can hardly realize the whirlwinds of brutality and unchained libido that roared through the streets of Imperial Rome. But we would know that feeling again if ever we understood, clearly and in all its consequences, what is happening under our very eyes. The civilized man of today seems very far from that. He has merely become neurotic. For us the needs of the Christian community have gone by the board; we no longer understand their meaning. We do not even know against what it is meant to protect us.[59] For enlightened people, the need for religion is next door to neurosis.[60] It must be admitted that the Christian emphasis on spirit inevitably leads to an unbearable depreciation of man’s physical side, and thus produces a sort of optimistic caricature of human nature. He gets too good and too spiritual a picture of himself, and becomes too naïve and optimistic. In two world wars the abyss has opened out again and taught us the most frightful lesson that can be imagined. We now know what human beings are capable of, and what lies in store for us if ever again the mass psyche gets the upper hand. Mass psychology is egoism raised to an inconceivable power, for its goal is immanent and not transcendent.

[105] Let us now turn back to the question from which we started, namely, whether or not Miss Miller has created anything of value with her poem. If we bear in mind the psychological and moral conditions under which Christianity came to birth, in an age when the crudest brutality was an everyday spectacle, we can understand the religious convulsion of the whole personality and the value of a religion that protected people living in the Roman sphere of culture from the visible onslaughts of wickedness. It was not difficult for those people to remain conscious of sin, for they saw it every day spread out before their eyes. Miss Miller not only underestimates her "sins," but the connection between the "bitter inexorable necessity" and her religious product has altogether escaped her. The poem thus loses the living value of a religious work of art. It seems to be not much more than a sentimental rehash of an erotic experience, slyly working itself out on the fringe of consciousness and having about the same ethical value as a dream, which is also none of our doing.

[106] To the degree that the modern mind is passionately concerned with anything and everything rather than religion, religion and its prime object—original sin—have mostly vanished into the unconscious. That is why, today, nobody believes in either. People accuse psychology of dealing in squalid fantasies, and yet even a cursory glance at ancient religions and the history of morals should be sufficient to convince them of the demons hidden in the human soul. This disbelief in the devilishness of human nature goes hand in hand with the blank incomprehension of religion and its meaning. The *unconscious* conversion of instinctual impulses into religious activity is ethically worthless, and often no more than an hysterical outburst, even though its products may be aesthetically valuable. Ethical decision is possible only when one is conscious of the conflict in all its aspects. The same is true of the religious attitude: it must be fully conscious of itself and of its foundations if it is to signify anything more than unconscious imitation.[61]

[107] Through centuries of educational training, Christianity subdued the animal instincts of antiquity and of the ensuing ages of barbarism to the point where a large amount of instinctual energy could be set free for the building of civilization. The effect of this training showed itself, to begin

with, in a fundamental change of attitude, namely in the alienation from reality, the otherworldliness of the early Christian centuries. It was an age that strove after inwardness and spiritual abstraction. Nature was abhorrent to man. One has only to think of the passage in St. Augustine quoted by Jacob Burckhardt:

> And men go forth, and admire lofty mountains and broad seas, … and turn away from themselves.[62]

[108] But it was not only the aesthetic beauty of the world that distracted their senses and lured them away from concentrating on a spiritual and supramundane goal. There were also daemonic or magical influences emanating from nature herself.

[109] The foremost authority on the Mithraic cult, Franz Cumont, describes the classical feeling for nature as follows:

> The gods were everywhere, and they mingled in all the events of daily life. The fire that cooked the food and warmed the bodies of the faithful, the water that allayed their thirst and cleansed them, the very air they breathed, and the light that shone for them, all were objects of their adoration. Perhaps no other religion has ever offered to its votaries, in so high a degree as Mithraism, opportunities for prayer and motives for veneration. When the initiate betook himself in the evening to the sacred grotto concealed in the solitude of the forest, at every step new sensations awakened in his heart some mystical emotion. The stars that shone in the sky, the wind that whispered in the foliage, the spring or brook that hastened murmuring to the valley, even the earth which he trod under his feet, were in his eyes divine, and all surrounding nature evoked in him a worshipful fear of the infinite forces that swayed the universe.[63]

[110] This religious oneness with nature is beautifully described by Seneca:

> When you enter a grove peopled with ancient trees, higher than the ordinary, and shutting out the sky with their thickly intertwining branches, do not the stately shadows of the wood, the stillness of the place, and the awful gloom of this domed cavern then strike you as with the presence of a deity? Or when you see a cave penetrating into the rock at the foot of an overhanging mountain, not made by human hands, but hollowed out to a great depth by nature, is not your soul suffused with a religious fear? We worship the sources of great rivers, we erect altars at the place where a sudden rush of water bursts from the bowels of the earth, warm springs we adore, and certain pools we hold sacred on account of their sombre darkness or their immense depth.[64]

[111] Sharply contrasting with this ancient nature worship is the Christian aversion from the world, as described in the most poignant language in the *Confessions* of St. Augustine:

> What do I love when I love my God? Not the beauty of any bodily thing, not the graciousness of the times, nor the splendour of the light that rejoices the eye, nor the sweet melodies of richly varied songs; not the fragrance of flowers and sweet-smelling ointments and spices, not manna and honey, nor the fair limbs whose embraces are pleasant to the flesh. None of these do I love when I love my God; and yet I love a kind of light, and a kind of melody, and a kind of fragrance, and a kind of savour, and a kind of embracement when I love my God, who is the light and the melody and the fragrance and the savour and the embracement of my inner man; where that light shines into my soul which no space can contain, that melody sounds which no time takes away, that fragrance smells which no wind scatters, that savour tastes which no gluttony diminishes, and that embracement is enjoyed which no satiety can put apart. That is what I love when I love my God.[65]

[112] The world and its beauty had to be shunned, not only because of their vanity and transitoriness, but because love of created nature soon makes man its slave. As St. Augustine says (X, 6): "… they love these things too much and become subject to them, and subjects cannot judge."[66] One would certainly think it possible to love something, to have a positive attitude towards it, without supinely succumbing to it and losing one's power of rational judgment. But Augustine knew his contemporaries, and knew furthermore how much godliness and godlike power dwelt in the beauty of the world.

> Since you alone govern the universe, and without you nothing rises into the bright realm of light, and nothing joyous or lovely can come to be.…[67]

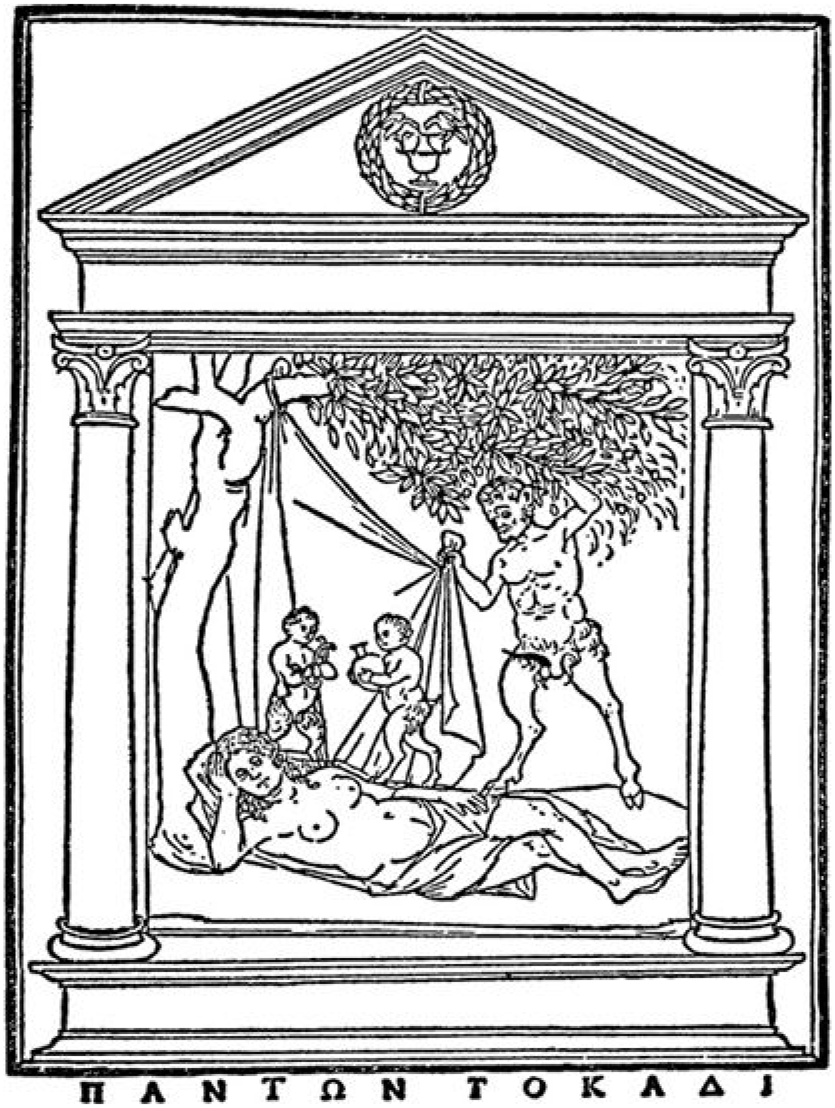

Fig. 1. The Mother of All Living

From the Hypnerotomachia Poliphili, *Venice, 1499*

[113] Thus Lucretius extols “alma Venus” as the ruling principle of nature. To such a *daimonion* man falls an abject victim unless he can categorically reject its seductive influence at the outset. It is not merely a question of sensuality and of aesthetic corruption, but—and this is the point—of paganism and nature-worship. (Fig. 1.) Because gods dwell in created things, man falls to worshipping them, and for that reason he must turn away from them utterly lest he be overwhelmed. In this respect the fate of Alypius is extremely instructive. If the flight from the world is successful, man can then build up an inner, spiritual world which stands firm against the onslaught of sense-impressions. The struggle with the

world of the senses brought to birth a type of thinking independent of external factors. Man won for himself that *sovereignty of the idea* which was able to withstand the aesthetic impact, so that thought was no longer fettered by the emotional effect of sense-impressions, but could assert itself and even rise, later, to reflection and observation. Man was now in a position to enter into a new and independent relationship with nature, to go on building upon the foundations which the classical spirit had laid,[68] and to take up once more the natural link which the Christian retreat from the world had let fall. On this newly-won spiritual level there was forged an alliance with the world and nature which, unlike the old attitude, did not collapse before the magic of external objects, but could regard them in the steady light of reflection. Nevertheless, the attention lavished upon natural objects was infused with something of the old religious piety, and something of the old religious ethic communicated itself to scientific truthfulness and honesty. Although at the time of the Renaissance the antique feeling for nature visibly broke through in art[69] and in natural philosophy,[70] and for a while thrust the Christian principle into the background, the newly-won rational and intellectual stability of the human mind nevertheless managed to hold its own and allowed it to penetrate further and further into depths of nature that earlier ages had hardly suspected. The more successful the penetration and advance of the new scientific spirit proved to be, the more the latter—as is usually the case with the victor—became the prisoner of the world it had conquered. At the beginning of the present century a Christian writer could still regard the modern spirit as a sort of second incarnation of the Logos. “The deeper comprehension of the spirit of nature in modern painting and poetry,” writes Kalthoff, “the living intuition which science is no longer willing to dispense with even in its most arduous endeavours, demonstrate how the Logos of Greek philosophy, which gave to the early Christ-ideal its cosmic position, is divesting itself of its transcendental character and entering upon a new incarnation.”[71] It did not take us long to realize that it was less a question of the incarnation of the Logos than of the descent of the Anthropos or Nous into the dark embrace of Physis. The world had not only been deprived of its gods, but had lost its soul. Through the shifting of interest from the inner to the outer world our knowledge of nature was increased a thousandfold in comparison with earlier ages, but knowledge and experience of the inner world were correspondingly reduced. The religious interest, which ought normally to be the greatest and most decisive factor, turned away from the inner world, and the great figures of dogma dwindled to strange and incomprehensible vestiges, a prey to every sort of criticism. Even modern psychology has the greatest difficulty in vindicating the human soul's right to existence, and in making it credible that the soul is a mode of being with properties that can be investigated, and therefore a suitable object for scientific study; that it is not something attached to an outside, but has an autonomous inside, too, and a life of its own; that it is not just an ego-consciousness, but an existent which in all essentials can only be inferred indirectly. To people who think otherwise, the myths and dogmas of the Church are bound to appear as a collection of absurd and impossible statements. Modern rationalism is a process of sham enlightenment and even prides itself morally on its iconoclastic tendencies. Most people are satisfied with the not very intelligent view that the whole purpose of dogma is to state a flat impossibility. That it could be the symbolic expression of a definite idea with a definite content is something that occurs to hardly anybody. For how can one possibly know what that idea really is! And what "I" do not know simply does not exist. Therefore, for this enlightened stupidity, there is no non-conscious psyche.

[114] *Symbols* are not allegories and not signs: they are images of contents which for the most part transcend consciousness. We have still to discover that such contents are real, that they are agents with which it is not only possible but absolutely necessary for us to come to terms.[72] While making this discovery, we shall not fail to understand what dogma is about, what it formulates, and the reason for its existence.[73]

V

THE SONG OF THE MOTH

[115] Shortly after the events described above, Miss Miller travelled from Geneva to Paris. She says:

> My fatigue on the train was such that I hardly slept an hour. It was horribly hot in the ladies' compartment.

[116] At four o'clock in the morning she noticed a moth fluttering round the light in the carriage. She then tried to go to sleep again. Suddenly the following poem sprang into her mind:

The Moth to the Sun

I longed for thee when first I crawled to consciousness.
My dreams were all of thee when in the chrysalis I lay.
Oft myriads of my kind beat out their lives
Against some feeble spark once caught from thee.
And one hour more—and my poor life is gone;
Yet my last effort, as my first desire, shall be
But to approach thy glory; then, having gained
One raptured glance, I'll die content,
For I, the source of beauty, warmth, and life
Have in his perfect splendor once beheld!

[117] Before we go into the material which Miss Miller offers for an understanding of the poem, we will again cast a glance over the psychological situation in which the poem arose. Some weeks or months appear to have elapsed since the last direct manifestation of the unconscious. About this period we have no information; we know nothing of her moods and fantasies during the interval. If any conclusion is to be drawn from this silence, it is that nothing of real importance has happened during the time between the two poems, and that the new poem is another verbalized fragment reflecting the unconscious working out of

the complex that had been going on for months. It is highly probable that it is concerned with the same conflict as before.[1] The earlier product, the Hymn of Creation, bears, however, little resemblance to the present poem. This has a truly hopeless and melancholy character: moth and sun, two things that never meet. But, we must ask, is a moth really expected to reach the sun? We all know the proverbial saying about the moth that flies into the flame and burns its wings, but we know of no legend about a moth that strives towards the sun. Evidently there is a condensation here of two things that do not really belong together: firstly the moth which flies round the light till it burns its wings; secondly the image of a tiny ephemeral being, the May-fly perhaps, which in pathetic contrast to the eternity of the stars longs for the imperishable light. This image is reminiscent of Faust, where he says:

> Mark, now, the glimmering in the leafy glades
> Of dwellings gilded by the setting sun.
> Now slants the fiery god towards the west,
> Hasting away, but seeking in his round
> New life afar: I long to join his quest,
> On tireless wings uplifted from the ground.
> Then should I see, in deathless evening light,
> The world in cradled stillness at my feet …
> And now at length the sun-god seems to sink,
> Yet stirs my heart with new-awakened might,
> The streams of quenchless light I long to drink,
> Before me day and, far behind, the night,
> The heavens above me, and the waves below:
> A lovely dream, but gone with set of sun.
> Ah me, the pinions by the spirit won
> Bring us no flight that mortal clay can know.[2]

[118] A little later, Faust sees the “black dog scampering through corn and stubble”—the poodle who is the devil himself, the Tempter in whose hellish fires Faust will soon singe his wings. Believing that he was expressing his great longing for the beauty of sun and earth, he “turned away from himself” and fell into the hands of the Evil One.

> Spurn this terrestrial sun,
> Leave, resolute, its loveliness,[3]

> Faust had said to himself but a little while before, in true recognition of his danger—for the worship of Nature and her beauties leads the medieval Christian to pagan thoughts which stand in antagonistic relationship to his conscious religion, just as Mithraism was once the threatening rival of Christianity.[4]

[119] Faust's longing became his ruin. His longing for the other world brought in its train a loathing of life, so that he was on the brink of self-destruction.[5] And his equally importunate longing for the beauties of this world plunged him into renewed ruin, doubt and wretchedness, which culminated in the tragedy of Gretchen's death. His mistake was that he made the worst of both worlds by blindly following the urge of his libido, like a man overcome by strong and violent passions. Faust's conflict is a reflection of the collective conflict at the beginning of the Christian era, but in him, curiously enough, it takes the opposite course. The fearful powers of seduction against which the Christian had to defend himself with his absolute hope in a world to come can be seen from the example of Alypius, to which we have already referred. That civilization was foredoomed, because humanity itself revolted against it. We know that, even before the spread of Christianity, mankind was seized by wild, eschatological hopes of redemption. This mood may well be reflected in Virgil's eclogue:

> Now has come the last age foretold in the song of the Cumaean Sibyl; the great cycle of centuries begins anew. Now the Virgin [6] returns, and the reign of Saturn is restored. Now a new generation comes down from high heaven. Only do thou, chaste Lucina, favour the birth of the child, through whom the iron brood shall cease to be, and a golden race arise throughout the world. Thine own Apollo now is king.… Under thy governance any lingering traces of our guilt shall be wiped out, and the earth shall be freed from its perpetual fear. He shall have the gift of divine life, shall see heroes consort with gods and shall himself be seen mingling with them; he shall rule over a world to which his father's virtues have brought peace.[7]

[120] For many, the cult of asceticism that followed the wholesale expansion of Christianity denoted a new adventure: monasticism and the life of the anchorite. Faust takes the opposite road; for him the ascetic ideal is sheer death. He struggles for liberation and wins life by binding himself over to evil, thereby bringing about the death of what he loves most: Gretchen. He tears himself away from his grief and sacrifices his life in unceasing work, thus saving many lives.[8] His double mission as saviour and destroyer had been hinted at from the beginning:

WAGNER: With what emotion must your noble soul
Receive the acclamations of the crowd! …
FAUST: So, with a nostrum of this hellish sort,
We made these hills and valleys our resort,
And ravaged there more deadly than the pest.
These hands have ministered the deadly bane
To thousands who have perished; I remain
To hear cool murderers extolled and bless’d.[9]

[121] What makes Goethe’s *Faust* so profoundly significant is that it formulates a problem that had been brewing for centuries, just as *Oedipus* did for the Greek sphere of culture: how to extricate ourselves from between the Scylla of world-renunciation and the Charybdis of its acceptance.

[122] The hopeful note struck in the hymn to the Creator-God cannot long be sustained by our author. It is a pose that promises, but does not fulfil. The old longing will come back again, for a peculiar feature of all complexes that are simply left to work themselves out in the unconscious is that they lose nothing of their original affectivity, though their outward manifestations can change almost endlessly. One can therefore take the first poem as an unconscious attempt to solve the conflict by adopting a religious attitude, in much the same way as in earlier centuries people decided their conscious conflicts by the criterion of religion. This attempt fails. There now follows a second attempt, which is decidedly more worldly in tone, and unequivocal in meaning: “one raptured glance,” and then—to die. From the supramundane sphere of religion her gaze turns, as in *Faust*,[10] to “this terrestrial sun.” And already there is mingled in it something with another meaning—the moth that flutters round the light until it burns its wings.

[123] We now pass to what Miss Miller says about the poem:

> This little poem made a profound impression on me. I could not at first find a sufficiently clear and direct explanation of it. But a few days afterwards, having again taken up a philosophical article that I had read in Berlin the previous winter, which had delighted me extremely, and reading it aloud to a friend, I came upon these words: “The same passionate longing of the moth for the star, of man for God.…” I had completely forgotten them, but it seemed to me quite obvious that these were the words that had reappeared in my hypnagogic poem. Moreover, a play

> entitled *The Moth and the Flame*,[11] which I saw a few years ago, also came back to me as another possible source of my poem. You see how often the word *moth* has been impressed upon me!

[124] The profound impression the poem made on the author means that it expresses a correspondingly intense psychic content. In the "passionate longing" we meet the profound yearning of the moth for the star, and of man for God—in other words, the moth is Miss Miller herself. Her final remark that the word "moth" had often been impressed upon her shows how often she had noticed the "moth" as being a suitable name for herself. Her longing for God resembles the longing of the moth for the "star." The reader will remember that this word has already occurred in the earlier material: "When the morning stars sang together," with reference to the ship's officer singing in the night-watch. The passionate longing for God is like that longing for the singing morning star. We pointed out in the previous chapter that this analogy was only to be expected—*si parvis com-ponere magna solebam*.

[125] It is, if you like, shameful and degrading that the more exalted longings of humanity, which alone make us what we are, should be so directly connected with an all-too-human passion. One is therefore inclined, despite the undeniability of the facts, to dispute the connection. What? A helmsman with bronzed skin and black mustachios, and the loftiest ideas of religion? Impossible! We do not doubt the incommensurability of these two objects, but one thing at least they have in common: both are the object of a passionate desire, and it remains to be seen whether the nature of the object alters the quality of the libido, or whether it is the same desire in both cases, i.e., the same emotional process. It is not at all certain psychologically—to use a banal comparison—whether appetite as such has anything to do with the quality of the object desired. Outwardly, of course, it is of some importance *which* object is desired, but inwardly it is at least as important to know what kind of desire it is. Desire can be instinctual, compulsive, uninhibited, uncontrolled, greedy, irrational, sensual, etc., or it may be rational, considered, controlled, co-ordinated, adapted, ethical, reflective, and so on. As regards its psychological evaluation the *how* is more important than the *what—si duo faciunt idem, non est idem*.

[126] The quality of the desire is important because it endows its object with the moral and aesthetic qualities of goodness and beauty, and thus influences our relations with our fellow men and the world in a decisive way. Nature is beautiful because I love it, and good is everything that my feeling regards as good. Values are chiefly created by the quality of one's subjective reactions. This is not to deny the existence of "objective" values altogether; only, their validity depends upon the consensus of opinion. In the erotic sphere, it is abundantly evident how little the object counts, and how much the subjective reaction.

[127] Apparently Miss Miller did not think much of the officer, which is understandable enough from the human point of view—though it did not prevent the relationship from having a deep and lasting effect which even dragged in the Deity. The moods apparently produced by such dissimilar objects can hardly spring from them in reality, but must spring from the subjective experience of love. So when Miss Miller praises God or the sun, she really means her love, the instinct most deeply rooted in human nature.

[128] The reader will remember the chain of associations we adduced in the previous chapter: the singer—the singing morning star—the God of Sound—the Creator—the God of Light—of the sun—of fire—of Love. With the changing of the erotic impression from positive to negative there is a predominance of *light* symbols for the object. In the second poem, where the longing comes out into the open, the object is the terrestrial sun. The libido having turned away from the concrete object, its object has become a psychic one, namely God. Psychologically, however, God is the name for a complex of ideas grouped round a powerful feeling; the feeling-tone is what really gives the complex its characteristic efficacy,[12] for it represents an emotional tension which can be formulated in terms of energy. The light and fire attributes depict the intensity of the feeling-tone and are therefore expressions for the psychic energy which manifests itself as libido. If one worships God, sun, or fire (cf. fig. 4), one is worshipping intensity and power, in other words the phenomenon of psychic energy as such, the libido. Every force and every phenomenon is a special form of energy. Form is both an image and a mode of manifestation. It expresses two things: the energy which takes

shape in it, and the medium in which that energy appears. On the one hand one can say that energy creates its own image, and on the other hand that the character of the medium forces it into a definite form. One man will derive the idea of God from the sun, another will maintain that it is the numinous feelings it arouses which give the sun its godlike significance. The former, by attitude and temperament, believes more in the causal nexus of the environment, the latter more in the spontaneity of psychic experience. I fear it is the old question of which came first, the chicken or the egg. For all that, I incline to the view that in this particular case the psychoenergic phenomenon not only takes precedence, but explains far more than the hypothesis of the causal primacy of the environment.

[129] I am therefore of the opinion that, in general, psychic energy or libido creates the God-image by making use of archetypal patterns, and that man in consequence worships the psychic force active within him as something divine. (Pl. v*a*.) We thus arrive at the objectionable conclusion that, from the psychological point of view, the God-image is a real but subjective phenomenon. As Seneca says: “God is near you, he is with you, he is within you,” or, as in the First Epistle of John, “He who does not love does not know God; for God is love,” and “If we love one another, God abides in us.”[13]

[130] To anyone who understands libido merely as the psychic energy over which he has conscious control, the religious relationship, as we have defined it, is bound to appear as a ridiculous game of hide-and-seek with oneself. But it is rather a question of the energy which belongs to the archetype, to the unconscious, and which is therefore not his to dispose of. This “game with oneself” is anything but ridiculous; on the contrary, it is extremely important. To carry a god around in yourself means a great deal; it is a guarantee of happiness, of power, and even of omnipotence, in so far as these are attributes of divinity. To carry a god within oneself is practically the same as being God oneself. In Christianity, despite the weeding out of the most grossly sensual ideas and symbols, we can still find traces of this psychology. The idea of “becoming a god” is even more obvious in the pagan mystery cults, where the neophyte, after initiation, is himself lifted up to divine status: at the conclusion of the

consecration rites in the syncretistic Isis mysteries [14] he was crowned with a crown of palm leaves, set up on a pedestal, and worshipped as Helios. (Pl. VI.) In a magic papyrus, published by Dieterich as a Mithraic liturgy, there is a ἱερὸς λόγος in which the neophyte says: “I am a star wandering together with you and shining up from the depths.”[15]

[131] In his religious ecstasy the neophyte makes himself the equal of the stars, just as the saint in the Middle Ages put himself, through the stigmata, on a level with Christ. St. Francis of Assist carried the relationship even further by speaking of his brother the sun and his sister the moon.[16]

[132] Hippolytus insists on the future deification of the believer: “You have become God, you will be a companion of God and co-heir in Christ.” He says of the deification: “That is the ‘Know thyself.’ ”[17] Even Jesus proved his divine Sonship to the Jews by appealing to Psalm 82:6: “I have said, Ye are gods” (John 10:34).

[133] This idea of becoming a god is age-old. The old belief relegates it to the time after death, but the mystery cults bring it about in this world. An ancient Egyptian text represents it, very beautifully, as the triumphal song of the ascending soul:

> I am the god Atum, I who alone was.
> I am the god Ra at his first appearing.
> I am the great god who created himself,
> The lord of the gods, to whom no other god is equal.
> I was yesterday and know tomorrow; the battle-ground of the gods was made when I spoke.
> I know the name of that great god who dwells there.
> I am the god Min at his coming forth, whose feathers I place upon my head.[18]
> I am in my country, I come into my city. I am daily together with my father Atum.
> My impurity is driven out, and the sin which was in me is trodden under foot.
> I washed myself in the two great pools which are in Heracleopolis, in which the sacrifices of men are purified for that great god who dwells there.
> I go on my way, where I wash my head in the water of the righteous. I reach this land of the glorified and enter in at the splendid portal.
> You who stand before me, reach me your hands, it is I, I am become one of you. I am daily together with my father Atum.[19]

[134] When man becomes God, his importance and power are enormously increased.[20] That seems to have been its main purpose: to strengthen the individual against his all-too-human weakness and insecurity in personal life. But the strengthening of his power-consciousness is only the outward effect of his becoming God; far more important are the deeper lying processes in the realm of feeling. For whoever introverts libido, i.e., withdraws it from the external object, suffers the necessary consequences of introversion: the libido which is turned inwards, into the subject, reverts to the individual past and digs up from the treasure-house of memory those images glimpsed long ago, which bring back the time when the world was a full and rounded whole. First and foremost are the memories of childhood, among them the imagos of father and mother. These are unique and imperishable, and in adult life not many difficulties are needed to reawaken those memories and make them active. The regressive reactivation of the father- and mother-imagos plays an important role in religion. The benefits of religion are equivalent, in their effects, to the parental care lavished upon the child, and religious feelings are rooted in unconscious memories of certain tender emotions in early infancy—memories of archetypal intuitions, as expressed in the above hymn:

> I am in my country, I come into my city. I am daily together with my father Atum.[21]

[135] The visible father of the world is the sun, the heavenly fire, for which reason father, God, sun, and fire are mythologically synonymous. The well-known fact that in worshipping the sun's strength we pay homage to the great generative force of Nature is the plainest possible evidence—if evidence were still needed—that in God we honour the energy of the archetype. This symbolism is expressed very plastically in the third logos of the Dieterich papyrus: after the second prayer, stars float down towards the neophyte from the disc of the sun—"five-pointed, in great numbers and filling the whole air." "When the sun's disc has opened, you will see an immense circle, and fiery doors which are closed." The neophyte then utters the following prayer:

> Give ear to me, hear me, Lord, who hast fastened the fiery bolts of heaven with thy spirit, double-bodied, fire-ruler, creator of light, fire-breathing, fiery-hearted, shining spirit, rejoicing in fire, beautiful light, Lord of light, fiery-bodied, giver of light, sower of fire, confounding with fire,

> living light, whirling fire, mover of light, hurler of thunderbolts, glorious light, multiplier of light, holder of fiery light, conqueror of the stars, etc.[22]

[136] The invocation is an almost inexhaustible catalogue of light and fire attributes, and for sheer extravagance can only be compared with the endless vociferations about "love" in Christian mysticism. Among the many texts which might be cited I select this passage from Mechthild of Magdeburg (1212–77):

> Ah Lord! love me greatly, love me often and long! For the more continuously Thou lovest me, the purer I shall be; the more fervently Thou lovest me, the more lovely I shall be; the longer Thou lovest me the more holy I shall become, even here on earth.

[137] God answers:

> That I love thee continuously is My Nature
> For I Myself am Love;
> That I love thee fervently is My Desire
> For I long to be greatly loved.
> That I love thee long comes from My Eternity
> For I am everlasting and without end.[23]

[138] Religious regression makes use of the parental imago, but only as a symbol—that is to say, it clothes the archetype in the image of the parents, just as it bodies forth the archetype's energy by making use of sensuous ideas like fire, light, heat,[24] fecundity, generative power, and so on. In mysticism the inwardly perceived vision of the Divine is often nothing but sun or light, and is rarely, if ever, personified. (Fig. 2.) For example, there is this significant passage in the Mithraic liturgy: "The path of the visible gods will appear through the disc of the sun, who is God my father."[25]

[139] Hildegarde of Bingen (1100–1178) declares:

> But the light I see is not local, but is everywhere, and brighter far than the cloud which supports the sun. I can in no way know the form of this light, just as I cannot see the sun's disc entire. But in this light I see at times, though not often, another light which is called by me the living light, but when and in what manner I see this I do not know how to say. And when I see it all weariness and need is lifted from me, and all at once I feel like a simple girl and not like an old woman.[26]

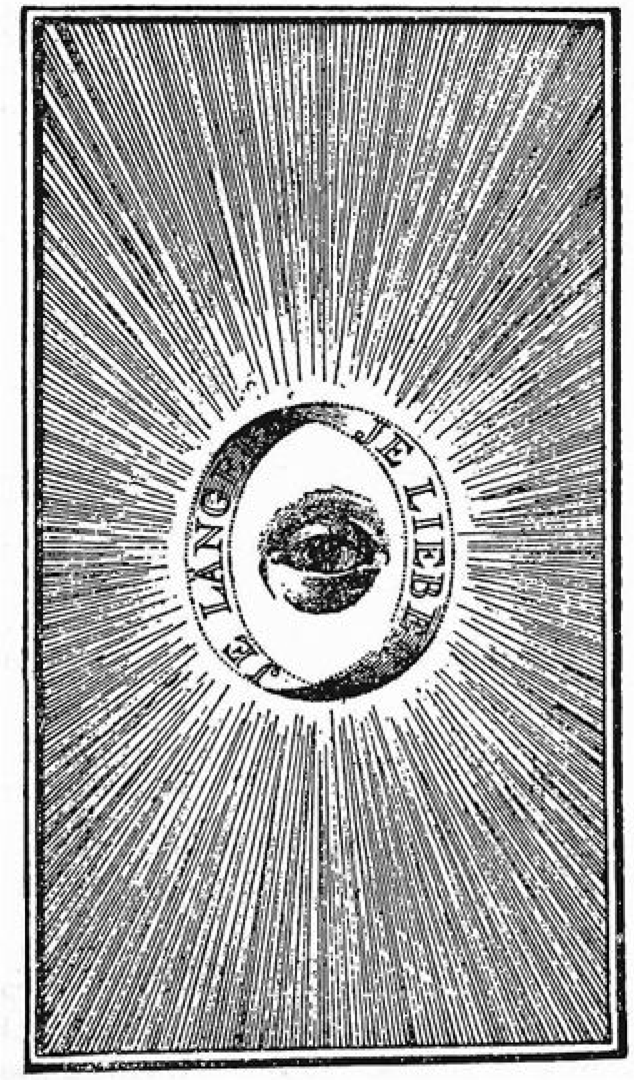

Fig. 2. The Eye of God

Frontispiece to Jakob Böhme, Seraphinisch Blumengärtlein, *Amsterdam, 1700*

[140] Symeon, the "New Theologian" (970–1040), says:

> My tongue lacks words, and what happens in me my spirit sees clearly but does not explain. It sees the Invisible, that emptiness of all forms, simple throughout, not complex, and in extent infinite. For it sees no beginning, and it sees no end, and is entirely unconscious of any middle, and does not know what to call that which it sees. Something complete appears, it seems to me, not indeed with the thing itself, but through a kind of *participation*. For you enkindle fire from fire, and you receive the whole fire; but this thing remains undiminished and undivided as before. Similarly, that which is imparted separates itself from the first, and spreads like something corporeal into many lights. But this is something spiritual, immeasurable, indivisible, and inexhaustible. For it is not separated when it becomes many, but remains undivided, and is in me, and rises in my poor heart like a sun or circular disc of the sun, like light, for it is a light.[27]

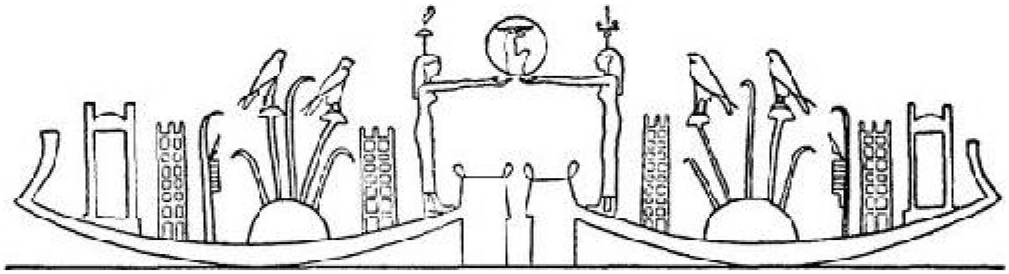

Fig. 3. The Voyage of the Sun: The Western Goddess in the Barge of Evening gives the Sun-disc to the Eastern Goddess in the Barge of Morning
Late Egyptian

[141] That the thing perceived as an inner light, as the sun of the other world, is an emotional component of the psyche, is clear from Symeon's words:

> And questing after it, my spirit sought to comprehend the splendour it had seen, but found it not as a creature and could not get away from created things, that it might embrace that uncreated and un-comprehended splendour. Nevertheless it wandered everywhere and strove to behold it. It searched through the air, it wandered over the heavens, it crossed the abysses, it searched, so it seemed, to the ends of the world.[28] But in all that it found nothing, for all was created. And I lamented and was sorrowful, and my heart burned, and I lived as one distraught in mind. But it came as it was wont, and descending like a luminous cloud, seemed to envelop my whole head, so that I cried out dismayed. But flying away again it left me alone. And when I wearily sought it, I realized suddenly that it was within me, and in the midst of my heart it shone like the light of a spherical sun.[29]

[142] In Nietzsche's "Glory and Eternity" we meet with essentially the same symbolism:

Hush!
I see vastness!
And of vasty things
One should not speak—
Save in vast words! Well then:
Grandiloquize, charmed wisdom mine!

Look up:
There roll the star-strewn seas,
Night, stillness, deathly silent roar!
Behold, a sign:
Slowly, from endless space.
A glittering constellation floats towards me.[30]

[143] It is not surprising that Nietzsche’s great solitude should have called awake certain images which the old cults had exalted as religious ideas. In the visions of the Mithraic liturgy we move among ideas of a very similar kind, which can now be understood without difficulty as ecstatic libido-symbols:

> But after you have said the second prayer, where silence is twice commanded, then whistle twice and click twice with the tongue, and immediately you will see stars coming down from the disc of the sun, five-pointed, in large numbers and filling the whole air. But say once again *Silence! Silence!*[31]

[144] The whistling and clicking with the tongue are archaic devices for attracting the theriomorphic deity. Roaring has a similar significance: “You are to look up at him and give forth a long roar, as with a horn, using all your breath and pressing your sides, then kiss the amulet” etc.[32] “My soul roars with the voice of a hungry lion,” says Mechthild of Magdeburg. “As the hart panteth after the water brooks, so panteth my soul after thee, O God” (Psalm 42:1). As so often happens, the ceremony has dwindled to a mere figure of speech. Schizophrenia, however, infuses new life into the old usage, as in the case of the “bellowing miracle”[33] described by Schreber, who in this way gave God, sadly uninformed about the affairs of humanity, notice of his existence.

[145] Silence is commanded, then the vision of light is revealed. The similarity between the situation of the neophyte and Nietzsche’s poetic vision is very striking. Nietzsche says “constellation”; but constellations, as we know, are mainly theriomorphic or anthropomorphic. The papyrus has *ἀστέρας πενταδακτυλιαίους* (literally, ‘five-fingered stars,’ similar to the ‘rosy-fingered Dawn’), which is a pure anthropomorphic image. Hence, if one looked long enough, one would expect that a living being would form itself out of the fiery image, a “constellation” in the form of a man or animal—for libido-symbols do not stop at sun, light, and fire, but have a whole range of other expressions at their disposal. I leave Nietzsche to speak for himself:

The Beacon

Here, where the island grew amid the seas,
Like a high-towering sacrificial rock,
Here under the darkling heavens

Zarathustra lights his mountain-fires.…

This flame with its grey-white belly
Hisses its desire into the chill distances,
Stretching its neck to ever purer heights—
A snake upreared in impatience:

This emblem I set up before me.
This flame is my own soul,
Insatiable for new distances,
Sending upwards its blaze of silent heat.…

To all the lonely I now throw my fishing-rod:
Give answer to the flame’s impatience,
Let me, the fisher on high mountains,
Catch my seventh, last solitude! [34]

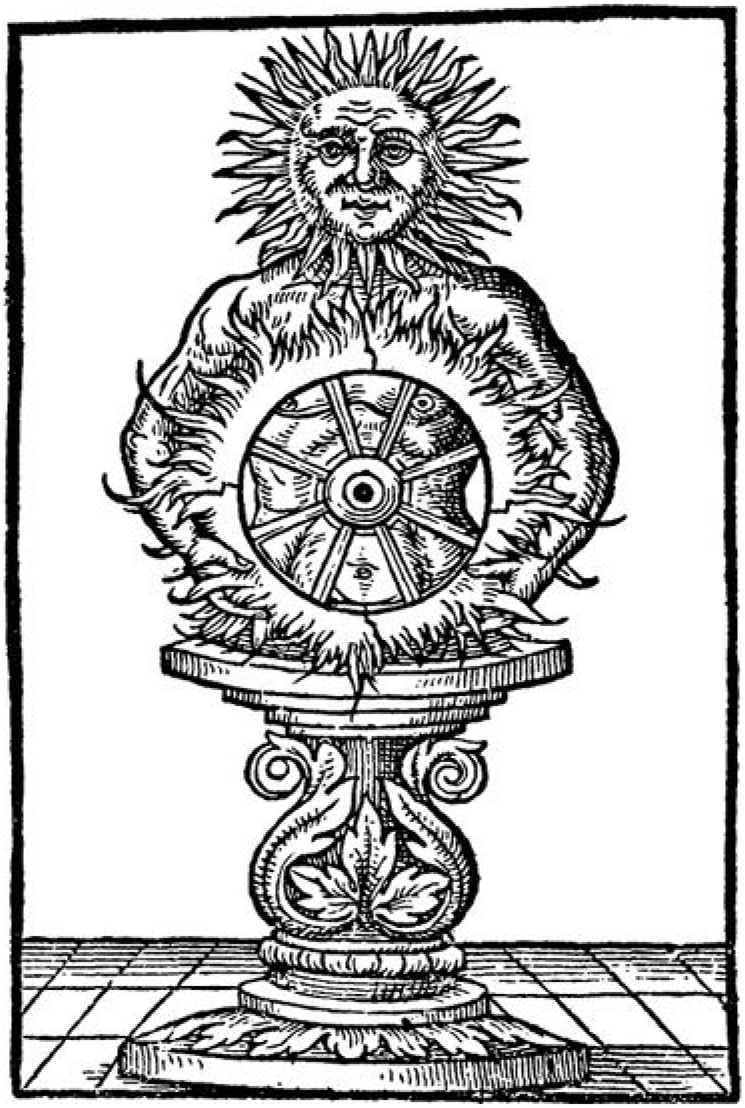

Fig. 4. Germanic sun-idol

From the Sachsisch Chronicon, *1596*

[146] Here the libido turns into fire, flame, and a snake. The Egyptian symbol of the "living sun-disc"—a disc with the two intertwined Uraeus serpents (pl. VII)—is a combination of both these libido analogies. And the sun-disc with its fructifying warmth is analogous to the fructifying warmth of love. The comparison of libido with sun and fire is essentially a "comparison by analogy." There is also a "causative" element in it, because sun and fire, as beneficent forces, are objects of human love (for instance the sun-hero Mithras is called the "well-beloved"). In Nietzsche's poem the comparison is also a causative one, but this time in the opposite sense: the snake comparison is unmistakably phallic. The phallus is the source of life and libido, the creator and worker of miracles, and as such it was worshipped everywhere. We have, therefore, three ways of symbolizing the libido:

1. *Comparison by analogy:* as sun and fire (fig. 4).
2. *Causative Comparisons:* (*a*) with objects. The libido is characterized by its object, e.g., the health-giving sun. (*b*) with the subject. The libido is characterized by its instrument or by something analogous to it, e.g., the phallus or its analogue, the snake.

[147] To these three fundamental forms of comparison there must be added a fourth: the *functional comparison*, where the "tertium comparationis" is *activity*. For instance, the libido is fertile like the bull, dangerous like the lion or boar (because of the fury of its passion), and lustful like the ever-rutting ass, and so on. These comparisons represent so many possible ways of symbolization, and for this reason all the infinitely varied symbols, so far as they are libido-images, can be reduced to a common denominator—the libido and its properties. This psychological simplification is in accord with the historical attempts of civilization to unify and simplify, in a higher synthesis, the infinite number of gods. We come across this attempt even in ancient Egypt, where the boundless polytheism of local demon-worship finally made simplification necessary. The various local gods, such as Amon of Thebes, Horus of the East, Horus of Edfu, Khnum of Elephantine, Atum of Heliopolis, etc., were all identified with the sun-god, Ra.[35] In the hymns to the sun, the composite deity Amon-Ra-Harmachis-Atum was invoked as "the only

god, in truth, the living one."[36] Amenophis IV (XVIIIth Dynasty) went the furthest in this direction: he replaced all former gods by the "great living disc of the sun," whose official title was: "Lord of the Two Horizons, exulting on the horizon in his name: Glittering Splendour, which is in the sun-disc." "In fact," adds Erman,[37] "it was not a sun-god who was adored, but the material sun itself, which, by the hands of his beams,[38] bestowed upon living beings that 'eternal life' which was in him." (Fig. 5; cf. also fig. 7 and pl. I *b.)*

[148] Amenophis IV achieved, by his reforms, a psychologically valuable work of interpretation. He united all the bull,[39] ram,[40] crocodile,[41] and pile-dwelling[42] gods into the sun-disc, and made it clear that their various attributes were compatible with those of the sun.[43] A similar fate overtook Hellenic and Roman polytheism as a result of the syncretistic strivings of later centuries.

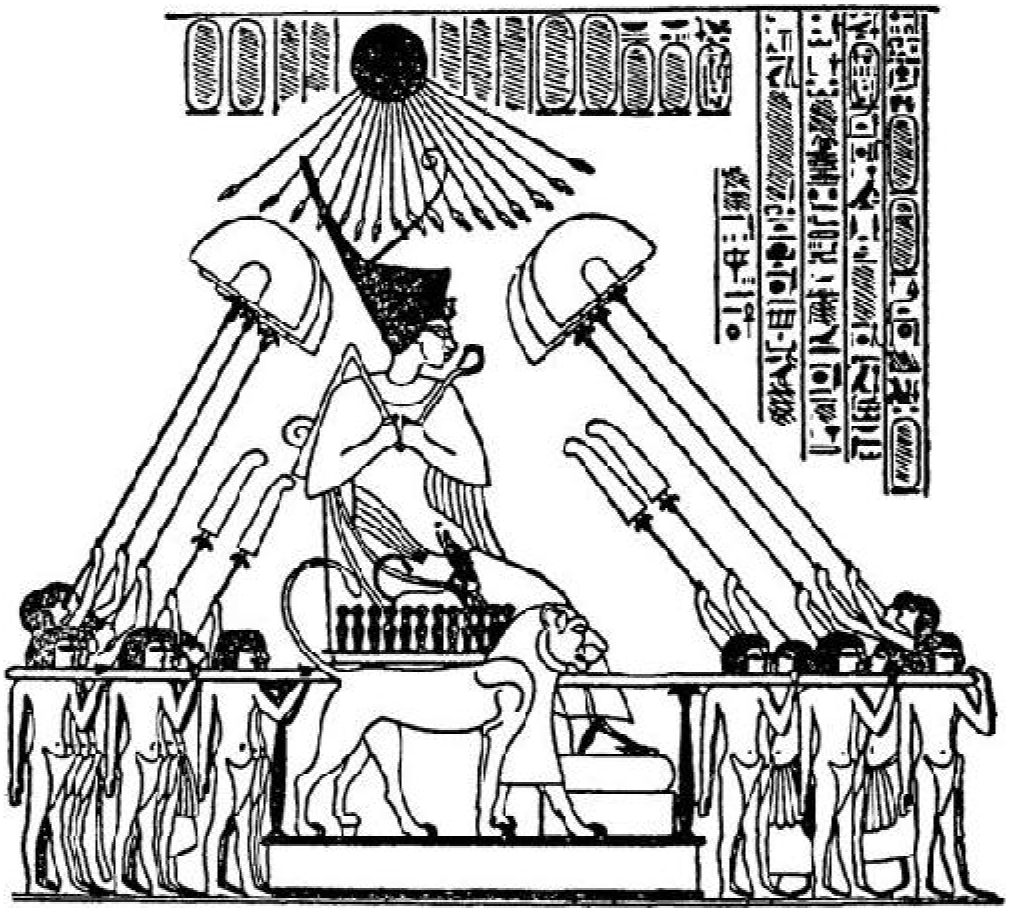

Fig. 5. The life-giving Sun: Amenophis IV on his throne

Relief, Egypt

An excellent illustration of this is the beautiful prayer of Lucius to the Queen of Heaven (the moon):

> Queen of heaven, whether thou be named Ceres, bountiful mother of earthly fruits, or heavenly Venus, or Phoebus' sister, or Proserpina, who strikest terror with midnight ululations …, thou that with soft feminine brightness dost illume the walls of all cities.…[44]

[149] These attempts to reunite the basic archetypes after polytheism had multiplied them into countless variants and personified them as separate gods prove that such analogies must forcibly have obtruded themselves at a fairly early date. Herodotus is full of references of this kind, not to mention the various systems known to the Greco-Roman world. But the striving for unity is opposed by a possibly even stronger tendency to create multiplicity, so that even in strictly monotheistic religions like Christianity the polytheistic tendency cannot be suppressed. The deity is divided into three parts, and on top of that come all the heavenly hierarchies. These two tendencies are in constant warfare: sometimes there is only one God with countless attributes, sometimes there are many gods, who are simply called by different names in different places, and who personify one or the other attribute of their respective archetype, as we have seen in the case of the Egyptian gods. This brings us back to Nietzsche's poem "The Beacon." The flame was there used as a libido-image, theriomorphically represented (fig. 6) as a snake (and at the same time as an image of the soul: [45] "This flame is my own soul"). We saw, however, that the snake is to be taken not only in the phallic sense, but as an attribute of the sun's image (the Egyptian uraeus) and as a libido-symbol. It is therefore possible for the sun-disc to be equipped not only with hands and feet (fig. 7; cf. also pl. IB), but also with a phallus. We find proof of this in a strange vision in the Mithraic liturgy: "And likewise the so-called tube, the origin of the ministering wind. For you will see hanging down from the disc of the sun something that looks like a tube."[46]

Fig. 6. The mercurial serpent, alchemical symbol of psychic transformation
From Barchusen, Elementa chemiae*, 1718*

[150] This remarkable vision of a tube hanging down from the sun would be absolutely baffling in a religious text were it not that the tube has a phallic significance: the tube is the origin of the wind. The phallic significance of this attribute is not apparent at first sight, but we must remember that the wind, just as much as the sun, is a fructifier and creator.[47] There is a painting by an early German artist which depicts the fructification of Mary in the following manner: a sort of tube or hose-pipe comes down from heaven and passes under the robe of the Virgin, and we can see the Holy Ghost flying down it in the form of a dove to fecundate the Mother of God.[48] (Cf. pl. VIII; cf. also pl. III.)

[151] I once came across the following hallucination in a schizophrenic patient: he told me he could see an erect phallus on the sun. When he

moved his head from side to side, he said, the sun's phallus moved with it, and *that was where the wind came from*. This bizarre notion remained unintelligible to me for a long time, until I got to know the visions in the Mithraic liturgy. The hallucination, it seems to me, also throws light on a very obscure passage in the text which comes immediately after the one quoted above:

> εἰς δὲ τὰ μέρη τὰ πρὸς λίβα ἀπέραντον οἷον ἀπηλιώτην. ‘Εὰν ᾖ κεκληρωμένος εἰς τὰ μέρη τοῦ ἀπηλιώτον ὁ ἕτερος, ὁμοίως εἰς τὰ μέρη τὰ ἐκείνου ὅψει τὴν ἀποφορὰν τοῦ ὁράματος

[152] Mead translates as follows:

> And towards the regions Westward, as though it were an infinite East-Wind. But if the other wind, toward the regions of the East, should be in service, in like fashion shalt thou see, toward the regions of that (side), the converse of the sight.[49]

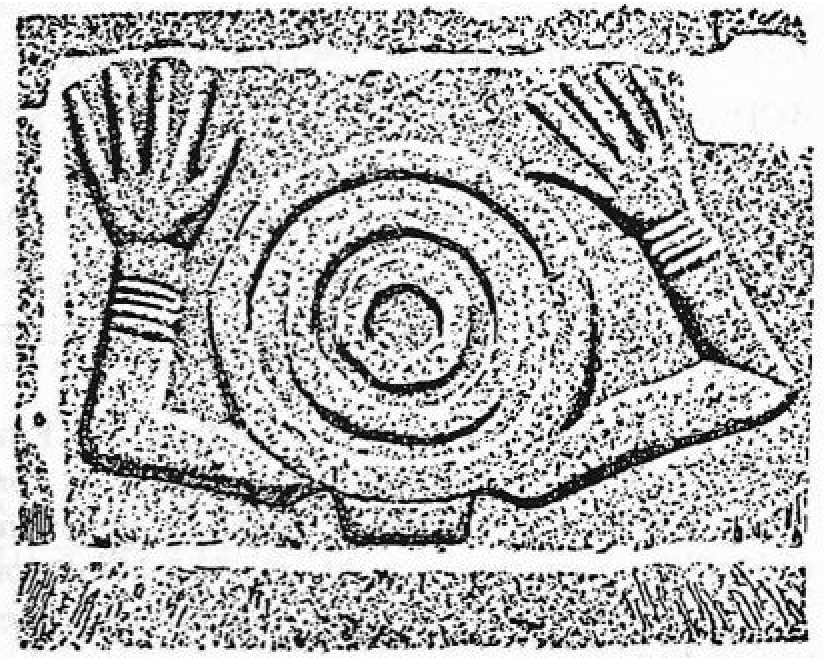

Fig. 7. The Sun's hands
Relief, Spitalkirche, Tübingen

[153] Basing ourselves on Dieterich, we would say:

> And towards the regions westward it is as though there were an infinite east wind. But if the other wind should prevail towards the regions of the east, you will in like manner see the vision veering in that direction.[50]

[154] “Οραμα is the vision, the thing seen; ἀποφορἀ really means a carrying away, or taking away. The probable meaning is that the vision

moves or is carried hither and thither according to the direction of the wind. The thing seen is the tube, the "origin of the wind," which turns now to the east, now to the west, and presumably generates the corresponding wind. The vision of our schizophrenic tallies in the most astonishing way with this movement of the tube.[51] This remarkable case prompted me to undertake various researches on mentally deranged Negroes.[52] I was able to convince myself that the well-known motif of Ixion on the sun-wheel (cf. pl. XLVI*b*) did in fact occur in the dream of an uneducated Negro. These and other experiences like them were sufficient to give me a clue: it is not a question of a specifically racial heredity, but of a universally human characteristic. Nor is it a question of *inherited ideas*, but of a functional disposition to produce the same, or very similar, ideas. This disposition I later called the *archetype*.[53]

[155] The various attributes of the sun appear one after another in the Mithraic liturgy. After the vision of Helios, seven maidens appear with faces like snakes, and seven gods with the faces of black bulls. The maiden can easily be understood as a causative libido analogy. The serpent in Paradise is usually thought of as feminine, as the seductive principle in woman, and is represented as feminine by the old painters.[54] (Fig. 8.) Through a similar change of meaning the snake in antiquity became a symbol of the earth, which has always been considered feminine. The bull is a notorious fertility-symbol. In the Mithraic liturgy, the bull-gods are called *κνωδακοφύλακς*, 'guardians of the world's axis,' who turn the "axle of the wheel of heaven." The same attribute falls also to Mithras: sometimes he is the *Sol invictus* itself, sometimes the companion and ruler of Helios (cf. pls. XXIVa, XL); in his right hand he holds "the constellation of the Bear, which moves and turns the heavens round." The bull-headed deities, *ἱεροὶ καὶ ἄλκιμοι νεανίαι*, 'sacred and valorous youths' like Mithras himself, who is also given the attribute νεώτερος, 'the younger one,' are merely aspects of the same divinity. The chief god of the Mithraic liturgy is himself divided into Mithras and Helios (cf. pl. XXIV*a*), both of whom have closely related attributes. Speaking of Helios, the text says:

Fig. 8. The Tempting of Eve
From the Speculum humanae salvationis, *Augsburg, 1470*

> You will see a god, young, comely, with glowing locks, in a white tunic and a scarlet cloak, with a fiery crown.[55]

> And of Mithras:

> You will see a god of enormous power, with a shining countenance, young, with golden hair, in a white tunic and a golden crown, with wide trousers, holding in his right hand the golden shoulder of a young bull. This is the constellation of the Bear, which moves and turns the heavens round, wandering upwards and downwards according to the hour. Then you will see lightnings leap from his eyes, and from his body, stars.[56]

[156] If we equate gold and fire as essentially similar, then there is a large measure of agreement in the attributes of the two gods. To these mystical pagan ideas we must add the visions of the Johannine Apocalypse, which are probably not much older:

> And I turned to see the voice that spake with me. And being turned, I saw seven golden candlesticks; and in the midst of the seven candlesticks one like unto the Son of man, clothed with a garment down to the foot, and girt about the paps with a golden girdle. His head and his hairs were white like wool, as white as snow; and his eyes were as a flame of fire; and his feet like unto fine brass, as if they burned in a furnace; and his voice as the sound of many waters. And he had in his right hand seven stars:[57] and out of his mouth went a sharp two-edged sword:[58] and his countenance was as the sun shineth in his strength. [Rev. 1:12ff.]
>
> And I looked, and behold a white cloud, and upon the cloud one sat like unto the Son of Man, having on his head a golden crown,[59] and in his hand a sharp sickle. [Rev. 14: 14.]

> His eyes were as a flame of fire, and on his head were many crowns.… And he was clothed with a vesture dipped in blood.…[60] And the armies which were in heaven followed him upon white horses, clothed in fine linen, white and clean.[61] [Rev. 19: 12ff.]

[157] There is no need to assume any direct connection between the Apocalypse and Mithraic ideas. The visionary images in both texts are drawn from a source not limited to any one place, but found in the souls of many people. The symbols it produces are far too typical to belong to any one individual.

Fig. 9. Mithras with sword and torch

Roman sculpture

[158] I mention these images in order to show how the light-symbolism gradually develops,[62] as the intensity of the vision increases, into the figure of the sun-hero, the "well-beloved."[63] These visionary processes are the psychological roots of the sun-coronations in the mystery

religions. (Pl. VI.) The religious experience behind the ritual had congealed into liturgy, but it was a regular enough occurrence to be accepted as a valid outward form. In view of all this it is evident that the early Church stood in a special relationship to Christ as the *Sol novus*, and on the other hand had some difficulty in shaking off the pagan symbol. Philo Judaeus saw in the sun the image of the divine Logos, or even the deity itself.[64] And in a hymn of St. Ambrose, Christ is invoked with the words "O sol salutis," etc. At the time of Marcus Aurelius, Melito, in his treatise Περὶ *λούτρου*, called Christ "The sun of the East.… As the only sun he rose in the heavens."[65]

[159] Even more explicit is a passage from Pseudo-Cyprian:

> O how wonderful is Providence, that Christ should be born on the same day on which the sun was created, the 28th of March! Therefore the prophet Malachi said to the people concerning him: "The Sun of righteousness shall rise, with healing in his wings." This is the sun of righteousness in whose wings healing was foreshown.[66]

[160] In a treatise attributed to St. John Chrysostom, "De solstitiis et aequinoctiis," it is said:

> But the Lord, too, was born in wintertime, on the 25th of December, when the ripe olives are pressed in order to produce the oil for anointing, the chrism. They also call this day the birthday of the Unconquerable One. Yet who is as unconquerable as our Lord, who overthrew and conquered death itself? As for their calling it the birthday of the sun, he himself is the sun of righteousness of whom the prophet Malachi spoke.—He is the Lord of light and darkness, the creator and separator, who is called by the prophet the sun of righteousness.[67]

[161] According to the testimony of Eusebius of Alexandria, Christians, too, shared in the worship of the rising sun until well into the fifth century:

> Woe to those who prostrate themselves before the sun and the moon and the stars! For I know of many who prostrate themselves and pray to the sun. At sunrise they address their prayers to him, saying: "Have pity on us!" And this is done not only by sun-worshippers and heretics, but by Christians too, who forget their faith and mix with heretics.[68]

[162] Augustine remonstrated with his Christian followers, telling them emphatically: "Christ the Lord has not been made [like unto] the sun, but is he through whom the sun is made."[69]

[163] Not a few traces of sun-worship are preserved in ecclesiastical art,[70] for instance the nimbus round the head of Christ, and the haloes of the saints. Numerous fire- and light-symbols are attributed to the saints in Christian legend.[71] The twelve apostles, for example, were likened to the twelve signs of the zodiac and were therefore represented each with a star over his head.[72] No wonder the heathen, as Tertullian reports, took the sun for the God of the Christians! “Some, in a more human and probable way, believe the Sun to be our god.”[73] Among the Manichees the sun actually was God. One of the most remarkable records of this period, an amalgam of pagan-Asiatic, Hellenistic, and Christian beliefs, is the ’ Εξήγησις περὶ τῶν ἐν Περσίδι πραχθέντων,[74] a book of fables which affords deep insight into syncretistic symbolism. There we find the following magical dedication: Διὶ ‘Ηλίῳ θεῷ μεγάλῳ βασιλεῖ ‘Ιησοῦ.[75] In certain parts of Armenia, Christians still pray to the rising sun, that it may “let its foot rest on the face of the worshipper.”[76]

Fig. 10. Serpent representing the orbit of the moon

Assyrian boundary stone, Susa

[164] Under the symbol of “moth and sun” we have dug deep down into the historical layers of the psyche, and in the course of our excavations have uncovered a buried idol, the sun-hero, “young, comely, with

glowing locks and fiery crown," who, forever unattainable to mortal man, revolves round the earth, causing night to follow day, and winter summer, and death life, and who rises again in rejuvenated splendour to give light to new generations. For him the dreamer longs with her very soul, for him the "soul-moth" burns her wings.

[165] The ancient civilizations of the Near East were familiar with a sun-worship dominated by the idea of the dying and resurgent god—Osiris (cf. fig. 23), Tammuz, Attis-Adonis,[77] Christ, Mithras,[78] and the phoenix. The beneficent as well as the destroying power was worshipped in the fire. The forces of nature are always two-faced, as is plainly the case with the God of Job. This ambivalence brings us back to Miss Miller's poem. Her recollections as to its antecedents bear out our earlier supposition that the image of the moth and the sun is a condensation of two ideas, one of which we have just discussed. The other is the idea of the moth and the flame. As the title of a play, about whose contents the author tells us absolutely nothing, "The Moth and the Flame" could easily have the hackneyed meaning of flying round the flame of passion until one's wings are burned. This passionate longing has two sides: it is the power which beautifies everything, but, in a different set of circumstances, is quite as likely to destroy everything. Hence a violent desire is either accompanied by anxiety at the start, or is remorselessly pursued by it. All passion is a challenge to fate, and what it does cannot be undone. Fear of fate is a very understandable phenomenon, for it is incalculable, immeasurable, full of unknown dangers. The perpetual hesitation of the neurotic to launch out into life is readily explained by his desire to stand aside so as not to get involved in the dangerous struggle for existence. But anyone who refuses to experience life must stifle his desire to live—in other words, he must commit partial suicide. This explains the death-fantasies that usually accompany the renunciation of desire. Miss Miller had already given vent to these fantasies in her poem, and she now comments:

> I had been reading a selection of Byron's poems that pleased me greatly and that I often dipped into. Moreover, there is a great similarity of rhythm between my two last lines, "For I, the source, etc." and these two of Byron's:
>
> "Now, let me die as I have lived in faith

Nor tremble tho’ the Universe should quake!”

[166] This reminiscence, the last link in her chain of associations, corroborates the death-fantasies born of renunciation. The quotation comes—a point not mentioned by Miss Miller—from an unfinished poem of Byron’s called “Heaven and Earth.” The passage reads:

> Still blessed be the Lord,
> For what is past,
> For that which is:
> For all are his,
> From first to last—
> Time, space, eternity, life, death—
> The vast known and immeasurable unknown,
> He made, and can unmake;
> And shall *I*, for a little gasp of breath,
> Blaspheme and groan?
> No; let me die, as I have lived, in faith,
> Nor quiver, though the universe may quake! [79]

[167] These words form part of a panegyric or prayer spoken by a “mortal” who is in headlong flight before the oncoming Deluge. Quoting them, Miss Miller puts herself in a similar situation: she hints that her own feelings are very like the hopeless despair of the unfortunates who saw themselves threatened by the rising waters. She thus allows us to peer into the dark abyss of her longing for the sun-hero. We see that her longing is in vain, for she too is a mortal, momentarily upborne on the wings of her longing into the light and then sinking down to death—or should we perhaps say, *driven by deadly fear* to climb higher and higher, like the people in the flood, and yet despite the most desperate struggles irretrievably doomed to destruction. One is forcibly reminded of the closing scene in *Cyrano de Bergerac:*

> CYRANO: But since Death comes,
> I meet him still afoot, and sword in hand! …
> What say you? It is useless? Ay, I know!
> But who fights ever hoping for success?
> I fought for lost cause, and for fruitless quest! …
> I know that you will lay me low at last.[80]

[168] Her human expectations are futile, because her whole longing is directed towards the Divine, the “well-beloved,” who is worshipped in the sun’s image. The existing material makes it clear that there is no question of any conscious decision or choice on her part: it is rather that she is confronted, against her will and inclinations, with the disquieting fact that a divine hero has stepped into the shoes of the handsome officer. Whether this betokens a good thing or a bad remains to be seen.

[169] Byron’s “Heaven and Earth” is a “mystery, founded on the following passage in Genesis: ‘And it came to pass … that the sons of God saw the daughters of men, that they were fair; and they took them wives of all which they chose.’”[81] Besides that, Byron used as a motto for his poem the following words from Coleridge: “And woman wailing for her demon-lover.”[82] The poem is composed of two major episodes, one psychological, the other telluric: a passion that breaks down all barriers, and the terrors of the unleashed forces of Nature. The angels Sami-asa and Azaziel burn with sinful love for the beautiful daughters of Cain, Anah and Aholibamah, and thus break through the barrier between mortals and immortals. Like Lucifer, they rebel against God, and the archangel Raphael raises his voice in warning:

> But man hath listen’d to his voice,
> And ye to woman’s—beautiful she is,
> The serpent’s voice less subtle than her kiss.
> The snake but vanquish’d dust; but she will draw
> A second host from heaven, to break heaven’s law.[83]

[170] The power of God is menaced by the seductions of passion; heaven is threatened with a second fall of angels. If we translate this projection back into the psychological sphere from whence it came, it would mean that the good and rational Power which rules the world with wise laws is threatened by the chaotic, primitive force of passion. Therefore passion must be exterminated, which means, in mythological projection, that the race of Cain and the whole sinful world must be wiped out, root and branch, by the Flood. That is the inevitable result of a passion that sweeps away all barriers. It is like the sea breaking through its dykes, like the waters of the deep and the torrential rains,[84] the creative, fructifying,

"motherly" waters, as Indian mythology calls them. Now they depart from their natural courses and surge over the mountain-tops and engulf all living things. As a power which transcends consciousness the libido is by nature daemonic: it is both God and devil. If evil were to be utterly destroyed, everything daemonic, including God himself, would suffer a grievous loss; it would be like performing an amputation on the body of the Deity. Raphael's lament over the rebel angels, Samiasa and Azaziel, suggests as much:

> Why
> Cannot this earth be made, or be destroy'd,
> Without involving ever some vast void
> In the immortal ranks?

[171] Passion raises a man not only above himself, but also above the bounds of his mortality and earthliness, and by the very act of raising him, it destroys him. This "rising above himself" is expressed mythologically in the building of the heaven-high tower of Babel that brought confusion to mankind,[85] and in the revolt of Lucifer. In Byron's poem it is the overweening ambition of the race of Cain, whose strivings make the stars subservient and corrupt the sons of God themselves. Even if a longing for the highest is legitimate in itself, the sinful presumption and inevitable corruption lie in the very fact that it goes beyond the fixed human boundaries. The longing of the moth is not made pure by reaching for the stars, nor does it cease to be a moth on account of such noble aspirations. Man continues to be man. Through excess of longing he can draw the gods down into the murk of his passion.[86] He seems to be raising himself up to the Divine, but in so doing he abandons his humanity. Thus the love of Anah and Aholibamah for their angels becomes the ruin of gods and men. Their impassioned invocation of the angels is an exact parallel to Miss Miller's poem:

> ANAH: [87] Seraph!
> From thy sphere!
> Whatever star[88] contain thy glory;
> In the eternal depths of heaven
> Albeit thou watchest with "the seven";
> Though through space infinite and hoary

Before thy bright wings worlds be driven,
    Yet hear!
Oh! think of her who holds thee dear!
And though she nothing is to thee,
Yet think that thou art all to her.…

Eternity is in thine ears,
Unborn, undying beauty in thine eyes;
With me thou canst not sympathize,
Except in love, and there thou must
Acknowledge that more loving dust
Ne’er wept beneath the skies.
Thou walk’st thy many worlds,[89] thou see’st
The face of him who made thee great,
As he hath made of me the least
Of those cast out from Eden’s gate;
Yet, Seraph dearl
    Oh hear!
For thou hast loved me, and I would not die
Until I know what I must die in knowing,
That thou forgett’st in thine eternity
Her whose heart death could not keep from o’erflowing
For thee, immortal essence as thou art!
Great is their love who love in sin and fear;
And such, I feel, are waging in my heart
A war unworthy: to an Adamite
Forgive, my Seraph! that such thoughts appear,
For sorrow is our element.…

    The hour is near
Which tells me we are not abandon’d quite.
    Appear! Appear!
    Seraph!
My own Azaziel! be but here,
And leave the stars to their own light.…

AHOLIBAMAH: I call thee, I await thee, and I love thee.…
Though I be form’d of clay,
And thou of beams
More bright than those of day
On Eden’s streams,
Thine immortality cannot repay

With love more warm than mine
My love. There is a ray [90]
In me, which, though forbidden yet to shine,
I feel was lighted at thy God’s and thine.[91]
It may be hidden long: death and decay
Our mother Eve bequeath’d us—but my heart
Defies it: though this life must pass away,
Is *that* a cause for thee and me to part? …

I can share all things, even immortal sorrow;
For thou hast ventured to share life with *me*,
And shall *I* shrink from thine eternity?
No! though the serpent’s sting should pierce me thorough,
And thou thyself wert like the serpent, coil
Around me still![92] and I will smile,
And curse thee not; but hold
Thee in as warm a fold.
… descend, and prove
A mortal’s love
For an immortal.…

[172] The apparition of both angels which follows the invocation is, as always, a glorious vision of light:

AHOLIBAMAH: The clouds from off their pinions flinging,
As though they bore tomorrow’s light.

ANAH: But if our father see the sight!
AHOLIBAMAH: He would but deem it was the moon
Rising unto some sorcerer’s tune
An hour too soon.…

ANAH: Lo! they have kindled all the west,
Like a returning sunset; lo!
On Ararat’s late secret crest
A mild and many-colour’d bow,
The remnant of their flashing path,
Now shines!

[173] At the sight of this rainbow-hued vision both women are filled with longing and expectation, and Anah makes use of a pregnant simile. Once

more the abyss opens, and we catch a brief but terrifying glimpse of the theriomorphic nature of the mild god of light:

> … and now, behold! it hath
> Return’d to night, as rippling foam,
> Which the leviathan hath lash’d
> From his unfathomable home,
> When sporting on the face of the calm deep,
> Subsides soon after he again hath dash’d
> Down, down, to where the ocean’s fountains sleep.

[174] Leviathan—we remember this prize exhibit that tips the scales of Yahweh’s justice so heavily against Job. There, where the deep fountains of the ocean are, dwells Leviathan; from there the all-destroying flood ascends, the tidal wave of animal passion. The choking, heart-constricting surge of instinct is projected outwards as a mounting flood to destroy everything that exists, so that a new and better world may arise from the ruins of the old:

> JAPHET: The eternal Will
> Shall deign to expound this dream
> Of good and evil; and redeem
> Unto himself all times, all things;
> And, gather’d under his almighty wings,
> Abolish hell!
> And to the expiated Earth
> Restore the beauty of her birth.…
>
> SPIRITS: And when shall take effect this wondrous spell?
>
> JAPHET: When the Redeemer cometh; first in pain,
> And then in glory.…
>
> SPIRITS: New times, new climes, new arts, new men; but still
> The same old tears, old crimes, and oldest ill,
> Shall be amongst your race in different forms;
> But the same moral storms
> Shall oversweep the future, as the waves
> In a few hours the glorious giants’ graves.[93]

[175] Japhet’s prognostications have an almost prophetic meaning for our poetess and must therefore be understood on the “subjective level.”[94]

With the death of the moth in the light the danger has been removed for the time being, though the problem is still far from solved. The conflict must begin again from the beginning; but this time there is a promise in the air, a premonition of the redeemer, the “well-beloved,” who mounts to the zenith with the sun and then sinks again into night and the cold darkness of winter—the young dying god, who has ever been our hope of renewal and of the world to come.

II

I

INTRODUCTION

[176] Before I enter upon the contents of this second part, it seems necessary to cast a backward glance over the singular train of thought which the analysis of the poem “The Moth to the Sun” has revealed. Although this poem is very different from the preceding “Hymn of Creation,” closer investigation of the longing for the sun has led us into a realm of mythological ideas that are closely related to those considered in the first poem: the Creator God, whose dual nature was plainly apparent in the case of Job, has now taken on an astromythological, or rather an astrological, character. He has become the sun, and thus finds a natural expression that transcends his moral division into a Heavenly Father and his counterpart the devil. The sun, as Renan has observed, is the only truly “rational” image of God, whether we adopt the standpoint of the primitive savage or of modern science. In either case the sun is the father-god from whom all living things draw life; he is the fructifier and creator, the source of energy for our world. The discord into which the human soul has fallen can be harmoniously resolved through the sun as a natural object which knows no inner conflict. The sun is not only beneficial, but also destructive; hence the zodiacal sign for August heat is the ravaging lion which Samson[1] slew in order to rid the parched earth of its torment. Yet it is in the nature of the sun to scorch, and its scorching power seems natural to man. It shines equally on the just and the unjust, and allows useful creatures to flourish as well as the harmful. Therefore the sun is perfectly suited to represent the visible God of this world, i. e., the creative power of our own soul, which we call libido, and whose nature it is to bring forth the useful and the harmful, the good and the bad. That this comparison is not just a matter of words can be seen from the teachings of the mystics: when they descend into the depths of their own being they find “in their heart” the image of the sun, they find their own

life-force which they call the “sun” for a legitimate and, I would say, a *physical* reason, because our source of energy and life actually *is* the sun. Our physiological life, regarded as an energy process, is entirely solar. The peculiar nature of this solar energy as inwardly perceived by the mystic is made clear in Indian mythology. The following passages, referring to Rudra,[2] are taken from the Shvetashvatara Upanishad:

> There is one Rudra only, they do not allow a second, who rules all the worlds by his powers. Behind all creatures he stands, the Protector; having created them, he gathers all beings together at the end of time.
>
> He has eyes on all sides, faces on all sides, arms on all sides, feet on all sides. He is the one God who created heaven and earth, forging all things together with his hands and wings.
>
> You who are the source and origin of the gods, the ruler of all, Rudra, the great seer, who of old gave birth to the Golden Seed—give us enlightenment! [3]

[177] Behind these attributes we can discern the All-Creator, and behind him the sun, who is winged and scans the world with a thousand eyes.[4] (Cf. fig. 11.) This is confirmed by the following passages, which bring out the important point that God is contained in the individual creature:

> Beyond this is Brahma, the highest, hidden in the bodies of all, encompassing all. Those who know him as the Lord become immortal.
>
> I know this mighty Person (purusha), who is like to the sun, transcendent over darkness. Those who know him truly pass beyond death; by no other road can they go.
>
> He is the face, the head, the neck of all, he dwells in the heart of all things, all-pervading, bountiful, omnipresent, kindly.

[178] The all-powerful God, who is “like to the sun,” is in every one of us, and whoever knows him is immortal.[5] Following the text, we come upon further attributes which tell us in what form Rudra dwells in man:

Fig. 11. Bes, with Horus-eyes
Bronze figure, Egypt, c. 6th century B.C.

> A mighty Lord is Purusha, spurring on the highest in us to purest attainment, inexhaustible light.
>
> That Person, no bigger than a thumb, the inner Self, seated forever in the heart of man, is revealed by the heart, the thought, the mind. They who know That, become immortal.
>
> Thousand-headed, thousand-eyed, thousand-footed is Purusha. He encompasses the earth on every side and rules over the ten-finger space.
>
> That Person is this whole world, whatever has been and what will be. He is Lord of immortality, he is whatever grows by food.

[179] There is a famous parallel passage in the Katha Upanishad:

> That Person in the heart, no bigger than a thumb, burning like flame without smoke, maker of past and future, the same today and tomorrow, that is Self.[6]

[180] We know that Tom Thumbs, dactyls, and Cabiri have a phallic aspect, and this is understandable enough, because they are personifications of creative forces, of which the phallus, too, is a symbol. It represents the libido, or psychic energy in its creative aspect. The same is true of many

other sexual images which are found not only in dreams and fantasies but in everyday speech. In neither case should they be taken literally, for they are not to be understood semiotically, as *signs* for definite things, but as *symbols*. A symbol is an indefinite expression with many meanings, pointing to something not easily defined and therefore not fully known. But the sign always has a fixed meaning, because it is a conventional abbreviation for, or a commonly accepted indication of, something known. The symbol therefore has a large number of analogous variants, and the more of these variants it has at its disposal, the more complete and clear-cut will be the image it projects of its object. The same creative force which is symbolized by Tom Thumb, etc., can also be represented by the phallus or by numerous other symbols (pl. XI*b*), which delineate further aspects of the process underlying them all. Thus the *creative dwarfs* toil away in secret; the *phallus*, also working in darkness, begets a living being; and the *key* unlocks the mysterious forbidden door behind which some wonderful thing awaits discovery. One thinks, in this connection, of “The Mothers” in *Faust:*

> MEPHISTOPHELES: Congratulations, before you part from me!
> You know the devil, that is plain to see.
> Here, take this key.
>
> FAUST: That little thing! But why?
> MEPHISTOPHELES: First grasp it; it is nothing to decry.
>
> FAUST: It glows, it shines, increases in my hand![7]
>
> MEPHISTOPHELES: How great its worth, you soon shall understand.
> The key will smell the right place from all others:
> Follow it down, it leads you to the Mothers![8]

[181] Here the devil again puts into Faust’s hand the marvellous tool, as once before when, in the form of the black dog, he introduced himself to Faust as:

> Part of that power which would

Ever work evil, but engenders good.[9]

[182] What he is describing here is the libido, which is not only creative and procreative, but possesses an intuitive faculty, a strange power to "smell the right place," almost as if it were a live creature with an independent life of its own (which is why it is so easily personified). It is purposive, like sexuality itself, a favourite object of comparison. The "realm of the Mothers" has not a few connections with the womb (fig. 12), with the matrix, which frequently symbolizes the creative aspect of the unconscious. This libido is a force of nature, good and bad at once, or morally neutral. Uniting himself with it, Faust succeeds in accomplishing his real life's work, at first with evil results and then for the benefit of mankind. In the realm of the Mothers he finds the tripod, the Hermetic vessel in which the "royal marriage" is consummated. But he needs the phallic wand in order to bring off the greatest wonder of all—the creation of Paris and Helen.[10] The insignificant-looking tool in Faust's hand is the dark creative power of the unconscious, which reveals itself to those who follow its dictates and is indeed capable of working miracles.[11] This paradox appears to be very ancient, for the Shvetashvatara Upanishad (19, 20) goes on to say of the dwarf-god, the cosmic *purusha:*

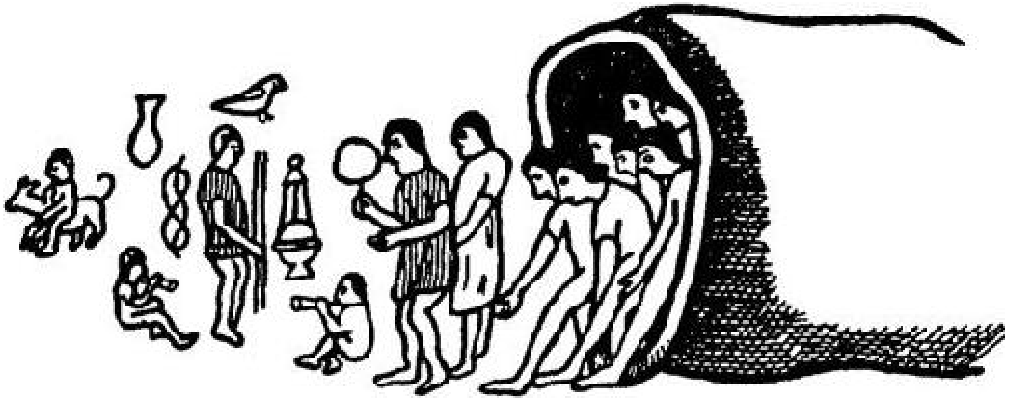

Fig. 12. The birth-giving orifice
From a Mexican lienzo

> Without feet, without hands, he moves, he grasps; eyeless he sees, earless he hears; he knows all that is to be known, yet there is no knower of him. Men call him the Primordial Person, the Cosmic Man.
>
> Smaller than small, greater than great.…

[183] The phallus often stands for the creative divinity, Hermes being an excellent example. It is sometimes thought of as an independent being, an idea that is found not only in antiquity but in the drawings of children and artists of our own day. So we ought not to be surprised if certain phallic characteristics are also to be found in the seers, artists, and wonder-workers of mythology. Hephaestus, Wieland the Smith, and Mani (the founder of Manichaeism, famous also for his artistic gifts), had crippled feet. The foot, as I shall explain in due course, is supposed to possess a magical generative power. The ancient seer Melampus, who is said to have introduced the cult of the phallus, had a very peculiar name —Blackfoot,[12] and it also seems characteristic of seers to be blind. Ugliness and deformity are especially characteristic of those mysterious chthonic gods, the sons of Hephaestus, the Cabiri,[13] to whom mighty wonder-working powers were ascribed. (Fig. 13.) Their Samothracian cult was closely bound up with that of the ithyphallic Hermes, who according to Herodotus was brought to Attica by the Pelasgians. They were called μειάλοι θεοί, 'great gods.' Their near relatives were the Idaean dactyls (fingers or else Tom Thumbs[14]), to whom the mother of the gods had taught the blacksmith's art. ("Follow it down, it leads you to the Mothers!") They were the first Wise Men, the teachers of Orpheus, and it was they who invented the Ephesian magic formulae and the musical rhythms.[15] The characteristic disparity which we noted in the Upanishads and *Faust* crops up again here, since the giant Hercules was said to be an Idaean dactyl. Also the colossal Phrygians, Rhea's technicians,[16] were dactyls. The two Dioscuri are related to the Cabiri; [17] they too wear the queer little pointed hat, the pileus,[18] which is peculiar to these mysterious gods and was thenceforward perpetuated as a secret mark of identification. Attis and Mithras both wore the pileus. (Cf. figs. 9, 20.) It has become the traditional headgear of our infantile chthonic gods today, the pixies and goblins.

[184] The dwarf motif brings us to the figure of the divine boy, the *puer aeternus, παίς*, the young Dionysus, Jupiter Anxurus, Tages, etc. In the Theban vase-painting already mentioned (fig. 14), there is a bearded Dionysus who is designated as ΚΑΒΙΡΟΣ, together with the figure of a boy labelled ΠΑΙΣ, followed by a caricatured boy's figure labelled as

ΠΡΛΤΟΛΑΟΣ, and then another bearded caricature labelled ΜΙΤΟΣ.[19] ΜΊτος really means ‘thread,’ but in Orphic speech it stands for semen. It is conjectured that this group corresponded to a set of cult-images in the sanctuary. The conjecture is supported by what we know of the history of the cult, which is supposed to have been originally a Phoenician cult of father and son,[20] an old and a young Cabir who were more or less assimilated to the Greek gods. The double figure of the adult and infant Dionysus lends itself particularly well to this assimilation. One might also call it the cult of the big and little man. Now Dionysus, under his various aspects, is a god in whose cult the phallus occupied a prominent position, as for instance in the worship of the Argive Dionysus-bull. Moreover the phallic herm of the god gave rise to a personification of the phallus of Dionysus in the form of the god Phales, who was nothing but a Priapus. He was called *έταίρος* or *σύγκωμος Βακχίου*.[21] The paradox of great and small, giant and dwarf in the Upanishadic text is expressed less drastically here as man and boy, or father and son. The motif of deformity (cf. fig. 13), which constantly appears in the Cabiric cult, is also present in the vase-painting, where the parallel figures to Dionysus and Παίς are the caricatured Μίτος and ΊΙρατόλαος.[22] Just as formerly the difference in size led to their separation, so now they are separated by deformity.

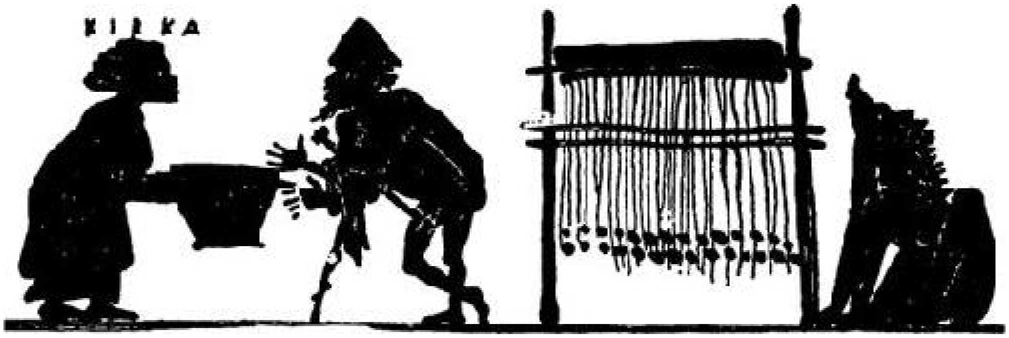

Fig. 13. Odysseus as a Cabiric dwarf, with Circe
From a bowl by the Cabiri Painter (?), c. 400 B.C.

[185] All this goes to show that though the term “libido,” introduced by Freud, is not without a sexual connotation,[23] an exclusively sexual definition of this concept is one-sided and must therefore be rejected. Appetite and compulsion are the specific features of all impulses and

automatisms. No more than the sexual metaphors of common speech can the corresponding analogies in instinctual processes, and the symptoms and dreams to which they give rise, be taken literally. The sexual theory of psychic automatisms is an untenable prejudice. The very fact that it is impossible to derive the whole mass of psychic phenomena from a single instinct forbids a one-sided definition of “libido.” I use this term in the general sense in which it was understood by the classical authors. Cicero gives it a very wide meaning:

Fig. 14. The banquet of the Cabir
From a bowl by the Cabiri Painter, c. 435 B.C.

> They hold that from two kinds of expected good arise desire and delight, in the sense that delight is concerned with present good, and desire with future good … since desire, being tempted and en-flamed, is carried away towards what seems good.… For all men naturally pursue those things that seem good and shun their opposites. Wherefore, as soon as anything presents itself that seems good, nature herself impels them to obtain it. If this is done with moderation and prudence, the Stoics call that kind of striving *βονλησις*, and we call it *will*. In their opinion this is found only in the wise man, and they define it as follows: will is a rational desire, but when it is divorced from reason and is too violently aroused, that is “libido,” or unbridled desire, which is found in all fools.[24]

[186] Here *libido* means a ‘want’ or a ‘wish,’ and also, in contradistinction to the ‘will’ of the Stoics, ‘unbridled desire.’ Cicero uses it in this sense when he says: “[Gerere rem aliquam] libidine, non ratione” (to do something from wilful desire and not from reason).[25] Similarly Sallust: “Iracundia pars est libidinis” (rage is a part of desire), or, in a milder and more general sense which comes closer to our use of the word: “Magisque in decoris armis et militaribus equis, quam in scortis atque conviviis libidinem habebant” (they took more pleasure in fine weapons and war-horses than in whores and drinking parties).[26] Or again: “Quod

si tibi bona libido fuerit patriae" (if you have a proper concern for your country).[27] The use of *libido* is so general that the phrase "libido est scire" merely means 'I like,' 'it pleases me.'[28] In the phrase "aliquam libido urinae lacessit," *libido* has the meaning of 'urge.' It can also have the nuance of 'lasciviousness.' St. Augustine aptly defines *libido* as a "general term for all desire" and says:

> There is a lust for revenge, which is called rage; a lust for having money, which is called avarice; a lust for victory at all costs, which is called stubbornness; a lust for self-glorification, which is called boastfulness. There are many and varied kinds of lust, some of which are specifically named, others not. For who could easily give a name to the lust for domination, which, as we know from the civil wars, is nevertheless very powerful in the minds of tyrants?[29]

[187] For him libido denotes an appetite like hunger and thirst, and so far as sexuality is concerned he says: "Pleasure is preceded by an appetite that is felt in the flesh, a kind of desire like hunger and thirst."[30] This very wide use of the term in the classics coincides with the etymological context:

[188] *Libido* or *lubido* (with *libet*, formerly *lubet*), 'it pleases'; *libens* or *lubens*, 'gladly, willingly'; Skr. *lúbhyati*, 'to experience violent longing,' *lôbhayati*, 'excites longing,' *lubdha-h*, 'eager,' *lôbha-h*, 'longing, eagerness'; Goth. *liufs*, OHG. *liob*, 'love.' Also associated with Goth. *lubains*, 'hope,' and OHG. *lobôn*, *loben*, *lob*, 'praise, glory'; OBulg. *ljubiti*, 'to love,' *ljuby*, 'love,' Lith. *liáupsinti*, 'to praise.' [31]

[189] We can say, then, that the concept of libido in psychology has functionally the same significance as the concept of energy in physics since the time of Robert Mayer.[32]

II

THE CONCEPT OF LIBIDO

[190] Freud introduced his concept of libido in his *Three Essays on the Theory of Sexuality*,[1] and there, as we have said, he defined it *sexually*. The libido appears subject to displacement, and in the form of "libidinal affluxes" can communicate itself to various other functions and regions of the body which in themselves have nothing to do with sex. This fact led Freud to compare the libido with a stream, which is divisible, can be dammed up, overflows into collaterals, and so on.[2] Thus, despite his definition of libido as sexuality, Freud does not explain "everything" in terms of sex, as is commonly supposed, but recognizes the existence of special instinctual forces whose nature is not clearly known, but to which he was bound to ascribe the faculty of taking up these "libidinal affluxes." At the back of all this lies the hypothetical idea of a "bundle of instincts,"[3] in which the sexual instinct figures as a partial instinct. Its encroachment into the sphere of other instincts is a fact of experience.[4] The resultant Freudian theory, which held that the instinctual forces of a neurotic system correspond to the libidinal affluxes taken up by other, non-sexual, instinctual functions,[5] has become the keystone of the psychoanalytical theory of neurosis and the dogma of the Viennese school. Later, however, Freud was forced to ponder whether libido might not in the end coincide with *interest* in general. (Here I would remark that it was a case of paranoid schizophrenia that gave rise to these considerations.) The operative passage, which I set down word for word, runs:

> A third consideration which arises from the views that have been developed in these pages is as follows. Are we to suppose that a general detachment of the libido from the external world would be an effective enough agent to account for the "end of the world"? Or would not the ego-cathexes which still remained in existence have been sufficient to maintain *rapport* with the external world? To meet this difficulty we should either have to assume that what we call libidinal cathexis (that is, interest emanating from erotic sources) coincides with interest in

> general, or we should have to consider the possibility that a very widespread disturbance in the distribution of the libido may bring about a corresponding disturbance in the egocathexes. But these are problems which we are still quite helpless and incompetent to solve. It would be otherwise if we could start out from some well-grounded theory of instincts; but in fact we have nothing of the kind at our disposal. We regard instinct as being the concept on the frontier-line between the somatic and the mental, and see in it the psychical representative of organic forces. Further, we accept the popular distinction between ego-instincts and a sexual instinct; for such a distinction seems to agree with the biological conception that the individual has a double orientation, aiming on the one hand at self-preservation and on the other at the preservation of the species. But beyond this are only hypotheses which we have taken up—and are quite ready to drop again—in order to help us to find our bearings in the chaos of the obscurer processes of the mind. What we expect from the psycho-analytic investigations of pathological mental processes is precisely that they shall drive us to some conclusions on questions connected with the theory of instincts. These investigations, however, are in their infancy and are only being carried out by isolated workers, so that the hopes we place in them must still remain unfulfilled.[6]

[191] Nevertheless, Freud finally decides that the paranoidal alteration is sufficiently explained by the recession of sexual libido. He says:

> It therefore appears to me far more probable that the paranoic's altered relation to the world is to be explained entirely or in the main by the loss of his libidinal interest.[7]

[192] In this passage Freud broaches the question of whether the well-known loss of reality in paranoia and schizophrenia,[8] to which I have drawn attention in my *Psychology of Dementia Praecox*,[9] is to be traced back solely to the recession of the "libidinal condition," or whether this condition ordinarily coincides with "objective interest." It can hardly be supposed that the normal "fonction du réel," to use Janet's term,[10] is maintained only through affluxes of libido or erotic interest. The fact is that in very many cases reality disappears entirely, so that the patient shows no trace of psychological adaptation. (In these states, reality has been buried under the contents of the unconscious.) One is compelled to admit that not only the erotic interest, but all interest whatsoever, has completely disappeared except for a few feeble flickers, and with it the man's whole relation to reality. If the libido were really nothing but sexuality, what would happen in the case of eunuchs? In their case it is precisely the "libidinal" interest that has been cut off, but they do not necessarily react with schizophrenia. The term "afflux of libido" connotes something that is highly questionable. Many apparently sexual contents and processes are mere metaphors and analogies, as for instance

"fire" for passion, "heat" for anger, "marriage" for a bond or union, etc. Presumably no one imagines that all plumbers who connect up male and female pipe-joints, or all electricians who work with male and female outlets, are blessed with particularly potent "affluxes of libido"?

[193] Earlier, in *The Psychology of Dementia Praecox*, I made use of the term "psychic energy," because what is lacking in this disease is evidently more than erotic interest as such. If one tried to explain the loss of relationship, the schizophrenic dissociation between man and world, purely by the recession of eroticism, the inevitable result would be to inflate the idea of sexuality in a typically Freudian manner. One would then be forced to say that every relationship to the world was in essence a sexual relationship, and the idea of sexuality would become so nebulous that the very word "sexuality" would be deprived of all meaning. The fashionable term "psychosexuality" is a clear symptom of this conceptual inflation. But in schizophrenia far more is lacking to reality than could ever be laid at the door of sexuality in the strict sense of the word. The "fonction du réel" is absent to such a degree as to include the loss of certain instinctual forces which cannot possibly be supposed to have a sexual character, for no one in his senses would maintain that reality is nothing but a function of sex! And even if it were, the introversion of libido in the neuroses would necessarily be followed by a loss of reality comparable with that which occurs in schizophrenia. But that is far from being the case. As Freud himself has pointed out, introversion and regression of sexual libido leads, at the worst, to neurosis, but not to schizophrenia.

[194] The attitude of reserve which I adopted towards the sexual theory in the preface to *The Psychology of Dementia Praecox*, despite the fact that I recognized the psychological mechanisms pointed out by Freud, was dictated by the general position of the libido theory at that time. The theory as it then stood did not permit me to explain functional disturbances which affect the sphere of other instincts just as much as that of sex, solely in the light of a one-sided sexual theory. An interpretation in terms of energy seemed to me better suited to the facts than the doctrine set forth in Freud's *Essays on the Theory of Sexuality*. It allowed me to identify "psychic energy" with "libido." The latter term

denotes a desire or impulse which is unchecked by any kind of authority, moral or otherwise. Libido is appetite in its natural state. From the genetic point of view it is bodily needs like hunger, thirst, sleep, and sex, and emotional states or affects, which constitute the essence of libido. All these factors have their differentiations and subtle ramifications in the highly complicated human psyche. There can be no doubt that even the highest differentiations were developed from simpler forms. Thus, many complex functions, which today must be denied all trace of sexuality, were originally derived from the reproductive instinct. As we know, an important change occurred in the principles of propagation during the ascent through the animal kingdom: the vast numbers of gametes which chance fertilization made necessary were progressively reduced in favour of assured fertilization and effective protection of the young. The decreased production of ova and spermatozoa set free considerable quantities of energy which soon sought and found new outlets. Thus we find the first stirrings of the artistic impulse in animals, but subservient to the reproductive instinct and limited to the breeding season. The original sexual character of these biological phenomena gradually disappears as they become organically fixed and achieve functional independence. Although there can be no doubt that music originally belonged to the reproductive sphere, it would be an unjustified and fantastic generalization to put music in the same category as sex. Such a view would be tantamount to treating of Cologne Cathedral in a text-book of mineralogy, on the ground that it consisted very largely of stones.

[195] Consequently, to speak of libido as the urge to propagation is to remain within the confines of a view which distinguishes libido from hunger in the same way that the instinct for the preservation of the species is distinguished from the instinct for self-preservation. In nature, of course, this artificial distinction does not exist. There we see only a continuous life-urge, a will to live which seeks to ensure the continuance of the whole species through the preservation of the individual. Thus far our conception of libido coincides with Schopenhauer’s Will, inasmuch as a movement perceived from outside can only be grasped as the manifestation of an inner will or desire. This throwing of psychological perceptions into material reality is known in philosophy as

"introjection."[11] Through introjection one's world picture becomes subjectivized, and it is to this same process that the physical concept of force owes its existence. As Galileo aptly remarked, its origin is to be sought in the subjective perception of our own muscular power. Similarly, the concept of libido as desire or appetite is an *interpretation* of the process of psychic energy, which we experience precisely in the form of an appetite. We know as little about what underlies it as we know about what the psyche is *per se*.

[196] Having once made the bold conjecture that the libido which was originally employed in the production of ova and spermatozoa is now firmly organized in the function of nest-building, for instance, and can no longer be employed otherwise, we are compelled to regard every striving and every desire, including hunger and instinct however understood, as equally a phenomenon of energy.

[197] This view leads to a conception of libido which expands into a conception of *intentionality* in general. As the above quotation from Freud shows, we know far too little about the nature of human instincts and their psychic dynamism to risk giving priority to any one instinct. We would be better advised, therefore, when speaking of libido, to understand it as an energy-value which is able to communicate itself to any field of activity whatsoever, be it power, hunger, hatred, sexuality, or religion, without ever being itself a specific instinct. As Schopenhauer says: "The Will as a thing-in-itself is quite different from its phenomenal manifestation, and entirely free from all forms of phenomenality, which it assumes only when it becomes manifest, and which therefore affect its objectivity only, and are foreign to the Will itself."[12]

[198] Numerous mythological and philosophical attempts have been made to formulate and visualize the creative force which man knows only by subjective experience. To give but a few examples, I would remind the reader of the cosmogonic significance of Eros in Hesiod,[13] and also of the Orphic figure of Phanes (pl. XII), The Shining One, the First-Created, the "Father of Eros." Orphically, too, he has the significance of Priapus; he is bisexual and equated with the Theban Dionysus Lysius.[14] The Orphic significance of Phanes is akin to that of the Indian Kama, the god

of love, who is likewise a cosmogonic principle. To the Neoplatonist Plotinus, the world-soul is the energy of the intellect.[15] He compares the One, the primordial creative principle, with light, the intellect with the sun (♂), and the world-soul with the moon (♀). Or again, he compares the One with the Father and the intellect with the Son.[16] The One, designated as Uranos, is transcendent; the Son (Kronos) has dominion over the visible world; and the world-soul (Zeus) is subordinate to him. The One, or the *ousia* of existence in totality, is described by Plotinus as hypostatic, and so are the three forms of emanation; thus we have *μία οὐσία ἐν τρισίν ὑποστάσεσιν* (one being in three hypostases). As Drews has observed, this is also the formula for the Christian Trinity as laid down at the councils of Nicaea and of Constantinople.[17] We might add that certain early Christian sects gave a maternal significance to the Holy Ghost (world-soul or moon). According to Plotinus, the world-soul has a tendency towards separation and divisibility, the *sine qua non* of all change, creation, and reproduction. It is an "unending All of life" and wholly energy; a living organism of ideas which only become effective and real in it.[18] The intellect is its progenitor and father, and what the intellect conceives the world-soul brings to birth in reality.[19] "What lies enclosed in the intellect comes to birth in the world-soul as Logos, fills it with meaning and makes it drunken as if with nectar."[20] Nectar, like soma, is the drink of fertility and immortality. The soul is fructified by the intellect; as the "over-soul" it is called the heavenly Aphrodite, as the "undersoul" the earthly Aphrodite. It knows "the pangs of birth."[21] It is not without reason that the dove of Aphrodite is the symbol of the Holy Ghost.

[199] The energic standpoint has the effect of freeing psychic energy from the bonds of a too narrow definition. Experience shows that instinctual processes of whatever kind are often intensified to an extraordinary degree by an afflux of energy, no matter where it comes from. This is true not only of sexuality, but of hunger and thirst too. One instinct can temporarily be depotentiated in favour of another instinct, and this is true of psychic activities in general. To assume that it is always and only sexuality which is subject to these depotentiations would be a sort of psychic equivalent of the phlogiston theory in physics and chemistry.

Freud himself was somewhat sceptical about the existing theories of instinct, and rightly so. Instinct is a very mysterious manifestation of life, partly psychic and partly physiological by nature. It is one of the most conservative functions in the psyche and is extremely difficult, if not impossible, to change. Pathological maladjustments, such as the neuroses, are therefore more easily explained by the patient's attitude to instinct than by a sudden change in the latter. But the patient's attitude is a complicated psychological problem, which it would certainly not be if his attitude depended on instinct. The motive forces at the back of neurosis come from all sorts of congenital characteristics and environmental influences, which together build up an attitude that makes it impossible for him to lead a life in which the instincts are satisfied. Thus the neurotic perversion of instinct in a young person is intimately bound up with a similar disposition in the parents, and the disturbance in the sexual sphere is a secondary and not a primary phenomenon. Hence there can be no sexual theory of neurosis, though there may very well be a psychological one.

[200] This brings us back to our hypothesis that it is not the sexual instinct, but a kind of neutral energy, which is responsible for the formation of such symbols as light, fire, sun, and the like. The loss of the reality function in schizophrenia does not produce a heightening of sexuality: it produces a world of fantasy with marked archaic features.[22] This is not to deny that, particularly at the beginning of the illness, violent sexual disturbances may sometimes occur, though they occur just as often in any intensive experience, such as panic, rage, religious mania, etc. The fact that an archaic world of fantasy takes the place of reality in schizophrenia proves nothing about the nature of the reality function as such; it only demonstrates the well-known biological fact that whenever a more recent system suffers deterioration it is likely to be replaced by a more primitive and therefore obsolete one. To use Freud's simile, one begins firing with bows and arrows instead of with guns. A loss of the latest acquisitions of the reality function (or adaptation) must of necessity be replaced, if at all, by an earlier mode of adaptation. We find this principle in the theory of neurosis which holds that any failure of adaptation is compensated by an older one, that is, by a regressive reactivation of the parental imagos. In

neurosis the substitute product is a fantasy of individual origin and scope with hardly a trace of those archaic features which are characteristic of the fantasies of schizophrenics. Again, in neurosis there is never an actual loss of reality, only a falsification of it. In schizophrenia, on the other hand, reality has all but disappeared. I must thank my erstwhile pupil J. Honegger, whose work [23] was unfortunately cut short by an early death, for a simple illustration of this: A paranoid patient of good intelligence, who knew very well that the earth was a sphere and rotated round the sun, superseded all our modern views of astronomy by an elaborate system of his own devising, where the earth was a flat disc over which the sun travelled. Spielrein, too, gives some interesting examples of archaic definitions which, in the course of the illness, begin superimposing themselves on the meanings of words. Thus, one of her women patients declared that the mythological analogue of alcohol was an "emission of seed," i.e., soma.[24] She also hit upon a symbolism of cooking which parallels the alchemical vision of Zosimos, who saw, in the "bowl" of the altar, people being transformed in boiling water.[25] The patient substituted earth,[26] and also water,[27] for "mother." (Cf. pls. XXIVa, XXVI.)

[201] What I said above about a disturbed reality function being replaced by an archaic substitute is supported by a remark of Spielrein's: "I often had the illusion that the patients might simply be victims of a deep-rooted folk superstition."[23] As a matter of fact, patients do set up, in place of reality, fantasies very like certain archaic ideas which once had a reality function. But, as the vision of Zosimos shows, the old superstitions were symbols [29] that sought to give adequate expression to the unknown in the world (and in the psyche). The "conception" (*Auffassung*) gives us a "handle" (*Griff*) by which to "grasp hold" of things (*fassen*, *begreifen*), and the resultant "concept" (*Begriff*) enables us to take possession of them. Functionally, the concept corresponds to the *magically powerful name* which gets a grip on the object. This not only renders the object harmless, but incorporates it into the psychic system, thus increasing the meaning and power of the human mind. (Compare the primitive respect for name-giving in the Alvissmal of the Elder Edda.) Spielrein evidently thinks symbols have a similar significance when she says:

> Thus a symbol seems to me to owe its origin to the striving of a complex for dissolution in the common totality of thought.… The complex is thus robbed of its personal quality.… This tendency towards dissolution or transformation of every individual complex is the mainspring of poetry, painting, and every form of art.[30]

[202] If, for "complex," we substitute the idea of "energy value," i.e., the total affectivity of the complex, it is clear that Spielrein's views fall into line with my own.

[203] It seems as if this process of analogy-making had gradually altered and added to the common stock of ideas and names, with the result that man's picture of the world was considerably broadened. Specially colourful or intense contents (the "feeling-toned" complexes) were reflected in countless analogies, and gave rise to synonyms whose objects were thus drawn into the magic circle of the psyche. In this way there came into being those intimate relationships by analogy which Lévy-Bruhl fittingly describes as "participation mystique." It is evident that this tendency to invent analogies deriving from feeling-toned contents has been of enormous significance for the development of the human mind. We are in thorough agreement with Steinthal when he says that a positively overwhelming importance attaches to the little word "like" in the history of human thought. One can easily imagine that the canalization of libido into analogy-making was responsible for some of the most important discoveries ever made by primitive man.

III

THE TRANSFORMATION OF LIBIDO

[204] In what follows I should like to give some concrete examples of this canalization of libido. I once had to treat a woman patient who suffered from catatonic depressions. As there was a mild degree of psychosis, I was not surprised by the numerous hysterical symptoms she exhibited. At the beginning of the treatment, while she was telling me of a very painful experience, she fell into an hysterical dream-state in which she showed all the signs of sexual excitement. (It was abundantly evident that during this state she was completely unaware of my presence.) The excitement culminated in an act of masturbation. This act was accompanied by a singular gesture: she kept on making a violent rotary movement with the forefinger of the left hand against the left temple, as though she were boring a hole there. Afterwards there was complete amnesia for what had happened, and nothing could be elicited about the singular gesture with the hand. Although this performance could easily be recognized as an act of thumb-sucking, or of nose- or ear-picking, transferred to the temple, and hence as an analogy of the masturbatory act, it nevertheless struck me as somehow significant, though at first I did not know why. Weeks later I had an opportunity of speaking with the patient's mother, and she told me what a very exceptional child her daughter had been. When only two years old she would sit for hours with her back to an open cupboard door, rhythmically banging it shut with her head[1] and driving the whole household distracted. A little later, instead of playing like the other children, she began boring holes in the plaster of the wall with her finger. She did this with little turning and scraping movements, which she would keep up for hours on end. To her parents she was a complete mystery. From about her fourth year she began to masturbate. So it is clear that in the earlier infantile occupation we have the preliminary stage of the later activity.

[205] The boring with the finger, then, can be traced back to a very early stage of childhood which antedates the period of masturbation. That period is very obscure psychologically, because there were no individual memories. Such a peculiar mode of behaviour is highly remarkable in a child of that age. We know from her subsequent history that her development—which was, as always, bound up with parallel external events—led to a mental illness which is well known for the individuality and originality of its products, namely schizophrenia. The peculiarity of this disease lies in the startling emergence of an archaic psychology. That accounts for the innumerable points of contact with mythological material, and what we take to be original and individual creations are mostly products which can only be compared with those of antiquity. We have to apply this criterion to probably all the products of this remarkable illness, including perhaps this odd symptom of boring. As we have seen, it dates from a very early period, and it was revived from the distant past only when the patient, after several years of marriage, fell back into her early masturbatory habits following the death of her child, with whom she had identified herself through an over-indulgent love. When the child died, the infantile symptoms again inflicted themselves on the still healthy mother in the form of fits of masturbation, accompanied by this same act of boring. The primary boring, as we have said, appeared some time before the infantile masturbation. This fact is important inasmuch as the boring is seen to be distinct from a similar and later habit which supervened after she began masturbating.

[206] We know that in infants the libido first manifests itself exclusively in the nutritional zone, where, in the act of sucking, food is taken in with a rhythmic movement. At the same time there develops in the motor sphere in general a pleasurable rhythmic movement of the arms and legs (kicking, etc.). With the growth of the individual and development of his organs the libido creates for itself new avenues of activity. The primary model of rhythmic movement, producing pleasure and satisfaction, is transferred to the zone of other functions, with sexuality as its ultimate goal. This is not to say that the rhythmic activity derives from the act of nutrition. A considerable part of the energy supplied by nutrition for growth has to convert itself into sexual libido and other forms of activity.

This transition does not take place suddenly at the time of puberty, as is commonly supposed, but only very gradually during the course of childhood. In this transitional period there are, so far as I am able to judge, two distinct phases: the phase of sucking, and the phase of rhythmic activity in general. Sucking still belongs to the sphere of the nutritive function, but outgrows it by ceasing to be a function of nutrition and becoming an analogous rhythmic activity without intake of nourishment. At this point the hand comes in as an auxiliary organ. It appears even more clearly as an auxiliary organ in the phase of rhythmic activity, which then leaves the oral zone and turns to other regions. Numerous possibilities now present themselves. As a rule, it is the other body openings that become the main object of interest; then the skin, or special parts of it; and finally rhythmic movements of all kinds. These, expressed in the form of rubbing, boring, picking, and so forth, follow a certain rhythm. It is clear that this activity, once it reaches the sexual zone, may provide occasion for the first attempts at masturbation. In the course of its migrations the libido carries traces of the nutritional phase into its new field of operations, which accounts for the many intimate connections between the nutritive and the sexual function. Should this more developed activity meet with an obstacle that forces it to regress, the regression will be to an earlier stage of development. The phase of rhythmic activity generally coincides with the development of mind and speech. I therefore propose to call the period from birth up to the time of the first clear manifestations of sexuality the “pre-sexual stage.” As a rule it falls between the first and the fourth year, and is comparable to the chrysalis stage in butterflies. It is characterized by a varying mixture of elements from the nutritional and sexual phases. Certain regressions go right back to the presexual stage: so far as one can judge from experience, this seems to be the rule with regressions in schizophrenia and epilepsy. I will give two examples. One is the case of a young girl who developed a catatonic state during her engagement. The first time she saw me she suddenly came up to me and gave me a kiss, saying, “Papa, give me something to eat!” The other case concerns a young servant-girl who complained that people were pursuing her with electricity, and that this caused a queer feeling in her genitals, “as if it ate and drank down there.”

[207] These things show that the earlier phases of libido are capable of regressive reactivation. It is a road that is easily travelled, and has often been travelled in the past. If this assumption is correct, it is very likely that in earlier stages of human development this way of transformation was not just a pathological symptom, but a frequent and normal occurrence. It would therefore be interesting to see whether it has left any historical traces.

[208] We are indebted to Abraham[2] for drawing attention to the ethnological connection between boring and fire-making. The latter subject has been elaborated in the work of Adalbert Kuhn.[3] From these investigations we learn that the fire-bringer Prometheus may possibly be brother to the Indian *pramantha*, the masculine fire-stick. The Indian fire-bringer was called Matarisvan, and the activity of fire-making is always referred to in the sacred texts by means of the verb *manthāmi*,[4] 'to shake, to rub, to bring forth by rubbing.' Kuhn relates this verb to Gr. μανθάνω, 'to learn,' and has also explained the conceptual relationship between them.[5] The *tertium comparationis* may lie in the rhythm, the movement to and fro in the mind. According to Kuhn, the root *manth-* or *math-* leads, via *μανθάνω* (*μάθημα, μάθησις*) and *προ-μηθέομαι*, to Π*ρομηθύς*, the well-known Greek fire-robber. He points out that just as the Thuric Zeus bore the especially interesting cognomen Π*ρο-μανθεύς*, so Π*ρο-μηθεύς* might be not an original Indo-European word related to the Skr. *pramantha*, but only a cognomen. This view is supported by a gloss of Hesychius, explaining the name Ι*θάς* as ὁ *τῶν* Τ*ιτάνων κήρυξ* Π*ρομηθεὔs* (Prometheus, the herald of the titans). Another gloss of Hesychius explains *ἁθαίνομαι* (*ℓαίνω*, 'to heat, melt') as *θερμαίνομαι*, 'to grow hot,' so that 'Ιθάς acquires the meaning 'Flaming One,' similar to Α*ϊθων* or Φλεγύας.[6] The relation of Prometheus to *pramantha* is therefore questionable. On the other hand, Π*ρομηθεὔs* is highly significant as a cognomen for 'Ιθάς, since the "Flaming One" is the "Forethinker."[7] (*Pramati*, 'precaution,' is also an attribute of Agni, the god of fire, although *pramati* is of different derivation.) Prometheus, however, belongs to the line of Phlegians whom Kuhn puts into incontestable relationship with the Indian priestly family of Bhrigu.[8] The Bhrigu, like Matarisvan ("he who swells in the mother"), were also fire-

bringers. Kuhn cites a passage to show that the Bhrigu arose from the fire like Agni. (“Bhrigu arose in the flame; Bhrigu roasted, but did not burn.”) This idea leads to a root cognate with Bhrigu: Skr. *bhrāy*, ‘to shine,’ Lat. *fulgeo*, Gr. *ϕλἔγω* (Skr. *bhargas*, ‘splendour,’ Lat. *fulgur*). Bhrigu therefore appears as the “Shining One.” Φλεγύας denotes a certain species of eagle distinguished for its burnished yellow colour. The connection with *øλέγειν* ‘to burn,’ is obvious. Hence the Phlegians were fiery eagles.[9] Prometheus, too, was a Phlegian. The line from *pramantha* to Prometheus does not go via the word, but more probably through the idea or image, so that Prometheus may in the end have the same meaning as *pramantha*[10] Only, it would be an *archetypal* parallel and not a case of linguistic transmission.

[209] For some time it was believed that Prometheus took over the meaning “Forethinker” (as the figure of Epimetheus, the “After-thinker,” testifies) only quite late, and that the word was originally connected with *pramantha, manthāmi, mathāyati* and had, etymologically, nothing to do with *προμηθέομαι, μάθημα, μανθάνω*. Conversely, *pramati*, ‘precaution,’ which is associated with Agni, has no connection with *manthämi*. Lately, however, there has been a tendency to derive Prometheus from *μανθάνω* after all.[11] The only thing that can be established with any certainty in this complicated situation is that we find thinking, precaution, or foresight somehow connected with fire-boring, without there being any demonstrable etymological connections between the words used for them. In considering the etymology, therefore, we have to take into account not only the migration of the root-words, but the autochthonous revival of certain primordial images.

[210] The *pramantha*, or instrument of the *manthana* (fire-sacrifice), is conceived under a purely sexual aspect in India, the fire-stick being the phallus or man, and the bored wood underneath the vulva or woman. The fire that results from the boring is the child, the divine son Agni. (Pl. XIII*b*.) The two pieces of wood are ritually known as *pururavas* and *urvasi*, and, when personified, are thought of as man and woman. The fire is born[12] from the genitals of the woman. Weber gives the following account of the fire-producing ceremony:

> A sacrificial fire is kindled by rubbing two fire-sticks together. One of the fire-sticks is taken up with the words: “Thou art the birthplace of fire,” and two blades of grass are placed upon it: “Ye are the two testicles.” The priest then places on them the *adhararani* (the underlying piece of wood), saying: “Thou art Urvasi,” and anoints the *uttararani* (uppermost piece) with butter: “Thou art the power” (semen). This is then placed on the *adhararani*, with the words: “Thou art Pururavas.” Rubbing them together three times the priest says: “I rub thee with the Gayatrimetrum: I rub thee with the Trishtubhmetrum: I rub thee with the Jagatimetrum.”[13]

[211] The sexual symbolism is unmistakable. We find the same idea and symbolism in a hymn of the Rig-Veda:

> Here is the gear for friction, here tinder is made ready for the spark.
> Bring the mistress of the people:[14] we will rub Agni in ancient fashion forth.
> In the two fire-sticks lies Jatavedas, safe as the seed in pregnant women;
> Daily let Agni be praised by men who watch and worship with oblations.
> Let this (staff) enter into her as she lies there outstretched, O you skilled ones;
> Straightway she conceives, has given birth to the fructifier:
> With his red pillar lighting his path, the son of Ila is born from the precious wood.[15]

[212] It is to be noted that in this hymn the *pramantha* is also Agni, the begotten son: the phallus is the son, or the son is the phallus. In colloquial German today there are distant echoes of this primitive symbolism: a lout or urchin is known as a *Bengel*, ‘club, cudgel,’ and in the Hessian dialect as a *Stift*, ‘peg,’ or *Bolzen*, ‘bolt.’[16] The plant *Artemisia abrotanum*, called in German *Stabwurz*, ‘stick-root,’ is known in English as “boy’s-love.” The vulgar designation of the penis as “boy” was remarked even by the brothers Grimm. Ceremonial fire-making lingered on in Europe as a superstitious custom until well into the nineteenth century. Kuhn mentions one such case which occurred in Germany in 1828. This magical rite, practised with due ceremony, was called the “Nodfyr” (need-fire),[17] and the charm was used mainly against cattle epidemics. Kuhn quotes from the Chronicles of Lanercost, in the year 1268, a particularly interesting case of “Nodfyr” which plainly reveals the sexual symbolism of the ceremonies:

> In order to safeguard the integrity of divine faith, let the reader remember that when the herds of cattle in Laodonia were ravaged this year by the pest called lung-sickness, certain cattle-breeders, monastery folk by habit or dress but not by disposition, taught the ignorant rustics to make fire by rubbing pieces of wood together, and to set up an image of Priapus, and in this wise to help their animals. After a Cistercian lay brother had done this near Fenton in front of the courtyard, he dipped the testicles of a dog in holy water and sprinkled the animals with it.…[18]

[213] These examples, coming from different periods of history and from different peoples, prove the existence of a widespread tendency to equate fire-making with sexuality. The ceremonial or magical repetition of this age-old discovery shows how persistently the human mind clings to the old forms, and how deep-rooted is the memory of fire-boring. One might be inclined to see the sexual symbolism of fire-making simply as a gratuitous addition to priestly lore. That may be true of certain ritualistic elaborations of the fire mystery, but the question remains whether fire-making originally had a deeper connection with sex. We know that similar rites are practised among primitives from studies of the Wachandi, of Australia,[19] who in spring perform the following piece of fertility-magic: They dig a hole in the ground, so shaping it and setting it about with bushes that it looks like a woman's genitals. Then they dance round this hole all night, holding their spears in front of them in imitation of an erect penis. As they dance round, they thrust their spears into the hole, shouting: "Pulli nira, pulli nira, wataka!" (Not a pit, not a pit, but a c____!). Obscene dances of this kind are found among other tribes as well.[20]

[214] In this rite of spring[21] there is enacted a sacramental mating, with the hole in the earth representing the woman, and the spear the man. The *hieros gamos* was an essential component of many cults and played an important part in various sects.[22]

[215] One can easily imagine that just as the Australian bushmen perform a sort of *hieros gamos* with the earth, so the same or a similar idea could be represented by producing fire from two pieces of wood. The ritual coitus is enacted, not by two people, but by two simulacra, Pururavas and Urvasi, the male and female fire-sticks. (Cf. pl. XIII*b*.)

Fig. 15. The phallic plough
From a Greek vase

[216] Of all the components of the psyche, sex is undoubtedly the one with the strongest affective tone. Certain persons are therefore inclined to assume that everything which bears an obvious analogy to sex must of necessity be derived from it, on the hypothesis that the sexual libido comes up against some sort of barrier which compels it to seek a substitute activity in the form of a ritual analogy. In order to account for the partial conversion and transformation of libido, Freud assumed that the barrier was the *incest-taboo*. Strictly speaking, however, the incest-taboo is a check on the endogamous tendency in man. For an instinct to be forcibly converted into something else, or even partially checked, there must be a correspondingly higher energy on the opposite side. Freud rightly supposed that this energy came from *fear*, and in order to explain the fear, he had to resort to the more or less plausible hypothesis of the primal horde, which, like a herd of gorillas, was tyrannized over by a ferocious patriarch. To complete the picture, we would have to add an equally awe-inspiring matron who instils fear into the daughters, just as the primordial father compels the savage respect of the sons. We would then have a patrilineal and a matrilineal source of anxiety to match the primitive conditions. I can well imagine that the more neurotic among the troglodytes “thought” in this manner.

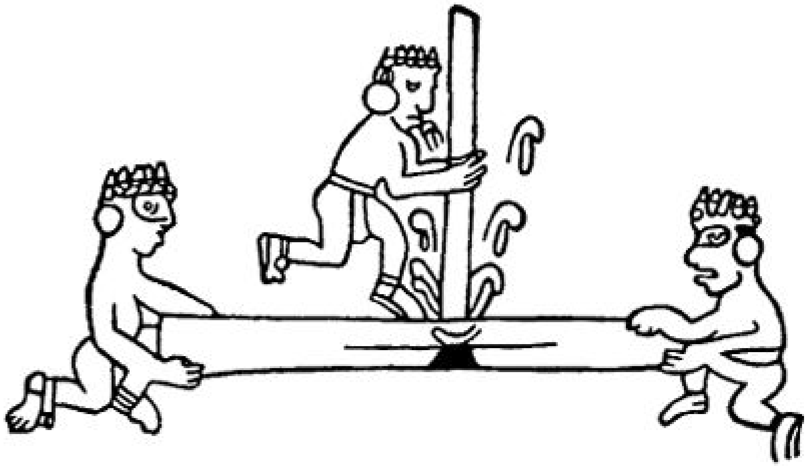

Fig. 16. The twirling-stick
From an Aztec hieroglyph-painting

[217] Such a derivation of the motive for checking the instincts seems to me somewhat doubtful, to say the least of it, for the simple reason that the tensions inside a primitive group are never greater than those involved in the struggle for existence of the group as a whole. Were it otherwise, the group would speedily perish. What does constitute a serious threat to the primitive group is the endogamous tendency, which has to be checked in order to exorcize the danger. The best means to this end seems to be the widespread custom of cross-cousin-marriage,[23] because it keeps the endogamous and exogamous tendencies balanced. The danger that then threatens the group comes from the very advantages it has gained through checking the endogamous tendency to which the incest-taboo applies. The group acquires an inner stability, opportunities for expansion, and hence greater security. That is to say, the source of fear does not lie inside the group, but in the very real risks which the struggle for existence entails. Fear of enemies and of hunger predominates even over sexuality, which is, as we know, no problem at all for the primitive, as it is far simpler to get a woman than it is to get food. Fear of the consequences of being unadapted is a compelling reason for checking the instincts. Confronted with disaster, one is obliged to ask oneself how it is to be remedied. The libido that is forced into regression by the obstacle always reverts to the possibilities lying dormant in the individual. A dog, finding the door shut, scratches at it until it is opened, and a man unable to find the answer to a problem rubs

his nose, pulls his lower lip, scratches his ear, and so on. If he gets impatient, all sorts of other rhythms appear: he starts drumming with his fingers, shuffles his feet about, and it will not be long before certain distinctly sexual analogies manifest themselves, such as masturbation gestures. Koch-Grünberg, writing on South American rock-paintings, tells us how the Indians sit on the rocks and scratch lines on them with sharp stones while waiting for their canoes to be transported round the rapids.[24] In the course of time there have arisen chaotic drawings or scribbles that might perhaps be compared with doodling on blotting-pads. This makes it easier to understand what Maeterlinck tells us in his *Blue Bird*:[25] the two children who are looking for the blue bird in the Land of the Unborn find a boy who *picks his nose*. It is said that one day he will discover a new *fire* when the earth has grown cold. Spielrein's patient[26] associated the act of boring with fire and procreation. She said: "You need iron to bore through the earth. With iron you can make cold people out of stone. With a hot iron you can bore through the mountain. The iron becomes red-hot when it is pushed into a stone."

[218] Now when the libido is forced back by an obstacle, it does not necessarily regress to earlier sexual modes of application, but rather to the rhythmic activities of infancy which serve as a model both for the act of nutrition and for the sexual act itself. The material before us does not seem to preclude the possibility that the invention of fire-making came about in the manner suggested, that is, through the regressive reawakening of rhythm.[27] This hypothesis seems to me psychologically possible, though I would not maintain that this is the only way in which the discovery of fire could have been made. It could just as well have been made from striking flints together. All I am concerned with here is the psychological process, whose symbolisms suggest that fire-making may possibly have been discovered in this way.

[219] Even if these rhythmic activities give one the impression of a game, one is nevertheless impressed by the intentness and energy with which this alleged game is conducted. It is well known that such rites (for that is how we must regard them) are performed with great seriousness and an uncommon display of energy, which is in marked contrast to the

notorious laziness of primitive man. The so-called game takes on the character of purposeful effort. If certain tribes can dance all night long to a monotonous tune of three notes, then, to our way of thinking, the play-element is entirely lacking: it is more like an exercise with a set purpose. This is in fact the case, for rhythm is a classic device for impressing certain ideas or activities on the mind, and what has to be impressed and firmly organized is the canalization of libido into a new form of activity. Since the rhythmic activity can no longer find an outlet in the act of feeding after the nutritional phase of development is over, it transfers itself not only to the sphere of sexuality in the strict sense, but also to the "decoy mechanisms," such as music and dancing, and finally to the sphere of work. The close connection which work always has with music, singing, dancing, drumming, and all manner of rhythms in primitive societies, indeed its absolute dependence on these things, is very striking. This connection forms the bridge to sexuality, thus giving the primitive an opportunity to sidetrack and evade the task in hand. Because diversions of this kind are a frequent occurrence, and are to be found in all spheres of culture, people have been led to believe that there is no differentiated achievement that is not a substitute for some form of sexuality. I regard this as an error, albeit a very understandable one considering the enormous psychological importance of the sexual instinct. I myself once held similar views, at least in so far as I assumed that the various forms of attraction and protection of the young came from the splitting and differentiation of an originally sexual libido, or of the reproductive instinct in its widest sense, and were therefore the preliminary stages of all cultural activities, so far as these are by nature instinctive. One reason for this error was the influence of Freud; the other, and more cogent, reason was the element of rhythm which often attaches to these functions. Only later did I realize that the rhythmic tendency does not come from the nutritional phase at all, as if it had migrated from there to the sexual, but that it is a peculiarity of emotional processes in general. Any kind of excitement, no matter in what phase of life, displays a tendency to rhythmic expression, perseveration, and repetition, as can easily be seen from the repetition, assonance, and alliteration of complex-toned reaction-words in the association experiment.[28] Rhythmic patterns therefore offer no ground for assuming that the function they affect originated in sexuality.

[220] The psychological importance of sexuality and the existence of plausible sexual analogies make a deviation into sex extremely easy in cases of regression, so that it naturally seems as if all one’s troubles were due to a sexual wish that is unjustly denied fulfilment. This reasoning is typical of the neurotic. Primitives seem to know instinctively the dangers of this deviation: when celebrating the *hieros gamos*, the Wachandi, of Australia, may not look at a woman during the entire ceremony. Among a certain tribe of American Indians, it was the custom for the warriors, before setting out on the warpath, to move in a circle round a beautiful young girl standing naked in the centre. Whoever got an erection was disqualified as unfit for military operations. The deviation into sex is used—not always, but very frequently—as a means of escaping the real problem. One makes oneself and others believe that the problem is purely sexual, that the trouble started long ago and that its causes lie in the remote past. This provides a heaven-sent way out of the problem of the present by shifting the whole question on to another and less dangerous plane. But the illicit gain is purchased at the expense of adaptation, and one gets a neurosis into the bargain.

[221] In an earlier paragraph we traced the checking of the instincts back to fear of the very real dangers of existence in this world. But external reality is not the only source of this instinct-inhibiting fear, for primitive man is often very much more afraid of an “inner” reality—the world of dreams, ancestral spirits, demons, gods, magicians, and witches. Although we, with our rationalism, think we can block this source of fear by pointing to its unreality, it nevertheless remains one of those psychic realities whose irrational nature cannot be exorcized by rational argument. You can free the primitive of certain superstitions, but you cannot talk him out of his alcoholism, his moral depravity, and general hopelessness. There is a psychic reality which is just as pitiless and just as inexorable as the outer world, and just as useful and helpful, provided one knows how to circumvent its dangers and discover its hidden treasures. “Magic is the science of the jungle,” a famous explorer once said. Civilized man contemptuously looks down on primitive

superstitions, which is about as sensible as turning up one’s nose at the pikes and halberds, the fortresses and tall-spired cathedrals of the Middle Ages. Primitive methods are just as effective under primitive conditions as machine-guns or the radio are under modern conditions. Our religions and political ideologies are methods of salvation and propitiation which can be compared with primitive ideas of magic, and where such “collective representations” are lacking their place is immediately taken by all sorts of private idiocies and idiosyncrasies, manias, phobias, and daemonisms whose primitivity leaves nothing to be desired, not to speak of the psychic epidemics of our time before which the witch-hunts of the sixteenth century pale by comparison.

[122] Notwithstanding our rationalistic attempts to argue it out of existence, psychic reality is and remains a genuine source of anxiety whose danger increases the more it is denied. The biological instincts then meet not only with outer obstacles but with an internal resistance. The same psychic system which, on one side, is based on the concupiscence of the instincts, rests on the other side on an opposing will which is at least as strong as the biological urge.

[123] Except when motivated by external necessity, the will to suppress or repress the natural instincts, or rather to overcome their predominance (*superbia*) and lack of co-ordination (*concupiscentia*), derives from a spiritual source; in other words, the determining factor is the numinous primordial images. These images, ideas, beliefs, or ideals operate through the specific energy of the individual, which he cannot always utilize at will for this purpose, but which seems rather to be drawn out of him by the images. Even the authority of the father is seldom powerful enough to keep the spirit of the sons in permanent subjection. This can only happen when the father appeals to or expresses an image which, in the eyes of humanity, is numinous, or at any rate backed up by the consensus of opinion. The suggestive power of the environment is itself a consequence of the numinosity of the image and intensifies it in turn. If there is no such suggestion, the collective effect of the image will be negligible, or non-existent, even though it may be extremely intense as an individual experience. I mention this circumstance because it is a controversial point whether the inner images, or collective representations, are merely

suggested by the environment, or whether they are genuine and spontaneous experiences. The first view simply begs the question, because it is obvious that the content suggested must have come into existence somehow and at some time. There was a time when the utterances of mythology were entirely original, when they were numinous experiences, and anyone who takes the trouble can observe these subjective experiences even today. I have already given one example[29] of a mythological statement (the solar phallus) coming alive again under circumstances which rule out any possibility of direct transmission. The patient was a small business employee with no more than a secondary school education. He grew up in Zurich, and by no stretch of imagination can I conceive how he could have got hold of the idea of the solar phallus, of the vision moving to and fro, and of the origin of the wind. I myself, who would have been in a much better position, intellectually, to know about this singular concatenation of ideas, was entirely ignorant of it and only discovered the parallel in a book of Dieterich's which appeared in 1910, four years after my original observation (1906).[30]

[224] This observation was not an isolated case: it was manifestly not a question of inherited ideas, but of an inborn disposition to produce parallel thought-formations, or rather of identical psychic structures common to all men, which I later called the archetypes of the collective unconscious. They correspond to the concept of the "pattern of behaviour" in biology.[31]

[225] The archetype, as a glance at the history of religious phenomena will show, has a characteristically numinous effect, so that the subject is gripped by it as though by an instinct. What is more, instinct itself can be restrained and even overcome by this power, a fact for which there is no need to advance proofs.

[226] Whenever an instinct is checked or inhibited, it gets blocked and regresses. Or, to be more precise: if there is an inhibition of sexuality, a regression will eventually occur in which the sexual energy flowing back from this sphere activates a function in some other sphere. In this way the energy changes its form. Let us take as an example the Wachandi

ceremony: in all probability the hole in the earth is an analogy of the mother's genitals, for when a man is forbidden to look at a woman, his Eros reverts to the mother. But as incest has to be avoided at all costs, the hole in the earth acts as a kind of mother-substitute. Thus, by means of ceremonial exercise, the incestuous energy-component becomes as it were desexualized, is led back to an infantile level where, if the operation is successful, it attains another form, which is equivalent to another function. It is to be assumed, however, that the operation is accomplished only with difficulty, for the primary instinct is composed of an endogamous ("incestuous") tendency and an exogamous one, and must therefore be split into two. This splitting is connected with consciousness and the process of becoming conscious. The regression is always attended by certain difficulties because the energy clings with specific force to its object, and on being changed from one form carries something of its previous character into the next form.[32] So although the resultant phenomena have the character of a sexual act, it is not a sexual act any longer. In the same way fire-boring is only an analogy of the sexual act, just as the latter often has to serve as a linguistic analogy for all sorts of other activities. The presexual, early infantile stage to which the libido reverts is characterized by numerous possibilities of application, because, once the libido has arrived there, it is restored to its original undifferentiated polyvalency. It is therefore understandable that the libido which regressively "invests" this stage sees itself confronted with a variety of possible applications. Since, in the Wachandi ceremony, the libido is bound to its object—sexuality—it will carry at least part of this function into the new form as an essential characteristic. The result is that an analogous object is "invested" and takes the place of the one thrust into the background. The ideal example of such an object is the nurturing earth-mother. (P1. XIV*a*; cf. also fig. 1.) The psychology of the presexual stage accounts for her nourishing character, and sexuality for her most typical form of worship, the *hieros gamos*. From this arise the age-old symbols of agriculture. In the work of tilling and sowing the fields hunger and incest intermingle. The ancient cults of Mother Earth saw in this the fertilization of the mother. But the aim of the action is to bring forth the fruits of the field, and it is magical rather than sexual.

Here the regression leads to a reactivation of the mother as the goal of desire, this time as a symbol not of sex but of the giver of nourishment.

[227] It is just possible that we owe the discovery of fire to some such regression to the presexual stage, where the model of rhythmic activity can co-operate effectively. The libido, forced into regression by the checking of instinct, reactivates the infantile boring and provides it with objective material to work on—fittingly called "material" because the object at this stage is the mother (*mater*). As I have pointed out above, the act of boring requires only the strength and perseverance of an adult man and suitable "material" in order to generate fire. Consequently, the production of fire may have originally occurred as the objective expression of a quasi-masturbatory activity analogous to the aforementioned case of masturbatory boring. Though we can never hope to advance any real proof of our contention, it is at least thinkable that some traces of these first exercises in fire-making may have been preserved. I have succeeded in finding a passage in a monument of Indian literature which describes this conversion of libido into fire-making. It occurs in the Brihadaranyaka Upanishad: [33]

> He (*A tman*[34]) was as big as a man and woman joined together; he divided himself into two, and thus husband and wife were born.…[35] He joined himself to her, and thus men were born.
>
> She thought: "How should he lie with me after having produced me? I will hide myself." She became a cow, he became a bull; they joined and cattle were born. She became a mare, he a stallion; she became a she-ass, he an ass; they joined and the hoofed animals were born. She became a she-goat, he a goat; she became a ewe, he a ram; they joined and goats and sheep were born. Thus he created everything down to the ants, male and female.…
>
> Then he knew: "I am this creation, for I produced it all from myself." Such was creation. He who possesses this knowledge creates his own being in that creation.
>
> Thereupon he rubbed thus [holding his hands before his mouth]. From his mouth, the fire-hole (*yoni*), and from his hands, he brought forth fire.[36]

[228] I once observed a year-old baby making a very peculiar gesture: it held one hand before its mouth and kept rubbing it with the other. It lost this habit after some months. Such cases show that there is some justification for interpreting a mythologem like the above as being based on a very early infantile gesture.

[229] The baby’s gesture is interesting in another respect, too: it lays emphasis on the mouth, which at this early age still has an exclusively nutritive significance. The pleasure and satisfaction it finds in feeding is localized in the mouth, but to interpret this pleasure as sexual is quite unjustified. Feeding is a genuine activity, satisfying in itself, and because it is a vital necessity nature has here put a premium on pleasure. The mouth soon begins to develop another significance as the organ of speech. The extreme importance of speech doubles the significance of the mouth in small children. The rhythmic activities it carries out express a concentration of emotional forces, i.e., of libido, at this point. Thus the mouth (and to a lesser degree the anus) becomes the prime place of origin. According to the Brihadaranyaka Upanishad, the most important discovery ever made by primitive man, the discovery of fire, came out of the mouth. As we might expect, there are texts which draw a parallel between fire and speech. The Aitareya Upanishad says:

> Then he drew forth a Person (*purusha*) from the waters and shaped him. He brooded upon him, and when he had brooded him forth, a mouth split open like an egg. From the mouth came speech, and from speech fire.[37] [Cf. pl. XIII*b*.]

[230] Here, then, speech becomes fire, but a little later on (2, 4) we are told that fire becomes speech. There is a similar connection between the two in Brihadaranyaka Upanishad:

> “Yajñavalkya, what is the light of man?”
>
> “The sun is his light,” he answered. “It is by the light of the sun that á man rests, goes forth, does his work and returns.”
>
> “Quite so, Yajñavalkya. But when the sun is set, what then is the light of man?”
>
> “The moon is his light,” he answered. “It is by the light of the moon that a man rests, goes forth, does his work and returns.”
>
> “Quite so, Yajñavalkya. But when the sun is set, and the moon is set, what then is the light of man?”
>
> “Fire is his light,” he answered. “It is by the light of the fire that a man rests, goes forth, does his work and returns.”
>
> “Quite so, Yajñavalkya. But when the sun is set, and the moon is set, and the fire has gone out, what then is the light of man?”
>
> “Speech is his light,” he answered. “It is by the light of speech that a man rests, goes forth, does his work and returns.”
>
> “Quite so, Yajñavalkya. But when the sun is set, and the moon is set, and the fire has gone out, and speech is hushed, what then is the light of man?”

> “Self is his light,” he answered. “It is by the light of the Self that a man rests, goes forth, does his work and returns.”[38]

[231] This association of mouth, fire, and speech is not as strange as it would seem: we speak of a man being “fired” or “inflamed” by another’s words, of a “fiery” speech, “burning words,” etc. In the language of the Old Testament mouth and fire are frequently connected, as in II Samuel 22:9: “There went up a smoke out of his nostrils, and fire out of his mouth.…” Isaiah 30: 27: “The name of the Lord cometh from afar, burning with his anger … his lips are full of indignation, and his tongue as a devouring fire.” Psalm 29:7 (RV): “The voice of the Lord scattereth flames of fire.” Jeremiah 23:29: “Is not my word like as a fire?” And in Revelation 11:5 fire proceeds out of the mouth of the two prophetic witnesses.

[232] Again and again fire is called “devouring,” “consuming,” a reminder of the function of the mouth, as in Ezekiel 15:4: “It is cast into the fire for fuel; the fire devoureth both the ends of it, and the midst of it is burned.” Deuteronomy 4: 24: “For the Lord thy God is a consuming fire, even a jealous God.” Perhaps the best-known example is Acts 2:3–4: “And there appeared unto them cloven tongues [γλῶσσαι] like as of fire, and it sat upon each of them. And they were all filled with the Holy Ghost, and began to speak with other tongues [γλῶσσαις], as the Spirit gave them utterance.” The γλῶσσα of the fire caused the glossolalia of the apostles. In a negative sense the Epistle of James 3:6 says: “And the tongue is a fire, a world of iniquity: so is the tongue among our members, that it defileth the whole body, and setteth on fire the course of nature; and it is set on fire of hell.” Proverbs 16:27 says likewise: “An ungodly man diggeth up evil: and in his lips there is as a burning fire.” The dragons or horses of the Apocalypse (Rev. 9:17) breathe forth fire and smoke and brimstone, and as for Leviathan (Job 41:19f.): “Out of his mouth go burning lamps, and sparks of fire leap out.”

[233] The connection of the mouth with fire and speech is indubitable. Another fact to be considered is that the etymological dictionaries connect the Indo-European root **bhā* with the idea of ‘bright,’ ‘shining.’ This root is found in Gr. *φάω, φαίνω, φάος*; in OIr. *bàn*, ‘white’; and in the G. *bohnen*, ‘to polish, make shining.’ But the homonymous root **bhā*

also signifies ‘speaking’: it is found in Skr. *bhan*, ‘to speak’; in Armen. *ban*, ‘word’; in G. *Bann*, *bannen*, ‘to ban, put a spell on’; in Gr. *φα-μί*, *ἔφαν*, *φάτις*, Lat. *fā-ri*, *fātum*.

[234] The root *la*, ‘to sound, to bark,’ occurs in Skr. *las lásati*, ‘to resound, reverberate,’ and in *las lásati*, ‘to radiate, shine.’

[235] A similar archaic fusion of meanings occurs in a certain class of Egyptian words derived from the cognate roots *ben* and *bel*, duplicated into *benben* and *belbel*. The original meaning of these words was ‘to burst forth, emerge, swell, well out,’ with the associated idea of bubbling, boiling, roundness. *Belbel*, accompanied by the obelisk sign, meant a source of light. The obelisk itself had several names: *teshenu*, *men*, *benben*, and more rarely *berber* and *belbel*.[39] The Indo-European root **υel*, meaning ‘to wave about like fire,’ occurs in Skr. *ulunka*, ‘blaze,’ Gr. *Fαλἐα*, Att. άλἐα, ‘warmth of the sun,’ Goth, *υulan*, ‘undulate,’ OHG. and MHG. *Walm*, ‘warmth.’ The related Indo-European root **υélkô*, ‘to lighten, glow,’ occurs in Skr. *ulka*, ‘firebrand,’ Gr. Fελχᾱνος, ‘Vulcan.’ The same root **vel* also means ‘to sound’; in Skr. *vānī*, ‘tone, song, music’; Czech *volati*, ‘to call.” The root **sυéno* occurs in Skr. *svan*, *svánati*, ‘to sound,’ Zend *qanañt*, Lat. *sonare*, OIran. *semn*, Welsh *sain*, Lat. *sonus*, OE. *sυinsian*. The related root **sυénos*, ‘noise,’ occurs in Ved. *sυánas*, Lat. *sonor*, *sonorus*. A further related root is **svonós*, OIran. *son*, ‘word.’ The root **sυé* (*n*), locative **sυéni*, dative **sυnéi*, means ‘sun’; in Zend *qeng* (cf. above, **suéno*, Zend *qanañt*); Goth, *sun-na*, *sunnô*.[40] Although the stars are only perceived by their light, we still talk of the music of the spheres and celestial harmony, just as Pythagoras did. Goethe opens his “Prologue in Heaven” in the same way:

The day-star, sonorous as of old,
Goes his predestined way along,
And round his path is thunder rolled,
While sister-spheres join rival song.[41]

Again, in Part II:

Hearken to the storm of hours!
Ringing out for spirits’ ears
Now the new-born day appears.

Gates of rock grind back asunder,
Phoebus comes with wheels of thunder,
Light brings tumult in his train.
Drums and trumpets far resounding,
Dazzling, deafening, dumbfounding,
A din the ears can scarce sustain.
Into bells of blossom creep,
Lie there quietly, as in sleep,
Into rock and under leaf:
If it strikes you, you are deaf.[42]

[236] Nor should we forget the verses of Hölderlin:

Where are you? Drunken with all your glory
My soul dreams; yet even now I hearken,
As full of golden tones the radiant sun-youth
Raises his evening song on the heavenly lyre
To the echoing woods and hills.…[43]

[237] These images point back to the sun-god Apollo, whose lyre marks him out as the divine musician. The fusion of sound, speech, light, and fire is expressed in an almost physiological way in the phenomenon of “colour-hearing,” i.e., the perception of the tonal quality of colours and the chromatic quality of musical tones. This leads one to think that there must be a preconscious identity between them: the two phenomena have something in common despite their real differences. It is probably no accident that the two most important discoveries which distinguish man from all other living beings, namely speech and the use of fire, should have a common psychic background. Both are products of psychic energy, of libido or mana. In Sanskrit there is a term which expresses in all its nuances the preconscious situation I have suggested. This is the word *tejas*, and it combines the following meanings:

1. Sharpness, cutting edge.
2. Fire, brightness, light, ardour, heat.
3. Healthy appearance, beauty.
4. The fiery and colour-producing faculty of the human organism (located in the bile).
5. Strength, energy, vital force.

6. Passion.
7. Spiritual and magical power; influence, position, dignity.
8. Semen.[44]

[238] *Tejas*, therefore, describes the psychological situation covered by the word "libido." It really denotes *subjective intensity*. Anything potent, any content highly charged with energy, therefore has a wide range of symbolic meanings. This is obvious enough in the case of language, which is capable of expressing practically anything. But it may not be out of place to say a few words about the symbolism of fire.

[239] The Sanskrit word for fire is *agnis* (Lat. *ignis*[45]), personified as Agni, the god of fire, a divine mediator (cf. pl. XIII*b*) whose symbolism has certain affinities with Christian ideas.

[240] An Iranian name for fire is *Nairyosagha*, 'masculine word.' (Cf. the Indian *Narasamsa*, 'wish of men.'[46]) Max Müller says of Agni:

> It was a familiar idea with the Brahmans to look upon the fire both as the subject and the object of a sacrifice. The fire embraced the offering, and was thus a kind of priest; it carried it to the gods, and was thus a kind of mediator between gods and men. But the fire represented also something divine, a god to whom honour was due, and thus it became both the subject and the object of the sacrifice. Hence the idea that Agni sacrifices himself, that he offers a sacrifice to himself, and likewise that he offers himself as a sacrifice.[47]

[241] The affinity between this line of thought and the Christian symbol is obvious. Krishna expresses the same idea in the Bhagavad Gita:

All's then God!
The sacrifice is Brahm, the ghee and grain
Are Brahm, the fire is Brahm, the flesh it eats
Is Brahm, and unto Brahm attaineth he
Who, in such office, meditates on Brahm.[48]

[242] The wise Diotima in Plato's *Symposium* has a rather different conception of the divine messenger and mediator. She teaches Socrates (ch. 23) that Eros is "the intermediary between mortals and immortals … a mighty daemon, dear Socrates; for everything daemonic is the intermediary between God and man." His function is to "interpret and convey messages to the gods from men and to men from the gods,

prayers and sacrifices from the one, and commands and rewards from the other, thus bridging the gap between them, so that by his mediation the universe is at one with itself." Diotima gives an excellent description of Eros: "He is bold and forward and strenuous, always devising tricks like a cunning huntsman; he yearns after knowledge and is full of resource and is a lover of wisdom all his life, a skilful magician, an alchemist, a true sophist. He is neither mortal nor immortal; but on one and the same day he will live and flourish (when things go well with him), and also meet his death; and then come to life again through the force of his father's nature. Yet all that he wins is forever slipping away from him."[49]

[243] In the Avesta and in the Vedas, fire is the messenger of the gods. In Christian mythology, too, there are points of contact with the Agni myth. Daniel 3: 24f. speaks of the three men in the burning fiery furnace:

> Then Nebuchadnezzar the king was astonied, and rose up in haste, and spake, and said unto his counsellors, Did we not cast three men bound into the midst of the fire? They answered and said unto the king, True, O king.
>
> He answered and said, Lo, I see four men loose, walking in the midst of the fire, and they have no hurt; and the form of the fourth is like the Son of God.

[244] The *Biblia pauperum* (1471) makes the following comment:

> We read in the third chapter of the book of the prophet Daniel that Nabuchodonosor, the King of Babylon, caused three men to be placed in a glowing furnace, and that the king came to the furnace and looked in, and saw with the three a fourth, who was like the Son of God. The three signify for us the Holy Trinity of the person, and the fourth the unity of being. Thus Christ in his transfiguration signified the Trinity of the person and the unity of being.

[245] According to this interpretation the legend of the three men in the furnace is a magical procedure during which a "fourth" is produced. The fiery furnace, like the fiery tripod in *Faust*, is a mother-symbol. From the tripod come Paris and Helen, the royal pair of alchemy, and in popular tradition children are baked in the oven. The alchemical athanor, or melting-pot, signifies the body, while the alembic or *cucurbita*, the Hermetic vessel, represents the uterus. The "fourth" in the fiery furnace appears like a son of God made visible in the fire.[50] Jehovah himself is a fire. Isaiah 10:17 (RSV) says of the saviour of Israel: "And the light of Israel will become a fire, and his Holy One a flame." A hymn of Ephraem the Syrian says of Christ: "Thou who art all fire, have pity on

me.” This view is based on the apocryphal saying of our Lord: “He who is near unto me is near unto the fire.”

[246] Agni is the sacrificial flame, the sacrificer and the sacrificed. Just as Christ left behind his redeeming blood, a true *φάρμακον ἀθανασίας*, in the wine, so Agni is the *soma*, the holy drink of inspiration, the mead of immortality.[51] Soma and fire are identical in Vedic literature. The ancient Hindus saw fire both as a symbol of Agni and as an emanation of the inner libido-fire, and for them the same psychic dynamism was at work in the intoxicating drink (“fire-water,” Soma-Agni as rain and fire). The Vedic definition of soma as “seminal fluid”[52] confirms this view. The “somatic” significance of Agni has its parallel in the Christian interpretation of the Eucharistic Blood as the body of Christ.

[247] Soma is also the “nourishing drink.” Its mythological characteristics coincide with those of fire, and so both are united in Agni. The drink of immortality, Amrita, was stirred by the Hindu gods like the fire. (P1. XV.)

[248] So far our exposition has been based on the *pramantha* component of the Agni sacrifice, and we have concerned ourselves with only one meaning of the word *manthāmi* or *mathnāmi*, namely with that which expresses the idea of rubbing. But as Kuhn has shown, the word can also mean ‘to tear or break off,’ ‘to snatch,’ and also ‘to rob.’[53] In his view this meaning is apparent even in the early Vedic texts. Legend always conceives the discovery of fire as a *robbery*, and to that extent it is akin to the widespread motif of the “treasure hard to attain.” In many myths fire-making is something forbidden, a criminal act of usurpation which can only be accomplished by cunning or violence, but mostly by cunning.[54] The religious laws of the ancient Hindus threatened with severe penalties anyone who prepared fire in an incorrect manner. It is the custom in the Catholic Church to light a new fire at Easter. So, even in the Occident, fire-making is an element in a religious mystery, which testifies to its symbolical and ambiguous character. The rules of the ritual must be scrupulously observed if it is to have its intended magical effect. Generally the rite has a prophylactic, apotropaic significance, and when incorrectly performed or used may conjure up the very danger it was intended to avert. Speech and fire-making represent primitive man’s

victory over his brutish unconsciousness and subsequently became powerful magical devices for overcoming the ever-present “daemonic” forces lurking in the unconscious. Both these applications of libido require attention, concentration, and inner discipline, thereby facilitating a further development of consciousness. On the other hand incorrect performance and use of the rite cause a retrograde movement of the libido, a regression which threatens to reproduce the earlier, instinctual, and unconscious state. The danger lies in those well-known “perils of the soul”—a splitting of the personality (“loss of a soul”) and reduction of consciousness, both of which automatically increase the power of the unconscious. The consequences of this are a serious danger not only for primitives; in civilized man, too, they may give rise to psychic disturbances, states of possession, and psychic epidemics.

[249] The blocking of libido leads to an accumulation of instinctuality and, in consequence, to excesses and aberrations of all kinds. Among them, sexual disturbances are fairly frequent, as we might expect. A particularly instructive example is the psychology of incendiarism: incendiarism is really a regressive act of fire-making, and in certain cases it is combined with masturbation. Schmid[55] tells of an imbecile peasant youth who started numerous fires. On one occasion he aroused suspicion by standing in the door of a house with his hands in his trouser-pockets, gazing with delight at the conflagration. Later, under examination, he admitted that he always masturbated while enjoying the spectacle of the fires he had started.

[250] The preparation of fire is an immemorial custom, harmless enough in itself, which soon ceased to have anything very mysterious about it. But there was always a tendency to prepare fire in a mysterious ceremonial manner on special occasions—just as with ritual eating and drinking—and to do it according to prescribed rules from which no one dared to differ. This ritual serves to remind us of the original numinosity of fire-making, but apart from that it has no practical significance. The anamnesis of fire-making is on a level with the recollection of the ancestors among primitives and of the gods at a more civilized stage. From the psychological point of view the ceremony has the significance of a meaningful institution, inasmuch as it represents a clearly defined

procedure for canalizing the libido. It has, in fact, the functional value of a paradigm, and its purpose is to show us how we should act when the libido gets blocked. What we call the “blocking of libido” is, for the primitive, a hard and concrete fact: his life ceases to flow, things lose their glamour, plants, animals, and men no longer prosper. The ancient Chinese philosophy of the *I Ching* devised some brilliant images for this state of affairs. Modern man, in the same situation, experiences a standstill (“I am stuck”), a loss of energy and enjoyment (“the zest—libido—has gone out of life”), or a depression. One frequently has to tell the patient what is happening to him, for modern man’s powers of introspection leave much to be desired. If, even today, the new fire is kindled at Eastertide, it is in commemoration of the redemptive and saving significance of the first fire-boring. In this way man wrested a secret from nature—the Promethean theft of fire. He made himself guilty of an unlawful intervention, incorporating a fragment of the age-old unconscious into the darkness of his mind. With this theft he appropriated something precious and offended against the gods. Anyone who knows the primitive’s fear of innovations and their unforeseen consequences can imagine the uncertainty and uneasy conscience which such a discovery would arouse. This primordial experience finds an echo in the widespread motif of robbery (sun-cattle of Geryon, apples of the Hesperides, herb of immortality). And it is worth remembering that in the cult of Diana at Aricia only he could become her priest who plucked the golden bough from the sacred grove of the goddess.

IV
THE ORIGIN OF THE HERO

[251] The finest of all symbols of the libido is the human figure, conceived as a demon or hero. Here the symbolism leaves the objective, material realm of astral and meteorological images and takes on human form, changing into a figure who passes from joy to sorrow, from sorrow to joy, and, like the sun, now stands high at the zenith and now is plunged into darkest night, only to rise again in new splendour.[1] Just as the sun, by its own motion and in accordance with its own inner law, climbs from morn till noon, crosses the meridian and goes its downward way towards evening, leaving its radiance behind it, and finally plunges into all-enveloping night, so man sets his course by immutable laws and, his journey over, sinks into darkness, to rise again in his children and begin the cycle anew. The symbolic transition from sun to man is easily made, and the third and last creation of Miss Miller's follows this pattern. She calls it "Chiwantopel, A hypnagogic drama," and gives us the following information concerning its origin:

> After an evening of trouble and anxiety, I had gone to bed at half past eleven. I felt restless; unable to sleep although very tired. I had the impression of being in a receptive mood. There was no light in the room. I closed my eyes, and had the feeling of waiting for something that was about to happen. Then I felt a great relaxation come over me, and I remained as completely passive as possible. Lines, sparks, and spirals of fire passed before my eyes, symptoms of nervousness and ocular fatigue, followed by a kaleidoscopic and fragmentary review of recent trivial events.

[252] The reader will share my regret that we cannot know the cause of her worry and anxiety. It would have been of great importance for what follows to have information on this point. This gap in our knowledge is the more regrettable because, between the first poem (1898) and the fantasy now to be discussed (1902), four whole years have passed. All information is lacking regarding this period, during which the problem was assuredly not slumbering in the unconscious. Maybe this lack has its advantages, in that our interest in the general validity of the fantasy now struggling to be born is not obscured by any sympathetic concern for the

personal fate of the author. This obviates the difficulty which often prevents the doctor, in his daily work, from turning his eyes away from the wearisome mass of petty detail to those wider relationships where every neurotic conflict is seen to be part of human fate as a whole.

Fig. 17. The first three labours of Heracles
Classical sarcophagus relief

[253] The state of mind depicted by our author is very much like that which usually precedes a case of intentional somnambulism,[2] and has often been described by mediums. A certain willingness to give ear to these faint nocturnal voices must be there, otherwise these subtle and hardly perceptible inner experiences will pass unnoticed. We can discern in this listening attitude an inward-flowing current of libido, leading towards a still invisible and mysterious goal. It is as if the libido had suddenly discovered, in the depths of the unconscious, an object which exercises a powerful attraction. As our life is directed outwards and does not normally allow of such introversions, we have to suppose a rather exceptional condition, for instance a lack of external objects, which forces the individual to seek a substitute in his own psyche. It is hard to believe that this teeming world is too poor to provide an object for human love—it offers boundless opportunities to everyone. It is rather the inability to love which robs a person of these opportunities. The world is empty only to him who does not know how to direct his libido towards things and people, and to render them alive and beautiful. What compels

us to create a substitute from within ourselves is not an external lack, but our own inability to include anything outside ourselves in our love. Certainly the difficulties and adversities of the struggle for existence may oppress us, yet even the worst conditions need not hinder love; on the contrary, they often spur us on to greater efforts. Real difficulties alone will never drive the libido back to the point where a neurosis arises, because the conflict which is the precondition for every neurosis is lacking. Only a resistance, which opposes its obstinate “won’t” to the “will,” is capable of producing a regression that may become the starting-point for a pathogenic disturbance. Resistance to loving produces the inability to love, or else that inability acts as a resistance. Just as the libido may be compared to a steady stream pouring its waters into the world of reality, so a resistance, dynamically considered, resembles, not a rock that juts up from the river-bed and causes the stream to flow round it, but a flowing back towards the source. Part of the psyche really wants the external object, but another part of it strives back to the subjective world, where the airy and lightly built palaces of fantasy beckon. We can take this dichotomy of the human will, for which Bleuler has coined the term “ambitendency,”[3] as a constant factor, bearing in mind that the most primitive motor impulses are essentially antithetical, since, even in a simple act like stretching, the flexor muscles must be innervated. Normally, however, this ambitendency never leads to the inhibition or prevention of the intended act, but is absolutely necessary for its co-ordination and execution. If, from this harmony of delicately balanced opposites, there should arise any resistance to the act, then it must be due to an abnormal plus or minus quantity on one side or the other. The resistance springs from the intervention of this third factor. This is true also of the dichotomy of the will which is the cause of so many human problems. The abnormal “third factor” loosens the paired opposites which are normally bound tightly together and makes them appear as separate tendencies, as a genuine “won’t” and “will” that get in each other’s way.[4] Harmony thus turns into disharmony. This is not the place to investigate where the unknown third factor comes from and what it is. Freud sees the root complex in the incest problem, since in his view the libido that regresses to the parents produces not only symbols, but symptoms and situations that can only be regarded as incestuous. This is the source of all those incestuous relationships with which mythology swarms. The reason this regression is so easy seems to lie in the specific inertia of the libido, which will relinquish no object of the past, but would like to hold it fast forever. Stripped of its incestuous covering, Nietzsche's "sacrilegious backward grasp" is only a metaphor for a reversion to the original passive state where the libido is arrested in the objects of childhood. This inertia, as La Rochefoucauld says, is also a passion:

> Of all the Passions we are exposed to, none is more concealed from our Knowledge than Idleness. It is the most violent, and the most mischievous of any, and yet at the same time we are never sensible of its Violence, and the damage we sustain by it is very seldom seen. If we consider its Power carefully, it will be found, upon all Occasions, to reign absolute over all our Sentiments, our Interests, and our Pleasures. This is a Remora that can stop the largest Ships, and a Calm of worse Consequence in our Affairs, than any Rocks, and Storms. The Ease and Quiet of Sloth is a secret Charm upon the Soul, to suspend its most eager Pursuits, and shake its most peremptory Resolutions. In a Word, to give a true image of this Passion, we must say that it is a supposed Felicity of the Soul, that makes her easie under all her Losses, and supplies the Place of all her Enjoyments and Advantages.[5]

[254] This dangerous passion is what lies hidden beneath the hazardous mask of incest. It confronts us in the guise of the Terrible Mother[6] (pl. XVI, cf. also pl. XXXVIII), and is indeed the mother of innumerable evils, not the least of which are neurotic disturbances. For out of the miasmas arising from the stagnant pools of libido are born those baneful phantasmagorias which so veil reality that all adaptation becomes impossible. However, we shall not enquire further into the, origin of incest fantasies; the bare mention of the incest problem must suffice. Here we are concerned only with the question whether the resistance which, in the case of our author, led to a regression, signifies a conscious external difficulty or not. If it were an external difficulty, then the libido would be violently dammed back, and would produce a flood of fantasies which could best be described as plans to overcome the obstacle: ideas that toy with solutions, perhaps even some hard thinking which might lead to anything rather than a hypnagogic poem. The passive state described above does not fit in with the idea of an external obstacle, but, through its very acquiescence, points to a tendency that scorns real solutions and prefers a fantastic substitute. In the last resort, therefore, we

must be dealing with an internal conflict, somewhat after the style of those earlier experiences which resulted in the first two unconscious creations. We are thus forced to conclude that the external object simply *cannot* be loved, because an overwhelming proportion of the libido prefers an internal object that rises up from the unconscious as a substitute for the missing reality.

[255] The visionary phenomena produced by the first stage of introversion can be classed among the well-known symptoms[7] of hypnagogic vision. They provide the basis for the actual visions or "self-perceptions" of the libido in the form of symbols.

[256] Miss Miller continues:

> Then an impression that something was on the point of being communicated to me. It seemed as if these words were repeating themselves in me—"Speak, Lord, for thy servant heareth—Open thou mine ears."

[257] This passage describes the underlying intention very clearly; the word "communication" (*communiqué*) is actually a common expression in mediumistic circles. The Biblical words contain an invocation or "prayer," that is, a wish addressed to God, a concentration of libido on the God-image. The prayer refers to I Samuel 3:1ff., where Samuel was called three times by God during the night, but thought it was Eli calling him, until Eli told him that it was God, and that if he was called again, he should answer: "Speak, Lord, for thy servant heareth." The dreamer uses these words in the opposite sense, in order to direct her wishes, her libido, into the depths of the unconscious.

[258] We know that however much individuals differ from one another in the content of their conscious minds, they become all the more alike when regarded from the standpoint of the unconscious. The psychotherapist cannot fail to be impressed when he realizes how uniform the unconscious images are despite their surface richness. Differences only arise through individuation—a fact which provides the psychological justification for an essential portion of the philosophies of Schopenhauer, Carus, and von Hartmann, whose views have as their psychic basis the obvious uniformity of the unconscious. The unconscious consists, among other things, of remnants of the

undifferentiated archaic psyche, including its animal stages. The reactions and products of the animal psyche have a uniformity and constancy of which we seem able to discover only sporadic traces in man. Man seems to us far more individual than the animals. This may perhaps be a delusion, since we have in us a convenient tendency to discern differences mainly in the things which interest us. Psychological adaptation makes this inevitable, for without the minute differentiation of impressions all adaptation would be impossible. So strong is this tendency that we have, in fact, the greatest difficulty in recognizing the common connection between the things we have to do with in everyday life. It is much easier to recognize the connection in things that are remote from us. For instance, it is almost impossible for a European to distinguish at first between the faces in a Chinese crowd, although the Chinese have just as individual a physiognomy as we Europeans; but what their faces have in common is much more evident to the outsider than their individual differences. If we live among the Chinese, the impression of uniformity gradually disappears, and in the end they too become individuals. Individuality is one of those conditioned factors which are greatly overrated on account of their practical importance; it does not come into the category of those self-evident, universal truths upon which a science must be founded. The individual content of consciousness is therefore the most unfavourable object imaginable for psychology, precisely because it has differentiated the universal to the point of unrecognizability. The essence of conscious processes is adaptation, which takes place in a series of particulars. The unconscious, on the other hand, is universal: it not only binds individuals together into a nation or race, but unites them with the men of the past and with their psychology. Thus, by reason of its supra-individual universality,[8] the unconscious is the prime object of any real psychology that claims to be more than psychophysics.

[259] Man as an individual is a very suspicious phenomenon whose right to exist could be questioned by the biologist, since from that point of view he is significant only as a collective creature or as a particle in the mass. The cultural point of view gives man a meaning apart from the mass, and this, in the course of centuries, led to the development of personality and

the cult of the hero. The efforts of rationalistic theology to preserve the *personal* Jesus as the last and most precious remnant of a divinity whom we are no longer capable of imagining, are quite in keeping with this tendency. In this respect the Catholic Church proved more adaptable, since she met the universal need for a visible hero by recognizing God's vicar upon earth. The concrete reality of religious figures assists the canalization of libido into the equivalent symbols, provided that the worship of them does not get stuck at the outward object. But even if it does, it at least remains bound to the representative human figure and loses its original primitive form, even though it does not attain the desired symbolic form. This need for a visible reality has been secretly preserved in a certain personalistic brand of Protestant theology which insists on the historical Jesus. Not that men have ever loved the visible God: they do not love him for what he appears to be, a mere man, because if the pious want to love humanity they have only to turn to their neighbours or their enemies. The religious figure cannot be a mere man, for it has to represent what it actually is, namely the totality of all those primordial images which express the "extraordinarily potent," always and everywhere. What we seek in visible human form is not man, but the superman, the hero or god, that *quasi-human* being who symbolizes the ideas, forms, and forces which grip and mould the soul. These, so far as psychological experience is concerned, are the archetypal contents of the (collective) unconscious, the archaic heritage of humanity, the legacy left behind by all differentiation and development and bestowed upon all men like sunlight and air. But in loving this inheritance they love that which is common to all; they turn back to the mother of humanity, to the psyche, which was before consciousness existed, and in this way they make contact with the source and regain something of that mysterious and irresistible power which comes from the feeling of being part of the whole. It is the problem of Antaeus, who could only keep his giant strength through contact with mother earth. This temporary withdrawal into oneself seems, within certain limits, to have a favourable effect upon the psychic well-being of the individual. As one would expect, the two fundamental mechanisms of the psyche, extraversion and introversion, are also to a large extent the normal and appropriate ways of reacting to complexes—extraversion as a means of escaping from the complex into reality, introversion as a means of detaching oneself from external reality through the complex.

[260] The story in I Samuel 3:1ff. illustrates how the libido can be directed inwards: the invocation expresses this introversion, and the explicit expectation that God will speak empties the conscious mind of activity and transfers it to the divine being constellated by the invocation, who, from the empirical point of view, must be regarded as a primordial image. It is a fact of experience that all archetypal contents have a certain autonomy, since they appear spontaneously and can often exercise an overwhelming compulsion. There is, therefore, nothing intrinsically absurd about the expectation that "God" will take over the activity and spontaneity of the conscious mind, for the primordial images are quite capable of doing precisely this.

[261] Now that we have informed ourselves of the general purpose of the prayer, we are prepared to hear more about the visions of our dreamer. After the prayer, "the head of a sphinx in an Egyptian setting" appeared, only to disappear again immediately after. At this point the dreamer was disturbed, and woke up for a moment. The vision recalls the fantasy of the Egyptian statue mentioned in the beginning, whose rigid gesture is entirely in place here as a functional phenomenon, the light stages of hypnosis being technically known as "engourdissement" (stiffening). The word "sphinx" suggests "enigma," an enigmatic creature who propounds riddles, like the Sphinx of Oedipus, and stands on the threshold of man's fate as though symbolically announcing the inevitable. The Sphinx is a semi-theriomorphic representation of the mother-imago, or rather of the Terrible Mother, who has left numerous traces in mythology. I shall be told that nothing except the word "Sphinx" justifies our allusion to the Sphinx of Oedipus. But, in the absence of any context, an individual interpretation of the vision is impossible. The "Egyptian" fantasy hinted at in Part I (par. 52) is far too vague to be used here. Therefore, in order to understand the vision at all, we have to turn boldly to the ethnological material, on the assumption that the unconscious coins its symbols today in much the same way as it did in the remote past. With regard to the Sphinx, I would remind the reader of what I said in Part I (par. 24) about theriomorphic representations of the libido. (Cf. pl. IV*a*.) They are well

known to the doctor from the dreams and fantasies of his patients, where instinct is often represented as a bull, horse, dog, etc. One of my patients, who had questionable relations with women, and who began the treatment with the fear that I would forbid him his adventures, dreamt that I had very skilfully speared a strange animal, half pig, half crocodile, to the wall. Dreams are full of these theriomorphic representations of libido. Hybrids and monsters, like the one found here, are not at all infrequent. Bertschinger[9] has given us a series of illustrations in which the lower (animal) half in particular is represented theriomorphically. The libido so represented is the "animal" instinct[10] that has got repressed. In the above-mentioned case, one asks oneself in some bewilderment where the repression can lie in such a man, since he obviously lives out his instincts as much as possible. But we must remember that sex is not the only instinct, nor can instinct be identified outright with sex. It is therefore conceivable that my patient was damaging his instinct precisely through his manifest lack of sexual repression. His fear of my imposing some medical prohibition on him is reflected a little too faithfully in the dream for the latter to be altogether above suspicion. Dreams which repeat the real situation too emphatically, or insist too plainly on some anticipated reality, are making use of conscious contents as a means of expression. His dream is really expressing a projection: he projects the killing of the animal on to the doctor. That is the way it appears to him, because he does not know that he himself is injuring his instinct. The pointed instrument generally means the needle of the intellect, with which insects are pinned down and classified. He has "modern" ideas about sex, and does not know that he has an unconscious fear of my taking his pet theories away from him. This possibility is rightly feared, for if it were not in him he would hardly have had this dream. Thus the theriomorphic symbols always refer to unconscious manifestations of libido.

[262] There are two main reasons why these instinctual impulses are unconscious: the first is the general unconsciousness which we all share to a greater or less degree; the other is a secondary unconsciousness due to the repression of incompatible contents. This is not a cause, but rather a symptom, of a neurotic attitude which prefers to overlook unpleasant

facts, and unhesitatingly risks a whole chain of pathological symptoms for the sake of some small advantage in the present.

[263] Repression, as we have seen, is not directed solely against sexuality, but against the instincts in general, which are the vital foundations, the laws governing all life. The regression caused by repressing the instincts always leads back to the psychic past, and consequently to the phase of childhood where the decisive factors appear to be, and sometimes actually are, the parents. But the inborn instincts of the child play a distinct role aside from the parents, as can be seen from the fact that the parents do not exercise a uniform influence on their children, who each react to them in a different way. They must, therefore, possess individual determinants. Yet, to the empty consciousness of the child, it must seem as if all the determining influences came from outside, because children cannot distinguish their own instincts from the influence and will of their parents. This lack of discrimination in the child makes it possible for the animals which represent the instincts to appear at the same time as *attributes* of the parents, and for the parents to appear in animal form, the father as a bull, the mother as a cow (cf. pl. L*a*), and so on.[11]

[264] If the regression goes still further back, beyond the phase of childhood to the preconscious, prenatal phase, then archetypal images appear, no longer connected with the individual's memories, but belonging to the stock of inherited *possibilities of representation* that are born anew in every individual. It is from them that there arise those images of "divine" beings, part animal, part human. The guise in which these figures appear depends on the attitude of the conscious mind: if it is negative towards the unconscious, the animals will be frightening; if positive, they appear as the "helpful animals" of fairytale and legend.[12] It frequently happens that if the attitude towards the parents is too affectionate and too dependent, it is compensated in dreams by frightening animals, who represent the parents just as much as the helpful animals did. The Sphinx is a fear-animal of this kind and still shows clear traces of a mother derivative. In the Oedipus legend the Sphinx was sent by Hera, who hated Thebes on account of the birth of Bacchus. Oedipus, thinking he had overcome the Sphinx sent by the mother-goddess merely because he had solved her childishly simple riddle, fell a victim to

matriarchal incest and had to marry Jocasta, his mother, for the throne and the hand of the widowed queen belonged to him who freed the land from the plague of the Sphinx. This had all those tragic consequences which could easily have been avoided if only Oedipus had been sufficiently intimidated by the frightening appearance of the “terrible” or “devouring” Mother whom the Sphinx personified. (Cf. pls. XVI, XLVIII.) He was far indeed from the philosophical wonderment of Faust: “The Mothers, the Mothers, it has a wondrous sound!” Little did he know that the riddle of the Sphinx can never be solved merely by the wit of man.

[265] The genealogy of the Sphinx has manifold connections with the problem touched upon here: she was a daughter of Echidna, a monster with the top half of a beautiful maiden, and a hideous serpent below. This double being corresponds to the mother-imago: above, the lovely and attractive human half; below, the horrible animal half, changed into a fear-animal by the incest prohibition.[13] Echidna was born of the All-Mother, Mother Earth, Gaia, who conceived her with Tartarus, the personification of the underworld. Echidna herself was the mother of all terrors, of the Chimera, Scylla, the Gorgon (pl. XIV*b*), of frightful Cerberus, of the Nemean lion, and of the eagle that devoured the liver of Prometheus. She also gave birth to a number of dragons. One of her sons was Orthrus, the dog of the monster Geryon, who was slain by Heracles. With this dog, her own son, Echidna incestuously begat the Sphinx. This should be sufficient to characterize the complex whose symbol is the Sphinx. It is evident that a factor of such magnitude cannot be disposed of by solving a childish riddle. The riddle was, in fact, the trap which the Sphinx laid for the unwary wanderer. Overestimating his intellect in a typically masculine way, Oedipus walked right into it, and all unknowingly committed the crime of incest. The riddle of the Sphinx was *herself*—the terrible mother-imago, which Oedipus would not take as a warning.

[266] If, in spite of the lack of subjective material, we may venture an inference concerning the sphinx symbol in the case of Miss Miller, we may perhaps say that its meaning for her is approximately the same as it was for Oedipus, even though Oedipus was a man. We would almost expect a masculine sphinx, and as a matter of fact there are masculine as

well as feminine sphinxes in Egypt. This may have been known to Miss Miller. (The Sphinx of Thebes was undoubtedly feminine.) If our expectations are correct, it would have to be a masculine monster, because the danger for a woman comes not from the mother, but from the father. We shall leave this question undecided for the moment, and turn back to the facts. After Miss Miller had concentrated her thoughts again, the vision continued as follows:

> Suddenly, the apparition of an Aztec, complete in every detail: hand open, with large fingers, head in profile, armoured, with a head-dress resembling the plumed crests of the American Indians, etc. The whole is somewhat suggestive of the carvings on Mexican monuments.

[267] Our conjecture that a masculine figure was hidden in the Sphinx is now confirmed. The Aztec is a primitive Indian, or rather a primitive American. On the personal level he represents the primitive side of the father, since Miss Miller was an American. I have frequently observed in the analysis of Americans that the inferior side of the personality, the "shadow,"[14] is represented by a Negro or an Indian, whereas in the dream of a European it would be represented by a somewhat shady individual of his own kind. These representatives of the so-called "lower races" stand for the inferior personality component of the man. But Miss Miller is a woman. Therefore her shadow would have to be a feminine figure. But what we have here is a masculine figure which, in view of the role it plays in the Miller fantasies, must be regarded as a personification of the masculine component of the woman's personality. (Cf. pl. XVII.) In my later writings I have called this personification the "animus."[15]

[268] The details of this vision are worth going into, because there are several things to be noticed. The head-dress of eagle's feathers has a magical significance. The Indian takes on something of the sun-like nature of this bird when he adorns himself with its feathers, just as he assimilates the courage and strength of his enemy when he eats the latter's heart or takes his scalp. At the same time the feather crest is a crown which is equivalent to the rays of the sun. (Pl. XXI*b*.) The importance of the sun identification was made clear in Part I. Further proof of this is furnished not only by innumerable ancient customs, but by equally ancient religious figures of speech, as in the Wisdom of Solomon 5: 16: "Therefore shall they receive … a beautiful crown from

the Lord's hand." There are countless other passages of this kind in the Bible. A hymn by J. L. K. Allendorf says of the soul:

> The soul is freed from all care and pain
> And in dying it has come
> To the crown of joy; she stands as bride and queen
> In the glitter of eternal splendour,
> At the side of the great king.
>
> It [the soul] sees a clear countenance [sun]:
> His [the sun's] joyful loving nature
> Now restores it through and through:
> It is a light in his light.
> Now the child can see the father.
> He feels the gentle emotion of love.
> Now he can understand the word of Jesus.
> He himself, the father, has loved you.
> An unfathomable sea of benefits,
> An abyss of eternal waves of blessing
> Is disclosed to the enlightened spirit:
> He beholds the countenance of God,
> And knows what signifies the inheritor
> Of God in light and the co-heir of Christ.
> The feeble body rests on the earth:
> It sleeps until Jesus awakens it.
> Then will the dust become the sun,
> Which now is covered by the dark cavern:
> Then shall we come together
> With all the pious, who knows how soon,
> And will be for eternity with the Lord.[16]

[269] Another hymn, by Laurentius Laurentii (1660–1722), says:

> To the bride, because she conquers,
> Now is given the eternal crown.[17]

[270] In a hymn by G. W. Sacer (1635–99) we find the passage:

> Adorn my coffin with garlands
> Just as a conqueror is adorned,
> From those springs of heaven,
> My soul has attained
> The eternally green crown:
> The true glory of victory,

Coming from the son of God
Who has so cared for me.[18]

[271] Special importance seems to attach to the hand, which is described as "open," with "large" fingers. It is rather odd that the accent should fall on the hand, as one would rather have expected a description of the face and its expression. It is well known that the gesture of the hand is significant; unfortunately, further details are lacking here. Nevertheless, we might mention a parallel fantasy which also concerns the hand: a patient in a hypnagogic condition saw his mother painted on a wall, like a mural in a Byzantine church. She held one hand up, wide open, with splayed fingers. The fingers were very large, swollen at the ends into knobs, each surrounded by a small halo. The immediate association with this image was the fingers of a frog with suckers at the ends; then the resemblance to a phallus. The antiquated setting of the mother-image is also important. Presumably the hand in this fantasy had a spermatic and creative significance. This interpretation is borne out by other fantasies of the same patient: he saw what looked like a skyrocket going up from his mother's hand, which on closer inspection proved to be a shining bird with golden wings—a golden pheasant, it then occurred to him. We have seen in the last chapter that the hand actually has a phallic meaning, and that it plays a corresponding role in the production of fire. Fire is bored with the hand; therefore fire comes from the hand; and Agni, fire, was worshipped as a golden-winged bird.[19]

[272] Miss Miller says of the Aztec: "In my childhood I was particularly interested in Aztec remains and in the history of Peru and the Incas." Unfortunately, she tells us nothing more in this connection. We can, however, conclude from the sudden appearance of the Aztec that the unconscious was willing to let itself be impressed by her reading, presumably because this material had a natural affinity with her unconscious contents or was able to give them satisfactory expression. Just as we surmised an aspect of the mother in the Sphinx, so the Aztec is probably an aspect of the father. The mother's influence is mainly on the Eros of her son, therefore it was only logical that Oedipus should end up by marrying his mother. But the father exerts his influence on the mind or spirit of his daughter—on her "Logos." This he does by increasing her

intellectuality, often to a pathological degree which in my later writings I have described as “animus possession.” These spiritual influences played a not unimportant part in the personal history of our author and, as I pointed out in the Foreword to the second edition of this volume, finally led to insanity. Although the Aztec is a masculine figure and thus clearly betrays the influence of the father, it was the feminine Sphinx that came first. In an American girl this might conceivably point to the preponderance of the feminine element. Mother complexes are extremely common in America and often very pronounced, probably because of the strong maternal influence in the home and the social position of women generally. The fact that more than half the capital in America is in women’s hands gives one something to think about. As a result of this conditioning many American women develop their masculine side, which is then compensated in the unconscious by an exquisitely feminine instinct, aptly symbolized by a Sphinx.

[273] The figure of the Aztec appears with all its “heroic” qualities: it represents the masculine ideal for the primitive, female side of our author. We have already met this ideal in the Italian naval officer, who “so softly and silently vanished away.” Though, in certain respects, he came up to the unconscious ideal that floated before Miss Miller, he was not able to compete with this rival because he lacked the mysterious charm of the “demon lover,” of the angel who takes a tender interest in the daughters of men, as angels sometimes seem inclined to do. (Hence the rule that women must cover up their hair in church, where the angels hover near!) We now understand what it was that turned against the naval officer: it was Miss Miller’s spirituality, which, personified as the Aztec, was far too exalted for her ever to find a lover among mortal men. However reasonable and unexacting the conscious attitude may be in such a case, it will not have the slightest effect on the patient’s unconscious expectations. Even after the greatest difficulties and resistances have been overcome, and a so-called normal marriage is made, she will only discover later on what the unconscious wants, and this will assert itself either as a change of life style or as a neurosis or even a psychosis.

[274] After this vision Miss Miller felt that a name was forming itself in her "bit by bit," a name that seemed to belong to this Aztec, who was the "son of an Inca of Peru." The name was "Chi-wan-to-pel."[20] The author says that it was somehow connected with her reminiscences. The act of naming is, like baptism, extremely important as regards the creation of personality, for a magical power has been attributed to the name since time immemorial. To know the secret name of a person is to have power over him. A well-known example of this is the tale of Rumpelstiltskin. In an Egyptian myth, Isis permanently robs the sun-god Ra of his power by compelling him to tell her his real name. Therefore, to give a name means to give power, to invest with a definite personality or soul.[21] Here the author remarked that the name reminded her very much of "Popocatepetl," which as we all know belongs to the unforgettable memories of our school-days and, much to the indignation of patients under analysis, occasionally turns up in a dream or association. Although one might hesitate to regard this schoolboy joke as of psychological importance, one must nevertheless inquire into the reasons for its existence. One must also ask: Why is it always Popocatepetl and not the neighbouring Ixtaccihuatl, or the even higher and more beautiful Orizaba? The latter is a nicer name and is far easier to pronounce. Popocatepetl, however, is impressive precisely because of its onomatopoeic name. In English the onomatopoeia that comes to mind is *pop* or *pop-gun*; in German and French, the words *Hinter-pommern, Pumpernickel, Bombe, petarde* (*le pet* = flatus). The German word *Popo*, 'posterior,' does not exist in English,[22] but on the other hand to break wind is sometimes called *to pop* or *to poop*, and the act of defecation is commonly known as *to poop* or to *poo-poo* in childish speech. A jocular name for the posterior is *bum*. (*Poop* also means the rear end of a ship.) In French, *pouf*! is onomatopoeic; *pouffer*, 'explode,' *la poupe*, 'poop of a ship,' *le poupard*, 'baby in arms,' *la poupée*, 'doll.' *Poupon* is a pet name for a chubby-cheeked child. In Dutch, *pop* is 'doll'; in Latin, *puppis* means poop of a ship, though Plautus uses it jokingly for the backside of the body; *pupus*, 'child,' *pupula*, 'girl, little doll.' The Greek *ποππῡζω* denotes a smacking, snapping, or blowing noise. It is used of

kissing, but also (in Theocritus) of the subsidiary noises connected with flute-playing.

[275] One of my patients, in his boyhood, always associated the act of defecation with the fantasy that his posterior was a volcano in full eruption, with violent explosions of gas and gushings forth of lava. The words for the elemental occurrences of nature are not, as a rule, very poetical: one thinks of a beautiful phenomenon like the meteor, which in German is called “Sternschnuppe” (smouldering wick of a star, which is “snuffed” out). Certain South American Indians call it “piss of the stars.” The Voile de la Vierge waterfall in the Valais, famous for its beauty, has only recently been called by this poetic name. Formerly it was known as the Pissevache. One takes the name from the nearest source.

[276] It seems very puzzling at first why the figure of Chiwantopel, whom Miss Miller awaited with positively mystical expectation and whom she herself compared, in a note, to a mediumistic control, should get into such a disreputable neighbourhood that his very essence—his name—appears to be bound up with those out-of-the-way regions of the body. In order to understand this, we have to realize that when something is produced from the unconscious, the first thing to come up is the infantile material that has long been lost to memory. We have, therefore, to adopt the point of view of that time, when this material was still on the surface. So if a much venerated object is related by the unconscious to the anal region, we have to conclude that this is a way of expressing respect and attention, such as the child feels for these forbidden functions. Naturally traces of this infantile interest still linger on in the adult. The only question is whether this interest corresponds to the psychology of the child. Before we attempt to answer this question, it must be said at once that the anal region is very closely connected with veneration. An Oriental fairy-tale relates that the Crusaders used to anoint themselves with the excrement of the Pope in order to make themselves more formidable. One of my patients, who had a special veneration for her father, had a fantasy in which she saw her father sitting on a commode in a dignified manner, while people filed past greeting him effusively. We might also mention the intimate connection between excrement and gold:[23] the lowest value allies itself to the highest. The alchemists sought

their *prima materia* in excrement, one of the arcane substances from which it was hoped that the mystic figure of the *filius philosophorum* would emerge (“in stercore invenitur”). A very religiously brought-up young patient once dreamt that she saw the Crucifix formed of excrement on the bottom of a blue-flowered chamber-pot. The contrast is so enormous that one can only assume that the valuations of childhood are totally different from ours. And so, indeed, they are. Children bring to the act of defecation and its products an interest[24] such as is later evinced only by the hypochondriac. We can only begin to understand this interest when we realize that the young child connects defecation with a theory of propagation. This puts a somewhat different complexion on the matter. The child thinks: that is how things are produced, how they “come out.”

[277] The same child on whom I reported in my “Psychic Conflicts in a Child” and who had a well-developed anal birth theory, like Freud’s “Little Hans,”[25] later contracted the habit of sitting for hours on the toilet. On one occasion her father, growing impatient, went to the toilet and called: “Come out at once! Whatever are you doing?” Whereupon the answer came from within: “I’m doing a little cart and two ponies!” So the child was “making” a little cart and two ponies, things she particularly wanted at that moment. In this way one can make whatever one wishes. The child wishes passionately for a doll or, at heart, for a real baby—that is, she is practising for her future biological task; and in exactly the same way that things in general are produced, she makes the “doll”[26] that stands for the baby and all her other wishes. From a patient I got a parallel fantasy dating from her childhood: in the toilet there was a crack in the wall, and she used to imagine that a fairy would come out of this crack and give her everything she wished for. The toilet is well known as the place of dreams where much is created that would later be considered unworthy of this place of origin. Lombroso recounts a pathological fantasy of two insane artists, which is relevant here:

> Each of them thought he was God Almighty and the ruler of the universe. They created or produced the world by making it come forth from the rectum, like a bird’s egg from the oviduct (or cloaca). One of these artists was gifted with real artistic sense. He painted a picture of himself in the act of creation: the world came forth from his anus, his member was in full erection, he was naked, surrounded by women and by all the insignia of his power.[27]

[278] It was only after I realized these connections that an observation I made many years ago, which kept on bothering me because I had never rightly understood it, finally became clear to me. The patient was an educated woman who was separated from her husband and child under tragic circumstances and taken to an asylum. She exhibited a typical apathy and slovenliness which were considered due to "affective deterioration." As I rather doubted this deterioration and was inclined to regard it more as a secondary phenomenon, I took great pains to find out how I could get at the blocked source of affect. Finally, after more than three hours' hard work, I hit upon a train of thought that suddenly produced a violent outburst of affect in the patient. Complete affective rapport was instantly established. This happened in the morning, and when I returned at the appointed time in the evening to see her in the ward, she had smeared herself with excrement from head to foot for my reception, and cried out laughingly: "How do you like me now?" She had never done this before; it was obviously a gesture intended for my benefit. The impression it made on me was so powerful that for years afterwards I was convinced of the affective deterioration of such cases. In reality this ceremony of welcome was a drastic attempt to ward off the transference—in so far as the patient acted as an adult. Rut in so far as she acted on the level of regressive infantilism, the ceremony denoted an outburst of positive feeling. Hence the equivocal "Do you like me now?"

[279] The birth of Chiwantopel from Popocatepetl therefore means: "I make, produce, invent him out of myself." It is the creation or birth of man by the infantile route. The first men were made from earth or clay. The Latin *lutum*, which really means 'mud,' also had the metaphorical meaning of 'filth.' Plautus even uses it as a term of abuse, something like "You scum!" The idea of anal birth recalls the motif of throwing something behind one. A well-known example of this is the story of Deucalion and Pyrrha, the sole survivors of the Flood, who were told by the oracle to throw behind them the bones of the Great Mother. They thereupon threw stones behind them, from which mankind sprang. There is a similar legend that the Dactyls sprang from the dust which the nymph Anchiale threw behind her. In this connection one thinks of the humorous significance that attaches to anal products: in popular humour excrement

is often regarded as a monument or souvenir (which in the case of criminals plays an important part in the form of the *grumus merdae*). Everyone knows the joke about the man who wandered through labyrinthine passages looking for a hidden treasure, and who, after shedding all his clothing, deposited an excrementum as a last sign-post for the journey back. In the distant past no doubt such a sign possessed as great a significance as the droppings of animals to indicate a man's whereabouts or the direction taken. Stone monuments will later have replaced this more perishable memorial.

[280] As a parallel to Chiwantopel's emergence into consciousness, Miss Miller mentions another instance of a name suddenly obtruding itself on her mind: "A-ha-ma-ra-ma," which, she felt, had something Assyrian about it. As a possible source there came into her mind the words: "Asurabama (who made cuneiform bricks)." This fact was unknown to me. We know that Assurbanipal left behind him the cuneiform library excavated at Kuyunjik, and it may be that "Asurabama" has something to do with "Assurbanipal." We must also consider the name "Aholibamah," which we met in Part I. The word "Ahama-rama" likewise has associations with Anah and Aholibamah, those daughters of Cain with the sinful passion for the sons of God. This possibility points to Chiwantopel as the longed-for son of God. Was Byron thinking, perhaps, of the two whorish sisters Aholah and Aholibah (Ezek. 23)? Aholibamah was the name of one of Esau's wives (Gen. 36:2 and 14), and another wife was called Adah. Dr. Riwkah Schärf has drawn my attention to a dissertation by Georg Mayn (1887) on Byron's "Heaven and Earth," in which the author points out that Anah was probably Adah in the original draft, but that Byron altered it to Anah because Adah had already occurred in his drama "Cain." So far as the meaning of the words is concerned, Aholibamah is reminiscent of Aholah and Aholibah: Aholah means "(she has) her (own) tabernacle," i.e., her own temple, and Aholibah means "my tabernacle is in her," i.e., in Jerusalem, just as Aholah is the name of Samaria (Ezek. 23:4). In Gen. 36:41 Aholibamah is also the name of one of the "dukes of Edom." The Canaanites worshipped on hilh—*bamoth*—and a synonym for hill is *ramah*. Whether

Miss Miller's neologism "Ahamarama" can legitimately be connected with this is open to question.

[281] Miss Miller remarks that besides the name "Asurabama" she also thought of "Ahasuerus." This association points to a very different aspect of the problem of the unconscious personality. While the previous material told us something about the infantile theory of human birth, this association gives us a glimpse into the dynamics of the unconscious creation of personality. Ahasuerus is the Wandering Jew, whose main characteristic was that he had to wander restlessly over the earth till the end of the world. The fact that this particular name occurred to the author justifies us in following his trail.

[282] The legend of Ahasuerus, whose first literary traces are to be found in the thirteenth century, appears to be of Occidental origin. The figure of the Eternal Jew has undergone even more literary elaboration than that of Faust, practically all of it dating from the last century. If the figure were not called Ahasuerus, it would still exist under another name, perhaps as the Comte de Saint-Germain, the mysterious Rosicrucian, whose immortality is assured and whose present whereabouts are supposed to be known.[28] Although the stories about Ahasuerus cannot be traced beyond the thirteenth century, the oral tradition may go much further back, and it is possible that a link with the Orient once existed. There the parallel figure is Khidr or El-Khadr, the "eternally youthful Chidher" celebrated in song by Friedrich Rückert. The legend is purely Islamic.[29] The strange thing is, however, that Khidr is not only regarded as a saint, but in Sufic circles even has the status of a deity. In view of the strict monotheism of Islam, one is inclined to think of him as a pre-Islamic, Arabian deity who, though not officially recognized by the new religion, was tolerated for reasons of expediency. But there is nothing to prove that. The first traces of Khidr are to be found in the commentaries on the Koran by al-Bukhari (d. 870) and al-Tabari (d. 923), and especially in the commentary on a noteworthy passage in the 18th Sura. This is entitled "The Cave," after the cave of the seven sleepers who, according to legend, slept in it for 309 years, thus escaping the persecution, and woke up in a new age. It is interesting to see how the Koran, after lengthy moral reflections in the course of this same sura, comes to the following passage, which is

especially important as regards the origin of the Khidr myth. I quote the Koran literally:[30]

> And Moses said to his servant (Joshua the son of Nun): “I will not cease to wander until I have reached the place where the two seas meet, even though I journey for eighty years.” But when they had reached the place where the two seas meet, they forgot their fish (which they had brought with them for food), and it took its way through a canal to the sea. And when they had gone past this place, Moses said to his servant: “Bring us our breakfast, for we are weary from our journey.” But his servant answered: “See what has befallen me! When we were encamped there by the rock, I forgot the fish. Only Satan can have caused me to forget the fish and put it out of my mind, and in wondrous wise it took its way to the sea.” Then Moses said: “That is the place we seek.” And they went back the way they had come. And they found one of Our servants, whom We[31] had endowed with Our grace and wisdom. Moses said to him: “Shall I follow you, that you may teach me for my guidance some of the wisdom you have learnt?” But he answered: “You will not be able to endure me, for how should you have patience to bear with things you cannot comprehend?”

[283] Moses now accompanies the mysterious servant of God, who does divers things which Moses cannot comprehend; finally the Unknown takes leave of him and speaks as follows:

> The Jews will ask you about Dhulqarnein.[32] Say: I will tell you a story of him. We established his kingdom on earth and gave him the means of fulfilling all his wishes. He took his way until he came to the place where the sun sets, and it seemed to him as if it set in a black muddy spring.…

[284] Now follows a moral reflection, then the story continues:

> Then he took his way further, until he came to the place where the sun rises.…

[285] If we wish to know who the unknown servant of God is, this passage tells us that he is Dhulqarnein, Alexander; he goes to the place of setting and the place of rising, like the sun. The commentators explain that the unknown servant of God is Khidr, “the Verdant One, the tireless wanderer, the teacher and counsellor of pious men, wise in divine knowledge, the immortal.”[33] On the authority of al-Tabari, Khidr is connected with Dhulqarnein: Khidr, following the armies of Alexander, reached the “stream of life,” and they both unwittingly drank of it, and so became immortal. Moreover, Khidr is identified by the old commentators with Elias (Elijah), who also did not die, but ascended to heaven in a fiery chariot, a feature he shares with Helios.[34] It has been conjectured that Ahasuerus owes his existence to an obscure passage in the Bible. This passage occurs in Matthew 16:28. First comes the scene where

Christ appoints Peter as the rock of his Church and names him the holder of his power; then follows the prophecy of his death, ending with the words:

> Verily I say unto you, There be some standing here, which shall not taste of death, till they see the Son of Man coming in his kingdom.

[286] This is followed immediately by the Transfiguration:

> And (he) was transfigured before them: and his face did shine as the sun, and his raiment was white as the light.
>
> And, behold, there appeared unto them Moses and Elias talking with him.
>
> Then answered Peter, and said unto Jesus, Lord, it is good for us to be here: if thou wilt, let us make here three tabernacles; one for thee, and one for Moses, and one for Elias.

[287] From these passages it is clear that Christ is somehow equated with Elias without being identical with him,[35] although the people regarded him as Elias. The ascension, however, forms a parallel between Elias and Christ. Christ's prophecy shows that there are one or two immortals besides himself who shall not die until the Second Coming. According to John 21:21ff., John himself was considered to be one of these immortals, and in legend he is in fact not dead, but merely sleeping in the earth until the Second Coming, and his breath causes the dust to swirl around his grave.[36]

[288] Another legend[37] says that Dhulqarnein brought his "friend" Khidr to the source of life, that he might drink of immortality.[38] Alexander himself bathed in the stream of life and performed the ritual ablutions. In the Arabian legend Khidr is the companion, or else he is accompanied (either by Dhulqarnein or by Elias, being "like unto" them or identical with them).[39] There are, therefore, two figures who resemble one another but are nevertheless distinct. The analogous situation in Christianity is the scene by the Jordan, where John leads Christ to the source of life. Christ, as the baptized, is here the subordinate, while John plays the superior role, as in the case of Dhulqarnein and Khidr, or Khidr and Moses, and Khidr and Elias. Vollers compares Khidr and Elias on the one hand with Gilgamesh and his primitive brother Eabani or Enkidu, and on the other hand with the Dioscuri, one of whom was mortal and the other immortal. This relation applies equally to Jesus and John the Baptist,[40]

and Jesus and Peter. The last-named parallel can be explained only by comparison with the Mithraic mysteries, whose esoteric content is revealed to us in part by the surviving monuments. On the marble relief at Klagenfurt,[41] Mithras is shown crowning Helios with a crown of rays, as he kneels before him or floats up to him from below. On the Osterburken monument, Mithras has in his right hand the shoulder of the mystic bull and holds it above the head of Helios, who stands bowed before him; his left hand rests on his sword hilt; a crown lies between them on the ground. Cumont[42] remarks that this scene probably represents the divine prototype of initiation into the degree of Miles, when a sword and crown were conferred on the neophyte. Helios is therefore appointed the Miles of Mithras. In general, Mithras seems to act in the capacity of patron to Helios. This recalls the bold attitude of Heracles towards the sun: on his way to fight the monster Geryon the sun burned too fiercely, so Heracles wrathfully threatened him with his invincible arrows. Helios was compelled to yield, and thereupon lent the hero the sun-ship which he used for crossing the sea. Thus Heracles came to Erythia, to the sun-cattle of Geryon.[43]

[289] On the Klagenfurt monument, Mithras is also shown shaking Helios by the hand, either in farewell or in agreement. (P1. XXIV*a*.) In another scene he mounts the chariot of Helios for the ascension or sea-journey.[44] Cumont is of the opinion that Mithras performs a kind of ceremonial investiture: he consecrates the divine power of Helios by crowning him with his own hands.[45] This relationship corresponds to that between Christ and Peter. Peter’s attribute, the cock, gives him a solar character. After Christ’s ascension he becomes the visible representative of God; therefore he suffers the same death—crucifixion—as his master, replaces the chief deity of the Roman imperium, the *Sol invictus*, and becomes the head of the Church Militant and Triumphant. In the Malchus scene he already appears as the Miles of Christ, the holder of the sword. His successors all wear the triple crown. But the crown is a solar attribute, hence the Pope is a symbolical “solis invicti comes” like the Roman Caesars. The setting sun appoints a successor whom he invests with his solar power. Dhulqarnein gives Khidr eternal life, Khidr imparts his wisdom to Moses; there is even a legend that Moses’ forgetful servant

Joshua unwittingly drank from the fountain of life, whereupon he became immortal and, as a punishment, was placed in a boat by Khidr and Moses and cast out to sea—another fragment of a sun-myth, the motif of the "sea-journey."[46]

[290] The symbol for that portion of the zodiac in which the sun re-enters the yearly cycle at the time of the winter solstice is Capricorn, originally known as the "Goat-Fish" (αἰγόχερως, 'goat-horned'): the sun mounts like a goat to the tops of the highest mountains, and then plunges into the depths of the sea like a fish. The fish in dreams occasionally signifies the unborn child,[47] because the child before its birth lives in the water like a fish; similarly, when the sun sinks into the sea, it becomes child and fish at once. The fish is therefore a symbol of renewal and rebirth.

[291] The journey of Moses with his servant Joshua is a life-journey (it lasted eighty years). They grow old together and lose the life-force, i.e., the fish, which "in wondrous wise took its way to the sea" (setting of the sun). When the two notice their loss, they discover at the place where the source of life is found (where the dead fish revived and sprang into the sea) Khidr wrapped in his mantle,[48] sitting on the ground. In another version he was sitting on an island in the midst of the sea, "in the wettest place on earth," which means that he had just been born from the maternal depths. Where the fish vanished Khidr, the Verdant One, was born as a "son of the watery deep," his head veiled, proclaiming divine wisdom, like the Babylonian Oannes-Ea (cf. fig. 18), who was represented in fish form and daily came out of the sea as a fish to teach the people wisdom.[49]

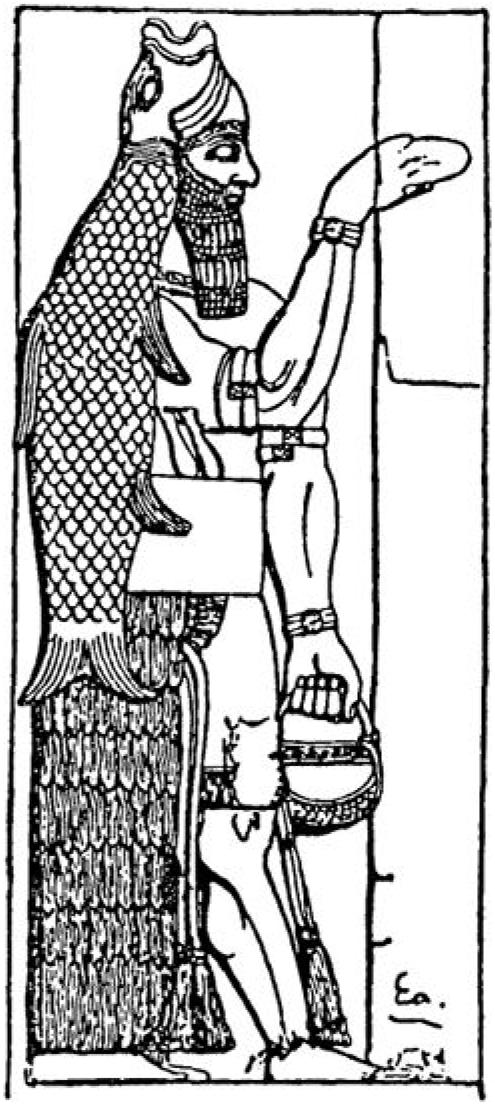

Fig. 18. Priest with a fish-mask, representing Oannes *Relief, Nimrud*

[292] Oannes’ name was brought into connection with John’s. With the rising of the reborn sun the fish that dwelt in darkness, surrounded by all the terrors of night and death,[50] becomes the shining, fiery day-star. This gives the words of John the Baptist a special significance (Matthew 3:11):

> I indeed baptize you with water unto repentance; but he that cometh after me is mightier than I … he shall baptize you with the Holy Ghost, and with fire.

[293] Following Vollers, we may compare Khidr and Elias (or Moses and his servant Joshua) with Gilgamesh and his brother Eabani (Enkidu). Gilgamesh wanders through the world, driven by fear and longing, to

find immortality. (Pl. XIX.) His journey takes him across the sea to the wise Utnapishtim (Noah), who knows how to cross the waters of death. There Gilgamesh has to dive down to the bottom of the sea for the magical herb that is to lead him back to the land of men. On the return journey he is accompanied by an immortal mariner, who, banished by the curse of Utnapishtim, has been forbidden to return to the land of the blessed. But when Gilgamesh arrives home, a serpent steals the magic herb from him (i.e., the fish slips back into the sea). Because of the loss of the magic herb, Gilgamesh's journey has been in vain; instead he comes back in the company of an immortal, whose fate we cannot learn from the fragments of the epic. Jensen[51] believes that this banished immortal is the prototype of Ahasuerus.

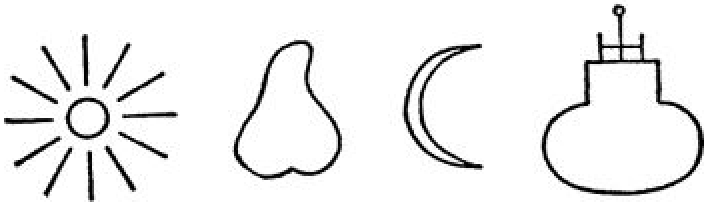
[294] Once again we meet the motif of the Dioscuri: mortal and immortal, the setting and rising sun. The Mithraic bull-sacrifice is often represented as flanked by the two dadophors, Cautes and Cautopates, one with a raised and the other with a lowered torch. (Cf. pl. XX*b*.) They form a pair of brothers whose characters are revealed by the symbolic position of the torches. Cumont not unjustly connects them with the sepulchral Erotes, who as genies with inverted torches have a traditional meaning. One would stand for death, the other for life. There are certain points of resemblance between the Mithraic sacrifice (where the bull in the centre is flanked on either side by dadophors) and the Christian sacrifice of the lamb (or ram). The Crucified is traditionally flanked by two thieves, one of whom ascends to paradise while the other descends to hell.[52] The Semitic gods were often flanked by two *paredroi*; for instance, the Baal of Edessa was accompanied by Aziz and Monimos (Baal being astrologically interpreted as the sun, and Aziz and Monimos as Mars and Mercury). According to the Babylonian view, the gods are grouped into triads. Thus the two thieves somehow go together with Christ. The two dadophors are, as Cumont has shown, offshoots[53] from the main figure of Mithras, who was supposed to have a secret triadic character. Dionysius the Areopagite reports that the magicians held a feast in honour of τοῡ τοϋ τρι-πλασίου Μίθρον[54] (the threefold Mithras).[55]

[295] As Cumont observes,[56] Cautes and Cautopates sometimes carry in their hands the head of a bull and of a scorpion respectively. Taurus and Scorpio are equinoctial signs,[57] and this is a clear indication that the sacrifice was primarily connected with the sun cycle: the rising sun that sacrifices itself at the summer solstice, and the setting sun. Since it was not easy to represent sunrise and sunset in the sacrificial drama, this idea had to be shown outside it.

[296] We have already pointed out that the Dioscuri represent a similar idea in somewhat different form: one sun is mortal, the other immortal. As this whole solar mythology is psychology projected into the heavens, the underlying idea could probably be paraphrased thus: just as man consists of a mortal and an immortal part, so the sun is a pair of brothers, one of whom is mortal, the other immortal. Man is mortal, yet there are exceptions who are immortal, or there is something immortal in us. Thus the gods, or figures like Khidr and the Comte de Saint-Germain, are our immortal part which continues intangibly to exist. The sun comparison tells us over and over again that the dynamic of the gods is psychic energy. This is our immortality, the link through which man feels inextinguishably one with the continuity of all life.[58] The life of the psyche is the life of mankind. Welling up from the depths of the unconscious, its springs gush forth from the root of the whole human race, since the individual is, biologically speaking, only a twig broken off from the mother and transplanted.

[297] The psychic life-force, the libido, symbolizes itself in the sun[59] or personifies itself in figures of heroes with solar attributes. At the same time it expresses itself through phallic symbols. Both possibilities are found on a late Babylonian gem from Lajard’s collection (fig. 19). In the middle stands an androgynous deity. On the masculine side there is a snake with a sun halo round its head; on the feminine side another snake with a sickle moon above it. This picture has a symbolic sexual nuance: on the masculine side there is a lozenge, a favourite symbol of the female genitals, and on the feminine side a wheel without its rim. The spokes are thickened at the ends into knobs, which, like the fingers we mentioned earlier, have a phallic meaning. It seems to be a phallic wheel such as

was not unknown in antiquity. There are obscene gems on which Cupid is shown turning a wheel consisting entirely of phalli.[60] As to what the sun signifies, I discovered in the collection of antiquities at Verona a late Roman inscription with the following symbols:[61]



[298] The symbolism is plain: sun = phallus, moon = vessel (uterus). This interpretation is confirmed by another monument from the same collection. The symbols are the same, except that the vessel[62] has been replaced by the figure of a woman. Certain symbols on coins can probably be interpreted in a similar manner. In Lajard's *Recherches sur la culte de Vénus* there is a coin from Perga, showing Artemis as a conical stone flanked by a masculine figure (alleged to be the deity Men) and a female figure (alleged to be Artemis). Men (otherwise called Lunus) appears on an Attic bas-relief with a spear, flanked by Pan with a club, and a female figure.[63] From this it is clear that sexuality as well as the sun can be used to symbolize the libido.

[299] One further point deserves mention here. The dadophor Cautopates is often represented with a cock[64] and pine-cones. These are the attributes of the Phrygian god Men (pl. XXI*a*), whose cult was very widespread. He was shown with the pileus[65] (or "Phrygian cap") and pine-cones, riding on the cock, and also in the form of a boy, just as the dadophors were boyish figures. (This latter characteristic relates both them and Men to the Cabiri and Dactyls.) Now Men has affinities with Attis, the son and lover of Cybele. In Imperial times Men and Attis merged into one. Attis also wears the pileus like Men, Mithras, and the dadophors. As the son and lover of his mother he raises the incest problem. Incest leads logically to ritual castration in the Attis-Cybele cult; for according to legend the hero, driven mad by his mother, mutilates himself. I must refrain from going into this question more deeply at present, as I would prefer to discuss the incest problem at the end of this book. Here I would only point out that the incest motif is bound to arise, because when the

regressing libido is introverted for internal or external reasons it always reactivates the parental imagos and thus apparently re-establishes the infantile relationship. But this relationship cannot be re-established, because the libido is an adult libido which is already bound to sexuality and inevitably imports an incompatible, incestuous character into the reactivated relationship to the parents.[66] It is this sexual character that now gives rise to the incest symbolism. Since incest must be avoided at all costs, the result is either the death of the son-lover or his self-castration as punishment for the incest he has committed, or else the sacrifice of instinctuality, and especially of sexuality, as a means of preventing or expiating the incestuous longing. (Cf. fig. 20.) Sex being one of the most obvious examples of instinctuality, it is sex which is liable to be most affected by these sacrificial measures, i.e., through abstinence. The heroes are usually wanderers,[67] and wandering is a symbol of longing,[68] of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth. It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o’ the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms. Here I must make way for the master, who has plumbed to the root of these Faustian longings:

Fig. 19. Androgynous divinity
Late Babylonian gem

Fig. 20. Cybele and her son-lover Attis
Roman coin

MEPHISTOPHELES: This lofty mystery I must now unfold.
Goddesses throned in solitude, sublime,
Set in no place, still less in any time.
At the mere thought of them my blood runs cold.
They are the Mothers!

… … … … … …

Goddesses, unknown to mortal mind,
And named indeed with dread among our kind.
To reach them you must plumb earth’s deepest vault;
That we have need of them is your own fault.

FAUST: Where leads the way?

MEPHISTOPHELES: There’s none! To the untrodden,
Untreadable regions—the unforgotten
And unforgettable—for which prepare!
There are no bolts, no hatches to be lifted,
Through endless solitudes you shall be drifted.
Can you imagine Nothing everywhere?
… … … … … …
Supposing you had swum across the ocean
And gazed upon the immensity of space,
Still you would see wave after wave in motion,
And even though you feared the world should cease,
You’d still see something—in the limpid green
Of the calm deep are gliding dolphins seen,
The flying clouds above, sun, moon, and star.
But blank is that eternal Void afar.
You do not hear your footfall, and you meet
No solid ground on which to set your feet.
… … … … … …
Here, take this key.
… … … … … …
The key will smell the right place from all others:
Follow it down, it leads you to the Mothers.
… … … … … …
Then to the depths!—I could as well say height:
It’s all the same. From the Existent fleeing,
Take the free world of forms for your delight,
Rejoice in things that long have ceased from being.
The busy brood will weave like coiling cloud,
But swing your key to keep away the crowd!
… … … … … …
A fiery tripod warns you to beware,
This is the nethermost place where now you are.
You shall behold the Mothers by its light,
Some of them sit, some walk, some stand upright,
Just as they please. Formation, transformation,
Eternal Mind’s eternal recreation.
Thronged round with images of things to be,

They see you not, shadows are all they see.
Then pluck up heart, the danger here is great,
Approach the tripod, do not hesitate,
And touch it with the key.[69]

V
SYMBOLS OF THE MOTHER AND OF REBIRTH

[300] The vision that follows the birth of the hero is described by Miss Miller as a "swarm of people." We know that this image symbolizes a secret,[1] or rather, the unconscious. The possession of a secret cuts a person off from his fellow human beings. Since it is of the utmost importance for the economy of the libido that his rapport with the environment should be as complete and as unimpeded as possible, the possession of subjectively important secrets usually has a very disturbing effect. It is therefore especially beneficial for the neurotic if he can at last disburden himself of his secrets during treatment. I have often noticed that the symbol of the crowd, and particularly of a streaming mass of people in motion, expresses violent motions of the unconscious. Such symbols always indicate an activation of the unconscious and an incipient dissociation between it and the ego.

[301] The vision of the swarm of people undergoes further development: horses appear, and a battle is fought.

[302] For the time being, I would like to follow Silberer and place the meaning of these visions in the "functional" category, because, fundamentally, the idea of the swarming crowd is an expression for the mass of thoughts now rushing in upon consciousness. The same is true of the battle, and possibly of the horses, which symbolize movement or energy. The deeper meaning of the horses will only become apparent in our treatment of mother-symbols. The next vision has a more definite character and a more significant content: Miss Miller sees a "dream-city." The picture is similar to one she had seen a short time before on the cover of a magazine. Unfortunately, further details are lacking. But one can easily imagine that this dream-city is something very beautiful and ardently longed for—a kind of heavenly Jerusalem, as the poet of the Apocalypse dreamt it.[2] (Cf. pl. XXII*a*.)

[303] The city is a maternal symbol, a woman who harbours the inhabitants in herself like children. It is therefore understandable that the three mother-goddesses, Rhea, Cybele, and Diana, all wear the mural crown (pl. XXIV*b*). The Old Testament treats the cities of Jerusalem, Babylon, etc. just as if they were women. Isaiah (47 : 1ff.) cries out:

> Come down, and sit in the dust, O virgin daughter of Babylon, sit on the ground: there is no throne, O daughter of the Chaldaeans: for thou shalt no more be called tender and delicate.
>
> Take the millstones, and grind meal: uncover thy locks, make bare the leg, uncover the thigh, pass over the rivers.
>
> Thy nakedness shall be uncovered, yea, thy shame shall be seen:
>
> I will take vengeance, and I will not meet thee as a man.…
>
> Sit thou silent, and get thee into darkness, O daughter of the Chaldaeans: for thou shalt no more be called, The lady of kingdoms.

[304] Jeremiah (50:12) says of Babylon:

> Your mother shall be sore confounded; she that bare you shall be ashamed.

[305] Strong, unconquered cities are virgins; colonies are sons and daughters. Cities are also harlots; Isaiah (23:16) says of Tyre:

> Take an harp, go about the city, thou harlot that hast been forgotten,

and (1:21):

> How is the faithful city become an harlot!

[306] We find a similar symbolism in the myth of Ogyges, the prehistoric king of Egypt who reigned in Thebes, and whose wife was appropriately called Thebe. The Boeotian city of Thebes founded by Cadmus received on that account the cognomen “Ogygian.” This cognomen was also applied to the great Flood, which was called “Ogygian” because it happened under Ogyges. We shall see later on that this coincidence can hardly be accidental. The fact that the city and the wife of Ogyges both have the same name indicates that there must be some relation between the city and the woman, which is not difficult to understand because the city is identical with the woman. There is a similar idea in Hindu mythology, where Indra appears as the husband of Urvara. But Urvara means the “fertile land.” In the same way the seizure of a country by the king was regarded as his marriage with the land. Similar ideas must also have existed in Europe. Princes at their accession had to guarantee a good

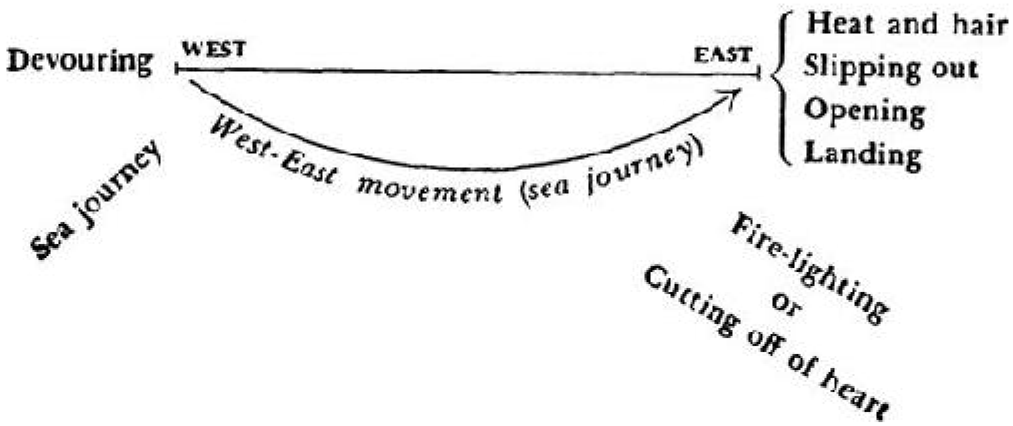
harvest. The Swedish king Domaldi was actually killed as a result of failure of the crops (Ynglinga Saga, 18). In the Hindu Ramayana, the hero Rama marries Sita, the furrow. To the same circle of ideas belongs the Chinese custom of the emperor's having to plough a furrow on ascending the throne. The idea of the soil as feminine also embraces the idea of continuous cohabitation with the woman, a physical interpenetration. The god Shiva, as Mahadeva and Parvati, is both male and female: he has even given one half of his body to his wife Parvati as a dwelling-place (pl. XXIII). The motif of continuous cohabitation is expressed in the well-known lingam symbol found everywhere in Indian temples: the base is a female symbol, and within it stands the phallus.[3] (P1. XXV.) This symbol is rather like the phallic baskets and chests of the Greeks. The chest or casket is a female symbol (cf. fig. 21 and pl. LIII), i.e., the womb, a common enough conception in the older mythologies.[4] The chest, barrel, or basket with its precious contents was often thought of as floating on the water, thus forming an analogy to the course of the sun. The sun sails over the sea like an immortal god who every evening is immersed in the maternal waters and is born anew in the morning.

[307] Frobenius writes:

> If, then, we find the blood-red sunrise connected with the idea that a birth is taking place, the birth of the young sun, the question immediately arises: Whose is the paternity? How did the woman become pregnant? And since this woman symbolizes the same idea as the fish, which means the sea (on the assumption that the sun descends into the sea as well as rises out of it), the strange primitive answer is that the sea has previously swallowed the old sun. The resulting myth is that since the sea-woman devoured the sun and now brings a new sun into the world, she obviously became pregnant in that way.[5]

[308] All these sea-going gods are solar figures. They are enclosed in a chest or ark for the "night sea journey" (Frobenius), often in the company of a woman (pl. XXII*b*)—an inversion of the actual situation, but linking up with the theme of continuous cohabitation we met above. During the night sea journey the sun-god is shut up in the mother's womb, and often threatened by all kinds of dangers.

[309] Instead of using numerous separate examples, I shall content myself with reproducing the diagram which Frobenius constructed from numberless myths of this sort:



[310] Frobenius gives the following legend by way of illustration:

> A hero is devoured by a water-monster in the West (*devouring*). The animal travels with him to the East (*sea journey*). Meanwhile, the hero lights a fire in the belly of the monster (*fire-lighting*), and feeling hungry, cuts himself a piece of the heart (*cutting off of heart*). Soon afterwards, he notices that the fish has glided on to dry land (*landing*); he immediately begins to cut open the animal from within (*opening*); then he slips out (*slipping out*). It was so hot in the fish's belly that all his hair has fallen out (*heat and hair*). The hero may at the same time free all those who were previously devoured by the monster, and who now slip out too.[6]

[311] A very close parallel is Noah's journey over the Flood that killed all living things; only he and his animals lived to experience a new Creation. A Polynesian myth[7] tells how the hero, in the belly of Kombili, the King Fish, seized his obsidian knife and cut open the fish's belly. "He slipped out and beheld a splendour. Then he sat down and began to think. 'I wonder where I am?' he said to himself. Then the sun rose up with a bound and threw itself from one side to the other." The sun had again slipped out. Frobenius cites from the Ramayana the story of the ape Hanuman, who represents the sun-hero:

> The sun, travelling through the air with Hanuman in it, cast a shadow on the sea, a sea-monster seized hold of it and drew Hanuman down from the sky. But when Hanuman saw that the monster was about to devour him, he stretched himself out to enormous size, and the monster followed suit. Then Hanuman shrank to the size of a thumb, slipped into the huge body of the monster, and came out on the other side.[7a] Hanuman thereupon resumed his flight, and encountered a new obstacle in another sea monster, who was the mother of Rahu, the sun-devouring demon. She also drew Hanuman down to her by his shadow.[8] Once more he had recourse to his earlier stratagem, made himself small, and slipped into her body; but scarcely was he inside than he swelled up to gigantic size, burst her, and killed her, and so made his escape.[9]

We now understand why the Indian fire-bringer Matarisvan is called "he who swells in the mother." The ark (fig. 21), chest, casket, barrel, ship, etc. is an analogy of the womb, like the sea into which the sun sinks for rebirth. That which swells in the mother can also signify her conquest and death. Fire-making is a pre-eminently conscious act and therefore “kills” the dark state of union with the mother.

[312] In the light of these ideas we can understand the mythological statements about Ogyges: it is he who possesses the mother, the city, and is thus united with the mother; therefore under him came the great flood, for it is typical of the sun myth that the hero, once he is united with the woman “hard to attain,” is exposed in a cask and thrown out to sea, and then lands on a distant shore to begin a new life. The middle section, the night sea journey in the ark, is lacking in the Ogyges tradition. But the rule in mythology is that the typical parts of a myth can be fitted together in every conceivable variation, which makes it extraordinarily difficult to interpret one myth without a knowledge of all the others. The meaning of this cycle of myths is clear enough: it is the longing to attain rebirth through a return to the womb, and to become immortal like the sun. This longing for the mother is amply expressed in the literature of the Bible. I cite first the passage in Galatians 4 : 26ff. and 5:1:

Fig. 21. Noah in the Ark
Enamelled altar of Nicholas of Verdun, 1186,
Klosterneuburg, near Vienna

But Jerusalem which is above is free, which is the mother of us all.

For it is written, Rejoice, thou barren that bearest not; break forth and cry, thou that travailest not: for the desolate hath many more children than she which hath an husband.

Now we, brethren, as Isaac was, are the children of promise.

But as then he that was born after the flesh persecuted him that was born after the Spirit, even so it is now.

Nevertheless what saith the scripture? Cast out the bondwoman and her son: for the son of the bondwoman shall not be heir with the son of the freewoman.

So then, brethren, we are not children of the bondwoman, but of the free.

Stand fast therefore in the liberty wherewith Christ hath made us free …

[313] The Christians are children of the Higher City, not sons of the earthly city-mother, who is to be cast out; for those born after the flesh are opposed to those born after the spirit, who are not born from the fleshly mother but from a symbol of the mother. Here again one thinks of the American Indians who say that the first man was born from a sword-hilt and a shuttle. The symbol-creating process substitutes for the mother the city, the well, the cave, the Church, etc. (Cf. pls. XXII*a*, XXX*a*.) This substitution is due to the fact that the regression of libido reactivates the ways and habits of childhood, and above all the relation to the mother;[10] but what was natural and useful to the child is a psychic danger for the adult, and this is expressed by the symbol of incest. Because the incest taboo opposes the libido and blocks the path to regression, it is possible for the libido to be canalized into the mother analogies thrown up by the unconscious. In that way the libido becomes progressive again, and even attains a level of consciousness higher than before. The meaning and purpose of this canalization are particularly evident when the city appears in place of the mother: the infantile attachment (whether primary or secondary) is a crippling limitation for the adult, whereas attachment to the city fosters his civic virtues and at least enables him to lead a useful existence. In primitives the tribe takes the place of the city. We find a well-developed city symbolism in the Johannine Apocalypse, where two cities play a great part, one being cursed and execrated, the other ardently desired. We read in the Revelation (17 : 1ff.):

> Come hither; I will show unto thee the judgement of the great whore that sitteth upon many waters:
>
> With whom the kings of the earth have committed fornication, and the inhabitants of the earth have been made drunk with the wine of her fornication.
>
> So he carried me away in the spirit into the wilderness: and I saw a woman sit upon a scarlet coloured beast, full of names of blasphemy, having seven heads and ten horns.
>
> And the woman was arrayed in purple and scarlet colour, and decked with gold and precious stones and pearls, having a golden cup in her hand full of abominations and filthiness of her fornication:
>
> And upon her forehead was a name written: Mystery, Babylon the Great, the Mother of Harlots and Abominations of the Earth.
>
> And I saw the woman drunken with the blood of the saints, and with the blood of the martyrs of Jesus: and when I saw her, I wondered with a great admiration. [Fig. 22.]

[314] There now follows a barely intelligible interpretation of the vision, the main points of interest being that the seven heads of the dragon signify “seven mountains, on which the woman sitteth.” This is probably a direct allusion to Rome, the city whose temporal power oppressed the world at that time. “The waters where the whore [the mother] sitteth” are “peoples, and multitudes, and nations, and tongues,” and this too seems to refer to Rome, for she is the mother of peoples and possesses all lands. Just as colonies are called “daughters,” so the peoples subject to Rome are like members of a family ruled over by the mother. In another scene the kings of the earth, i.e., the “sons,” commit fornication with her. The Apocalypse continues (18:2ff.):

> Babylon the great is fallen, is fallen, and is become the habitation of devils, and the hold of every foul spirit, and a cage of every unclean and hateful bird.
>
> For all nations have drunk of the wine of the wrath of her fornication, and the kings of the earth have committed fornication with her.

[315] This mother, then, is not only the mother of all abominations, but the receptacle of all that is wicked and unclean. The birds are soul-images,[11] by which are meant the souls of the damned and evil spirits. Thus the mother becomes the underworld, the City of the Damned. In this primordial image of the woman on the dragon[12] we recognize Echidna, the mother of every hellish horror. Babylon is the symbol of the Terrible Mother, who leads the peoples into whoredom with her devilish temptations and makes them drunk with her wine (cf. fig. 22). Here the intoxicating drink is closely associated with fornication, for it too is a libido symbol, as we have already seen in the soma-fire-sun parallel.

Fig. 22. The Great Whore of Babylon

New Testament engraving by H. Burgkmaier, Augsburg, l523

[316] After the fall and curse of Babylon, we find the hymn (Rev. 19 : 6ff.) which brings us from the lower half of the mother to the upper half, where everything that incest would have made impossible now becomes possible:

> Alleluia: for the Lord God omnipotent reigneth.
>
> Let us be glad and rejoice, and give honour to him: for the marriage of the Lamb[13] is come, and his wife hath made herself ready.
>
> And to her was granted that she should be arrayed in fine linen, clean and white: for the fine linen is the righteousness of saints.

> And he saith unto me, Write, Blessed are they which are called unto the marriage supper of the Lamb.

[317] The Lamb is the Son of Man who celebrates his nuptials with the "woman." Who the "woman" is remains obscure at first, but Rev. 21:9ff. shows us which "woman" is the bride, the Lamb's wife:

> Come hither, I will show thee the bride, the Lamb's wife.[14]
>
> And he carried me away in the spirit to a great and high mountain, and showed me that great city, the holy Jerusalem, descending out of heaven from God. [Cf. pl. XXII*a*.]

[318] After all that has gone before, it is evident from this passage that the City, the heavenly bride who is here promised to the Son, is the mother or mother-imago.[15] In Babylon the impure maid was cast out, according to Galatians, in order that the mother-bride might be the more surely attained in the heavenly Jerusalem. It is proof of the most delicate psychological perception that the Church Fathers who compiled the canon did not allow the Apocalypse to get lost, for it is a rich mine of primitive Christian symbols.[16] The other attributes that are heaped on the heavenly Jerusalem put its mother significance beyond doubt (Rev. 22:1f.):

> And he showed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the Lamb.
>
> In the midst of the street of it, and on either side of the river, was there the tree of life, which bare twelve manner of fruits, and yielded her fruit every month: and the leaves of the tree were for the healing of the nations.
>
> And there shall be no more curse.

[319] In this passage we meet the water-symbol which we found connected with the city in the case of Ogyges. The maternal significance of water (pl. XXVI) is one of the clearest interpretations of symbols in the whole field of mythology,[17] so that even the ancient Greeks could say that "the sea is the symbol of generation." From water comes life;[18] hence, of the two deities who here interest us most, Christ and Mithras, the latter is represented as having been born beside a river, while Christ experienced his "rebirth" in the Jordan. Christ, moreover, was born of the Πηγή,[19] the sempiternal *fons amoris* or Mother of God, whom pagan-Christian legend turned into a nymph of the spring. The spring is also found in Mithraism. A Pannonian dedication reads "Fonti perenni." An inscription from

Apulum is dedicated to the “Fons aeternus.”[20] In Persian, Ardvisura is the fount of the water of life. Ardvisura-Anahita is a goddess of water and love (just as Aphrodite is the “foam-born”). In the Vedas, the waters are called *malritamah*, ‘most maternal.’ All living things rise, like the sun, from water, and sink into it again at evening. Born of springs, rivers, lakes, and seas, man at death comes to the waters of the Styx, and there embarks on the “night sea journey.” Those black waters of death are the water of life, for death with its cold embrace is the maternal womb, just as the sea devours the sun but brings it forth again. Life knows no death; as the Spirit says in *Faust*:

> In flood of life, in action’s storm
> I ply on my wave
> With weaving motion
> Birth and the grave,
> A boundless ocean,
> Ceaselessly giving
> Weft of living,
> Forms unending,
> Glowing and blending.…[21]

[320] The projection of the mother-imago upon water endows the latter with a number of numinous or magical qualities peculiar to the mother. A good example of this is the baptismal water symbolism in the Church (pl. XXVII). In dreams and fantasies the sea or a large expanse of water signifies the unconscious. The maternal aspect of water coincides with the nature of the unconscious, because the latter (particularly in men) can be regarded as the mother or matrix of consciousness. Hence the unconscious, when interpreted on the subjective level,[22] has the same maternal significance as water.

[321] Another equally common mother-symbol is the wood of life (ξύλον ζωής), or tree of life. The tree of life may have been, in the first instance, a fruit-bearing genealogical tree, and hence a kind of tribal mother. Numerous myths say that human beings came from trees, and many of them tell how the hero was enclosed in the maternal tree-trunk, like the dead Osiris in the cedar-tree, Adonis in the myrtle, etc. (Cf. fig. 23.) Numerous female deities were worshipped in tree form, and this led to

the cult of sacred groves and trees. Hence when Attis castrates himself under a pine-tree, he did so because the tree has a maternal significance. Juno of Thespiae was a bough, Juno of Samos a plank, Juno of Argos a pillar, the Carian Diana was an unhewn block of wood, Athene of Lindus a polished column.[23] Tertullian called the Ceres of Pharos “rudis palus et informe lignum sine effigie” (a rough and shapeless wooden stake with no face). Athenaeus remarks that the Latona at Delos was ξὒλινον ᾂμορφον, ‘an amorphous bit of wood.’ Tertullian also describes an Attic Pallas as a “crucis stipes” (cross-post). The naked wooden pole, as the name itself indicates (*φάληϛ*, *palus*, *Pfahl*, pale, pile), is phallic (cf. pl. XXVIII). The φαλλός is a pole, a ceremonial lingam carved out of figwood, as are all the Roman statues of Priapus. Φάλοϛ means the peak or ridge of a helmet, later called *κῶνοϛ*, ‘cone.’ Φάλληνos (from φαλλós) means ‘wooden’; *øαλ-άγγωμα* is a cylinder; *øάλαγξ*, a round beam. The Macedonian shock-troops when drawn up in battle array were also known as a phalanx, and so is the finger-joint.[24] Finally, we have to consider *øαλόϛ*, ‘bright, shining.’ The Indo-European root is **bhale*, ‘to bulge, swell.’[25] Who does not think of Faust’s “It glows, it shines, increases in my hand!”[26]

[322] This is “primitive” libido symbolism, which shows how direct is the connection between libido and light. We find much the same thing in the invocations to Rudra in the Rig-Veda:

> May we obtain favour of thee, O ruler of heroes, maker of bountiful water [i.e., urine].…
>
> We call down for our help the fiery Rudra, who fulfils the sacrifice, the seer who circles in the sky.…
>
> He who yields sweetness, who hears our invocations, the ruddy-hued with the gorgeous helm, let him not deliver us into the power of jealousy.
>
> The bull of the Marut has gladdened me, the suppliant, with more vigorous health.…
>
> Let a great hymn of praise resound to the ruddy-brown bull, the white-shining (sun); let us worship the fiery god with prostrations; let us sing of the glorious being of Rudra.
>
> May the arrow of Rudra be turned from us; may the anger of the fiery god pass us by. Unbend thy firm bow (?) for the princes; thou who blessest with the waters of thy body, be gracious to our children and grandchildren.[27]

[323] Here the various aspects of the psychic life-force, of the extraordinarily potent,” the personified mana-concept, come together in

the figure of Rudra: the fiery-white sun, the gorgeous helm, the puissant bull, and the urine (*urere*, ‘to burn’).

[324] Not only the gods, but the goddesses, too, are libido-symbols, when regarded from the point of view of their dynamism. The libido expresses itself in images of sun, light, fire, sex, fertility, and growth. In this way the goddesses, as we have seen, come to possess phallic symbols, even though the latter are essentially masculine. One of the main reasons for this is that, just as the female lies hidden in the male (*pl*. XXIX), so the male lies hidden in the female.[28] The feminine quality of the tree that represents the goddess (cf. pl. XXXI) is contaminated with phallic symbolism, as is evident from the genealogical tree that grows out of Adam’s body. In my *Psychology and Alchemy* I have reproduced, from a manuscript in Florence, a picture of Adam showing the *membrum virile* as a tree.[29] Thus the tree has a bisexual character, as is also suggested by the fact that in Latin the names of trees have masculine endings and the feminine gender.[30]

[325] The tree in the following dream of a young woman patient brings out this hermaphroditism:[31] *She was in a garden, where she found an exotic-looking tree with strange red fleshy flowers or fruits. She picked and ate them. Then, to her horror, she felt that she was poisoned*.

[326] As a result of sexual difficulties in her marriage, the dreamer’s fancy had been much taken by a certain young man of her acquaintance. The tree is the same tree that stood in Paradise, and it plays the same role in this dream as it did for our first parents. It is the tree of libido, which here represents the feminine as well as the masculine side, because it simply expresses the relationship of the two to one another.

[327] A Norwegian riddle runs:

> A tree stands on the Billinsberg,
> Drooping over a lake.
> Its branches shine like gold.
> You won’t guess that today.

[328] In the evening the sun’s daughter collects the golden branches that have dropped from the wonderful oak.

Bitterly weeps the sun-child
In the apple orchard.
From the apple-tree has fallen
The golden apple.
Weep not, sun-child,
God will make another
Of gold or bronze,
Or a little silver one.

[329] The various meanings of the tree—sun, tree of Paradise, mother, phallus—are explained by the fact that it is a libido-symbol and not an allegory of this or that concrete object. Thus a phallic symbol does not denote the sexual organ, but the libido, and however clearly it appears as such, it does not mean *itself* but is always a symbol of the libido. Symbols are not signs or allegories for something known; they seek rather to express something that is little known or completely unknown. The *tertium comparationis* for all these symbols is the libido, and the unity of meaning lies in the fact that they are all analogies of the same thing. In this realm the fixed meaning of things comes to an end. The sole reality is the libido, whose nature we can only experience through its effect on us. Thus it is not the real mother who is symbolized, but the libido of the son, whose object was once the mother. We take mythological symbols much too concretely and are puzzled at every turn by the endless contradictions of myths. But we always forget that it is the unconscious creative force which wraps itself in images. When, therefore, we read: "His mother was a wicked witch," we must translate it as: the son is unable to detach his libido from the mother-imago, he suffers from resistances because he is tied to the mother.

[330] The water and tree symbolism, which we found as further attributes of the symbol of the city, likewise refer to the libido that is unconsciously attached to the mother-imago. In certain passages of the Apocalypse we catch a clear glimpse of this longing for the mother.[32] Also, the author's eschatological expectations end with the mother: "And there shall be no more curse." There shall be no more sin, no more repression, no more disharmony with oneself, no guilt, no fear of death and no pain of separation, because through the marriage of the Lamb the son is united

with the mother-bride and the ultimate bliss is attained. This symbol recurs in the *nuptiae chymicae*, the *coniunctio* of alchemy.[33]

[331] Thus the Apocalypse dies away on that same note of radiant, mystic harmony which was re-echoed some two thousand years later in the last prayer of "Doctor Marianus":

> O contrite hearts, seek with your eyes
> The visage of salvation;
> Blissful in that gaze, arise
> Through glad regeneration.
> Now may every pulse of good
> Seek to serve before thy face,
> Virgin, Queen of Motherhood,
> Keep us, Goddess, in thy grace.[34]

[332] The beauty and nobility of these feelings raises in our minds a question of principle: is the causal interpretation of Freud correct in believing that symbol-formation is to be explained solely by prevention of the primary incest tendency, and is thus a mere substitute product? The so-called "incest prohibition" which is supposed to operate here is not in itself a primary phenomenon, but goes back to something much more fundamental, namely the primitive system of marriage classes which, in its turn, is a vital necessity in the organization of the tribe. So it is more a question of phenomena requiring a teleological explanation than of simple causalities. Moreover it must be pointed out that the basis of the "incestuous" desire is not cohabitation, but, as every sun myth shows, the strange idea of becoming a child again, of returning to the parental shelter, and of entering into the mother in order to be reborn through her. But the way to this goal lies through incest, i.e., the necessity of finding some way into the mother's body. One of the simplest ways would be to impregnate the mother and beget oneself in identical form all over again. But here the incest prohibition intervenes; consequently the sun myths and rebirth myths devise every conceivable kind of mother-analogy for the purpose of canalizing the libido into new forms and effectively preventing it from regressing to actual incest. For instance, the mother is transformed into an animal, or is made young again,[35] and then disappears after giving birth, i.e., is changed back into her old shape. It is

not incestuous cohabitation that is desired, but rebirth. The incest prohibition acts as an obstacle and makes the creative fantasy inventive; for instance, there are attempts to make the mother pregnant by means of fertility magic. The effect of the incest-taboo and of the attempts at canalization is to stimulate the creative imagination, which gradually opens up possible avenues for the self-realization of libido. In this way the libido becomes imperceptibly spiritualized. The power which “always desires evil” thus creates spiritual life. That is why the religions exalt this procedure into a system. It is instructive to see the pains they take to further the translation into symbols.[36] The New Testament gives us an excellent example of this: in the dialogue about rebirth (John 3:4ff.), Nicodemus cannot help taking the matter realistically:

> How can a man be born when he is old? Can he enter the second time into his mother’s womb, and be born?

[333] Jesus tries to purify the sensuous cast of Nicodemus’ mind by rousing it from its dense materialistic slumbers, and translates the passage into the same, and yet not the same, words:

> Verily, verily, I say unto thee, Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God.
>
> *That which is born of flesh is flesh, and that which is born of the Spirit is spirit*.
>
> Marvel not that I said unto thee, Ye must be born again.
>
> *The wind bloweth where it listeth*, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit.

[334] To be born of water simply means to be born of the mother’s womb; to be born of the Spirit means to be born of the fructifying breath of the wind, as can be seen from the Greek text of the passages italicized above, where spirit and wind are expressed by the same word, are expressed by the same word, πνεῦμα: “τὸ γεγεννημένον ἒκ τῆs σαρκὸs σάρξ ἐστιν, καὶ τὸ γεγννημένον ἒκ τοῦ πνεὑματος πνεῦμά ἐστιν.… Τὸ πνεῦμα ὅπου θἒλει πνεῖ.”

[335] This symbolism arose from the same need as that which produced the Egyptian legend of the vultures: they were female only and were fertilized by the wind. The basis of these mythological statements is an ethical demand which can be formulated thus: you should not say that your mother is impregnated by a man in the ordinary way, but is

impregnated in some extraordinary way by a spiritual being. As this stands in complete contrast to the empirical truth, the myth bridges over the difficulty by analogy: the son is said to have been a hero who died, was born again in a remarkable manner, and thus attained to immortality. The need responsible for this demand is evidently a desire to transcend reality. A son may naturally believe that a father begot him in the flesh, but not that he himself can impregnate his mother and so cause himself to be born young again. Such a thought is prohibited by the danger of regression, and is therefore replaced by the above demand that one should, in certain circumstances, express the problem of rebirth in symbolical terms. We see the same thing in Jesus' challenge to Nicodemus: Do not think carnally, or you will be flesh, but think symbolically, and then you will be spirit. It is evident that this compulsion towards the symbolical is a great educative force, for Nicodemus would remain stuck in banalities if he did not succeed in raising himself above his concretism. Had he been a mere Philistine, he would certainly have taken offence at the irrationality and unreality of this advice and understood it literally, only to reject it in the end as impossible and incomprehensible. The reason why Jesus' words have such great suggestive power is that they express the symbolical truths which are rooted in the very structure of the human psyche. The empirical truth never frees a man from his bondage to the senses; it only shows him that he was always so and cannot be otherwise. The symbolical truth, on the other hand, which puts water in place of the mother and spirit or fire in place of the father, frees the libido from the channel of the incest tendency, offers it a new gradient, and canalizes it into a spiritual form. Thus man, as a spiritual being, becomes a child again and is born into a circle of brothers and sisters: but his mother has become the "communion of saints," the Church (pl. XXX*a*), and his brothers and sisters are humanity, with whom he is united anew in the common heritage of symbolical truth. It seems that this process was especially necessary at the time when Christianity originated; for that age, as a result of the appalling contrast between slavery and the freedom of the citizens and masters, had entirely lost consciousness of the unity of mankind.

[336] When we see how much trouble Jesus took to make the symbolical view of things acceptable to Nicodemus, as if throwing a veil over the crude reality, and how important it was—and still is—for the history of civilization that people should think in this way, then one is at a loss to understand why the concern of modern psychology with symbolism has met with such violent disapprobation in many quarters. It is as necessary today as it ever was to lead the libido away from the cult of rationalism and realism—not, indeed, because these things have gained the upper hand (quite the contrary), but because the guardians and custodians of symbolical truth, namely the religions, have been robbed of their efficacy by science. Even intelligent people no longer understand the value and purpose of symbolical truth, and the spokesmen of religion have failed to deliver an apologetic suited to the spirit of the age. Insistence on the bare concretism of dogma, or ethics for ethics' sake, or even a humanization of the Christ-figure coupled with inadequate attempts to write his biography, are singularly unimpressive. Symbolical truth is exposed undefended to the attacks of scientific thought, which can never do justice to such a subject, and in face of this competition has been unable to hold its ground. The truth, however, still remains to be proved. Exclusive appeals to faith are a hopeless *petitio principii*, for it is the manifest improbability of symbolical truth that prevents people from believing in it. Instead of insisting so glibly on the necessity of faith, the theologians, it seems to me, should see what can be done to make this faith possible. But that means placing symbolical truth on a new foundation—a foundation which appeals not only to sentiment, but to reason. And this can only be achieved by reflecting how it came about in the first place that humanity needed the improbability of religious statements, and what it signifies when a totally different spiritual reality is superimposed on the sensuous and tangible actuality of this world.

[337] The instincts operate most smoothly when there is no consciousness to conflict with them, or when what consciousness there is remains firmly attached to instinct. This condition no longer applies even to primitive man, for everywhere we find psychic systems at work which are in some measure opposed to pure instinctuality. And if a primitive tribe shows even the smallest traces of culture, we find that creative

fantasy is continually engaged in producing analogies to instinctual processes in order to free the libido from sheer instinctuality by guiding it towards analogical ideas. These systems have to be constituted in such a way that they offer the libido a kind of natural gradient. For the libido does not incline to *anything*, otherwise it would be possible to turn it in any direction one chose. But that is the case only with voluntary processes, and then only to a limited degree. The libido has, as it were, a natural penchant: it is like water, which must have a gradient if it is to flow. The nature of these analogies is therefore a serious problem because, as we have said, they must be ideas which attract the libido. Their special character is, I believe, to be discerned in the fact that they are archetypes, that is, universal and inherited patterns which, taken together, constitute the structure of the unconscious. When Christ, for instance, speaks to Nicodemus of spirit and water, these are not just random ideas, but typical ones which have always exerted a powerful fascination on the mind. Christ is here touching on the archetype, and that, if anything, will convince Nicodemus, for the archetypes are the forms or river-beds along which the current of psychic life has always flowed.

[338] It is not possible to discuss the problem of symbol-formation without reference to the instinctual processes, because it is from them that the symbol derives its motive power. It has no meaning whatever unless it strives against the resistance of instinct, just as undisciplined instincts would bring nothing but ruin to man if the symbol did not give them form. Hence a discussion of one of the strongest instincts, sexuality, is unavoidable, since perhaps the majority of symbols are more or less close analogies of this instinct. To interpret symbol-formation in terms of instinctual processes is a legitimate scientific attitude, which does not, however, claim to be the only possible one. I readily admit that the creation of symbols could also be explained from the spiritual side, but in order to do so, one would need the hypothesis that the “spirit” is an autonomous reality which commands a specific energy powerful enough to bend the instincts round and constrain them into spiritual forms. This hypothesis has its disadvantages for the scientific mind, even though, in the end, we still know so little about the nature of the psyche that we can

think of no decisive reason against such an assumption. In accordance with my empirical attitude I nevertheless prefer to describe and explain symbol-formation as a natural process, though I am fully conscious of the probable one-sidedness of this point of view.

[339] As we have said, sex plays an important part in this process, even when the symbols are religious. It is less than two thousand years since the cult of sex was in full bloom. In those days, of course, they were heathens and did not know any better, but the nature of the symbol-creating forces does not change from age to age. If one has any conception of the sexual content of those ancient cults, and if one realizes that the experience of union with God was understood in antiquity as a more or less concrete coitus, then one can no longer pretend that the forces motivating the production of symbols have suddenly become different since the birth of Christ. The fact that primitive Christianity resolutely turned away from nature and the instincts in general, and, through its asceticism, from sex in particular, clearly indicates the source from which its motive forces came. So it is not surprising that this transformation has left noticeable traces in Christian symbolism. Had it not done so, Christianity would never have been able to transform libido. It succeeded in this largely because its archetypal analogies were for the most part in tune with the instinctual forces it wanted to transform. Some people profess to be very shocked when I do not shrink from bringing even the sublimest spiritual ideas into relation with what they call the "subhuman." My primary concern, however, is to *understand* these religious ideas, whose value I appreciate far too deeply to dispose of them with rationalistic arguments. What do we want, anyway, with things that cannot be understood? They appeal only to people for whom thinking and understanding are too much bother. Instead, we ask for blind faith and praise it to the skies. But that, in the end, only means educating ourselves to thoughtlessness and lack of criticism. What the "blind faith" so long preached from the pulpit was able to do in Germany, when that country finally turned its back on Christian dogma, has been bloodily demonstrated before our eyes by contemporary history. The really dangerous people are not the great heretics and unbelievers, but the swarm of petty thinkers, the rationalizing intellectuals, who suddenly

discover how irrational all religious dogmas are. Anything not understood is given short shrift, and the highest values of symbolic truth are irretrievably lost. What can a rationalist do with the dogma of the virgin birth, or with Christ's sacrificial death, or the Trinity?

[340] The medical psychotherapist today must make clear to his more educated patients the foundations of religious experience, and set them on the road to where such an experience becomes possible. If, therefore, as a doctor and scientist, I analyse abstruse religious symbols and trace them back to their origins, my sole purpose is to conserve, through understanding, the values they represent, and to enable people to think symbolically once more, as the early thinkers of the Church were still able to do. This is far from implying an arid dogmatism. It is only when we, today, think dogmatically, that our thought becomes antiquated and no longer accessible to modern man. Hence a way has to be found which will again make it possible for him to participate spiritually in the substance of the Christian message.

[341] At a time when a large part of mankind is beginning to discard Christianity, it may be worth our while to try to understand why it was accepted in the first place. It was accepted as a means of escape from the brutality and unconsciousness of the ancient world. As soon as we discard it, the old brutality returns in force, as has been made overwhelmingly clear by contemporary events. This is not a step forwards, but a long step backwards into the past. It is the same with individuals who lay aside one form of adaptation and have no new form to turn to: they infallibly regress along the old path and then find themselves at a great disadvantage, because the world around them has changed considerably in the meantime. Consequently, any one who is repelled by the philosophical weakness of Christian dogmatism or by the barren idea of a merely historical Jesus—for we know far too little about his contradictory personality and the little we do know only confuses our judgment—and who throws Christianity overboard and with it the whole basis of morality, is bound to be confronted with the age-old problem of brutality. We have had bitter experience of what happens when a whole nation finds the moral mask too stupid to keep up. The beast breaks loose, and a frenzy of demoralization sweeps over the civilized world.[37]

[342] Today there are countless neurotics who are neurotic simply because they do not know why they cannot be happy in their own way—they do not even know that the fault lies with them. Besides these neurotics there are many more normal people, men and women of the better kind, who feel restricted and discontented because they have no symbol which would act as an outlet for their libido. For all these people a reductive analysis down to the primal facts should be undertaken, so that they can become acquainted with their primitive personality and learn how to take due account of it. Only in this way can certain requirements be fulfilled and others rejected as unreasonable because of their infantile character. We like to imagine that our primitive traits have long since disappeared without trace. In this we are cruelly disappointed, for never before has our civilization been so swamped with evil. This gruesome spectacle helps us to understand what Christianity was up against and what it endeavoured to transform. The transforming process took place for the most part unconsciously, at any rate in the later centuries. When I remarked earlier (par. 106) that an unconscious transformation of libido was ethically worthless, and contrasted it with the Christianity of the early Roman period, as a patent example of the immorality and brutalization against which Christians had to fight, I ought to have added that mere faith cannot be counted as an ethical ideal either, because it too is an unconscious transformation of libido. Faith is a charisma for those who possess it, but it is no way for those who need to understand before they can believe. This is a matter of temperament and cannot be discounted as valueless. For, ultimately, even the believer believes that God gave man reason, and for something better than to lie and cheat with. Although we naturally *believe* in symbols in the first place, we can also *understand* them, and this is indeed the only viable way for those who have not been granted the charisma of faith.

[343] The religious myth is one of man’s greatest and most significant achievements, giving him the security and inner strength not to be crushed by the monstrousness of the universe. Considered from the standpoint of realism, the symbol is not of course an external truth, but it is psychologically true, for it was and is the bridge to all that is best in humanity.[38]

[344] Psychological truth by no means excludes metaphysical truth, though psychology, as a science, has to hold aloof from all metaphysical assertions. Its subject is the psyche and its contents. Both are realities, because they *work*. Though we do not possess a physics of the soul, and are not even able to observe it and judge it from some Archimedean point "outside" ourselves, and can therefore know nothing objective about it since all knowledge of the psyche is itself psychic, in spite of all this the soul is the only experient of life and existence. It is, in fact, the only immediate experience we can have and the *sine qua non* of the subjective reality of the world. The symbols it creates are always grounded in the unconscious archetype, but their manifest forms are moulded by the ideas acquired by the conscious mind. The archetypes are the numinous, structural elements of the psyche and possess a certain autonomy and specific energy which enables them to attract, out of the conscious mind, those contents which are best suited to themselves. The symbols act as *transformers*, their function being to convert libido from a "lower" into a "higher" form. This function is so important that feeling accords it the highest values. The symbol works by suggestion; that is to say, it carries conviction and at the same time expresses the content of that conviction. It is able to do this because of the numen, the specific energy stored up in the archetype. Experience of the archetype is not only impressive, it seizes and possesses the whole personality, and is naturally productive of faith.

[345] "Legitimate" faith must always rest on experience. There is, however, another kind of faith which rests exclusively on the authority of tradition. This kind of faith could also be called "legitimate," since the power of tradition embodies an experience whose importance for the continuity of culture is beyond question. But with this kind of faith there is always the danger of mere habit supervening—it may so easily degenerate into spiritual inertia and a thoughtless compliance which, if persisted in, threatens stagnation and cultural regression. This mechanical dependence goes hand in hand with a psychic regression to infantilism. The traditional contents gradually lose their real meaning and are only believed in as formalities, without this belief having any influence on the conduct of life. There is no longer a living power behind it. The much-

vaunted "child-likeness" of faith only makes sense when the feeling behind the experience is still alive. If it gets lost, faith is only another word for habitual, infantile dependence, which takes the place of, and actually prevents, the struggle for deeper understanding. This seems to be the position we have reached today.

[346] Since faith revolves round those central and perennially important "dominant ideas" which alone give life a meaning, the prime task of the psychotherapist must be to understand the symbols anew, and thus to understand the unconscious, compensatory striving of his patient for an attitude that reflects the totality of the psyche.

[347] After this digression, let us return to our author.

[348] The vision of the city is immediately followed by that of a "strange conifer with knotty branches." This image no longer seems strange to us after what we have learned about the tree of life and its association with the mother, the city, and the water of life. The attribute "strange" probably expresses, as in dreams, a peculiar emphasis or numinosity. Unfortunately the author gives us no individual material in this connection. As the tree already suggested in the symbolism of the city is specially emphasized in the further development of the visions, I feel it necessary to discuss at some length the history of tree symbolism.

[349] Trees, as is well known, have played a large part in religion and in mythology from the remotest times. (Pl. XXXI.) Typical of the trees found in myth is the tree of paradise, or tree of life; most people know of the pine-tree of Attis, the tree or trees of Mithras, and the world-ash Yggdrasill of Nordic mythology, and so on. The hanging of Attis, in effigy, on a pine-tree (cf. fig. 42), the hanging of Marsyas, which became a popular theme for art, the hanging of Odin, the Germanic hanging sacrifices and the whole series of hanged gods—all teach us that the hanging of Christ on the Cross is nothing unique in religious mythology, but belongs to the same circle of ideas. In this world of images the Cross is the Tree of Life and at the same time a Tree of Death—a coffin (cf. pl. XXXVI). Just as the myths tell us that human beings were descended from trees, so there were burial customs in which people were buried in hollow tree-trunks, whence the German *Totenbaum*, 'tree of death,' for coffin,

which is still in use today. If we remember that the tree is predominantly a mother-symbol, then the meaning of this mode of burial becomes clear. *The dead are delivered back to the mother for rebirth*. (Cf. fig. 23 and pl. XLII.) We meet this symbol in the myth of Osiris as handed down by Plutarch.[39] Rhea was pregnant with Osiris and his twin sister Isis, and they mated together even in their mother's womb (night sea journey with incest). Their son was Arueris, later called Horus. Isis is said to have been "born in the All-Wetness" (ἐν πανὐγροιs γενέσθαι), and of Osiris it is related that a certain Pamyles of Thebes, whilst drawing water, heard a voice from the temple of Zeus which commanded him to proclaim that Osiris, "the great and beneficent king" (μέγas βασλεὐs εὐεργέτηs), was born. In honour of this Pamyles the Pamylia were celebrated, similar to the Phallophoria. Pamyles seems, therefore, to have been originally a phallic daimon, like Dionysus. In his phallic form he represents the creative power which "draws" things out of the unconscious (i.e., the water) and begets the god (Osiris) as a conscious content. This process can be understood both as an individual experience: Pamyles drawing water, and as a symbolic act or experience of the archetype: a drawing up from the depths. What is drawn up is a numinous, previously unconscious content which would remain dark were it not interpreted by the voice from above as the birth of a god. This type of experience recurs in the baptism in the Jordan, Matthew 3:17.

[350] Osiris was killed in a crafty manner by the god of the underworld, Set (Typhon in Greek), who locked him in a chest. He was thrown into the Nile and carried out to sea. But in the underworld Osiris mated with his second sister, Nephthys. One can see from this how the symbolism is developed: already in his mother's womb, before his extra-uterine existence, Osiris commits incest; and in death, the second intra-uterine existence, he again commits incest, both times with a sister, for in remote antiquity brother-and-sister marriages were not only tolerated, but were a mark of the aristocracy. Zarathustra likewise recommended consanguineous marriages.

[351] The wicked Set lured Osiris into the chest by a ruse, in other words the original evil in man wants to get back into the mother again, and the illicit, incestuous longing for the mother is the ruse supposedly invented

by Set. It is significant that it is “evil” which lures Osiris into the chest; for, in the light of teleology, the motif of containment signifies the latent state that precedes regeneration. Thus evil, as though cognizant of its imperfection, strives to be made perfect through rebirth—“Part of that power which would / Ever work evil, but engenders good!”[40] The ruse, too, is significant: man tries to sneak into rebirth by a subterfuge in order to become a child again. That is how it appears to the “rational” mind. An Egyptian hymn[41] even charges Isis with having struck down the sun god Ra by treachery: it was because of her ill will towards her son that she banished and betrayed him. The hymn describes how Isis fashioned a poisonous snake and set it in his path, and how the snake wounded the sun-god with its bite. From this wound he never recovered, so that he finally had to retire on the back of the heavenly cow. But the cow was the cow-headed mother-goddess (pl. XXX*b*), just as Osiris was the bull Apis. The mother is accused as though *she* were the cause of his having to fly to her in order to be cured of the wound she herself had inflicted. But the real cause of the wound is the incest-taboo,[42] which cuts a man off from the security of childhood and early youth, from all those unconscious, instinctive happenings that allow the child to live without responsibility as an appendage of his parents. There must be contained in this feeling many dim memories of the animal age, when there was as yet no “thou shalt” and “thou shalt not,” and everything just happened of itself. Even now a deep resentment seems to dwell in man’s breast against the brutal law that once separated him from instinctive surrender to his desires and from the beautiful harmony of animal nature. This separation manifested itself in the incest prohibition and its correlates (marriage laws, food-taboos, etc.). So long as the child is in that state of unconscious identity with the mother, he is still one with the animal psyche and is just as unconscious as it. The development of consciousness inevitably leads not only to separation from the mother, but to separation from the parents and the whole family circle and thus to a relative degree of detachment from the unconscious and the world of instinct. Yet the longing for this lost world continues and, when difficult adaptations are demanded, is forever tempting one to make evasions and retreats, to regress to the infantile past, which then starts throwing up the incestuous symbolism. If only this temptation were perfectly clear, it would be possible, with a great effort of will, to free oneself from it. But it is far from clear, because a new adaptation or orientation of vital importance can only be achieved in accordance with the instincts. Lacking this, nothing durable results, only a convulsively willed, artificial product which proves in the long run to be incapable of life. No man can change himself into anything from sheer reason; he can only change into what he potentially is. When such a change becomes necessary, the previous mode of adaptation, already in a state of decay, is unconsciously compensated by the archetype of another mode. If the conscious mind now succeeds in interpreting the constellated archetype in a meaningful and appropriate manner, then a viable transformation can take place. Thus the most important relationship of childhood, the relation to the mother, will be compensated by the mother archetype as soon as detachment from the childhood state is indicated. One such successful interpretation has been, for instance, Mother Church (cf. pl. XXX*a*), but once this form begins to show signs of age and decay a new interpretation becomes inevitable.

[352] Even if a change does occur, the old form loses none of its attractions; for whoever sunders himself from the mother longs to get back to the mother. This longing can easily turn into a consuming passion which threatens all that has been won. The mother then appears on the one hand as the supreme goal, and on the other as the most frightful danger—the "Terrible Mother."[43]

[353] After completing the night sea journey, the coffer containing Osiris was cast ashore at Byblos and came to rest in the branches of a cedar-tree, which shot up and enclosed the coffer in its trunk (cf. fig. 23). The king of the country, admiring the splendid tree, caused it to be cut down and made into a pillar supporting the roof of his house.[44] This period of Osiris' absence (the winter solstice) coincides with the age-old lament for the dead god, and his εὓρεσις (finding) was celebrated as a feast of joy.

[354] Later on Set dismembered the body and scattered the pieces. We find this motif of dismemberment in numerous sun-myths[45] as a contrast to the putting together of the child in the mother's womb. Actually Isis collected the pieces together again with the help of the jackal-headed

Anubis. Here the dogs and jackals, devourers of corpses by night, assist in the reconstitution or reproduction of Osiris.[46] To this necrophagous function the Egyptian vulture probably owes its symbolic mother significance. In ancient times the Persians used to throw out their corpses for the dogs to devour, just as, today in Tibet, the dead are left to the vultures,[46a] and in Bombay, where the Parsis expose their corpses on the "towers of silence." The Persians had the custom of leading a dog to the bedside of a dying man, who then had to give the dog a morsel to eat.[47] This custom suggests that the morsel should belong to the dog, so that he will spare the body of the dying man, just as Cerberus was pacified with the honey-cakes which Heracles gave him on his journey to hell. But when we consider the jackal-headed Anubis (pl. XXXII*a*) who rendered such good service in gathering together the remains of Osiris, and the mother significance of the vulture, the question arises whether this ceremony may not have a deeper meaning. This problem has been taken up by Creuzer,[48] who comes to the conclusion that the deeper meaning is connected with the astral form of the dog ceremony, i.e., the appearance of the dog-star at the highest point of the solstice. Hence the bringing in of the dog would have a compensatory significance, death being made equal to the sun at its highest point. This is a thoroughly psychological interpretation, as can be seen from the fact that death is quite commonly regarded as an entry into the mother's womb (for rebirth). The interpretation would seem to be supported by the otherwise enigmatic function of the dog in the Mithraic sacrifice. In the monuments a dog is often shown leaping upon the bull killed by Mithras. In the light of the Persian legend, and on the evidence of the monuments themselves, this sacrifice should be conceived as the moment of supreme fruitfulness. This is most beautifully portrayed in the Mithraic relief at Heddernheim (pl. XXXIII). On one side of a large (formerly rotating) stone slab there is a stereotyped representation of the overthrow and sacrifice of the bull, while on the other side stand Sol with a bunch of grapes in his hand, Mithras with the cornucopia, and the dadophors bearing fruits, in accordance with the legend that from the dead bull comes all fruitfulness: fruits from his horns, wine from his blood, corn from his tail, cattle from his semen, garlic from his nostrils, and so forth. Over this scene stands Sylvanus, the beasts of the forest leaping away from him.

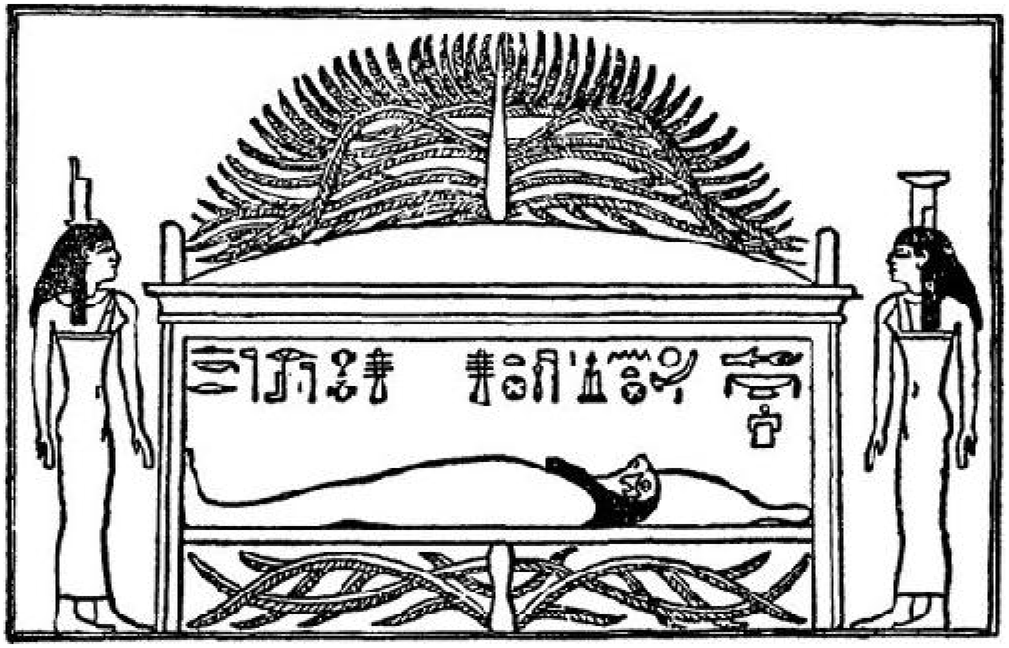


Fig. 23. Osiris in the cedar-coffin
Relief, Dendera, Egypt

[355] In this context the dog might very well have the significance suspected by Creuzer. Moreover the goddess of the underworld, Hecate, is dog-headed, like Anubis. As Canicula, she received dog sacrifices to keep away the pest. Her close relation to the moon-goddess suggests that she was a promoter of growth. Hecate was the first to bring Demeter news of her stolen daughter, another reminder of Anubis. Dog sacrifices were also offered to Eileithyia, the goddess of birth, and Hecate herself (cf. pl. LVIII) is, on occasion, a goddess of marriage and birth. The dog is also the regular companion of Aesculapius, the god of healing, who, while still a mortal, raised a man from the dead and was struck by a thunderbolt as a punishment. These associations help to explain the following passage in Petronius:

> I earnestly beseech you to paint a small dog round the foot of my statue … so that by your kindness I may attain to life after death.[49]

[356] But to return to the myth of Osiris: although Isis had managed to collect the pieces of the body, its resuscitation was only partially

successful because the phallus could not be found; it had been eaten by the fishes, and the reconstituted body lacked vital force.[50] The phantom Osiris lay once more with Isis, but the fruit of their union was Harpocrates, who was weak “in the lower limbs” (*γυίον*), i.e., in the feet. In the above-mentioned hymn, Ra was wounded in the foot by the serpent of Isis. The foot, as the organ nearest the earth, represents in dreams the relation to earthly reality and often has a generative or phallic significance.[51] The name Oedipus, ‘Swell-foot,’ is suspicious in this respect. Osiris, although only a phantom, now makes the young sun (his son Horus) ready for battle with Set, the evil spirit of darkness. Osiris and Horus represent the father-son symbolism mentioned at the beginning. Osiris is thus flanked by the comely Horus and the misshapen Harpocrates, who is mostly shown as a cripple, sometimes distorted to the point of freakishness. It is just possible that the motif of the unequal brothers has something to do with the primitive conception that the placenta is the twin-brother of the new-born child.

[357] Osiris is frequently confused in tradition with Horus. The latter’s real name is Horpi-chrud,[52] which is composed of *chrud* (child), and *Hor* (from *hri*, ‘up, above, on top’). The name thus signifies the “up-and-coming child,” the rising sun, as opposed to Osiris, who personifies the setting sun, the sun “in the Western Land.” So Osiris and Horpi-chrud are one being, both husband and son of the same mother. Khnum-Ra, the sun-god of Lower Egypt, is a ram, and his consort, the female divinity of the nome, is Hatmehit, who wears the fish on her head. She is the mother and spouse of Bi-neb-did (‘ram,’ the local name for Khnum-Ra). In the hymn of Hibis, Amon-Ra is invoked as follows:

> Thy Ram dwelleth in Mendes, united as the fourfold god Thmuis. He is the phallus, lord of the gods. The bull of his mother rejoiceth in the cow, and the husband maketh fruitful through his seed.[53]

[358] In other inscriptions[54] Hatmehit is called the “mother of Mendes.” (Mendes is the Greek form of Bi-neb-did.) She is also invoked as “The Good,” with the subsidiary meaning of *tanofert*, “young woman.” The cow as a mother-symbol (cf. pl. L*a*) appears in all the innumerable forms and variations of Hathor-Isis (cf. pl. XXX*b*), and also in the feminine

aspect of Nun (whose parallel is the primitive goddess Nit or Neith), the primary substance—moisture—which is both masculine and feminine by nature. Nun is therefore invoked[55] as "Amon, the primordial waters,[56] which was in the beginning." He is also called the father of fathers, the mother of mothers. The corresponding invocation to Nun-Amon's feminine aspect, Nit or Neith, says:

> Nit, the Ancient, the Mother of God, Mistress of Esne, Father of Fathers, Mother of Mothers, who is the Scarab and the Vulture, who was in the beginning.
>
> Nit, the Ancient, the mother who bore Ra, the God of Light, who, brought forth when there was nothing which brought forth.
>
> The Cow, the Ancient, who bore the sun and set the seeds of gods and men.[57] [Cf. figs. 24, 25.]

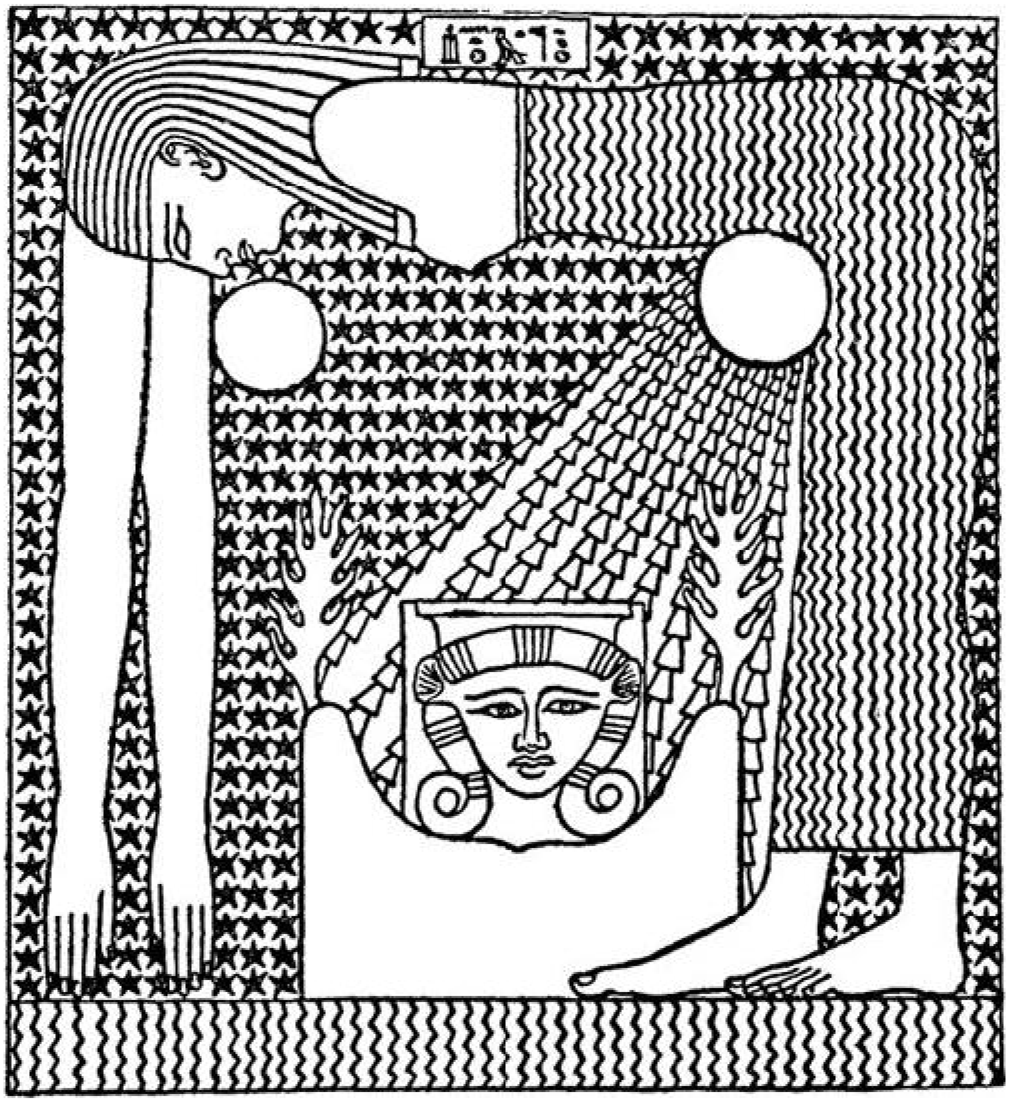

Fig. 24. Nut giving birth to the Sun
Relief, Egypt

[359] The word *nun* means ‘young, fresh, new,’ and also the new flood-waters of the Nile. In a metaphorical sense it is used for the chaotic waters of the beginning, and for the birth-giving primary substance,[58] which is personified as the goddess Naunet. From her sprang Nut, the sky-goddess, who is represented with a starry body or as a heavenly cow dotted with stars (figs. 24, 25).

[360] So when the sun-god Ra retires on the back of the heavenly cow, it means that he is going back into the mother in order to rise again as Horus. In the morning the goddess is the mother, at noon she is the sister-wife, and at evening once more the mother who takes back the dead into her womb.

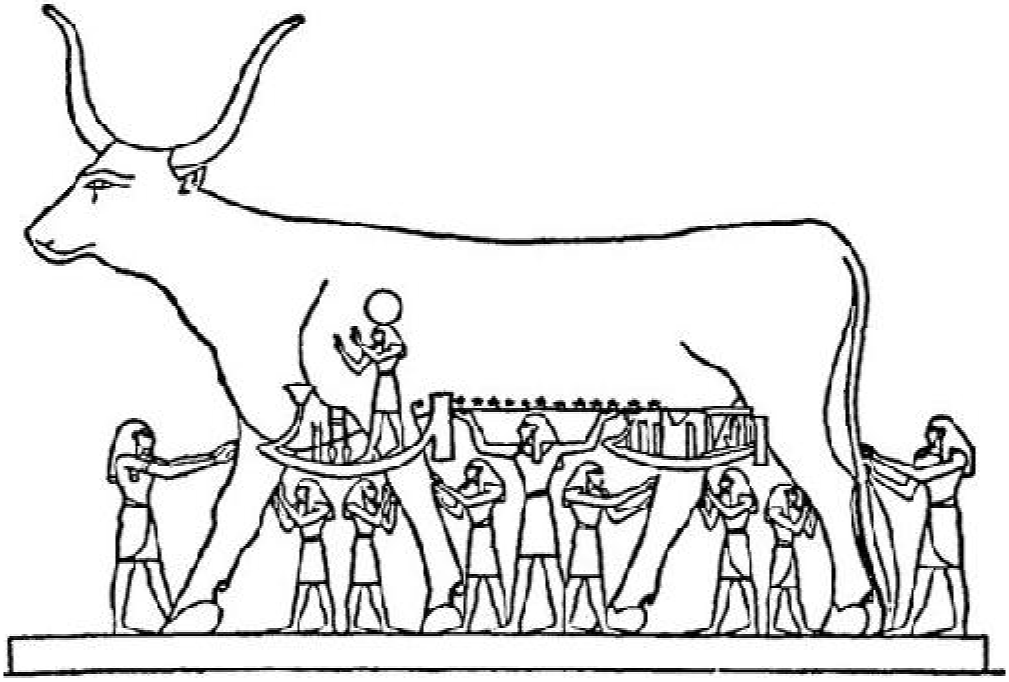

Fig. 25. The Divine Cow

From the tomb of Seti I, Egypt

[361] Thus the fate of Osiris is explained: he enters into the mother’s womb, into the coffer, the sea, the tree, the Astarte column; is dismembered, put together again, and reappears in his son Horpi-chrud.

[362] Before we enter upon the other mysteries which this myth has in store for us, it will be as well to say a few words more about the symbol of the tree. Osiris comes to rest in the branches of a tree, which grow up round him.[59] The motif of embracing and entwining is often found in the sun myths and rebirth myths, as in the story of Sleeping Beauty, or the legend of the girl who was imprisoned between the bark and the wood of a tree.[60] A primitive myth tells of a sun-hero who has to be freed from a creeping plant.[61] The girl dreams that her lover has fallen into the water; she tries to rescue him, but first has to pull seaweed out of the water, then she catches him. In an African myth the hero, after his deed, has to be disentangled from the seaweed. In a Polynesian story the hero's canoe is caught in the tentacles of a giant polyp, just as Ra's barge was entwined by the nocturnal serpent on the night sea journey. The motif of entwining also occurs in Sir Edwin Arnold's poetic version of the story of Buddha's birth:

> Queen Maya stood at noon, her days fulfilled,
> Under a palsa in the palace-grounds,
> A stately trunk, straight as a temple-shaft,
> With crown of glossy leaves and fragrant blooms;
> And, knowing the time come—for all things knew—
> The conscious tree bent down its boughs to make
> A bower about Queen Maya's majesty:
> And Earth put forth a thousand sudden flowers
> To spread a couch; while, ready for the bath,
> The rock hard by gave out a limpid stream
> Of crystal flow. So brought she forth her child.[62]

[363] There is a very similar motif in the cult-legend of the Samian Hera. Every year her image "disappeared" from the temple, attached itself to a lygos-tree somewhere on the seashore, and was entwined in its branches. There it was "found" and regaled with wedding-cakes. This festival was undoubtedly a *hieros gamos*, for in Samos there was a legend that Zeus had previously had a long-drawn-out clandestine love-affair with Hera. In Plataea and Argos a wedding procession was staged in their honour with bridesmaids, wedding feast, etc. The festival took place in the "wedding month" of Gamelion (beginning of February). The image was carried to a

lonely spot in the woods, which is in keeping with Plutarch's story that Zeus kidnapped Hera and hid her in a cave on Mount Cithaeron. After our previous remarks we have to conclude that there is still another train of thought connected with the *hieros gamos*, namely, rejuvenation magic. The disappearance and hiding of the image in the wood, in the cave, on the seashore, its twining-about by the lygos-tree,[63] all this points to death and rebirth. The early springtime, Gamelion, fits in very well with this theory. In fact, Pausanias[64] tells us that the Argive Hera became a virgin again by taking a yearly dip in the fountain of Kanathos. The significance of this bath is further increased by the report that, in the Plataean cult of Hera Teleia, Tritonian nymphs appeared as water-carriers. The Iliad describes Zeus' conjugal couch on Mount Ida as follows:

> As he spoke, the Son of Cronos took his wife in his arms; and the gracious earth sent up fresh grass beneath them, dewy lotus and crocuses, and a soft and crowded bed of hyacinths, to lift them off the ground. In this they lay, covered by a beautiful golden cloud, from which a rain of glistening dewdrops fell.… The Father lay peacefully on top of Gargarus with his arms round his wife, conquered by sleep and love.…[65]

[364] Drexler sees in this description[66] an allusion to the garden of the gods on the extreme Western shore of the ocean—an idea which might have been taken from a pre-Homeric *hieros gamos* hymn.[67] The Western Land is the land of the setting sun; Heracles and Gilgamesh hasten thither, where the sun and the maternal sea are united in an eternally rejuvenating embrace. This seems to confirm our conjecture that the *hieros gamos* is connected with a rebirth myth. Pausanias mentions a related myth-fragment which says that the image of Artemis Orthia was also called *Lygodesma*, 'willow-captive,'[68] because it was found in a willow-tree. There seems to be some connection here with the popular Greek festival of the *hieros gamos* and its above-mentioned customs.

[365] The motif of "devouring" (pls. XXXII*b*, XXXIV), which Frobenius has shown to be one of the commonest components of the sun myth, is closely connected with embracing and entwining. The "whale-dragon" always "devours" the hero, but the devouring can also be partial. For instance, a six-year-old girl who hated going to school once dreamt that her leg was encircled by a large red worm. Contrary to what might be expected, she evinced a tender interest in the creature. Again, an adult

patient who was unable to separate from an older woman friend on account of a strong mother transference to her, dreamt that she had to cross a broad stream. There was no bridge, but she found a place where she could step across. Just as she was about to do so, a large crab that lay hidden in the water seized hold of her foot and would not let go.[69]

[366] This picture is borne out by etymology. There is an Indo-European root **υélu-*, with the meaning of 'encircling, enveloping, winding, turning.' From this are derived: Skr. *val, valati*, 'to cover, envelop, surround, encircle'; *valli*, 'creeping plant'; *ulūta*, 'boa-constrictor' = Lat. *volutus*; Lith. *velù, velti* = G. *wickeln*, 'to wind, wrap'; Church Slav, *vlina* = OHG. *wella*, 'a wave.' A related root is *vlvo*, 'covering, coil, membrane, womb.' Skr. *ulva*, *ulba*, has the same meaning; Lat. *volva*, *volvula*, *vulva*. *Vélu* is also cognate with *ulvora*, 'fruitful field, sheath or husk of a plant.' Skr. *urvárā*, 'sown field'; Zend *urvara*, 'plant.' The same root *vel* also has the meaning of G. *wallen*, 'boil, undulate.' Skr. *ulmuka*, 'conflagration'; Gr. Faλέa, Fέλa, Goth. *vulan* = *wallen*. OHG. and MHG. *walm* = 'warmth.'[70] (It is typical that in the state of "involution" the hero's hair always falls out with the heat.) *Vel* is also found with the meaning 'to sound,'[71] and 'to will, wish.'

[367] The motif of entwining is a mother-symbol.[72] The entwining trees are at the same time birth-giving mothers (cf. pl. XXXIX), as in the Greek myth where the μελίαι νύμφαι are ash-trees, the mothers of the men of the Bronze Age. The Bundahish symbolizes the first human beings, Mashya and Mashyoi, as the tree Rivas. According to a Nordic myth, God created man by breathing life into a substance called *tre*[73] (tree, wood).[74] Gr. ὕλη also means 'wood.' In the wood of the world-ash Yggdrasill a human pair hide themselves at the end of the world, and from them will spring a new race of men.[75] At the moment of universal destruction the world-ash becomes the guardian mother, the tree pregnant with death and life.[76] The regenerative function of the world-ash helps to explain the image in the chapter of the Egyptian Book of the Dead called "The Gate of Knowledge of the Souls of the East":

I am the pilot in the holy keel, I am the steersman who allows himself no rest in the ship of Ra.[77]
I know the tree of emerald green from whose midst Ra rises to the height of the clouds.[78]

[368] Ship and tree (i.e., the ship of death and tree of death) are closely related here. (P1. XXXV.) The idea is that Ra rises up, born from the tree. The representations of the sun-god Mithras should probably be interpreted in the same way. In the Heddernheim Relief (pl. XL) he is shown with half his body rising from the top of a tree, and in other monuments half his body is stuck in the rock, which clearly points to the rock-birth. Often there is a stream near his birthplace. This conglomeration of symbols[79] is also found in the birth of Aschanes, the first Saxon king, who grew from the Harz rocks in the middle of a wood near a fountain.[80] Here all the mother symbols are united—earth, wood, and water. So it is only logical that in the Middle Ages the tree was poetically addressed with the honorific title of “Lady.” Nor is it surprising that Christian legend transformed the tree of death, the Cross, into the Tree of Life, so that Christ is often shown hanging on a green tree among the fruit (pl. XXXVI). The derivation of the Cross from the Tree of Life, which was an authentic religious symbol even in Babylonian times, is considered entirely probable by Zöckler,[81] an authority on the history of the Cross. The pre-Christian meaning of so universal a symbol does not contradict this view; quite the contrary, for its meaning is life. Nor does the existence of the cross in the sun-cult (where the regular cross and the swastika represent the sun-wheel) and in the cult of the love-goddesses in any way contradict its historical significance. Christian legend has made abundant use of this symbolism. The student of medieval art will be familiar with the representation of the Cross growing from Adam’s grave (pl. XXXVII). The legend says that Adam was buried on Golgotha, and that Seth planted on his grave a twig from the tree of Paradise, which grew into Christ’s Cross, the Tree of Death.[82] As we know, it was through Adam’s guilt that sin and death came into the world, and Christ through his death redeemed us from the guilt. If we ask, In what did Adam’s guilt consist? the answer is that the unpardonable sin to be punished by death was that he dared to eat of the tree of Paradise.[83] The consequences of this are described in a Jewish legend: one who was permitted to gaze into Paradise after the Fall saw

the tree and the four streams, but the tree was withered, and in its branches lay a babe. The “mother” had become pregnant.[84]

[369] This curious legend corresponds to the Jewish tradition that Adam, before he knew Eve, had a demon-wife called Lilith, with whom he strove for supremacy. But Lilith rose up into the air through the magic of God’s name and hid herself in the sea. Adam forced her to come back with the help of three angels,[85] whereupon Lilith changed into a nightmare or lamia (pl. XXXVIII*a*) who haunted pregnant women and kidnapped new-born infants. The parallel myth is that of the lamias, the nocturnal spectres who terrify children. The original legend is that Lamia seduced Zeus, but the jealous Hera caused her to bring only dead children into the world. Ever since then, the raging Lamia has persecuted children, whom she destroys whenever she can. This motif is a recurrent one in fairytales, where the mother often appears as a murderess[86] or eater of human flesh (cf. pl. αXXXVIII*b*); a well-known German paradigm is the story of Hansel and Gretel. Lamia is also the name of a large, voracious fish,[87] which links up with the whale-dragon motif worked out by Frobenius. Once again we meet the idea of the Terrible Mother in the form of a voracious fish, a personification of death.[88] In Frobenius there are numerous examples of the monster devouring not only men (pl. XXXVIII*b*), but animals, plants, and even an entire country, which are all delivered by the hero to a glorious rebirth.

[370] The lamias (cf. pl. XXXVIII*a*) are typical nightmares whose feminine nature is abundantly documented.[89] Their universal peculiarity is that they *ride* their victims. Their counterparts are the spectral horses who carry their riders away at a mad gallop. One can easily recognize in these symbols the typical anxiety dream which, as Laistner[90] has shown, holds an important clue to the interpretation of fairytales. The riding takes on a special aspect in the light of researches into child psychology: the two contributions of Freud and myself[91] have established the fear-significance of horses on the one hand, and the sexual meaning of riding fantasies on the other. The essential feature is the *rhythm*, which assumes a sexual significance only secondarily. If we take these factors into account, it will not surprise us to hear that the maternal world-ash

Yggdrasill is called the *Schreckross* (terrible horse) in German. Cannegieter says of nightmares: “Even today the peasants drive away these female spirits (mother-goddesses, *moirae*) by throwing the bone of a horse’s head upon the roof, and you can often see such bones on peasant houses hereabouts. But at night they are believed to ride at the time of the first sleep and to tire out the horses for long journeys.”[92] At first sight, there seems to be an etymological connection between *nightmare* and *mare* (female horse)—G. *Mar* and *Mähre*. The Indo-European root for ‘mare’ is **mark*; cf. OIr. *marc*. *Mare* is akin to OHG. *meriha* (fem. of *marah*, ‘stallion’), OE. *myre* (fem. of *mearh*, ‘stallion’), ON. *merr*. The supposed source of *nightmare* is OE. and ON. *mara*, ‘ogress, incubus, demon,’ and, by extension, ‘nightmare.’ F. *cauchemar* comes from Lat. *calcare*, ‘to tread,’ in the reiterative sense of “treading” the grape; it is also used of the cock that “treads” the hen. This movement is equally typical of the nightmare; hence it was said of King Vanlandi: “Mara trad hann,”the Mara trod him to death in sleep.[93] A synonym for the nightmare is the troll or “treader.” The treading movement has been verified by the experience of Freud and myself with children, which shows that a secondary sexual meaning attaches to stamping or kicking, though the rhythm is obviously primary. Like the Mara, the “Stempe” treads.[94]

[371] The Indo-European root **mer*, **mor*, means ‘to die.’ From it also come Lat. *mors*, Gr. *μόρος*, ‘fate,’ and possibly Μοῖρα, the goddess of fate.[95] The Norns who sit under the world-ash are well-known personifications of fate, like Clotho, Lachesis, and Atropos. With the Celts the conception of the Fates probably passed into that of the *matres* and *matronae*,[96] who were considered divine by the Teutons. The divine significance of the mothers comes out in Julius Caesar, where he says, “The matrons should declare by lots and divinations whether it was expedient to join battle or not.”[97]

[372] In connection with the etymology of *Mar* and (*night*)*mare*, it should be added that F. *mère* has a strong phonetic resemblance to *mare*, although this, etymologically speaking, proves nothing. In Slavonic, *mara* means ‘witch’; in Polish, *mora* means ‘nightmare.’ *Mor* or *More* in

Swiss-German means ‘sow’ (it is also used as a swear-word). The Czech *mura* means both ‘nightmare’ and the Sphinx or hawk moth. This strange connection is explained by the fact that the butterfly is a symbol and allegory of the psyche. The *Sphingidae* are evening moths—they come, like the nightmare, in darkness. Finally, it should be mentioned that the sacred olive-tree of Athene was called *μορία*, which is derived from *μόρος*, ‘fate.’ Halirrhothios wanted to cut down the tree, but killed himself with the axe in the attempt.

[373] The phonetic connection between G. *Mar*, F. *mère*, and the various words for ‘sea’ (Lat. *mare*, G. *Meer*, F. *mer*) is certainly remarkable, though etymologically accidental. May it perhaps point back to the great primordial image of the mother, who was once our only world and later became the symbol of the whole world? Goethe says of the Mothers that they are “thronged round with images of all creation.”[98] Even the Christians could not refrain from reuniting their Mother of God with the water: “Ave maris stella” are the opening words of a hymn to Mary. It is probably significant that the infantile word *ma-ma* (mother’s breast) is found in all languages, and that the mothers of two religious heroes were called Mary and Maya. That the mother is in fact the child’s “horse” is apparent in the primitive custom of carrying the child on the back or riding it on the hip. And Odin hung upon the maternal world-ash, upon his “terrible horse.”

[374] As we have seen, Isis, the mother of the gods, played an evil trick on the sun-god with the poisonous snake, and, according to Plutarch, she behaved equally treacherously towards her son Horus. Horus vanquished the wicked Set who had murdered his father Osiris, but Isis set him free again. Outraged, Horus lifted his hand against his mother and snatched the royal diadem from her head,[99] in place of which Thoth gave her a cow’s head (cf. pl. XXX*b*). Horus then vanquished Set for a second time. In the Greek legend, Typhon (Set) is a dragon. But even without this confirmation it is evident that Horus’ fight is the typical fight of the sun-hero with the “whale dragon” who, as we know, is a symbol of the Terrible Mother, of the voracious maw, the jaws of death in which men are crunched and ground to pieces.[100] (Cf. pl. XXXVIII*b*.) Whoever

conquers this monster wins to eternal youth. But to this end, defying all danger, he must descend into the belly of the monster[101] ("journey to hell") and sojourn there for some time ("night sea imprisonment": Frobenius). (Cf. diagram, p. 210; pl. XXII*b*.)

[375] The fight with the "nocturnal serpent" accordingly signifies conquest of the mother, who is suspected of an infamous crime, namely the betrayal of her son. Complete confirmation of all this is furnished by the fragments of the Babylonian Creation Epic discovered by George Smith, most of which come from the library of Assurbanipal. The text dates from about the time of Hammurabi (2000 B.C.). From this account of the Creation we learn that Ea, the son of the watery deep and god of wisdom,[102] has overthrown Apsu. Apsu is the progenitor of the great gods, so Ea has conquered the father. But Tiamat, the mother of the gods, plots revenge, and arrays herself for battle against them:

Mother Hubur, who created everything,
Procured invincible weapons, gave birth to giant snakes,
Sharp of tooth, unsparing of fang,
Filled their bodies with venom instead of blood,
Roaring dragons she clothed with terror,
Made them to swell with a terrible splendour, made them to prance,
So that he who beholds them shall perish of terror.
Their bodies shall rear up, and none shall turn them back.
She set up lizards, dragons, and sphinxes,
Hurricanes, mad dogs, scorpion-men,
Lion-demons, fish-men, and centaurs,
Bearing weapons that spare not, fearless in battle.
Mighty are Tiamat's commands, irresistible are they.

And when Tiamat had completed her handiwork,
She prepared for battle against the gods, her descendants.
To avenge Apsu, Tiamat did evil.

When Ea now heard this thing,
He was sore afraid, and he sat down sorrowfully.

He went to the father, his creator, Ansar,
To relate to him all that Tiamat plotted:
Tiamat, our mother, is incensed against us,

She has mustered a riotous throng, furiously raging.[103]

[376] Against the fearful hosts of Tiamat the gods finally put up Marduk, the god of spring, who represents the victorious sun. Marduk prepares himself for battle and forges his invincible weapons:

He created the evil wind, Imhullu, the sou'wester, the hurricane,
The fourfold wind, the sevenfold wind, the whirlwind, and the harmful wind,
Then he let loose the winds he had brought forth, all seven of them:
To stir up confusion in Tiamat's vitals, they followed behind him.
Then the Lord raised up the cyclone, his mighty weapon;
For his chariot he mounted the storm-wind, matchless and terrible.

[377] His chief weapons are the wind and a net with which he hopes to catch Tiamat. He approaches Tiamat and challenges her to single combat:[104]

Then Tiamat and Marduk, the wise one among the gods, joined issue,
Girding their loins for the fight, drawing near for battle.
Then the Lord spread out his net and caught her;
Imhullu, which followed behind, he let loose in her face,
When Tiamat opened her mouth, as wide as she could, to consume him,
He let Imhullu rush in and her lips could not close.
With the raging winds he filled her belly,
Her inward parts were seized and she opened wide her mouth.
He smote her with the spear, he hewed her in pieces,
He cut up her bowels and made mincemeat of her heart,
Vanquished her and put an end to her life,
Threw down her carcass and trampled upon it.

[378] After Marduk had slain Tiamat, he sat down and planned the creation of the world:

Then the Lord paused to contemplate her dead body,
That he might divide up the monster and do artful works.
He split her like a flat fish into two parts,[105]
One half he set up and with it he covered the sky.

[379] In this manner Marduk created the world from the mother. (Cf. fig. 41.) Evidently the killing of the mother-dragon here takes the form of a negative wind-fertilization. The world is created from the mother, i.e., with the libido that is withdrawn from her through the sacrifice, and

through prevention of the regression that threatened to overcome the hero. We shall have to examine this significant formula more closely in the final chapter. As Gunkel[106] has pointed out, the myth has interesting parallels in the literature of the Old Testament. Isaiah 51 : 9f. says:[106a]

> Awake, awake, put on strength, O arm of the Lord; awake, as in the days of old, the generations of long ago. Was it not thou that didst cut Rahab in pieces, that didst pierce the dragon?
>
> Was it not thou that didst dry up the sea, the waters of the great deep; that didst make the depths of the sea a way for the redeemed to pass over?

[380] The name Rahab is frequently used for Egypt in the Old Testament (in Isaiah 30:7, Egypt is called “Rahab who sits still”), and also for dragon; it therefore meant something evil and hostile. Rahab appears here as the old dragon Tiamat, against whose evil power Marduk or Yahweh goes forth to battle. The term “the redeemed” refers to the children of Israel who were delivered from bondage; but it is also mythological, because the hero sets free those who had previously been devoured by the whale-dragon (Frobenius).

[381] Psalm 89:10:

> Thou didst crush Rahab like a carcass.…

[382] Job 26: 12f.:

> By his power he stilled the sea,
> by his understanding he smote Rahab.
> By his wind the heavens were made fair,
> his hand pierced the fleeing serpent.

[383] Gunkel equates Rahab with chaos, i.e., Tiamat. The dragon Rahab also appears as Leviathan, the monster of the deep and personification of the sea.

[384] Psalm74:13ff.:

> Thou didst divide the sea by thy might;
> thou didst break the heads of the dragons on the waters.
> Thou didst crush the heads of Leviathan,
> thou didst give him as food for the creatures of the wilderness.

[385] There is a further parallel in Isaiah 27:1:

> In that day the Lord with his sore and great and strong sword shall punish Leviathan the piercing serpent, even Leviathan that crooked serpent; and he shall slay the dragon that is in the sea.

[386] We come upon a special motif in Job 41:1f.:

> Canst thou draw out Leviathan with an hook?
> Or his tongue with a cord which thou lettest down?
> Canst thou put an hook into his nose?
> Or bore his jaw through with a thorn?

[387] This motif has numerous parallels in the primitive myths collected by Frobenius, where the sea-monster was likewise fished for.

[388] We have seen that the incest prohibition prevents the son from symbolically reproducing himself through the mother. It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido. Now it is a fact amply confirmed by psychiatric experience that all parts of the psyche, inasmuch as they possess a certain autonomy, exhibit a personal character, like the split-off products of hysteria and schizophrenia, mediumistic "spirits," figures seen in dreams, etc. Every split-off portion of libido, every complex, has or is a (fragmentary) personality. At any rate, that is how it looks from the purely observational standpoint. But when we go into the matter more deeply, we find that they are really archetypal formations. There are no conclusive arguments against the hypothesis that these archetypal figures are endowed with personality at the outset and are not just secondary personalizations. In so far as the archetypes do not represent mere functional relationships, they manifest themselves as *δαίμονες*, as personal agencies. In this form they are felt as actual experiences and are not "figments of the imagination," as rationalism would have us believe. Consequently, man derives his human personality only secondarily from what the myths call his descent from the gods and heroes; or, to put it in psychological terms, his consciousness of himself as a personality derives primarily from the influence of quasi-personal archetypes.[107]

Numerous mythological proofs could be advanced in support of this view.

[389] It is, then, in the first place the god who transforms himself, and only through him does man take part in the transformation. Thus Khnum, “the maker, the potter, the builder,” shapes his egg on the potter’s wheel (pl. XLI*b*), for he is “immortal growth, his own generation and his own self-birth, the creator of the egg that came out of the primeval waters.” The Egyptian Book of the Dead says: “I have risen like the mighty hawk[108] that comes forth from his egg,” and: “I am the creator of Nun, who has taken up his abode in the underworld. My nest is not seen and my egg is not broken.” Yet another passage speaks of “that great and glorious god in his egg, who created himself for that which came forth from him.”[109] (Cf. fig. 36.) Therefore the god is also called Nagaga-uer, the “Great Cackler.” (Book of the Dead 98:2: “I cackle like the goose, and whistle like the hawk.”)

[390] The canalization of regressive libido into the god justifies the mythological statement that it is the god or the hero who commits incest. On the primitive level no further symbolization is required. This only becomes necessary when the mythological statement begins to bring the god into discredit, which obviously only happens at a higher level of morality. Thus Herodotus reports:

> I have already mentioned the festival of Isis at Busiris: it is here that everybody—tens of thousands of men and women—when the sacrifice is over, beat their breasts: in whose honour, however, I do not feel it is proper for me to say.
>
> At Papremis there is a special ceremony in addition to the ordinary rites and sacrifices as practised elsewhere. As the sun draws towards setting, only a few of the priests continue to employ themselves about the image of the god, while the majority, armed with wooden clubs, take their stand at the entrance of the temple; opposite these is another crowd of men, more than a thousand strong, also armed with clubs and consisting of men who have vows to perform. The image of the god, in a little wooden gold-plated shrine, is conveyed to another sacred building on the day before the ceremony. The few priests who are left to attend to it put it, together with the shrine which contains it, in a four-wheeled cart, which they drag along towards the temple. The others, waiting at the temple gate, try to prevent it from coming in, while the votaries take the god’s side and set upon them with their clubs. The assault is resisted, and a vigorous tussle ensues in which heads are broken and not a few actually die of the wounds they receive. That, at least, is what I believe, though the Egyptians told me that nobody is ever killed. The origin of this festival is explained locally by the story that the mother of Ares[110] once lived in the temple; Ares himself was brought up elsewhere, but when he grew to manhood he wished to get to know[111] his mother and for that

> purpose came to the temple where she was. Her attendants, however, not knowing him by sight, refused him admission, and succeeded in keeping him out until he fetched help from another town and forced his way in by violence. This, they say, is why the battle with clubs is part of the ceremony at the festival of Ares.[112]

[391] A Pyramid Text, describing the dead Pharaoh's fight for supremacy in heaven, says:

> The sky weeps, the stars shake, the keepers of the gods tremble and their servants flee, when they behold the King rising up as a spirit, as a god who lives on his fathers and possesses his mothers.[113]

[392] It is clear that the votaries fight and even kill each other for their share in the mystery of divine incest.[114] In this way they participate in the action of the god.[115] The death of Baldur, by being wounded with the branch of mistletoe, is analogous to the death of Osiris and seems to require a similar explanation. The legend says that all creatures had pledged themselves not to harm Baldur; only the mistletoe was forgotten, because she was supposed to be too young. Yet it was the twig of mistletoe that killed Baldur. The mistletoe is a parasite. The female fire-stick, the fire-mother, was obtained from the wood of a parasitic or creeping plant for the Indian fire-boring ceremony.[116] In Germanic legend the Mara, after its nightly jaunt, is said to rest on the "märentakken," which Grimm suggests is another name for mistletoe.[117] Mistletoe was also a sovereign remedy against barrenness.[118] In Gaul, it was only after offering sacrifice that the Druid was allowed, amid solemn ceremonies, to climb the sacred oak and cut the ritual branch of mistletoe. That which grows on the tree is the child (pl. XXXIX), or *oneself* in renewed and rejuvenated form; and that is precisely what one cannot have, because the incest prohibition forbids it. We are told that the mistletoe which killed Baldur was "too young"; hence this clinging parasite could be interpreted as the "child of the tree." But as the tree signifies the origin in the sense of the mother, it represents the source of life, of that magical life-force whose yearly renewal was celebrated in primitive times by the homage paid to a divine son, a *puer aeternus*. The graceful Baldur is such a figure. This type is granted only a fleeting existence, because he is never anything but an anticipation of something desired and hoped for. This is so literally true that a certain type of

“mother’s son” actually exhibits all the characteristics of the flower-like, youthful god, and even dies an early death.[119] The reason is that he only lives on and through the mother and can strike no roots in the world, so that he finds himself in a state of permanent incest. He is, as it were, only a dream of the mother, an ideal which she soon takes back into herself, as we can see from the Near Eastern “son-gods” like Tammuz, Attis, Adonis, and Christ. The mistletoe, like Baldur, represents the “child of the mother,” the longed-for, revivified life-force that flows from her. But, separated from its host, the mistletoe dies. Therefore, when the Druid cuts it, he kills it and by this act symbolically repeats the fatal self-castration of Attis and the wounding of Adonis by the boar’s tusk. This is the dream of the mother in matriarchal times, when there was as yet no father to stand by the side of the son.

Rubens: *The Last Judgment*
1618–20

[393] But why should the mistletoe kill Baldur, since it is, in a sense, his sister or brother? The lovely apparition of the *puer aeternus* is, alas, a form of illusion. In reality he is a parasite on the mother, a creature of her imagination, who only lives when rooted in the maternal body. In actual psychic experience the mother corresponds to the collective unconscious,

and the son to consciousness, which fancies itself free but must ever again succumb to the power of sleep and deadening unconsciousness. The mistletoe, however, corresponds to the shadow brother, of whom E. T. A. Hoffmann gives such an excellent description in his *Devil's Elixir*, and whom the psychotherapist regularly meets as a personification of the personal unconscious.[120] Just as, at evening, the shadows lengthen and finally engulf everything, so the mistletoe betokens Baldur's end. Being an equivalent of Baldur himself, it is fetched down from the tree like the "treasure hard to attain" (see the following chapters). The shadow becomes fatal when there is too little vitality or too little consciousness in the hero for him to complete his heroic task.

[394] The "son of the mother," as a mere mortal, dies young, but as a god he can do that which is forbidden and superhuman: he commits the magical incest and thus obtains immortality. In the myths the hero does not die; instead, he has to overcome the dragon of death.

[395] As the reader will long since have guessed, the dragon represents the negative mother-imago and thus expresses resistance to incest, or the fear of it. Dragon and snake are symbolic representations of the fear of the consequences of breaking the taboo and regressing to incest. It is therefore understandable that we should come over and over again upon the motif of the tree and the snake. Snakes and dragons are especially significant as guardians or defenders of the treasure. The black horse Apaosha also has this meaning in the old Persian *Song of Tishtriya*, where he blocks up the sources of the rain-lake. The white horse, Tishtriya, makes two futile attempts to vanquish Apaosha; at the third attempt he succeeds with the help of Ahura-Mazda.[121] Whereupon the sluices of heaven are opened and the fertilizing rain pours down upon the earth.[122] In this symbolism we can see very clearly how libido fights against libido, instinct against instinct, how the unconscious is in conflict with itself, and how mythological man perceived the unconscious in all the adversities and contrarieties of external nature without ever suspecting that he was gazing at the paradoxical background of his own consciousness.

[396] The tree entwined by the snake may therefore be taken as the symbol of the mother who is protected against incest by fear. This symbol is frequently found on Mithraic monuments. The rock with a snake coiled round it has a similar meaning, for Mithras (and also Men) was born from a rock. The threatening of new-born infants by snakes (Mithras, Apollo, Heracles) is explained by the legend of Lilith and the Lamia. Python, the dragon of Leto, and Poine, who devastated the land of Crotopos, were sent by the father of the new-born. This fact points to the father as being the cause of the fear, which as we know prompted Freud to his famous aetiological myth of the primal horde with the jealous old patriarch at the top. The immediate model for this is obviously the jealous Yahweh, struggling to protect his wife Israel from whoredoms with strange gods. The father represents the world of moral commandments and prohibitions, although, for lack of information about conditions in prehistoric times, it remains an open question how far the first moral laws arose from dire necessity rather than from the family preoccupations of the tribal father. At all events it would be easier to keep one's eye on a boxful of spiders than on the females of a primal horde. The father is the representative of the spirit, whose function it is to oppose pure instinctuality. That is his archetypal role, which falls to him regardless of his personal qualities; hence he is very often an object of neurotic fears for the son. Accordingly, the monster to be overcome by the son frequently appears as a giant who guards the treasure. An excellent example of this is the giant Humbaba in the Gilgamesh Epic, who guards the garden of Ishtar.[123] Gilgamesh conquers the giant and wins Ishtar, whereupon Ishtar immediately makes sexual advances to her deliverer.[124] These facts should be sufficient to explain the role played by Horus in Plutarch, and especially the violent treatment of Isis. By overpowering the mother the hero becomes equal to the sun: he renews himself. He wins the strength of the invincible sun, the power of eternal rejuvenation. We can now understand the series of pictures illustrating the Mithraic legend on the Heddernheim Relief (pl. XL). First we see the birth of Mithras from the top of the tree; the next picture shows him carrying the conquered bull (cf. pl. XLIX*a*). Here the bull has the same significance as the monster and may be compared with the bull that was

conquered by Gilgamesh. He represents the father who—paradoxically—enforces the incest prohibition as a giant and dangerous animal. The paradox lies in the fact that, like the mother who gives life and then takes it away again as the "terrible" or "devouring" mother, the father apparently lives a life of unbridled instinct and yet is the living embodiment of the law that thwarts instinct. There is, however, a subtle though important distinction to be made here: the father commits no incest, whereas the son has tendencies in that direction. The paternal law is directed against incest with all the violence and fury of uninhibited instinct. Freud overlooks the fact that the spirit too is dynamic, as indeed it must be if the psyche is not to lose its self-regulating equilibrium. But as the "father," the representative of moral law, is not only an objective fact, but a subjective psychic factor in the son himself, the killing of the bull clearly denotes an overcoming of animal instinct, and at the same time a secret and furtive overcoming of the power of the law, and hence a criminal usurpation of justice. Since the better is always the enemy of the good, every drastic innovation is an infringement of what is traditionally right, and may sometimes even be a crime punishable by death. As we know, this dilemma played an important part in the psychology of early Christianity, at the time when it came into conflict with Jewish law. In the eyes of the Jews, Christ was undoubtedly a law-breaker. Not unjustly is he called Adam Secundus; for just as the first Adam became conscious through sin, through eating of the tree of knowledge, so the second Adam broke through to the necessary relation with a fundamentally different God.[125]

[397] The third picture shows Mithras reaching for the nimbus on the head of Sol. This act recalls the Christian idea that those who have conquered win the crown of eternal life.

[398] In the fourth picture Sol kneels before Mithras. (Cf. pl. XXIV*a*.) These last two pictures show that Mithras has arrogated to himself the strength of the sun and become its lord. He has conquered his animal nature (the bull). Animals represent instinct, and also the prohibition of instinct, so that man becomes human through conquering his animal instinctuality. Mithras has thus sacrificed his animal nature—a solution already anticipated in the Gilgamesh Epic by the hero's renunciation of the

terrible Ishtar. In the Mithraic sacrifice the conquest of instinctuality no longer takes the archaic form of overpowering the mother, but of renouncing one’s own instinctive desires. The primitive idea of reproducing oneself by entering into the mother’s body has become so remote that the hero, instead of committing incest, is now sufficiently far advanced in the domestic virtues to seek immortality through the sacrifice of the incest tendency. This significant change finds its true fulfilment only in the symbol of the crucified God. In atonement for Adam’s sin a bloody human sacrifice is hung upon the tree of life.[126] (Cf. pl. XXXVI.) Although the tree of life has a mother significance, it is no longer the mother, but a symbolical equivalent to which the hero offers up his life. One can hardly imagine a symbol which expresses more drastically the subjugation of instinct. Even the manner of death reveals the symbolic content of this act: the hero suspends himself in the branches of the maternal tree by allowing his arms to be nailed to the cross. We can say that he unites himself with the mother in death and at the same time negates the act of union, paying for his guilt with deadly torment. This act of supreme courage and supreme renunciation is a crushing defeat for man’s animal nature, and it is also an earnest of supreme salvation, because such a deed alone seems adequate to expiate Adam’s sin of unbridled instinctuality. The sacrifice is the very reverse of regression—it is a successful canalization of libido into the symbolic equivalent of the mother, and hence a spiritualization of it.

[399] As I have already pointed out, the hanging of the victim on a tree was a religious rite, of which numerous examples can be found in the Germanic sphere of culture.[127] It is also characteristic that the victims were pierced with a spear. Thus, in the Hovamol Edda, Odin says:

I ween that I hung / on the windy tree,
Hung there for nights full nine;
With the spear I was wounded, / and offered I was
To Odin, myself to myself.[128]

[400] The hanging of the victims on crosses was a religious custom in Middle America. Müller[129] mentions the Fejérváry Manuscript (a Mexican hieroglyphic codex), which has, for a tailpiece, a cross with a

gory divinity hanging in the centre. Equally significant is the Palenque Cross (pl. XLI*a*).[130] At the top is a bird, on either side two human figures facing the cross, one of them holding out a child for either sacrifice or baptism. The ancient Aztecs are said to have invoked the favour of Cinteotl, “the daughter of heaven and goddess of the grain,” by nailing a youth or maiden to the cross every spring and shooting the victim with arrows.[131] The name of the cross signifies “Tree of our life or flesh.”[132] An effigy from the island of Philae represents Osiris in the form of a crucified god, mourned by Isis and Nephthys, his sister wives.[133]

[401] The meaning of the cross is certainly not restricted to the tree of life, as has already been shown. Müller takes it as an emblem of rain and fertility.[134] We should also mention that it is a powerful charm for averting evil (e.g., making the sign of the cross).

[402] In view of the fact that the cross resembles the human figure with arms outspread, it is worth noting that in early Christian art Christ is not nailed to the cross, but is shown standing before it with open arms.[135] Maurice interprets this as follows:

> It is a fact not less remarkable than well attested, that the Druids in their groves were accustomed to select the most stately and beautiful tree as an emblem of the deity they adored; and, having cut off the side branches, they affixed two of the largest of them to the highest part of the trunk, in such manner that those branches, extended on each side like the arms of a man, together with the body, presented to the spectator the appearance of a huge cross [cf. fig. 26]; and on the bark, in various places, was actually inscribed the letter “tau.”[136]

[403] The “tree of knowledge” of the Jains, of India, also has a human form; it is represented as an enormously thick trunk shaped like a human head, from the top of which grow two long branches hanging down on either side, with a short, vertical branch sticking straight up, crowned with a bud-like knob.[137] Robertson tells us that in the Assyrian system God was represented in the form of a cross, the vertical standing for the human figure, and the horizontal for a conventionalized pair of wings.[138] Archaic Greek idols, such as were found in large quantities in Aegina, have a similar character: an immoderately long head, wing-shaped arms slightly raised, and in front distinct breasts.[139]

Fig. 26. The human cross

From Agrippa von Nettesheim, De occulta philosophia, *Cologne, 1533*

[404] I must leave it an open question whether the symbol of the cross bears any relation to the two ceremonial fire-sticks used in fire-making, as has been claimed. But it seems very likely that the idea of “union” still lingers on in the cross, for underlying all fertility magic is the thought of renewal, which in turn is intimately connected with the cross. The idea of union expressed in the cross symbol is found in Plato’s *Timaeus,* where the demiurge joins the parts of the world-soul together by means of two sutures, which form a X (chi). According to Plato, the world-soul contains the world in itself like a body, an image which cannot fail to remind us of the mother:

> And in the centre he set a soul and caused it to extend throughout the whole and further wrapped its body round with soul on the outside; and so he established one world alone, round and revolving in a circle, solitary but by reason of its excellence able to bear itself company, needing no other acquaintance or friend but sufficient to itself. On all these accounts the world which he brought into being was a blessed god.[140]

[405] This utter inactivity and desirelessness, symbolized by the idea of self-containment, amounts to divine bliss. Man in this state is contained as if in his own vessel, like an Indian god in the lotus or in the embrace of his Shakti. In accordance with this mythological and philosophical conception, the enviable Diogenes lived in a tub in order to give symbolical expression to the blissfulness and godlikeness of his freedom from desire. On the relation between the world-soul and the world-body Plato says:

> Now this soul, though it comes later in the account we are now attempting, was not made by the god younger than the body; for when he joined them together, he would not have suffered the elder to be ruled by the younger. There is in us too much of the casual and random, which shows itself in our speech; but the god made soul prior to body and more venerable in birth and excellence, to be the body’s mistress and governor.[141]

[406] From other indications it appears that the image of the “soul” somehow coincides with the mother-imago.[142] The next stage in the development of the world-soul takes place in a mysterious and rather controversial fashion.[143] When the operation was complete, the following was done:

> This whole fabric, then, he split lengthwise into two halves; and making the two cross one another at their centres in the form of the letter X, he bent each round into a circle and joined it up.…
>
> When the whole fabric of the soul had been finished to its maker’s mind, he next began to fashion within the soul all that is bodily and brought the two together, fitting them centre to centre.[144]

[407] A peculiar use is made of the cross symbol by the Muyscas Indians, of Peru; two ropes are stretched crosswise over the surface of the water (pool or stream), and fruits, oil, and precious stones are thrown in as a sacrifice at the point of intersection.[145] Here the divinity is evidently the water, not the cross, which only signifies the place of sacrifice. The symbolism is somewhat obscure. Water, and particularly deep water, usually has a maternal significance, roughly corresponding to “womb.” The point of intersection of the two ropes is the point of union where the “crossing” takes place. (Note the double meaning of this word! According to all the analogies, the aim of fertility magic is to bring about the *increase* of the things marked for sacrifice.)

[408] The cross in the form of the *crux ansata* frequently appears in the hand of the Egyptian Tum or Atum, the supreme god or hegemon of the Ennead. Its meaning is “life,” which is to say that the god gives life. (Fig. 27.) It is important to know something about the attributes of this life-giving god. Tum of On-Heliopolis bears the name “the father of his mother,” and his attendant goddess, Jusas or Nebit-Hotpet, is called sometimes the mother, sometimes the daughter, and sometimes the wife of the god. The first day in autumn is known in the Heliopolitan inscriptions as the “feast-day of the goddess Jusasit,” as the arrival of the “sister who makes ready to unite herself with her father.” It is the day on which “the goddess Mehnit completes her work, so that the god Osiris may enter the left eye.”[146] It is also called “the day for filling the sacred eye with what it needs.” In the autumn equinox the heavenly cow with the moon-eye, Isis, receives the seed that begets Horus (the moon being the guardian of the seed).[147] The “eye” evidently stands for the female genitals, as is clear from the myth of Indra, who, as a punishment for his wantonness, was smitten with yonis all over his body, but was so far pardoned by the gods that the shameful yonis were changed into eyes. The little image reflected in the eye, the “pupilla,” is a “child.” The great

god becomes a child again: he enters into the mother’s womb for self-renewal.[148] (Cf. pl. XLII.) An Egyptian hymn says:

Fig. 27. *The life-giving crux ansata*
Egypt

> Thy mother, the sky,
> Stretches forth her arms to thee.

[409] The hymn continues:

> Thou shinest, O father of the gods, upon the back of thy mother, daily thy mother taketh thee in her arms. When thou lightest up the habitation of the night, thou art one with thy mother, the sky.[149]

[410] Tum of Pithum-Heroopolis not only carries the *crux ansata* as a symbol, but even has this emblem as the commonest of his titles, *ankh* or *ankhi*, which means ‘life’ or the ‘Living One.’ He was chiefly worshipped as the Agathodaimon serpent (cf. fig. 37), of whom it was said: “The sacred Agathodaimon serpent goes forth from the city of Nezi.” The snake, because it casts its skin, is a symbol of renewal, like the scarab beetle, a sun-symbol, which was believed to be of masculine sex only and to beget itself. “Khnum” (another name for Tum, but always the sun-god is meant) comes from the verb *num*, ‘to combine or unite.’[150] Khnum appears as the potter and maker of his own egg (cf. pl. XLI*b*).

[411] It is clear from all this that the cross is a many-faceted symbol, and its chief meaning is that of the “tree of life” and the “mother.” Its symbolization in human form is therefore quite understandable. The various forms of the *crux ansata* have the meaning of “life” and “fruitfulness,” and also of “union,” which can be interpreted as the *hieros gamos* of the god with his mother for the purpose of conquering death and renewing life.[151] This mythologem, it is plain, has passed into Christianity. For instance, St. Augustine says:

> Like a bridegroom Christ went forth from his chamber, he went out with a presage of his nuptials into the field of the world.… He came to the marriage-bed of the cross, and there, in mounting it, he consummated his marriage. And when he perceived the sighs of the creature, he lovingly gave himself up to the torment in place of his bride, and he joined himself to the woman for ever.[152]

[412] The analogy is indeed so plain that it hardly requires further comment. It is, therefore, a very touching and, for all its naïveté, an extraordinarily profound piece of symbolism when Mary, in an Old English lament of the Virgin,[153] accuses the cross of being a false tree, which unjustly and insensately destroyed “the pure fruit of her body, her gentle birdling,” with a poisonous draught, the draught of death, which was meant only for the guilty descendants of the sinner Adam. Her son was not to blame for their guilt. Mary laments:

Tre unkynde, thou schalt be kud,
mi sone step-moder I the calle:
cros thou holdest him so heih on heigth,
mi fruites feet I mai not kis;
cros I fynde thou art my fo,
thou berest my brid, beten blo.…

[413] Whereupon the Holy Cross answers:

Ladi to the I owe honour,
thi brihte palmes nou I bere;
thi fruit me florischeth in blod colour …
that Blosme Blomed up in thi bour.
ac not for the al-one,
but for to winne all this world.

[414] Concerning the relation of the two mothers to one another, the Cross says:

thou art i-crouned hevene quene,
thorw the burthe that thou beere.
I am a Relyk that shineth shene,
men wolde wite wher that I were,
at the parlement wol I bene,
on domes-day prestly a-pere;
at the parlement shul puiten up pleynyng,
hou Maydenes fruit on me gan sterve.[154]

[415] Thus the Mother of Death joins the Mother of Life in lamenting the dying god, and, as an outward token of their union, Mary kisses the cross and is reconciled.[155] In ancient Egypt this union of opposite tendencies was naively preserved in the Isis mother-imago. The separation of the son

from the mother signifies man’s leavetaking from animal unconsciousness. It was only the power of the “incest prohibition”[156] that created the self-conscious individual, who before had been mindlessly one with the tribe; and it was only then that the idea of the final death of the individual became possible. Thus through Adam’s sin, which lay precisely in his becoming conscious, death came into the world. The neurotic who cannot leave his mother has good reasons for not doing so: ultimately, it is the fear of death that holds him there. It seems as if no idea and no word were powerful enough to express the meaning of this conflict. Certainly the struggle for expression which has continued through the centuries cannot be motivated by what is narrowly and crudely conceived as “incest.” We ought rather to conceive the law that expresses itself first and last in the “incest prohibition” as the impulse to domestication, and regard the religious systems as institutions which take up the instinctual forces of man’s animal nature, organize them, and gradually make them available for higher cultural purposes.

[416] We will now return to Miss Miller’s visions. Those that now follow do not require detailed discussion. First comes the image of a “bay of purple water.” The symbolism of the sea links up with what has gone before, and we could also refer back to the reminiscences of the bay of Naples in Part I. In the sequence of the whole we certainly ought not to overlook the significance of the bay, so it might be as well to cast a glance at the etymology of this conception. Generally speaking, *bay* denotes anything that stands open. F. *bayer* means ‘to keep the mouth open, to gape.’ Another word for the same thing is *gulf* (Lat. *sinus*), which, in F. *golfe*, is closely connected with *gouffre*, ‘abyss’ (cf. also Eng. *gap*). *Gulf* is related to κόλπος,[157] ‘bosom, lap, womb’; also ‘fold of a garment,’ or ‘pocket.’ (In Swiss-German, *Buese* is ‘pocket of a coat or skirt.’) Κόλπος can also mean a deep hollow between two waves, or a valley between two high mountains. These significations point clearly to the underlying primitive ideas. They render intelligible Goethe’s choice of words in the passage where Faust wishes to follow the sun with winged desire in order to drink its “streams of quenchless light”:

> Then mountains could not check my godlike flight,
> With wild ravine or savage rocky ways;

But lo, the sea, with warm and tranquil bays,
Would hold its beauty to my wondering sight.[158]

[417] Faust's desire, like that of every hero, is a yearning for the mystery of rebirth, for immortality; therefore his way leads out to sea and down into the maw of death, that frighteningly narrow "passage" which signals the new day:

I hear a call towards the open main,
My tide of soul is ebbing more and more;
Lies at my feet the shining, glassy plain,
A new day beckons to another shore.
As if on wings, a chariot of fire
Sweeps near me. I am ready to be free.
Piercing the ether, new-born, I aspire
To rise to spheres of pure activity.
… … … … … …
Now let me dare to open wide the gate
Past which man's steps have ever flinching trod,
The hour is come, as master of my fate,
To prove in man the stature of a god,
Nor shrink before the cavern black and fell,
Imagination's torment evermore,
But *strive towards that passage*, at whose door
—A narrow mouth—burn all the flames of hell.
This step I take in cheerful resolution,
Though I should plunge to death and dissolution.[159]

[418] So it seems like a confirmation of this when in the very next vision Miss Miller sees "a perpendicular cliff." (Cf. *gouffre*.) This whole series of visions ends, so the author tells us, with a confusion of sounds, somewhat resembling "wa-ma, wa-ma." This strikes a very primitive, abysmal note. Since we learn nothing from Miss Miller about the subjective roots of this echo from the past, there is only one conjecture open to us: that it might, in the context as a whole, be considered a slight distortion of the well-known cry "Ma-ma."

VI
THE BATTLE FOR DELIVERANCE FROM THE MOTHER

[419] There now comes a short pause in the production of the visions; then the activity of the unconscious is energetically resumed.

[420] A wood appears, with trees and bushes. After our discussion in the preceding chapter, we need only say that the meaning of the forest coincides essentially with that of the tabooed tree. The sacred tree is generally found in a wood or in a paradiselike garden. Sometimes the forbidden grove takes the place of the tabooed tree and is invested with all the attributes of the latter. The forest, like the tree, has a maternal significance. In the vision which now follows, the forest forms the setting for the dramatic representation of Chiwantopel's end. I will first give the beginning of the drama, i.e., the first attempt at sacrifice, as it appears in the original text. The reader will find the continuation, the monologue and sacrificial scene, at the beginning of the next chapter.

> The figure of Chi-wan-to-pel comes up from the south, on horseback, wrapped in a blanket of bright colours, red, blue, and white. An Indian, dressed in buckskin, beaded and ornamented with feathers, creeps forward stealthily, making ready to shoot an arrow at Chi-wan-to-pel, who bares his breast to him in an attitude of defiance; and the Indian, fascinated by this sight, slinks away and disappears into the forest.

[421] Chiwantopel appears on horseback. This fact seems to be of some importance because, as the next act of the drama will show, the horse does not play a neutral role, but suffers the same death as the hero, who even calls him his "faithful brother." This points to a curious similarity between horse and rider. There seems to be an intimate connection between the two which leads them to the same fate. We have already seen that the libido directed towards the mother actually symbolizes her as a horse.[1] The mother-imago is a libido-symbol and so is the horse; at some points the meaning of the two symbols overlaps. But the factor common to both is the libido. In the present context, therefore, the hero and his horse seem to symbolize the idea of man and the subordinate sphere of

animal instinct. Parallel representations would be Agni on the ram (pl. XIII*b*), Wotan on Sleipnir (fig. 28), Ahura-Mazda on Angramainyu,[2] Christ on the ass,[3] Mithras on the bull, accompanied by his symbolic animals, the lion and the snake (pl. XL), Men on the human-footed horse, Frey on the boar with golden bristles, and so on. The steeds of mythology are always invested with great significance and very often appear anthropomorphized. Thus Men's horse has human forelegs, Balaam's ass human speech, and the bull upon whose back Mithras springs to deliver the death blow (*taurokathapsis:*[4] cf. pl. XL) is a life-giving deity.

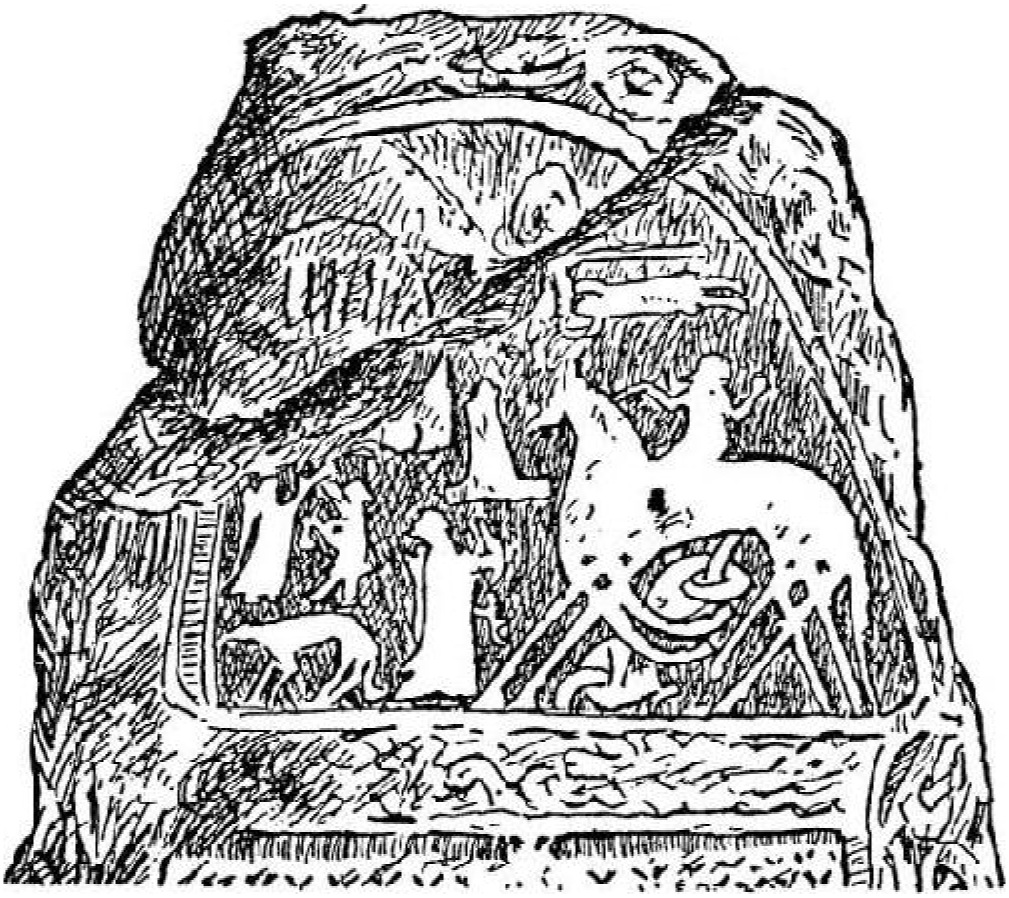

Fig. 28. Wotan riding the eight-legged horse Sleipnir
Tombstone, Götland, Sweden, C. A.D. *1000*

Fig. 29. The Devil riding off with a witch
From Olaus Magnus, Historia, *Rome, 1555*

The mock crucifixion on the Palatine shows the Crucified with an ass's head (pl. XLIII), which may perhaps be a reference to the old legend that the image of an ass was worshipped in the temple at Jerusalem.[5] In the form of Drosselbart ('horse's beard') Wotan is half man, half horse. An old German riddle puts this unity of horse and rider[6] very nicely: "Who are the two that go to the Thing? Together they have three eyes,[7] ten feet and one tail,[8] and thus they travel over the land." Legend attributes properties to the horse which psychologically belong to the unconscious of man: there are clairvoyant and clairaudient horses, path-finding horses who show the way when the wanderer is lost, horses with mantic powers. In the Iliad (xix), the horse prophesies evil. They hear the words the corpse utters on its way to the grave—words which no human can hear. Caesar was told by his human-footed horse (probably derived from an identification of Caesar with the Phrygian Men) that he would conquer the world. An ass prophesied to Augustus the victory of Actium. Horses also see ghosts. All these things are typical manifestations of the unconscious. We can therefore see why the horse, as a symbol of the animal component in man, has numerous connections with the devil. The devil has a horse's hoof and sometimes a horse's form. At critical moments he shows the proverbial cloven hoof, just as, during the abduction of Hadding, Sleipnir suddenly looked out from behind Wotan's mantle.[9] The devil, like the nightmare, rides the sleeper; hence it is said that those who have nightmares are ridden by the devil. In Persian lore the devil is the steed of God. He represents the sexual instinct; consequently at the Witches' Sabbath he appears in the form of a goat or horse. The sexual nature of the devil is imparted to the horse as well, so that this symbol is found in contexts where the sexual interpretation is the only one that fits. Loki propagates in the form of a horse, and so does the devil, as an ancient god of fire. Lightning, too, is represented theriomorphically as a horse.[10] An uneducated hysterical patient once told me that as a child she was terrified of thunderstorms, because after each flash of lightning she saw a huge black horse rearing up to the sky. Indian legend tells of the black thunder-horse of Yama, the god of death, who dwells in the south, the mythical place of storms.[11] In German folklore the devil is a god of lightning who hurls the horse's hoof—lightning—on the rooftops. In accordance with the primitive idea that thunder fertilizes the earth, lightning and horses' hoofs both have a phallic meaning. An uneducated woman patient who had been violently forced by her husband to have coitus with him often dreamt that a wild horse leapt over her and kicked her in the abdomen with his hind foot. Plutarch records the following words of a prayer from the Dionysian orgies:

> Come, Dionysus, into thy temple at Elis, come with the Graces into thy holy temple, come with the bull's foot thundering, worthy bull, worthy bull! [12]

Pegasus struck the fountain of Hippocrene from the earth with his hoof. A Corinthian statue of Bellerophon, which was also a fountain, was made so that the water flowed from the hoof of the horse. Baldur's horse struck forth a spring with his kick. The horse's foot is therefore the dispenser of fruitful moisture.[13]A tale from lower Austria, recorded by Jähns,[14] says that a gigantic man on a white horse can sometimes be seen riding over the mountains, a sure sign of rain. In German legend, Mother Holle, the goddess of childbirth, comes on horseback. Pregnant women nearing confinement would often give oats to a white horse from their aprons and ask him for a speedy delivery. Originally it was the custom for the horse to nuzzle the woman's genitals. The horse, like the ass, has the significance of a priapic animal.[15] Hoof-marks were once worshipped as dispensers of blessings and fertility; they also established the right of possession and were of importance in determining boundaries, like the Priapic statues of Latin antiquity. It was a horse who, like the Dactyls, discovered the mineral wealth of the Harz Mountains with his hoof. The horse-shoe, an equivalent for the horse's foot,[16] brings luck and has an apotropaic meaning. In the Netherlands, a hoof is hung up in the stable to ward off sorcery. The analogous effect of the phallus is well known; hence the phalli on gates. The shank in particular is supposed to keep off lightning, on the principle that like cures like.

[422] On account of their speed, horses signify wind, and here again the *tertium comparationis* is the libido-symbol. German legend knows the wind as the wild huntsman in lustful pursuit of the maiden. Wotan gallops along in a storm after the wind-bride (Frigg) fleeing before him.[17] Storm-centres often get their names from horses, e.g., the Schimmelberge ('white horse hills') on Lüneburg heath. The centaurs are, among other things, wind-gods.[18]

[423] Horses also signify fire and light, like the fiery horses of Helios. Hector's horses were called Xanthos (yellow, glaring), Podargos (swift-footed), Lampos (shining), and Aithon (burning). Siegfried leaps over the wall of fire on the thunder-horse Grani, who was sired by Sleipnir and was the only one capable of taking the fiery hedge.[19] There is a distinct fire symbolism in the mystic quadriga mentioned by Dio Chrysostom: [20] the highest god always drives his chariot round in a circle. The chariot is drawn by four horses, and the outside horse moves very quickly. He has a shining coat, bearing on it the signs of the zodiac and the constellations.[21]

The second horse goes more slowly and is illuminated on one side only. The third horse is slower still, and the fourth horse runs round himself. Once, however, the outside horse set the mane of the second horse on fire with his fiery breath, and the third horse drenched the fourth with streams of sweat. Then the horses dissolve and merge with the substance of the strongest and most fiery, which now becomes the charioteer. The horses represent the four elements. The catastrophe signifies world conflagration and the deluge, after which the division of God into Many ceases, and the divine One is restored.[22] There can be no doubt that the quadriga is meant as an astronomical symbol of Time. We saw in Part I that the Stoic conception of fate is a fire-symbol, so it is a logical continuation of this idea when the closely related conception of time exhibits the same libido symbolism.

[424] The Brihadaranyaka Upanishad says:

> Dawn is the head of the sacrificial horse, the sun his eye, the wind his breath, the universal fire his open mouth. The year is the body of the sacrificial horse. The sky is his back, the air his belly, the earth the underpart of his belly. The poles are his flanks, the intermediate poles his ribs, the seasons his limbs, the months and half-months his joints, days and nights his feet, the stars his bones, the clouds his flesh. Sand is the food in his stomach, rivers are his entrails. His liver and lungs are the mountains; plants and trees, his hair. The rising sun is his forepart, the setting sun his hindpart.… The ocean is his kinsman, the sea his cradle.[23]

[425] Here the horse is undoubtedly conceived as a time-symbol, besides being the whole world. In the Mithraic religion we meet with a strange god, Aion (pl. XLIV), also called Chronos or *deus leontocephalus* because he is conventionally represented as a lion-headed human figure. He stands in a rigid attitude, wrapped in the coils of a serpent whose head juts forward over the head of the lion. In each hand he holds a key, on his breast is a thunderbolt, on his back are the four wings of the wind, and on his body are the signs of the zodiac. His attributes are a cock and implements. In the Carolingian Utrecht Psalter, which was based on classical models, Aion is shown as a naked man bearing in his hand a snake.[24] As the name indicates, he is a time-symbol, and is composed entirely of libido-images. The lion, the zodiacal sign for the torrid heat of summer,[25] is the symbol of *concupiscentia effrenata*, ‘frenzied desire.’ (“My soul roars with the voice of a hungry lion,” says Mechthild of

Magdeburg.) In the Mithraic mysteries the snake is often shown as the antagonist of the lion, in accordance with the myth of the sun's fight with the dragon. In the Egyptian Book of the Dead, Tum is addressed as a tom-cat, because in that form he fought the Apophis-serpent. To be "entwined" or embraced is the same as to be "devoured," which as we saw means entering into the mother's womb. Time is thus defined by the rising and setting sun, by the death and renewal of libido, the dawning and extinction of consciousness. The attribute of the cock again points to time, and the implements to creation through time (Bergson's "durée créatrice"). Oromazdes (Ahura-Mazda) and Ahriman came into being through *Zrwan akarana*, 'infinitely long duration.' So time, this empty and purely formal concept, is expressed in the mysteries through transformations of the creative force, libido, just as time in physics is identical with the flow of the energic process. Macrobius remarks: "By the lion's head the present time is indicated … because its condition is strong and fervent."[26] Philo Judaeus evidently knows better:

> Time is regarded as a god by evil men who wish to hide the Essential Being.… Vicious men think that Time is the cause of the world, but the wise and good think it is God.[27]

[426] In Firdausi, time is often the symbol of fate.[28] The Indian text quoted above goes even further: its horse symbol contains the whole world, his kinsman and cradle is the sea, the mother, who is the equivalent of the world-soul. Just as Aion represents the libido in the "embrace" or state of death and rebirth, so here the cradle of the horse is the sea, i.e., the libido is in the "mother," dying and rising again in the unconscious.

[427] We have already seen that the horse is connected through Yggdrasill with the symbolism of the tree. The horse too is a "tree of death"; for instance in the Middle Ages the bier was called "St. Michael's Horse," and the modern Persian word for coffin means 'wooden horse.'[29] The horse also plays the part of a psychopomp who leads the way to the other world—the souls of the dead are fetched by horsewomen, the Valkyries. Modern Greek songs speak of Charon as riding on a horse.

[428] Finally, the symbol appears in yet another form: sometimes the devil rides on a *three-legged* horse. The goddess of death, Hel, rides on a three-legged horse in time of pestilence.[30] In the Bundahish [31] there is a

monstrous three-legged ass who stands in the heavenly rain-lake Vouru-Kasha; his urine purifies its waters, and at his cry all useful animals become pregnant and all harmful animals drop their young. The contrasting symbolism of Hel is fused into one image in the ass of Vouru-Kasha. The libido is fructifying as well as destructive.

[429] In the Miller drama an Indian approaches the hero, preparing to shoot an arrow at him. But Chiwantopel, with a proud gesture, exposes his breast to the enemy. This image reminded the author of the scene between Cassius and Brutus in Shakespeare's *Julius Caesar*.[32] A misunderstanding has arisen between the two friends, Brutus accusing Cassius of withholding the money for the legions. Cassius breaks out in a peevish tirade:

Come, Antony, and young Octavius, come,
Revenge yourselves alone on Cassius,
For Cassius is aweary of the world:
Hated by one he loves: braved by his brother;
Check'd like a bondman; all his faults observ'd,
Set in a note-book, learn'd, and conn'd by rote,
To cast into my teeth. O! I could weep
My spirit from mine eyes! There is my dagger,
And here my naked breast; within, a heart
Dearer than Plutus' mine, richer than gold:
If that thou be'st a Roman, take it forth;
I, that denied thee gold, will give my heart.
Strike, as thou didst at Caesar; for, I know,
When thou didst hate him worst, thou lov'dst him better
Than ever thou lov'dst Cassius.

[430] Our material would not be complete if we did not mention that this speech of Cassius has several analogies with the agonized delirium of Cyrano, except that Cassius is far more theatrical. There is something childish and hysterical in his manner. Brutus has no intention of killing him; instead, he pours cold water on him in the following dialogue:

Sheathe your dagger:
Be angry when you will, it shall have scope;
Do what you will, dishonour shall be humour.

O Cassius! you are yoked with a lamb
That carries anger as the flint bears fire,
Who, much enforced, shows a hasty spark,
And straight is cold again.

CASSIUS: Hath Cassius liv’d

To be but mirth and laughter to his Brutus,
When grief and blood ill-temper’d vexeth him?

BRUTUS: When I spoke that, I was ill-temper’d too.

CASSIUS: Do you confess so much? Give me your hand.

BRUTUS: And my heart too.

CASSIUS: O Brutus!

BRUTUS: What’s the matter?

CASSIUS: Have you not love enough to bear with me,
When that rash humour which my mother gave me
Makes me forgetful?

BRUTUS: Yes, Cassius; and from henceforth
When you are over-earnest with your Brutus,
He’ll think your mother chides, and leave you so.

[431] Cassius’s irritability is explained by the fact that he identifies with his mother and therefore behaves exactly like a woman, as his speech demonstrates to perfection.[33] His womanish yearning for love and his despairing self-abasement under the proud masculine will of Brutus fully justify the latter’s remark that Cassius is “yoked with a lamb,” in other words, has something feckless in his character, which is inherited from his mother. This can be taken as proof of an infantile disposition, which is as always characterized by a predominance of the parental imago, in this case that of the mother. An individual is infantile because he has freed himself insufficiently, or not at all, from his childish environment

and his adaptation to his parents, with the result that he has a false reaction to the world: on the one hand he reacts as a child towards his parents, always demanding love and immediate emotional rewards, while on the other hand he is so identified with his parents through his close ties with them that he behaves like his father or his mother. He is incapable of living his own life and finding the character that belongs to him. Therefore Brutus correctly surmises that "the mother chides" in Cassius, not he himself. The psychologically valuable fact to be elicited here is that Cassius is infantile and identified with the mother. His hysterical behaviour is due to the circumstance that he is still, in part, a "lamb," an innocent and harmless child. So far as his emotional life is concerned, he has not yet caught up with himself, as is often the case with people who are apparently so masterful towards life and their fellows, but who have remained infantile in regard to the demands of feeling.

[432] Since the figures in the Miller drama are children of the author's imagination, they naturally depict those traits of character which belong to the author herself.[34] The hero Chiwantopel represents her ideal, who is here projected as a masculine figure; for Miss Miller is still youthful enough to see her ideal in a man. She has evidently received no salutary disappointments in this respect, but is still enjoying her illusions. She does not yet know that her ideal figure ought really to be feminine, because such a figure might touchthey could get at him her too closely. So long as the ideal is portrayed in the person of a man, it does not commit her to anything; it merely stimulates her fantastic demands. Were the ideal of her own sex, she might one day make the discovery that she does not quite come up to it. That would be uncomfortable, but salutary. Cyrano's gesture [35] is all very fine and impressive, but that of Cassius verges on the theatrical. Both heroes set about dying in the grand manner, and Cyrano actually succeeds in doing so. This yearning for death anticipates the inevitable end of the illusion that the *other* person is the ideal. Miss Miller's ideal figure is evidently about to change his psychic localization—he might even take up his abode in the author herself. That would mark a very critical point in her career. For when such a vitally important figure as the ideal is about to change, it is as though that figure

had to die. It then creates in the individual all sorts of unaccountable and apparently unfounded presentiments of death—a romantic world-weariness. These tendencies have already found expression in the "Song of the Moth," but now they become more sharply defined. Her infantile world wants to come to an end and be replaced by the adult phase. The wish of young girls to die is often only an indirect expression of this, but it remains a pose even if they really do die, for even death can be dramatized. Such an outcome merely makes the pose more effective. That the highest summit of life can be expressed through the symbolism of death is a well-known fact, for any growing beyond oneself means death. As an infantile person Miss Miller cannot realize what her task is in life; she cannot set herself any goal or standard for which she feels responsible. Therefore she is not yet prepared to accept the problem of love either, for this demands full consciousness and responsibility, circumspection and foresight. It is a decision in favour of life, at whose end death stands. Love and death have not a little to do with one another.

[433] The proud gesture with which the hero offers himself to death may very easily be a manoeuvre for courting the sympathy of the other person, and it therefore invites the cool analysis which Brutus proceeds to give. The behaviour of Chiwantopel is equally suspicious, for the Cassius scene which serves as its model indiscreetly discloses the fact that the whole affair is merely infantile. When a gesture turns out to be too theatrical it gives ground for the suspicion that it is not genuine, that somewhere a contrary will is at work which intends something quite different.

[434] In the ensuing drama the libido assumes a menacing activity that contrasts very strongly with the inactive nature of the preceding symbols, and a conflict develops in which one party threatens the other with murder. The hero, the ideal image of the dreamer, is ready to die; he has no fear of death. To judge from the infantile character of this hero, it is indeed high time for him to quit the stage. Death is to come for him in the form of an arrow-shot. In view of the fact that many heroes are themselves mighty archers, or else are killed by arrows, it may not be superfluous to inquire what death by an arrow means. (Cf. pl. XLV.)

[435] We read in the biography of Anna Catherina Emmerich, the hysterical German nun (1774–1824) who received the stigmata, the following account of her heart-trouble:

> When only in her novitiate, she received as a Christmas gift from Christ a very painful heart-trouble, which lasted for the whole period of her ordained life. But God showed her inwardly its purpose: it was to atone for the decay of the spirit of the Order, and especially for the sins of her fellow sisters. But what made this trouble most painful to her was the gift which she had possessed from youth, of seeing with her mind's eye the inner nature of man as he really was. She felt the heart-trouble physically, as if her heart were continually pierced by arrows.[36] These arrows—and for her this was a far worse spiritual torment—she recognized as the thoughts, schemings, secret gossipings, misunderstandings, and uncharitable slanders with which her fellow sisters, wholly without reason and conscience, plotted against her and her God-fearing way of life.[37]

[436] It is difficult to be a saint, because even a patient and long-suffering nature will not readily endure such a high degree of differentiation and defends itself in its own way. The constant companion of sanctity is temptation, without which no true saint can live. We know that these temptations can pass off unconsciously, so that only their equivalents reach consciousness in the form of symptoms. We know, too, that *Herz* traditionally rhymes with *Schmerz*.[38] It is a well-known fact that hysterics substitute a physical pain for a psychic pain which is not felt because repressed. Catherina Emmerich's biographer has understood this more or less correctly, but her own interpretation of the pain is based, as usual, on a projection: it is always the others who secretly say all sorts of wicked things about her, and this is the cause of her pains. The facts of the matter are rather different: the renunciation of all life's joys, this fading before the flower, is always painful, and especially painful are the unfulfilled desires and the attempts of nature to break through the barrier of repression, without which no such differentiation would be possible. The gossip and sarcastic gibes of the sisters very naturally pick on these painful things, so that it must seem to the saint as if her difficulties came from there. She could hardly know that gossip is very apt to take over the role of the unconscious, and, like a skilled adversary, always aims at the chinks in our armour of which we know nothing.

[437] The same idea is expressed in the following passage from the discourses of the Buddha:

> But if those sensual pleasures fail the person who desires and wishes for them, he will suffer, pierced by the arrow of pain.[39]

[438] The wounding and painful shafts do not come from outside, through gossip, which only pricks us on the surface, but from the ambush of our own unconscious. It is our own repressed desires that stick like arrows in our flesh.[40] On another occasion this became true for our nun, and in the most literal sense. It is a well-known fact that scenes of mystic union with the Saviour are strongly tinged with erotic libido.[41] Stigmatization amounts to an incubation with the Saviour, a slight modification of the ancient conception of the *unio mystica* as cohabitation with the god. The nun gives the following account of her stigmatization:

> I had a contemplation of the sufferings of Christ, and I besought him to let me feel his sorrows with him, and prayed five paternosters in adoration of the five sacred wounds. Lying on my bed with arms outstretched, I entered into a great sweetness and into an endless thirst for the torments of Jesus. Then I saw a radiance descending towards me; it came slanting down from above. It was a crucified body, alive and transparent, the arms extended, but without the Cross. The wounds shone more brightly than the body; they were five circles of glory emanating from the glory of the whole. I was enraptured, and my heart was moved with great pain and yet with great sweetness, from my longing to share the torments of my Saviour. And at the sight of the wounds my longing for the sufferings of the Redeemer increased more and more, as if streaming out of my breast, through my hands, side, and feet towards his holy wounds. Then from the hands, then from the side, then from the feet of the figure triple beams of shining red light shot forth into my hands, my side, and my feet, ending in an arrow.[42]

[439] The beams are triple, terminating in an arrow-head.[43] Like Cupid, the sun has his quiver full of destroying or fertilizing arrows.[44] The arrow has a masculine significance; hence the Oriental custom of describing brave sons as the arrows or javelins of their father. “To make sharp arrows” is an Arabic expression for begetting valiant sons. To announce the birth of a son the Chinese used to hang a bow and arrow in front of the house. Accordingly the Psalms declare (127:4, RV): “As arrows in the hand of a mighty man, so are the children of youth.” Thanks to this meaning of the arrow, we can see why the Scythian king Ariantes, wishing to prepare a census, demanded an arrow-head from each man.[45] A similar significance attaches to the lance: men are descended from the lance; the ash is the mother of lances; therefore the men of the Bronze Age are derived from her. Kaineus [46] commanded that his lance was to be worshipped. Pindar says of this Kaineus that, in the legend, “he

descended into the depths, splitting the earth with a straight foot."[47] Originally he is supposed to have been a maiden named Kainis, who, as a reward for her submissiveness, was changed by Poseidon into an invulnerable man. Ovid, describing the battle of the Lapithae with the invulnerable Kaineus, says that in the end they covered him completely with trees, because that was the only way they could get at him. He continues:

> His end is doubtful. Some say that his body was thrust down by the weight of the trees to the Tartarean pit, but the son of Ampycus denied this. For from the midst of the pile he saw a bird with golden wings fly up into the limpid air.[48]

[440] Roscher[49] takes this bird to be the golden plover (*Charadrius pluvialis*), which gets its name from the fact that it lives in a *χαράδρα*, 'crack in the earth.' His song heralds the rain.

[441] Once again we recognize the typical elements of a libido myth: original bisexuality, immortality (invulnerability) through entry into the mother (splitting the mother with the foot), resurrection as a soul-bird, and production of fertility (rain). When a hero of this type causes his lance to be worshipped, he probably does so because he thinks it a valid equivalent of himself.

[442] From this standpoint the passage in Job, which we quoted in Part I, appears in a new light:

> He hath set me up for his mark.
> His archers compass me round about,
> He cleaveth my reins asunder, and doth not spare;
> He poureth out my gall upon the ground.
> He breaketh me with breach upon breach,
> He runneth upon me like a giant.[50]

[443] Here Job is voicing the torment of soul caused by the onslaught of unconscious desires; the libido festers in his flesh, a cruel God has overpowered him and pierced him through with barbed thoughts that agonize his whole being.

[444] The same image occurs in Nietzsche:

> Stretched out, shivering,

Like one half dead whose feet are warmed,
Shaken by unknown fevers,
Shuddering from the icy pointed arrows of frost,
Hunted by thee, O thought,
Unutterable! veiled! horrible one!
Thou huntsman behind the clouds.
Struck to the ground by thee,
Thou mocking eye that gazeth at me from the dark:
Thus do I lie,
Twisting, writhing, tortured
With eternal tortures,
Smitten
By thee, cruel huntsman,
Thou unknown—God!

Smite deeper!
Smite once more!
Pierce, rend my heart!
What meaneth this torturing
With blunt-toothed arrows?
Why gazest thou again,
Never weary of human agony,
With sardonic gods’-eyes, flashing lightning?
Why wilt thou not kill,
Only torture, torture? [51]

[445] No long-drawn explanations are needed to see in this comparison the martyred and sacrificed god whom we have already met in the Aztec crucifixions and in the sacrifice of Odin.[52] We meet the same image in depictions of the martyrdom of St. Sebastian, where the glowing, girlishly tender flesh of the young saint betrays all the pain of renunciation which the sensibility of the artist projected into it. An artist cannot prevent his work from being coloured by the psychology of his time. This is true in even higher degree of the Christian symbol, the Crucified pierced by the lance. It is a true symbol of the man of the Christian era, tormented by his desires and crucified in Christ.

[446] That the torment which afflicts mankind does not come from outside, but that man is his own huntsman, his own sacrificer, his own sacrificial

knife, is clear from another poem of Nietzsche's, where the dualism is resolved into a psychic conflict through the same symbolism:

O Zarathustra,
Most cruel Nimrod!
Erstwhile hunter of God,
Snare of all virtue,
Arrow of evil!
And now
Self-hunted,
Thine own quarry,
Thyself pierced through …

Now
Alone with thyself,
Split in thine own knowledge,
Amidst a hundred mirrors
To thine own self false,
Amidst a hundred memories
Uncertain,
Languishing with each wound,
Shivering with each frost,
Strangled in thine own snares,
Self-knower!
Self-hangman!

Why didst thou hang thyself
With the noose of thy wisdom?
Why hast thou enticed thyself
Into the old serpent's Paradise?
Why hast thou stolen
Into thyself, thyself?[53]

[447] The deadly arrows do not strike the hero from without; it is himself who hunts, fights, and tortures himself. In him, instinct wars with instinct; therefore the poet says, "Thyself pierced through," which means that he is wounded by his own arrow. As we know that the arrow is a libido-symbol, the meaning of this "piercing" is clear: it is the act of union with oneself, a sort of self-fertilization, and also a self-violation, a self-murder, so that Zarathustra can justly call himself his own hangman (like Odin, who sacrifices himself to Odin). One should not of course

take this psychologem in too voluntaristic a sense: nobody deliberately inflicts such tortures on himself, they just happen to him. If a man reckons the unconscious as part of his personality, then one must admit that he is in fact raging against himself. But, in so far as the symbolism thrown up by his suffering is archetypal and collective, it can be taken as a sign that he is no longer suffering from himself, but rather from the spirit of the age. He is suffering from an objective, impersonal cause, from his collective unconscious which he has in common with all men.

[448] Being wounded by one's own arrow signifies, therefore, a state of introversion. What this means we already know: the libido sinks "into its own depths" (a favourite image of Nietzsche's), and discovers in the darkness a substitute for the upper world it has abandoned—the world of memories ("Amidst a hundred memories"), the strongest and most influential of which are the earliest ones. It is the world of the child, the paradisal state of early infancy, from which we are driven out by the relentless law of time. In this subterranean kingdom slumber sweet feelings of home and the hopes of all that is to be. As Heinrich says of his miraculous work in Gerhart Hauptmann's *The Sunken Bell:*

> It sings a song, long lost and long forgotten,
> A song of home, a childlike song of love,
> Born in the waters of some fairy well,
> Known to all mortals, and yet heard of none.[54]

[449] Yet "the danger is great,"[55] as Mephistopheles says, for these depths fascinate. When the libido leaves the bright upper world, whether from choice, or from inertia, or from fate, it sinks back into its own depths, into the source from which it originally flowed, and returns to the point of cleavage, the navel, where it first entered the body. This point of cleavage is called the mother, because from her the current of life reached us. Whenever some great work is to be accomplished, before which a man recoils, doubtful of his strength, his libido streams back to the fountainhead—and that is the dangerous moment when the issue hangs between annihilation and new life. For if the libido gets stuck in the wonderland of this inner world,[56] then for the upper world man is nothing but a shadow, he is alrof the unconscious to be eady moribund or

at least seriously ill. But if the libido manages to tear itself loose and force its way up again, something like a miracle happens: the journey to the underworld was a plunge into the fountain of youth, and the libido, apparently dead, wakes to renewed fruitfulness. This idea is illustrated in an Indian myth: Vishnu sank into a profound trance, and in his slumber brought forth Brahma, who, enthroned on a lotus, rose out of Vishnu's navel, bringing with him the Vedas (pl. XLVI*a*), which he diligently read. (Birth of creative thought from introversion.) But through Vishnu's ecstatic absentmindedness a mighty flood came upon the world. (Devouring and destruction of the world through introversion.) Taking advantage of the general confusion, a demon stole the Vedas and hid them in the depths. Brahma then roused Vishnu, who, changing himself into a fish (pl. XLVII), plunged into the flood, fought the demon, conquered him, and recaptured the Vedas.

[450] This is a primitive way of describing the libido's entry into the interior world of the psyche, the unconscious. There, through its introversion and regression, contents are constellated which till now were latent. These are the primordial images, the archetypes, which have been so enriched with individual memories through the introversion of libido as to become perceptible to the conscious mind, in much the same way as the crystalline structure latent in the saturated solution takes visible shape from the aggregation of molecules. Since these introversions and regressions only occur at moments when a new orientation and a new adaptation are necessary, the constellated archetype is always the primordial image of the need of the moment. Although the changing situations of life must appear infinitely various to our way of thinking, their possible number never exceeds certain natural limits; they fall into more or less typical patterns that repeat themselves over and over again. The archetypal structure of the unconscious corresponds to the average run of events. The changes that may befall a man are not infinitely variable; they are variations of certain typical occurrences which are limited in number. When therefore a distressing situation arises, the corresponding archetype will be constellated in the unconscious. Since this archetype is numinous, i.e., possesses a specific energy, it will attract to itself the contents of consciousness—conscious ideas that render it

perceptible and hence capable of conscious realization. Its passing over into consciousness is felt as an illumination, a revelation, or a “saving idea.” Repeated experience of this process has had the general result that, whenever a critical situation arises, the mechanism of introversion is made to function artificially by means of ritual actions which bring about a spiritual preparation, e.g., magical ceremonies, sacrifices, invocations, prayers, and suchlike. The aim of these ritual actions is to direct the libido towards the unconscious and compel it to introvert. If the libido connects with the unconscious, it is as though it were connecting with the mother, and this raises the incest-taboo. But as the unconscious is infinitely greater than the mother and is only symbolized by her, the fear of incest must be conquered if one is to gain possession of those “saving” contents—the treasure hard to attain. Since the son is not conscious of his incest tendency, it is projected upon the mother or her symbol. But the symbol of the mother is not the mother herself, so in reality there is not the slightest possibility of incest, and the taboo can therefore be ruled out as a reason for resistance. In so far as the mother represents the unconscious, the incest tendency, particularly when it appears as the amorous desire of the mother (e.g., Ishtar and Gilgamesh) or of the anima (e.g., Chryse and Philoctetes), is really only the desire of the unconscious to be taken notice of. The rejection of the unconscious usually has untortunate results; its instinctive forces, if persistently disregarded, rise up in opposition: Chryse changes into a venomous serpent. The more negative the attitude of the conscious towards the unconscious, the more dangerous does the latter become.[57] Chryse’s curse was fulfilled so completely that Philoctetes, on approaching her altar, wounded himself in the foot with his own poison-tipped arrow, or, according to other versions [58] which are in fact better attested, was bitten in the foot by a poisonous snake,[59] and fell into a decline.[60]

[451] This very typical injury also destroyed Ra, and is described as follows in an Egyptian hymn:

> The mouth of the god twitched with age,
> So that he dropped his spittle on the earth,
> And what he spat fell on the ground.
> Isis then kneaded it with her hands

Together with the earth which was there;
She fashioned from it a noble worm
And made it like a spear.
She did not wind it living about her face,
But threw it in a coil upon the path
Upon which the great god was wont to walk
At pleasure through his two countries.
The noble god stepped forth in his splendour,
The gods who served Pharaoh accompanied him,
And he walked as he did each day.
Then the noble worm stung him …
The divine god opened his mouth,
And the voice of his majesty rang through the heavens.
And the gods cried: Behold! Behold!
He could not answer them,
His jawbones chattered,
All his limbs trembled,
And the poison invaded his flesh
As the Nile invades his territory.[61]

[452] In this hymn Egypt has preserved for us a primitive version of the snake-sting motif. The aging of the autumn sun as a symbol of human senility is traced back to poisoning by a serpent. The mother is blamed for causing the death of the sun-god with her mischievous arts. The serpent symbolizes the mysterious numen of the "mother" (and of other daimonia) who kills, but who is at the same time man's only security against death, as she is the source of life.[62] Accordingly, only the mother can cure him who is sick unto death, and the hymn goes on to describe how the gods were called together to take counsel:

Then came Isis with her wisdom,
Whose mouth is full of the breath of life,
Whose decree banishes pain,
And whose word gives life to those who no longer breathe.
She said: What is it, what is it, divine Father?
Behold, a worm hath done thee this wrong.

Tell me thy name, divine Father,
For he whose name is spoken shall live.

[453] Ra answers:

I am he who created heaven and earth, and piled up the mountains,
And made all living things.
I am he who made the water and caused the great flood,
Who made the Bull of his Mother,
Who is the Begetter.

The poison did not depart, it went further,
The great god was not healed.
Then said Isis to Ra:
That is not thy name which thou tellest me.
Tell me thy name, that the poison may depart,
For he whose name is spoken shall live.

[454] Finally Ra decides to utter his true name. He was only partially cured, just as Osiris was only incompletely reconstituted, and in addition he lost his power and finally had to retire on the back of the heavenly cow.

[455] The poisonous worm is a deadly instead of an animating form of libido. The “true name” is Ra’s soul and magic power (his libido). What Isis demands is the transference of libido to the mother. This request is fulfilled to the letter, for the aging god returns to the heavenly cow, the symbol of the mother.

[456] The meaning of this symbolism becomes clear in the light of what we said earlier: the forward-striving libido which rules the conscious mind of the son demands separation from the mother, but his childish longing for her prevents this by setting up a psychic resistance that manifests itself in all kinds of neurotic fears—that is to say, in a general fear of life. The more a person shrinks from adapting himself to reality, the greater becomes the fear which increasingly besets his path at every point. Thus a vicious circle is formed: fear of life and people causes more shrinking back, and this in turn leads to infantilism and finally “into the mother.” The reasons for this are generally projected outside oneself: the fault lies with external circumstances, or else the parents are made responsible. And indeed, it remains to be found out how much the mother is to blame for not letting the son go. The son will naturally try to explain everything by the wrong attitude of the mother, but he would do better to refrain

from all such futile attempts to excuse his own ineptitude by laying the blame on his parents.

[457] This fear of life is not just an imaginary bogy, but a very real panic, which seems disproportionate only because its real source is unconscious and therefore projected: the young, growing part of the personality, if prevented from living or kept in check, generates fear and changes into fear. The fear seems to come from the mother, but actually it is the deadly fear of the instinctive, unconscious, inner man who is cut off from life by the continual shrinking back from reality. If the mother is felt as the obstacle, she then becomes the vengeful pursuer. Naturally it is not the real mother, although she too may seriously injure her child by the morbid tenderness with which she pursues it into adult life, thus prolonging the infantile attitude beyond the proper time. It is rather the mother-imago that has turned into a lamia.[63] (Cf. pls. XXXVIII*a*, XLVIII.) The mother-imago, however, represents the unconscious, and it is as much a vital necessity for the unconscious to be joined to the conscious as it is for the latter not to lose contact with the unconscious. Nothing endangers this connection more in a man than a successful life; it makes him forget his dependence on the unconscious. The case of Gilgamesh is instructive in this respect: he was so successful that the gods, the representatives of the unconscious, saw themselves compelled to deliberate how they could best bring about his downfall. Their efforts were unavailing at first, but when the hero had won the herb of immortality (cf. pl. XIX) and was almost at his goal, a serpent stole the elixir of life from him while he slept.

[458] The demands of the unconscious act at first like a paralysing poison on a man’s energy and resourcefulness, so that it may well be compared to the bite of a poisonous snake. (Cf. fig. 30.) Apparently it is a hostile demon who robs him of energy, but in actual fact it is his own unconscious whose alien tendencies are beginning to check the forward striving of the conscious mind. The cause of this process is often extremely obscure, the more so as it is complicated by all kinds of external factors and subsidiary causes, such as difficulties in work, disappointments, failures, reduced efficiency due to age, depressing family problems, and so on and so forth. According to the myths it is the

woman who secretly enslaves a man, so that he can no longer free himself from her and becomes a child again.[64] It is also significant that Isis, the sister-wife of the sun-god, creates the poisonous serpent from his spittle, which, like all bodily secretions, has a magical significance, being a libido equivalent. She creates the serpent from the libido of the god, and by this means weakens him and makes him dependent on her. Delilah acts in the same way with Samson: by cutting off his hair, the sun's rays, she robs him of his strength. This demon-woman of mythology is in truth the "sister-wife-mother," the woman in the man, who unexpectedly turns up during the second half of life and tries to effect a forcible change of personality. I have dealt with certain aspects of this change in my essay on "The Stages of Life." It consists in a partial feminization of the man and a corresponding masculinization of the woman. Often it takes place under very dramatic circumstances: the man's strongest quality, his Logos principle, turns against him and as it were betrays him. The same thing happens with the Eros of the woman. The man becomes rigidly set in his previous attitude, while the woman remains caught in her emotional ties and fails to develop her reason and understanding, whose place is then taken by equally obstinate and inept "animus" opinions. The fossilization of the man shrouds itself in a smoke-screen of moods, ridiculous irritability, feelings of distrust and resentment, which are meant to justify his rigid attitude. A pertect example of this type of psychology is Schreber's account of his own psychosis, *Memoirs of My Nervous Illness*.[65]

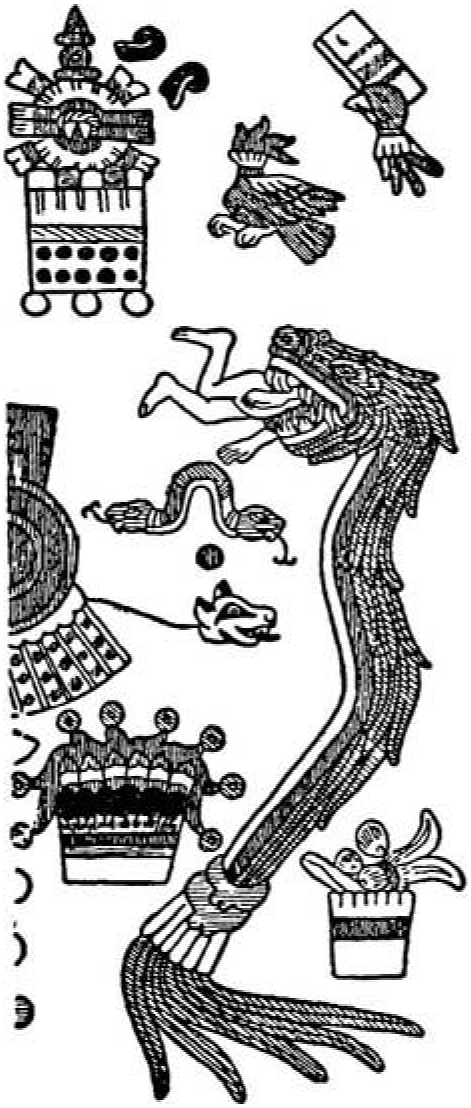

Fig. 30. Quetzalcoatl devouring a man
From the Codex Borbonicus, Aztec 16th century

[459] The paralysis of progressive energy has in truth some very disagreeable aspects. It seems like an unwelcome accident or a positive catastrophe, which one would naturally rather avoid. In most cases the conscious personality rises up against the assault of the unconscious and resists its demands, which, it is clearly felt, are directed not only against all the weak spots in the man's character, but also against his chief virtue (the differentiated function and the ideal). It is evident from the myths of Heracles and Gilgamesh that this assault can become the source of energy for an heroic conflict; indeed, so obvious is this impression that one has to ask oneself whether the apparent enmity of the maternal

archetype is not a ruse on the part of Mater Natura for spurring on her favoured child to his highest achievement. The vengeful Hera would then appear as the stern “Mistress Soul,” who imposes the most difficult labours on her hero and threatens him with destruction unless he plucks up courage for the supreme deed and actually becomes what he always potentially was. The hero’s victory over the “mother,” or over her daemonic representative (dragon, etc.), is never anything but temporary. What must be regarded as regression in a young person—feminization of the man (partial identity with the mother) and masculinization of the woman (partial identity with the father)-acquires a different meaning in the second half of life. The assimilation of contrasexual tendencies then becomes a task that must be fulfilled in order to keep the libido in a state of progression. The task consists in integrating the unconscious, in bringing together “conscious” and “unconscious.” I have called this the individuation process, and for further details must refer the reader to my later works.[65a] At this stage the mother-symbol no longer connects back to the beginnings, but points towards the unconscious as the creative matrix of the future. “Entry into the mother” then means establishing a relationship” between the ego and the unconscious. Nietzsche probably means something of the kind in his poem:

Why hast thou enticed thyself
Into the old serpent’s Paradise?
Why hast thou stolen
Into thyself, thyself?

A sick man now,
Sick of the serpent’s poison;[66]
A captive now
Who drew the hardest lot:
Bent double
Working in thine own pit,
Encaved within thyself,
Burrowing into thyself,
Heavy-handed,
Stiff,
A corpse—
Piled with a hundred burdens,

Loaded to death with thyself,
A knower!
Self-knower!
The wise Zarathustra!
You sought the heaviest burden
And found yourself.[67]

[460] Sunk in his own depths, he is like one buried in the earth; a dead man who has crawled back into the mother; [68] a Kaineus "piled with a hundred burdens" and pressed down to death, groaning beneath the intolerable weight of his own self and his own destiny. Who does not think here of Mithras, who, in the Taurophoria, took his bull (or, as the Egyptian hymn says, "the bull of his mother"), namely his love for his Mater Natura, on his back, and with this heaviest burden set forth on the *via dolorosa* of the Transitus?[69] The way of this passion leads to the cave in which the bull is sacrificed. So, too, Christ had to bear the Cross[70] to the place of sacrifice, where, according to the Christian version, the Lamb was slain in the form of the god, and was then laid to earth in the sepulchre.[71] The cross, or whatever other heavy burden the hero carries, is *himself*, or rather *the* self, his wholeness, which is both God and animal—not merely the empirical man, but the totality of his being, which is rooted in his animal nature and reaches out beyond the merely human towards the divine. His wholeness implies a tremendous tension of opposites paradoxically at one with themselves, as in the cross, their most perfect symbol. What seems like a poetic figure of speech in Nietzsche is really an age-old myth. It is as if the poet could still sense, beneath the words of contemporary speech and in the images that crowd in upon his imagination, the ghostly presence of bygone spiritual worlds, and possessed the capacity to make them come alive again. As Gerhart Hauptmann says: "Poetry is the art of letting the primordial word resound through the common word."[72]

[461] The sacrifice, whose mysterious and manifold meanings we guess rather than understand, passes by the conscious mind of our author unrecognized and unconsummated. The arrow is not yet shot, the hero Chiwantopel is not yet fatally poisoned and ready for death through self-sacrifice. On the evidence before us we can say that this sacrifice means

giving up the connection with the mother, relinquishing all the ties and limitations which the psyche has taken over from childhood into adult life. From various hints of Miss Miller's it appears that at the time of these fantasies she was still living in the family circle, at an age when independence was an urgent necessity. It is therefore significant that the birth of her fantasies coincided with a journey abroad, i.e., with a breaking away from her childhood environment. It is not possible to live too long amid infantile surroundings, or in the bosom of the family, without endangering one's psychic health. Life calls us forth to independence, and anyone who does not heed this call because of childish laziness or timidity is threatened with neurosis. And once this has broken out, it becomes an increasingly valid reason for running away from life and remaining forever in the morally poisonous atmosphere of infancy.

[462] The fantasy of the arrow-shot is part of this struggle for personal independence. As yet, however, the need for such a decision has not penetrated to the conscious mind of the dreamer: the fatal arrow of Cupid has not yet found its mark. Chiwantopel, playing the role of the author, is not yet wounded or killed. He is the bold adventurer who dares to do what Miss Miller obviously shrinks from doing: he ofters himself, of his own free will, as a target for the fatal arrow-shot. The fact that this gesture of self-exposure is projected upon a masculine figure is direct proof that the dreamer is quite unconscious of its necessity. Chiwantopel is a typical animus-figure, that is to say, a personification of the masculine side of the woman's psyche. He is an archetypal figure who becomes particularly active when the conscious mind refuses to follow the feelings and instincts prompted by the unconscious: instead of love and surrender there is mannishness, argumentativeness, obstinate self-assertion, and the demon of opinion in every possible shape and form (power instead of love). The animus is not a real man at all; he is a slightly hysterical, infantile hero whose longing to be loved shows through the gaps in his armour. It is in this garb that Miss Miller has dressed the critical decisions of her life, or rather these decisions have not yet got beyond the stage of unconscious fantasy and are still not recognized by her conscious mind as her own decisions. (Cf. pl. XVII.)

[463] The fact that the assassin allows himself to be scared away by Chiwantopel’s heroics means that the impending death of this pasteboard hero has been temporarily postponed: the conscious mind is not yet ready to come to a decision by itself, but prefers to adopt the ostrich policy of burying its head in unconsciousness. Chiwantopel must fall because the power of decision locked up in the unconscious, which is at present keeping the nerveless figure of the hero erect, is needed to strengthen the conscious mind, for without the co-operation of the unconscious and its instinctive forces the conscious personality would be too weak to wrench itself free from its infantile past and venture into a strange world with all its unforeseen possibilities. The whole of the libido is needed for the battle of life. The dreamer cannot bring herself to this decision, which would tear aside all sentimental attachments to childhood, to father and mother, and yet it must be taken if she wishes to follow the call of her individual destiny.

VII

THE DUAL MOTHER [1]

[464] After his assailant has disappeared, Chiwantopel begins the following monologue:

> From the tip of the backbone [2] of these continents, from the farthest lowlands, I have wandered for a hundred moons since quitting my father's palace, forever pursued by my mad desire to find "her who will understand." With jewels I tempted many beautiful women; with kisses tried I to draw out the secrets of their hearts, with deeds of daring I won their admiration. [He reviews one after another the women he has known.] Chi-ta, the princess of my own race … she was a fool, vain as a peacock, without a thought in her head except trinkets and perfumes. Ta-nan, the peasant girl … bah! a perfect sow, nothing but a bust and a belly, thinking of nothing but pleasure. And then Ki-ma, the priestess, a mere parrot, repeating the empty phrases learnt from the priests, all for show, without real understanding or sincerity, mistrustful, affected, hypocritical! … Alas! Not one who understands me, not one who resembles me or has a soul that is sister to mine. There is not one among them all who has known my soul, not one who could read my thoughts—far from it; not one capable of seeking the shining summits with me, or of spelling out with me the superhuman word Love!

[465] Here Chiwantopel admits that his travels and wanderings are a search for the other, for the beloved, and for the meaning of life that is to be found in union with her. This possibility was merely hinted at in the first part of the book. The fact that the seeker is masculine and the sought-for feminine is not so very remarkable, since the prime object of unconscious desire is the mother, as should be clear from what we have already learnt. "She who understands" is, in infantile speech, the mother. The original concrete meaning of words like *comprehend*, *comprendre, begreifen, erfassen* (grasp, seize), etc., is literally to seize hold of something with the hands and hold it tight in the arms. That is just what the mother does with her child when it asks for help or protection, and what binds the child to its mother. But the older it grows, the greater becomes the danger of this kind of "comprehension" hindering its natural development. Instead of adapting itself, as is necessary, to its new surroundings, the libido of the child regresses to the sheltering ease of the mother's arms and fails to keep pace with the passing of time. This situation is described

as follows in an old Hermetic text: “Being chained to the arms and breast of my mother, and to her substance, I cause my substance to hold together and rest, and I compose the invisible from the visible.…”[3] When a person remains bound to the mother, the life he ought to have lived runs away in the form of conscious and unconscious fantasies, which in the case of a woman are generally attributed to some hero-figure, or are acted out by him, as here. *He* is the one who then has the great longing for an understanding soul-mate, he is the seeker who survives the adventures which the conscious personality studiously avoids; he it is who, with a magnificent gesture, offers his breast to the slings and arrows of a hostile world, and displays the courage which is so sadly lacking to the conscious mind. It is all up with the man whom the whims of fortune bring into contact with this infantile woman: he will at once be made identical with her animus-hero and relentlessly set up as the ideal figure, threatened with the direst punishments should he ever make a face that shows the least departure from the ideal!

[466] It is in this situation that our author now finds herself. Chiwantopel is the very devil of a fellow: a breaker of hearts by the dozen, all the women rave about him. He knows so many of them that he can pass them under review. Not one of them gets him, for he seeks one who (so she thinks) is known only to our author. That is, she believes in her heart of hearts that he is looking for *her*. In this she is labouring under a delusion, for experience shows that this particular cat jumps quite differently. The animus, a typical “son”—hero, is not after her at all; true to his ancient prototype, he is seeking the mother. This youthful hero is always the son-lover of the mother-goddess and is doomed to an early death. (Cf. fig. 20.) The libido that will not flow into life at the right time regresses to the mythical world of the archetypes, where it activates images which, since the remotest times, have expressed the non-human life of the gods, whether of the upper world or the lower. If this regression occurs in a young person, his own individual life is supplanted by the divine archetypal drama, which is all the more devastating for him because his conscious education provides him with no means of recognizing what is happening, and thus with no possibility of freeing himself from its fascination. Herein lay the vital importance of myths: they explained to

the bewildered human being what was going on in his unconscious and why he was held fast. The myths told him: “This is not you, but the gods. You will never reach them, so turn back to your human avocations, holding the gods in fear and respect.” These ingredients can also be found in the Christian myth, but it is too veiled to have enlightened our author. Nor is anything said about these things in the catechism. The “shining heights” are beyond the reach of mere mortals, and the “superhuman word Love” betrays the divine nature of the *dramatis personae*, since even human love presents such a thorny problem to man that he would rather creep into the remotest corner than touch it with his little finger. The words we have quoted show how deeply our author has been drawn into the unconscious drama and how much she is under its spell. Looked at in this light, the pathos rings hollow and the heroics seem hysterical.

[467] However, it looks somewhat different when viewed not from the personalistic standpoint, i.e., from the personal situation of Miss Miller, but from the standpoint of the archetype’s own life. As we have already explained, the phenomena of the unconscious can be regarded as more or less spontaneous manifestations of autonomous archetypes, and though this hypothesis may seem very strange to the layman, it is amply supported by the fact the archetype has a numinous character: it exerts a fascination, it enters into active opposition to the conscious mind, and may be said in the long run to mould the destinies of individuals by unconsciously influencing their thinking, feeling, and behaviour, even if this influence is not recognized until long afterwards. The primordial image is itself a “pattern of behaviour”[4] which will assert itself with or without the co-operation of the conscious personality. Although the Miller case gives us some idea of the manner in which an archetype gradually draws nearer to consciousness and finally takes possession of it, the material is too scanty to serve as a complete illustration of the process. I must therefore refer my reader to the dream-series discussed in *Psychology and Alchemy*, where he will be able to follow the gradual emergence of a definite archetype with all the specific marks of its autonomy and authority.

[468] From this point of view, then, the hero Chiwantopel represents a psychic entity which can only be compared to a fragmentary personality equipped with a relative degree of consciousness and a will to match. Such a conclusion is inevitable if our premise of the autonomy and purposiveness of the complex is correct. In that case the intentions both of Chiwantopel and of the mother-imago standing behind and above him can be subjected to closer scrutiny. He himself seems to find complete fulfilment in the role of the actor. As an ideal figure he attracts all our author's attention to himself, he gives voice to her most secret thoughts and desires, and, like Cyrano, he does so in a language which springs from Miss Miller's own heart. He is therefore sure of his success and cuts out all possible rivals. He wins the soul of the dreamer, not in order to lead her back to normal life, but to her spiritual destiny; for he is a bridegroom of death, one of the son-lovers who die young because they have no life of their own but are only fast-fading flowers on the maternal tree. Their meaning and their vitality begin and end in the mother-goddess. Therefore, when Chiwantopel, the "ghostly lover,"[5] draws Miss Miller away from the path of life, he does so in a certain sense at the behest of the mother-imago, which in women personifies a special aspect of the unconscious. It does not, like the anima, stand for the chaotic life of the unconscious in all its aspects, but for the peculiarly fascinating background of the psyche, the world of primordial images. There is always a danger that those who set foot in this realm will grow fast to the rocks, like Theseus and Peirithous, who wanted to abduct the goddess of the underworld. It happens all too easily that there is no returning from the realm of the Mothers. As I have already hinted, this is the fate that has overtaken Miss Miller. But the danger could equally well prove to be her salvation, if only the conscious mind had some means of understanding the unconscious contents. This is certainly not the case with our author. For her these fantasies are "marvellous" products of an unconscious activity which she confronts more or less helplessly, although, as we shall see, the associations contain all the necessary clues that would enable her, with a little reflection, to guess what the fantasy-figures mean, and to use the symbols as a heavensent opportunity for assimilating her unconscious contents. Our culture, however, has neither

eyes nor heart for these things. Anything that comes out of the psyche is regarded with suspicion at the best of times, and if it does not immediately prove its material value it goes for nothing.

[469] The hero as an animus-figure acts vicariously for the conscious individual; that is to say, he does what the subject ought, could, or would like to do, but does not do. All the things that could happen in conscious life, but do not happen, are acted out in the unconscious and consequently appear in projection. Chiwantopel is characterized as the hero who leaves his family and his ancestral home in order to seek his psychic counterpart. He thus represents what in the normal course of events ought to happen. The fact that this appears as a fantasy-figure shows how little the author is doing it herself. What happens in fantasy is therefore compensatory to the situation or attitude of the conscious mind. This is also the rule in dreams.

[470] How right we were in our supposition that what is going on in Miss Miller's unconscious is a battle for independence is now shown by her remark that the hero's departure from his father's house reminded her of the fate of the young Buddha, who renounced all the luxury of his home in order to go out into the world and live his destiny to the full.[6] The Buddha set the same heroic example as Christ, who also cut himself off from his family and even spoke these bitter words (Matt. 10: 34f.):

> Think not that I am come to send peace on earth: I came not to send peace, but a sword.
>
> For I am come to set a man at variance against his father, and the daughter against her mother, and the daughter in law against her mother in law.
>
> And a man's foes shall be they of his own household.
>
> He that loveth father or mother more than me is not worthy of me.…

[471] Horus snatches the head-dress from his mother, the emblem of her power. Nietzsche says:

> We must suppose that a mind in which the ideal of the "free spirit" can grow to maturity and perfection has had its decisive crisis in some great act of emancipation, and that before this it was a spirit bound and apparenFig. 31. The m tly chained for ever to its corner and pillar. What binds it most tightly? What ties are the most unbreakable? For men of a superior and select type, it is the ties of duty: the reverence that befits youth, respect and tenderness for all the time-honoured and valued things, feelings of gratitude for the soil whence they grew, for the hand that guided them, for the shrine where they learnt to pray—their highest moments are the very ones that bind

> them most firmly, that put them under the most enduring obligations. The great emancipation comes suddenly for those who are so bound.…
>
> "Better to die than live here," says the imperious voice of temptation; and this "here," this "at home," is all that the soul has hitherto loved! A sudden horror and mistrust of what it loved, a flash of contempt for its so-called "duty," a rebellious, wilful, volcanically impelling desire for travel, strangeness, estrangement, coldness, disillusion, glaciation; a hatred of love, perhaps a sacrilegious grasp and glance backwards [7] to everything it had worshipped and loved till then, perhaps a blush of shame over what it has just done and at the same time an exultation over having done it, an intoxicating, inner thrill of joy which signalizes victory—victory over what? over whom? an enigmatic, doubtful, questioning victory, but the first victory nonetheless. Of such evil and painful things is the history of the great emancipation composed. It is like a disease that can easily destroy the man, this first eruption of strength and will to self-determination.…[8]

[472] The danger, as Nietzsche sees, lies in isolation within oneself:

> Solitude surrounds and encircles him, ever more threatening, ever more constricting, ever more heart-strangling, that terrible goddess and *Mater saeva cupidinum*,[9]

[473] The libido that is withdrawn so unwillingly from the "mother" turns into a threatening serpent, symbolizing the fear of death—for the relation to the mother must cease, *must die*, and this is almost the same as dying oneself. That is to say, the violence of the separation is proportionate to the strength of the bond uniting the son with the mother, and the stronger this broken bond was in the first place, the more dangerously does the "mother" approach him in the guise of the unconscious. This is indeed the *Mater saeva cupidinum*, 'savage mother of desire,' who in another form now threatens to devour the erstwhile fugitive. (Note the snake symbolism.)

[474] Miss Miller now gives us a further reference, this time to something that influenced her fantasies in a more general way, namely Longfellow's great narrative poem, *The Song of Hiawatha*.[10] My reader must frequently have wondered at the number of times I adduce apparently very remote material for purposes of comparison and how I enlarge the basis upon which Miss Miller's creations rest. He must also have doubted whether it is justifiable, on the basis of such scanty suggestions, to enter into fundamental discussions concerning the mythological foundations of these fantasies. For, he will say, we are not likely to find anything of the sort behind the Miller fantasies. I need hardly emphasize how hazardous these comparisons have seemed even to me. In this case I can at least

plead that Miss Miller named her sources herself. So long as we stick to these clues we are moving on certain ground. The information we obtain from our patients, however, is seldom complete. We ourselves do not find it at all easy to remember where some of our own ideas and views come from. But, although instances of cryptomnesia are not uncommon, it is highly probable that not all our ideas are individual acquisitions, and that the ones whose origin we do not know are not necessarily cryptomnesias. It is rather different as regards the way in which our ideas are formed and the order in which they are arranged. Such things can undoubtedly be acquired and afterwards remembered. That need not always be the case, however, because the human mind possesses general and typical modes of functioning which correspond to the biological "pattern of behaviour." These preexistent, innate patterns—the archetypes—can easily produce in the most widely differing individuals ideas or combinations of ideas that are practically identical, and for whose origin no individual experience can be made responsible. In the psychoses, for instance, there are very many ideas and images which impress the patient and his circle with their absolute strangeness, but which are quite familiar to the expert on account of the affinity of their motifs with certain mythologems. Because the basic structure of the psyche is everywhere more or less the same, it is possible to compare what look like individual dream-motifs with mythologems of whatever origin. So I have no hesitation in making comparisons between American Indian myth and the modern American psyche.

[475] I had never read *Hiawatha* until I came to this point in my inquiry, when the continuation of my work made its perusal necessary. This poetical compilation of Indian myths proved to my satisfaction how justified were all my previous reflections, since it is unusually rich in mythological motifs. This fact should throw light on the wealth of associations in the Miller fantasies. It therefore behoves us to examine the contents of this epic more closely.

[476] Nawadaha sings the songs of Hiawatha, the friend of man:[11]

> There he sang of Hiawatha,
> Sang the songs of Hiawatha,

Sang his wondrous birth and being,
How he prayed and how he fasted,
How he lived, and toiled, and suffered,
That the tribes of men might prosper,
That he might advance his people.

[477] The teleological significance of the hero as a symbolic figure who attracts libido to himself in the form of wonder and adoration, in order to lead it over the symbolic bridge of myth to higher uses, is already anticipated here. Thus we quickly become acquainted with Hiawatha as a saviour, and are prepared to hear all that is usually said about such a figure, about his miraculous birth, his mighty deeds in youth, and his sacrifice for his fellow men. The first canto opens with an "Evangelium": Gitche Manito, the "master of life," weary of the squabbles of his human children, calls his people together and makes known to them the joyous message:

I will send a Prophet to you,
A Deliverer of the nations,
Who shall guide you and shall teach you,
Who shall toil and suffer with you.
If you listen to his counsels,
You will multiply and prosper;
If his warnings pass unheeded,
You will fade away and perish!

[478] Gitche Manito the Mighty, "the creator of the nations,"[12] is shown standing erect "on the great Red Pipestone quarry":

From his footprints flowed a river,
Leaped into the light of morning,
O'er the precipice plunging downward
Gleamed like Ishkoodah, the comet.

[479] This image has a parallel in certain Coptic ideas. In the "Mysteries of Saint John and the Holy Virgin" we read:

> [The Cherubim] answered and said unto me: "Seest thou that the water is under the feet of the Father? If the Father lifteth up His feet, the water riseth upwards; but if at the time when God is about to bring the water up, man sinneth against Him, He is wont to make the fruit of the earth to be little, because of the sins of men."[13]

By the water is meant the Nile, on which Egypt's fertility depended.

[480] It is not only the feet themselves that have a fertility significance, it also seems to extend to their activity, treading. I observed that the dance-step of the Pueblo Indians consisted in a "calcare terram"—a persistent, vigorous pounding of the earth with the heels ("nunc pede libero pulsanda tellus": "with unfettered foot now we are to beat on the ground"[14]). Kaineus, as we saw, descended into the depths, "splitting the earth with a straight foot." Faust reached the Mothers by stamping on the ground: "Stamping descend, and stamping rise up again!"[15]

[481] The heroes in the sun-devouring myths often stamp or kick in the gullet of the monster. Thor stamped clean through the bottom of the boat in his struggle with the monster and touched the bottom of the sea. The regression of libido makes the ritual act of treading out the dance-step seem like a repetition of the infantile "kicking." The latter is associated with the mother and with pleasurable sensations, and recapitulates a movement that was already practised inside the mother's womb. The foot and the treading movement are invested with a phallic significance,[16] or with that of re-entry into the womb, so that the rhythm of the dance transports the dancer into an unconscious state. The Dancing Dervishes and other primitive dancers offer confirmation of this. The comparison of the water flowing from Gitche Manito's footprints with a comet means that it is a light- or libido-symbol for the fertilizing moisture (sperma). According to a note in Humboldt's *Cosmos*,[17] certain South American Indian tribes call meteors the "piss of the stars." We should also mention that Gitche Manito is a fire-maker: he blows upon a forest so that the trees rub against one another and burst into flame. Hence this god too is a libido-symbol, since he produces not only water but fire.

[482] After this prologue there follows in the second canto the story of the hero's antecedents. His father, the great warrior Mudjekeewis, has overcome by stealth the great bear, "the terror of the nations," and stolen from him the magic "belt of wampum," a girdle of shells. Here we meet the motif of the "treasure hard to attain," which the hero wrests from the monster. The "mystic" identity of the bear comes out in the poet's comparisons: Mudjekeewis smites the bear on the head after robbing him of the treasure:

With the heavy blow bewildered
Rose the great Bear of the mountains;
But his knees beneath him trembled,
And he whimpered like a woman.

[483] Mudjekeewis tells him mockingly:

Else you would not cry and whimper
Like a miserable woman! …
But you, Bear! sit here and whimper,
And disgrace your tribe by crying,
Like a wretched Shaugodaya,
Like a cowardly old woman!

[484] These three comparisons with a woman occur on the same page. What Mudjekeewis slays is his feminine component, the anima-image, whose first carrier is the mother. Like a true hero, he has snatched life from the jaws of death, from the all-devouring Terrible Mother. This deed, which as we have seen is also depicted as the journey to hell, the night sea journey (cf. pars. 308f.), or the conquest of the monster from within, signifies at the same time entry into the mother's womb, a rebirth that has notable consequences for Mudjekeewis. As in the Zosimos vision, so here the entrant becomes the pneuma, a wind-breath or spirit: Mudjekeewis becomes the West Wind, the fertilizing breath, the father of the winds.[18] Hissons become the other winds. An intermezzo tells of them and their loves, of which I will mention only the courtship of Wabun, the East Wind, because the wind's wooing is described in particularly graphic language. Every morning he sees a beautiful girl in the meadow, whom he eagerly courts:

Every morning, gazing earthward,
Still the first thing he beheld there
Was her blue eyes looking at him,
Two blue lakes among the rushes.

[485] The comparison with water is not irrelevant, because from "wind and water" man shall be born anew.

And he wooed her with caresses,
Wooed her with his smile of sunshine,
With his flattering words he wooed her,

With his sighing and his singing,
Gentlest whispers in the branches,
Softest music, sweetest odors.

[486] The caressing courtship of the wind is beautifully expressed in the lilting onomatopoeia.[19]

[487] The third canto gives us the antecedents of Hiawatha's two mothers. We are told that as a girl his grandmother lived in the moon. One day when she was swinging on a grape-vine, a jealous lover cut it down, and Nokomis, Hiawatha's grandmother, fell to earth. The people who saw her fall thought she was a shooting-star. The wonderful origin of Nokomis is explained more fully in the course of the same song. Young Hiawatha asks his grandmother what the moon really is. She tells him that the moon is the *body of a grandmother* who had been thrown up there by one of her warlike grandchildren in a fit of rage. (Cf. fig. 32.)[20] According to the ancient belief, the moon is the gathering-place of departed souls[21] (fig. 31) a guardian of the seed, and hence a source of life with a feminine significance. The remarkable thing is that Nokomis, when she fell to earth, gave birth to a daughter, Wenonah, who afterwards became the mother of Hiawatha. The throwing upward of the mother, her fall and birth-pangs, seem to be something altogether typical. A seventeenth-century story relates that a raging bull tossed a pregnant woman "as high as a house" and tore open her body, and the child fell to earth without injury. This child, on account of his wonderful birth, was supposed to be a hero or miracle-worker, but he died young. There is a widespread belief among primitives that the sun is feminine and the moon masculine. Among the Namaqua Hottentots, the sun is thought to consist of clear bacon-fat. "Those who travel on boats," we read,[22] "draw it down by magic every evening, and after cutting off a sizeable piece, kick it up again into the sky." In infancy, food comes from the mother. In the fantasies of the Gnostics there is a legend about the origin of man which may be of some relevance here. The female archons who were bound to the vault of heaven were unable, on account of its rapid rotation, to keep their young within them, but let them fall to earth, where they grew into human beings. (This may be connected with certain barbarous obstetric methods, in which women in labour were dropped or thrown to the

ground.) The assault on the mother begins with the Mudjekeewis episode and is continued in the violent treatment of Grandmother Nokomis, who, as a result of the cutting of the grape-vine and her fall to earth, seems to have become pregnant in some way. The "plucking of the branch" hints, as we have already seen, at an infringement of the incest-taboo. The song about "Saxonland, where beautiful maidens grow upon trees," or proverbs like "stolen fruits are sweetest," point to a similar idea. The fall of Nokomis deserves comparison with a poetical figure in Heine:

Fig. 31. The moon as the abode of souls

Chalcedon gem, 1st century B.C.

Fig. 32. The woman in the moon

Tattoo pattern, Haida Indians, Northwest America

A star, a star is falling
Out of the glittering sky!

The star of Love! I watch it
    Sink in the depths and die.

The leaves and buds are falling
    From many an apple-tree;
I watch the mirthful breezes
    Embrace them wantonly.[23]

[488] Wenonah is later wooed by the caressing West Wind and is made pregnant by him. Being a young moon-goddess, she is as beautiful as the moonlight. Nokomis warns her of the dangerous courtship of Mudjekeewis, but Wenonah allows herself to become infatuated and conceives from the breath of the West Wind a son, our hero:

And the West Wind came at evening …
Found the beautiful Wenonah
Lying there among the lilies,
Wooed her with his words of sweetness,
Wooed her with his soft caresses,
Till she bore a son in sorrow,
Bore a son of love and sorrow.

[489] The star or comet plainly belongs to the birth-scene; Nokomis, too, comes to earth as a falling star. Mörike’s poetic fancy imagined another such divine conception:

And she who bore me in her womb,
    And gave me food and clothing,
She was a maid, a wild, brown maid,
    Who looked on men with loathing.

She fleered at them and laughed aloud,
    And bade no suitor tarry;
“I’d rather be the Wind’s own bride
    Than have a man and marry.”

Then came the Wind and held her fast,
    His captive, love-enchanted;
And lo, by him a merry child
    Within her womb was planted.[24]

[490] The same idea can be seen in the story of Buddha’s marvellous birth, as told by Sir Edwin Arnold:

Maya the queen …
Dreamed a strange dream; dreamed that a star from heaven-
Splendid, six-rayed, in colour rosy-pearl,
Whereof the token was an Elephant
Six-tusked, and white as milk of Kamadhuk—
Shot through the void; and, shining into her,
Entered her womb upon the right.[25] [Pl. XLIX*b*.]

[491] During the conception

A wind blew
With unknown freshness over lands and seas.

[492] After the birth the four genies of the East, West, North, and South come to offer their services as palanquin-bearers. (Cf. the coming of the Wise Men at the birth of Christ.) To complete the symbolism, there is in the Buddha myth, besides the fertilization by star and wind, fertilization by a theriomorphic symbol, the elephant, who, as Bodhisattva, begets the Buddha. In Christian picture-language the unicorn, as well as the dove, is a symbol of the spermatic Word or Spirit.[26] (Cf. pl. VIIIn.)

[493] At this point we might ask ourselves why the birth of a hero always has to take place under such extraordinary circumstances. One would think it possible for a hero to be born in the normal manner, and then gradually to grow out of his humble and homely surroundings, perhaps with a great effort and in face of many dangers. (This motif is by no means uncommon in the hero-myths.) As a general rule, however, the story of his origins is miraculous. The singular circumstances of his procreation and birth are part and parcel of the hero-myth. What is the reason for these beliefs?

[494] The answer to this question is that the hero is not born like an ordinary mortal because his birth is a rebirth from the mother-wife. That is why the hero so often has two mothers. As Rank [27] has shown with a wealth of examples, the hero is frequently exposed and then reared by foster-parents. In this way he gets two mothers. An excellent example of this is the relation of Heracles to Hera. In the Hiawatha epic, Wenonah dies after giving birth, and her place is taken by Nokomis.[28] Buddha, too, was brought up by a foster-mother. The foster-mother is sometimes an

animal, e.g., the she-wolf of Romulus and Remus, etc. (pls. II, L*a*). The dual mother may be replaced by the motif of dual birth, which has attained a lofty significance in various religions. In Christianity, for example, baptism represents a rebirth, as we have already seen. Man is not merely born in the commonplace sense, but is born again in a mysterious manner, and so partakes of divinity. Anyone who is reborn in this way becomes a hero, a semi-divine being. Thus Christ's redemptive death on the cross was understood as a "baptism," that is to say, as rebirth through the second mother, symbolized by the tree of death. (Cf. pls. XXXVI, XXXVII.) Christ himself said (Luke 12:50): "But I have a baptism to be baptized with; and how am I straitened till it be accomplished!" He therefore interprets his own death-agony symbolically as the pangs of rebirth.

[495] The dual-mother motif suggests the idea of a dual birth. One of the mothers is the real, human mother, the other is the symbolical mother; in other words, she is distinguished as being divine, supernatural, or in some way extraordinary. She can also be represented theriomorphically. In certain cases she has more human proportions, and here we are dealing with projections of archetypal ideas upon persons in the immediate environment, which generally brings about complications. For instance the rebirth symbol is liable to be projected upon the step-mother or mother-in-law (unconsciously, of course), just as, for her part, the mother-in-law often finds it difficult not to make her son-in-law her son-lover in the old mythological manner. There are innumerable variations on this motif, especially when we add individual elements to the collective mythological ones.

[496] He who stems from two mothers is the hero: the first birth makes him a mortal man, the second an immortal half-god. That is what all the hints in the story of the hero's procreation are getting at. Hiawatha's father first conquers the mother under the terrifying symbol of the bear; [29] then, having become a god himself, he begets the hero. What the hero Hiawatha then has to do is suggested to him by Nokomis, when she tells him the story of the origin of the moon: he is to throw his mother up into the sky, whereupon she will become pregnant and give birth to a daughter. This rejuvenated mother would, according to the Egyptian

fantasy, be given as a daughter-wife to the sun-god, the "father of his mother," for purposes of self-reproduction. What Hiawatha does in this respect we shall see presently. We have already examined the behaviour of the dying and resurgent gods of the Near East. In regard to the pre-existence of Christ, the gospel of St. John is, as we know, the crowning witness to this idea. One has only to think of the words of the Baptist (John 1:30): "After me cometh a man which is preferred before me: for he was before me." The opening words are equally significant: "In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by him; and without him was not any thing made that was made." Then follows the annunciation of the Light, of the rising sun—the *Sol mysticus* which was before and will be afterwards. In the baptistry at Pisa, Christ is shown bringing the tree of life to mankind, his head surrounded by a sun-wheel. Over this relief stand the words "INTROITUS SOLIS."

[497] Because the reborn is his own begetter, the story of his procreation is veiled beneath strange symbolical events which conceal and reveal at the same time. Quite in keeping with this is the extraordinary assertion about the virgin conception. The idea of supernatural conception can, of course, be taken as a metaphysical fact, but psychologically it tells us that a content of the unconscious ("child") has come into existence without the natural help of a human father (i.e., consciousness). (Cf. pl. VIII.) It tells us, on the contrary, that some god has begotten the son and further that the son is identical with the father, which in psychological language means that a central archetype, the God-image, has renewed itself ("been reborn") and become "incarnate" in a way perceptible to consciousness. The "mother" corresponds to the "virgin anima," who is not turned towards the outer world and is therefore not corrupted by it. She is turned rather towards the "inner sun," the archetype of transcendent wholeness—the self.[30]

[498] As is consistent with the birth of the hero and renewed god from the ocean of the unconscious, Hiawatha passes his childhood between land and water, by the shores of the great lake:

By the shores of Gitche Gumee,

By the shining Big-Sea-Water,
Stood the wigwam of Nokomis,
Daughter of the moon, Nokomis.
Dark behind it rose the forest,
Rose the black and gloomy pine-trees,
Rose the firs with cones upon them;
Bright before it beat the water,
Beat the clear and sunny water,
Beat the shining Big-Sea-Water.

[499] In these surroundings he was reared by Nokomis. Here she taught him the first words and told him the first fairytales, and the sounds of the water and the forest mingled with them, so that the child learned to understand not only the language of men, but the language of nature:

At the door on summer evenings
Sat the little Hiawatha;
Heard the whispering of the pine-trees,
Heard the lapping of the water,
Sounds of music, words of wonder:
“Minne-wawa!” said the pine-trees,
“Mudway-aushka!” said the water.

[500] Hiawatha hears human speech in the sounds of nature; thus he understands nature’s language. The wind says “wawa.” The goose cries “wawa.” “Wah-wah-taysee” is the name of the little glow-worm that enchants him. Thus the poet describes the gradual drawing in of external nature into the world of the subject, and the contamination of the primary object, the mother, to whom those first lisping words were addressed and from whom the first sounds were learned, with the secondary object, nature, which imperceptibly usurps the mother’s place and takes over the sounds first heard from her, together with all those feelings we later rediscover in ourselves in our warm love for Mother Nature. The subsequent blending, whether pantheistic or aesthetic, of the sensitive, civilized man with nature[31] is, looked at retrospectively, a reblending with the mother, who was our first object, with whom we were truly and wholly one. She was our first experience of an *outside* and at the same time of an *inside:* from that interior world there emerged an image, apparently a reflection of the external mother-image, yet older, more

original and more imperishable than this—a mother who changed back into a Kore, into an eternally youthful figure. This is the anima, the personification of the collective unconscious. So it is not surprising if we see the old images rising up again in the graphic language of a modern philosopher, Karl Joël, symbolizing this oneness with the mother and the merging of subject and object in the unconscious. Joël gives the following account of this "Primal Experience":[32]

> I lie on the seashore, the sparkling flood blue-shimmering in my dreamy eyes; light breezes flutter in the distance; the thud of the waves, charging and breaking over in foam, beats thrillingly and drowsily upon the shore—or upon the ear? I cannot tell. The far and the near become blurred into one; outside and inside merge into one another. Nearer and nearer, friendlier, like a homecoming, sounds the thud of the waves; now, like a thundering pulse, they beat in my head, now they beat over my soul, wrapping it round, consuming it, while at the same time my soul floats out of me as a blue waste of waters. Outside and inside are one. The whole symphony of sensations fades away into one tone, all senses become one sense, which is one with feeling; the world expires in the soul and the soul dissolves in the world. Our little life is rounded by a great sleep. Sleep our cradle, sleep our grave, sleep our home, from which we go forth in the morning, returning again at evening; our life a short pilgrimage, the interval between emergence from original oneness and sinking back into it! Blue shimmers the infinite sea, where the jelly-fish dreams of that primeval existence to which our thoughts still filter down through aeons of memory. For every experience entails a change and a guarantee of life's unity. At that moment when they are no longer blended together, when the experient lifts his head, still blind and dripping, from immersion in the stream of experience, from flowing away with the thing experienced; when man, amazed and estranged, detaches the change from himself and holds it before him as something alien—at that moment of estrangement the two sides of the experience are substantialized into subject and object, and at that moment consciousness is born.[33]

[501] Joël describes here, in unmistakable symbolism, the merging of subject and object as the reunion of mother and child. The symbols agree with those of mythology even in their details. There is a distinct allusion to the encircling and devouring motif. The sea that devours the sun and gives birth to it again is an old acquaintance. The moment of the rise of consciousness, of the separation of subject and object, is indeed a birth. It is as though philosophical speculation hung with lame wings on a few primordial figures of human speech, beyond whose simple grandeur no thought can fly. The image of the jelly-fish is far from accidental. Once when I was explaining to a patient the maternal significance of water, she experienced a very disagreeable sensation at this contact with the mother-complex. "It makes me squirm," she said, "as if I'd touched a *jelly-fish*." The blessed state of sleep before birth and after death is, as Joël observes,

rather like an old shadowy memory of that unsuspecting state of early childhood, when there is as yet no opposition to disturb the peaceful flow of slumbering life. Again and again an inner longing draws us back, but always the life of action must struggle in deadly fear to break free lest it fall into a state of sleep. Long before Joël, an Indian chieftain had expressed the same thing in the same words to one of the restless white men: "Ah, my brother, you will never know the happiness of thinking nothing and doing nothing. This is the most delightful thing there is, next to sleep. So we were before birth, and so we shall be after death."[34]

[502] We shall see from the later destinies of Hiawatha how important his early childhood impressions were in his choice of a wife. Hiawatha's first deed was to kill a roebuck with his arrow:

> Dead he lay there in the forest
> By the ford across the river.…

[503] This is typical of Hiawatha's deeds. Whatever he kills generally lies by or in the water, or better still, half in water and half on land.[35] His subsequent adventures will explain why this is so. Further, the roebuck was no ordinary animal, but a magic one with an unconscious (i.e., symbolical) significance. Hiawatha made himself gloves and moccasins from its hide: the gloves gave such power to his arms that he could crumble rocks to dust, and the moccasins had the virtue of seven-leagued boots. By clothing himself in the hide he became a sort of giant. Therefore the roebuck killed at the ford[36] was a "doctor animal," a magician who had changed his shape, or a daemonic being—a symbol, that is to say, which points to the "animal" and other such powers of the unconscious. That is why it was killed at the ford, i.e., at the crossing, on the border-line between conscious and unconscious. The animal is a representative of the unconscious, and the latter, as the matrix of consciousness, has a maternal significance, which explains why the mother was also represented by the bear. All animals belong to the Great Mother (pl. LI), and the killing of any wild animal is a transgression against the mother. Just as the mother seems a giantess to the small child, so the attribute of size passes to the archetypal Great Mother, Mother Nature. Whoever succeeds in killing the "magic" animal, the symbolic

representative of the animal mother, acquires something of her gigantic strength. This is expressed by saying that the hero clothes himself in the animal's skin and in this way obtains for the magic animal a sort of resurrection. At the Aztec human sacrifices criminals played the part of gods: they were slaughtered and flayed, and the priests then wrapped themselves in the dripping pelts in order to represent the gods' resurrection and renewal.[37]

[504] In killing his first roebuck, therefore, Hiawatha was killing the symbolic representative of the unconscious, i.e., his own *participation mystique* with animal nature, and from that comes his giant strength. He now sallies forth to do battle with Mudjekeewis, the father, in order to avenge his mother Wenonah. (Cf. Gilgamesh's fight with the giant Humbaba.) In this fight the father may also be represented by some sort of magic animal which has to be overcome, but he can equally well be represented by a giant or a magician or a wicked tyrant. *Mutatis mutandis* the animals can be interpreted as the "mother," as the "mater saeva cupidinum," or again as that amiable Isis who laid a horned viper in her husband's path—in short, they can be interpreted as the Terrible Mother who devours and destroys, and thus symbolizes death itself.[38] (I remember the case of a mother who kept her children tied to her with unnatural love and devotion. At the time of the climacteric she fell into a depressive psychosis and had delirious states in which she saw herself as an animal, especially as a wolf or pig, and acted accordingly, running about on all fours, howling like a wolf or grunting like a pig. In her psychosis she had herself become the symbol of the all-devouring mother.)

[505] Interpretation in terms of the parents is, however, simply a *façon de parler*. In reality the whole drama takes place in the individual's own psyche, where the "parents" are not the parents at all but only their imagos: they are representations which have arisen from the conjunction of parental peculiarities with the individual disposition of the child.[39] The imagos are activated and varied in every possible manner by an energy which likewise pertains to the individual; it derives from the sphere of instinct and expresses itself as instinctuality. This dynamism is

represented in dreams by theriomorphic symbols. All the lions, bulls, dogs, and snakes that populate our dreams represent an undifferentiated and as yet untamed libido, which at the same time forms part of the human personality and can therefore fittingly be described as the *anthropoid psyche*. Like energy, the libido never manifests itself as such, but only in the form of a "force," that is to say, in the form of something in a definite energic state, be it moving bodies, chemical or electrical tension, etc. Libido is therefore tied to definite forms or states. It appears as the *intensity* of impulses, affects, activities, and so on. But these phenomena are never impersonal; they manifest themselves like parts of the personality. The same is true of complexes: they too behave like parts of the personality.

[506] It is this anthropoid psyche which will not fit into the rational pattern of culture—or only very unsatisfactorily and with extreme reluctance—and resists cultural development to the utmost. It is as though its libido were constantly striving back to the original unconscious state of untamed savagery. The road of regression leads back to childhood and finally, in a manner of speaking, into the mother's body. The intensity of this retrospective longing, so brilliantly depicted in the figure of Enkidu in the Gilgamesh Epic, becomes quite unbearable with the heightened demands made by adaptation. These may be due either to external or to internal causes. If the demand comes from "inside," the main difficulty lies not so much in unfavourable external circumstances as in an enhanced "subjective" demand that seems to increase with the years, and in the ever-stronger emergence of the inner, and hitherto hidden, "real" personality. The source of this change is to all appearances the anthropoid psyche, and the anthropoid psyche is also the aim and end of every regression, which immediately sets in whenever there is the least hesitation to adapt—not to speak of cases where the demands of life cannot be met at all.

[507] Scenting the dangers in this situation, religious and conventional morality joins forces with Freudian theory in consistently devaluing the regression and its ostensible goal—reversion to infantilism—as "infantile sexuality," "incest," "uterine fantasy," etc. Reason must here call a halt, for it is hardly possible to go farther back than the maternal uterus. At

this point concretism comes up against a brick wall; what is more, moral condemnation seizes upon the regressive tendency and tries by every trick of devaluation to prevent this sacrilegious return to the mother, surreptitiously aided and abetted by the one-sided “biological” orientation of the Freudian school. But anything that exceeds the bounds of a man’s personal consciousness remains unconscious and therefore appears in projection; that is to say, the semi-animal psyche with its regressive demands against which he struggles so desperately is attributed to the mother, and the defence against it is seen in the father. Projection, however, is never a cure; it prevents the conflict only on the surface, while deeper down it creates a neurosis which allows him to escape into illness. In that way the devil is cast out by Beelzebub.

[508] As against this, therapy must support the regression, and continue to do so until the “prenatal” stage is reached. It must be remembered that the “mother” is really an imago, a psychic image merely, which has in it a number of different but very important unconscious contents. The “mother,” as the first incarnation of the anima archetype, personifies in fact the whole unconscious. Hence the regression leads back only apparently to the mother; in reality she is the gateway into the unconscious, into the “realm of the Mothers.” Whoever sets foot in this realm submits his conscious ego-personality to the controlling influence of the unconscious, or if he feels that he has got caught by mistake, or that somebody has tricked him into it, he will defend himself desperately, though his resistance will not turn out to his advantage. For regression, if left undisturbed, does not stop short at the “mother” but goes back beyond her to the prenatal realm of the “Eternal Feminine,” to the immemorial world of archetypal possibilities where, “thronged round with images of all creation,” slumbers the “divine child,” patiently awaiting his conscious realization. This son is the germ of wholeness, and he is characterized as such by his specific symbols.

[509] When Jonah was swallowed by the whale, he was not simply imprisoned in the belly of the monster, but, as Paracelsus tells us,[40] he saw “mighty mysteries” there. This view probably derives from the *Pirkê de Rabbi Elieser*, which says:

> Jonah entered its mouth just as a man enters the great synagogue, and he stood there. The two eyes of the fish were like windows of glass giving light to Jonah. R. Meir said: One pearl was suspended inside the belly of the fish and it gave illumination to Jonah, like this sun which shines with all its might at noon; and it showed to Jonah all that was in the sea and in the depths.[41]

[510] In the darkness of the unconscious a treasure lies hidden, the same "treasure hard to attain" which in our text, and in many other places too, is described as the shining pearl, or, to quote Paracelsus, as the "mystery," by which is meant a *fascinosum* par excellence. It is these inherent possibilities of "spiritual" or "symbolic" life and of progress which form the ultimate, though unconscious, goal of regression. By serving as a means of expression, as bridges and pointers, symbols help to prevent the libido from getting stuck in the material corporeality of the mother. Never has the dilemma been more acutely formulated than in the Nicodemus dialogue: on the one hand the impossibility of entering again into the mother's womb; on the other, the need for rebirth from "water and spirit." The hero is a hero just because he sees resistance to the forbidden goal in all life's difficulties and yet fights that resistance with the whole-hearted yearning that strives towards the treasure hard to attain, and perhaps unattainable—a yearning that paralyses and kills the ordinary man.

[511] Hiawatha's father is Mudjekeewis, the West Wind: the battle therefore is fought in the West. From that quarter came life (fertilization of Wenonah) and death (Wenonah's). Hence Hiawatha is fighting the typical battle of the hero for rebirth in the Western Sea. The fight is with the father, who is the obstacle barring the way to the goal. In other cases the fight in the West is a battle with the devouring mother. As we have seen, the danger comes from both parents: from the father, because he apparently makes regression impossible, and from the mother, because she absorbs the regressing libido and keeps it to herself, so that he who sought rebirth finds only death. Mudjekeewis, who had acquired his godlike nature by overcoming the maternal bear, is himself overcome by his son:

> Back retreated Mudjekeewis,
> Rushing westward o'er the mountains,
> Stumbling westward down the mountains,
> Three whole days retreated fighting,

Still pursued by Hiawatha
To the doorways of the West Wind,
To the portals of the Sunset,
To the earth's remotest border,
Where into the empty spaces
Sinks the sun, as a flamingo
Drops into her nest at nightfall.

[512] The "three days" are a stereotyped expression for the "night sea imprisonment" (December 21 to 24). Christ, too, spent three days in the underworld. During this struggle in the West the hero wins the treasure hard to attain. In Hiawatha's case the father is forced to make a great concession to the son: he gives him his divine nature,[42] that very wind-nature whose incorporeality alone protected Mudjekeewis from death.[43] He says to his son:

I will share my kingdom with you,
Ruler shall you be henceforward
Of the Northwest Wind, Keewaydin,
Of the home-wind, the Keewaydin.

[513] Hiawatha's being appointed the ruler of the home-wind has its exact parallel in the Gilgamesh Epic, where Gilgamesh obtains from the wise old Utnapishtim, who dwells in the West, the magic herb which brings him safely over the sea to his native land (cf. pl. XIX), but which is stolen from him by a serpent on his arrival home. As a reward for his victory Hiawatha receives a "pneumatic" body, a breath-body or subtle body not subject to corruption. On the return journey he stops with a skilled arrowsmith who has a lovely daughter:

And he named her from the river,
From the waterfall he named her,
Minnehaha, Laughing Water.

[514] When Hiawatha, in his early childhood reveries, felt the sounds of wind and water crowding upon his ears, he recognized in the phonetics of nature the speech of his own mother. "Minnewawa" said the murmuring pines on the shore of the great lake. And once again, through the murmuring of the wind and the lapping of the water, he discovers his childhood reveries in the girl of his choice, "Minnehaha," the laughing water. For the hero, even more than the rest of mankind, finds his mother

in the woman he loves, so that he can become a child again and win to immortality. The archetype of the Feminine, the anima, first appears in the mother and then transfers itself to the beloved.

[515] The fact that Minnehaha's father is a skilled arrowsmith tells us that he is a protagonist in the unconscious drama, namely the father of the hero (just as the beloved is his mother). The archetype of the wise old man first appears in the father, being a personification of meaning and spirit in its procreative sense.[44] The hero's father is often a master carpenter or some kind of artisan. According to an Arabian legend, Terah, the father of Abraham, was a master craftsman who could cut a shaft from any bit of wood, which means in Arabic usage that he was a begetter of excellent sons.[45] In addition, he was a maker of images. Tvashtri, the father of Agni, was the cosmic architect, a smith and carpenter, and the inventor of fire-boring. Joseph, the father of Jesus, was a carpenter, and so was Cinyras, the father of Adonis, who was supposed to have invented the hammer, the lever, roof-building, and mining. The father of the many-faced Hermes, Hephaestus, was a cunning technician and sculptor. In fairytales, the hero's father is, more modestly, the traditional woodcutter. In the Rig-Veda the world is hewn from a tree by the cosmic architect, Tvashtri. To say that Hiawatha's father-in-law was an arrowsmith means, therefore, that the mythological attribute otherwise characteristic of the hero's father has been transferred to the father-in-law. This corresponds to the psychological fact that the anima always stands in the relationship of a daughter to the wise old man.[46] Nor is it uncommon to find the father-in-law so much emphasized that he replaces the real father. The reason for this is the archetypal relationship we have just discussed.

[516] Finally, father-attributes may occasionally fall to the son himself, i.e., when it has become apparent that he is of one nature with the father. The hero symbolizes a man's *unconscious self*, and this manifests itself empirically as the sum total of all archetypes and therefore includes the archetype of the father and of the wise old man. To that extent the hero is his own father and his own begetter. This combination of motifs can be found in the legend of Mani. He performs his great deeds as a religious

teacher, then goes into hiding for years in a cave, dies, and is skinned, stuffed, and hung up. Besides that, he is an artist and has a crippled foot. There is a similar combination of motifs in Wieland the Smith.

[517] Hiawatha kept silent, on his return to Nokomis, about what he had seen at the old arrowsmith's house, and did nothing further to win Minnehaha. But now something happens which, if it were not in an Indian epic, we might rather have expected to find in the anamnesis of a neurosis. Hiawatha introverts his libido, puts up the most dogged resistance to the natural course of events, and builds himself a hut in the forest in order to fast and have dreams and visions. For the first three days he wanders through the forest as in his boyhood, looking at all the animals and plants:

> Master of Life! he cried, desponding,
> Must our lives depend on these things?

[518] This question, as to whether our lives must depend on "these things," is very strange. It sounds as if Hiawatha found it unendurable that life should come from "these things," i.e., from the world of nature. Nature seems suddenly to have taken on an alien meaning. The only possible explanation for this is that a considerable quantity of libido which till now was unconscious has suddenly been either transferred to nature or withdrawn from it. At any rate, some crucial change has taken place in the general direction of feeling, consisting apparently in a regression of libido. Hiawatha returns home to Nokomis without having undertaken anything; but there again he is driven away, because Minnehaha is already standing in his path. So he withdraws himself still further, back into the time of early boyhood when he learnt to hear the mother-sounds in the sounds of nature, whose undertones now fill his mind with memories of Minnehaha. In this reactivation of the impressions of nature we can see a revival of those very early and powerful impressions which are only surpassed by the still stronger impressions the child received from its mother. The glamour of this feeling for her is transferred to other objects in the child's environment, and from them there emanate in later years those magical, blissful feelings which are characteristic of the earliest memories of childhood. When, therefore, Hiawatha hides himself

again in the lap of nature, what he is doing is to reawaken the relationship to the mother, and to something older than the mother, and it is therefore to be expected that he will emerge reborn in some other form.

[519] Before we turn to this new creation born of introversion, there is still another meaning to be considered in this question of whether life must depend on “these things.” Life can depend on “these things” in the quite simple sense that, without them, man must perish of hunger. In that case we would have to conclude that the question of nourishment has suddenly come to lie close to the hero’s heart. The question of nourishment has to be considered here because regression to the mother is bound to revive the memory of the “alma mater,”[47] the mother as the nourishing source. Incest is not the only aspect characteristic of regression: there is also the hunger that drives the child to its mother. Whoever gives up the struggle to adapt and regresses into the bosom of the family, which in the last resort is the mother’s bosom, expects not only to be warmed and loved, but also to be fed. If the regression has an infantile character, it aims—without of course admitting it—at incest and nourishment. But when the regression is only apparent, and is in reality a purposive introversion of libido directed towards a goal, then the endogamous relationship, which is in any case prohibited by the incest-taboo, will be avoided, and the demand for nourishment replaced by intentional fasting, as was the case with Hiawatha. Such an attitude compels the libido to switch over to a symbol or to a symbolic equivalent of the “alma mater,” in other words, to the collective unconscious. Solitude and fasting have from time immemorial been the best-known means of strengthening any meditation whose purpose is to open the door to the unconscious.

[520] On the fourth day of his fast Hiawatha ceases to address himself to nature; he lies on his couch exhausted, his eyes half-closed, sunk in his dreams, a picture of extreme introversion. We have already seen that in such states inner experiences take the place of external life and reality. Hiawatha then has a vision:

> And he saw a youth approaching,
> Dressed in garments green and yellow,
> Coming through the purple twilight,

Through the splendour of the sunset;
Plumes of green bent o’er his forehead,
And his hair was soft and golden.

[521] This singular personage addresses Hiawatha as follows:

From the Master of Life descending,
I, the friend of man, Mondamin,
Come to warn you and instruct you,
How by struggle and by labour
You shall gain what you have prayed for.
Rise up from your bed of branches,
Rise, O youth, and wrestle with me!

[522] Mondamin is the maize, the Indian corn. Hiawatha’s introversion gives birth to a god who is eaten. His hunger—in the twofold sense described above—his longing for the nourishing mother, calls forth from the unconscious another hero, an edible god, the maize, son of the Earth Mother. The Christian parallel is obvious. It is hardly necessary to suppose any Christian influence here, since Fray Bernardino de Sahagún had already described the eucharist of Huitzilopochtli among the Aztecs early in the sixteenth century.[48] This god, too, was ceremonially eaten. Mondamin, the “friend of man,”[49] challenges Hiawatha to single combat in the glow of evening. In the “purple twilight” of the setting sun (i.e., in the western land) there now ensues the mythological struggle with the god who has sprung out of the unconscious like a transformed reflection of Hiawatha’s introverted consciousness. As a god or god-man he is the prototype of Hiawatha’s heroic destiny; that is to say, Hiawatha has in himself the possibility, indeed the necessity, of confronting his daemon. On the way to this goal he conquers the parents and breaks his infantile ties. But the deepest tie is to the mother. Once he has conquered this by gaining access to her symbolical equivalent, he can be born again. In this tie to the maternal source lies the strength that gives the hero his extraordinary powers, his true genius, which he frees from the embrace of the unconscious by his daring and sovereign independence. Thus the god is born in him. The mystery of the “mother” is divine creative power, which appears here in the form of the corn-god Mondamin. (Cf. pl. LII.) This view is corroborated by a legend of the Cherokee Indians, “who invoke it [the corn] under the name of ‘the old woman,’ in allusion to a

myth that it sprang from the blood of an old woman killed by her disobedient sons."[50]

> Faint with famine, Hiawatha
> Started from his bed of branches,
> From the twilight of his wigwam
> Forth into the flush of sunset,
> Came and wrestled with Mondamin;
> At his touch he felt new courage
> Throbbing in his brain and bosom,
> Felt new life and hope and vigour
> Run through every nerve and fibre.

[523] The battle in the sunset with the corn-god gives Hiawatha new strength—necessarily so, because the fight against the paralysing grip of the unconscious calls forth man's creative powers. That is the source of all creativity, but it needs heroic courage to do battle with these forces and to wrest from them the treasure hard to attain. Whoever succeeds in this has triumphed indeed. Hiawatha wrestles with himself in order to create himself.[51] The struggle again lasts for the mythical three days; and on the fourth day, as Mondamin prophesied, Hiawatha conquers him, and Mondamin, yielding up his soul, sinks to the ground. In accordance with the latter's wish, Hiawatha buries him in the earth his mother, and soon afterwards, young and fresh, the corn sprouts from his grave for the nourishment of mankind. (Cf. pl. LII.) Had Hiawatha not succeeded in conquering him, Mondamin would have "killed" him and usurped his place, with the result that Hiawatha would have become "possessed" by a demon.[52]

[524] Now the remarkable thing here is that it is not Hiawatha who passes through death and emerges reborn, as might be expected, but the god. It is not man who is transformed into a god, but the god who undergoes transformation in and through man. It is as though he had been asleep in the "mother," i.e., in Hiawatha's unconscious, and had then been roused and fought with so that he should not overpower his host, but should, on the contrary, himself experience death and rebirth, and reappear in the corn in a new form beneficial to mankind. Consequently he appears at first in hostile form, as an assailant with whom the hero has to wrestle.

This is in keeping with the violence of all unconscious dynamism. In this manner the god manifests himself and in this form he must be overcome. The struggle has its parallel in Jacob's wrestling with the angel at the ford Jabbok. The onslaught of instinct then becomes an experience of divinity, provided that man does not succumb to it and follow it blindly, but defends his humanity against the animal nature of the divine power. It is "a fearful thing to fall into the hands of the living God," and "whoso is near unto me, is near unto the fire, and whoso is far from me, is far from the kingdom"; for "the Lord is a consuming fire," the Messiah is "the Lion of the tribe of Judah":

> Judah is a lion's whelp;
> from the prey, my son, thou art gone up.
> He stooped down, he couched as a lion,
> and as an old lion; who shall rouse him up? [53]

[525] The devil, too, "as a roaring lion, walketh about seeking whom he may devour."[54] These well-known examples suffice to show that this idea is very much at home even in the Judaeo-Christian teachings.

[526] In the Mithraic mysteries, the cult-hero has to fight the bull; in the "transitus" he carries it into the cave, where he kills it. From its death comes all fruitfulness, especially things to eat.[55] (Cf. pl. XXXIII.) The cave is the equivalent of the grave. The same idea is expressed in the Christian mystery, but in a more beautiful and humane form. The struggle in Christ's soul in Gethsemane, where he wrestles with himself in order to complete his work; then the "transitus," the carrying of the cross,[56] when he takes on his shoulders the symbol of the deadly mother and in so doing carries himself to the grave, from which he will rise again after three days—all these images express the same fundamental thought: that Christ is a divinity who is eaten in the Lord's Supper. His death transforms him into bread and wine, which we relish as mystical food.[57] The relation of Agni to the soma-drink and of Dionysus to the wine [58] should not pass without mention here. Another parallel is Samson's strangling of the lion, and the subsequent inhabitation of the dead lion by a swarm of bees, which gave rise to the riddle: "Out of the eater came forth meat, and out of the strong came forth sweetness."[59] These ideas

seem to have played a role in the Eleusinian mysteries, too. (Cf. also pl. IV*b*.) Besides Demeter and Persephone, Iacchus was one of the chief gods in the Eleusinian cult; he was a *puer aeternus*, the eternal boy, whom Ovid apostrophizes as follows:

> For thine is unending youth, eternal boyhood: thou art the most lovely in the lofty sky; thy face is virgin-seeming, if without horns thou stand before us.[60]

[527] The image of Iacchus was carried at the head of the great Eleusinian procession. It is not easy to say exactly what god Iacchus is, but he was probably a boy or a new-born son, similar perhaps to the Etruscan Tages, who bore the epithet "the fresh-ploughed boy," because, according to legend, he sprang out of a furrow behind a peasant ploughing his fields. This image illustrates the Mondamin motif very clearly: the plough has a well-known phallic meaning (cf. fig. 15), and the furrow, as in India, stands for woman. Psychologically this image is a symbolical equivalent of copulation, the son being the edible fruit of the field. The lexicographers called him "Demeter's daimon." He was identified with Dionysus, especially with the Thracian Dionysus-Zagreus, who is supposed to have undergone the typical fate of being reborn. Hera, we are told, had stirred up the Titans against Zagreus, who tried to escape them by changing into various shapes. In the end they caught him when he had taken on the form of a bull. They then killed him, cut him in pieces, and threw the pieces into a cauldron; but Zeus slew the Titans with a thunderbolt and swallowed the still-throbbing heart of Zagreus. In this manner he was regenerated, and Zagreus stepped forth again as Iacchus.

[528] Another thing carried in the Eleusinian procession was the winnowing-basket (cf. also pl. IV*b*), the cradle of Iacchus (λίκνον, *mystica vannus Iacchi*). The Orphic legend[61] relates that Iacchus was reared by Persephone in the underworld, where, after slumbering for three years, he awoke in the λίκνον. The 20th of Boedromion (the month of Boedromion lasted from about September 5 to October 5) was called Iacchus, in honour of the hero. On the evening of this day a great torchlight procession was held on the sea-shore, where the search and lament of Demeter were re-enacted. The part of Demeter, who, abstaining from food and drink, wanders over the face of the earth seeking her lost

daughter, has, in the American Indian epic, been taken over by Hiawatha. He turns to all creatures, but receives no answer. Just as Demeter first gets news of her daughter from the moon-goddess Hecate, so Hiawatha only finds the one he is looking for—Mondamin [62]—through profound introversion, by a descent into the darkness of night, to the Mothers. As to the content of the mysteries, we have the following testimony from Bishop Asterius (*c.* A.D. 390): "Is not there [in Eleusis] the dark descent, and is not the solemn communion of hierophant and priestess between him and her alone? Are not the torches doused, and does not the great multitude see their salvation in that which is consummated by the two in the darkness?"[63] This clearly points to a *hieros gamos* which was celebrated underground. The priestess of Demeter seems to have represented the earth-goddess, or possibly the ploughed furrow.[64] The descent into the earth is a piece of womb symbolism and was widespread in the form of cave worship. Plutarch says that the Magi offered sacrifices to Ahriman "in a sunless place."[65] In Lucian, the magician Mithrobarzanes descends into the bowels of the earth "at a desolate spot, marshy and sunless."[66] According to the testimony of Moses of Chorene, the Armenians worshipped "Sister Fire" and "Brother Spring" in a cave. Julian records the Attis legend of a "descent into the cave," from which Cybele brings back her son-lover.[67] The cave where Christ was born in Bethlehem ("The House of Bread") is said to have been an Attis spelaeum.

[529] A further piece of Eleusinian symbolism relating to the celebration of the *hieros gamos* is the mysterious baskets (pl. LVII*a*), which, according to the testimony of Clement of Alexandria, contained pastries, salt-offerings, and fruit. But the *synthema* (confession) of the neophyte, as handed down by Clement, points to other things besides:

> I have fasted, I have drunk the mixed drink, I have taken from the cista, and after working with it I have laid it back in the basket and from the basket into the cista.[68]

[530] The question of what was in the cista has been elucidated by Dieterich.[69] The "working" he interprets as some phallic activity which the neophyte had to perform. And there are in fact representations of the magic basket with a phallus lying in it surrounded by fruits.[70] On the so-

called Lovatelli funeral urn, carved with scenes supposedly taken from the Eleusinian mysteries, there is a picture of a neophyte fondling the snake entwined about Demeter. The fondling or kissing of the “fear-animal” symbolizes the ceremonial conquest of incest. According to Clement of Alexandria, there was a snake in the mystical basket.[71] This snake signifies the danger that comes from the regressive movement of libido. Rohde[72] mentions that, at the Arrhetophoria festival, pastries shaped like phalli and serpents were thrown into a pit near the Thesmophorion, to invoke the blessing of children and good harvests.[73] The snake also played a large part in the initiation ceremonies, under the strange title “ό διὰ χόλπου θεός” (the god through the lap). Clement says that the symbol of the Sabazius mysteries was “The god through the lap: and that is a snake which is dragged through the laps of the initiates.”[74] From Arnobius we learn: “A golden snake is let down into the lap of the initiates and is drawn out again from below.”[75] In the 52nd Orphic hymn, Bacchus is invoked by the name of ὑποκόλπιε (lying in the lap), which suggests that the god entered his devotees as if through the female genitals.[76] At the Eleusinian mysteries the hierophant proclaimed in a loud voice: “The great goddess has borne a divine boy, Brimo has borne Brimos!”[77] This Christmas message “Unto us a son is born” is further elucidated by the tradition [78] that the Athenians “silently held up before the celebrants the great, the wonderful, the supreme epoptic mystery—a mown ear of corn.”[79] (Cf. pl. ɪᴠ*b*.)

[531] The parallel to the motif of dying and rising again is that of being lost and found again. It appears ritually at exactly the same place, in connection with the *hieros-gamos*-like spring festivities, where the image of the god was hidden and then found again. There is an uncanonical tradition that Moses left his father’s house at the age of twelve in order to instruct mankind. Similarly, Christ was lost by his parents, and they found him teaching wisdom in the temple, just as in the Mohammedan legend Moses and Joshua lose the fish and find in its stead Khidr, the teacher of wisdom. So, too, does the corn-god, lost and believed dead, suddenly spring from the earth in the splendour of youth.

[532] We can see from these accounts how comforting the Eleusinian mysteries were for the celebrant’s hopes of a world to come. One epitaph says:

> Truly the blessed gods have proclaimed a most beautiful secret: Death comes not as a curse, but as a blessing to men!

[533] The Homeric hymn to Demeter says the same thing of the mysteries:

> Happy is he among men upon earth who has seen these mysteries; but he who is uninitiate and has no part in them, never has lot of like good things once he is dead, down in the darkness and gloom.[80]

[534] And we find the same symbolism in a nineteenth-century hymn by Samuel Preiswerk:[80a]

> The world is yours, Lord Jesus,
> The world, on which we stand,
> Because it is thy world
> It cannot perish.
> Only the wheat, before it comes
> Up to the light in its fertility,
> Must die in the womb of the earth
> First freed from its own nature.
> Thou goest, O Lord, our chief,
> To heaven through thy sorrows,
> And guide him who believes
> In thee on the same path.
> Then take us all equally
> To share in thy sorrows and kingdom,
> Guide us through thy gate of death,
> Bring thy world into the light.[81]

[535] Firmicus says of the Attis mystery:

> On a certain night the image is laid on its back in a litter, and the people bewail it with rhythmical laments. And when they have had their fill of this pretended lamentation, a light is brought in. Then the priest anoints the throats of all who wept, and this having been done, the priest whispers softly: “Take courage, ye initiates, for the god is saved, and you too shall have salvation out of sorrow.”[82]

[536] These parallels show how little there is of the human and personal in the Christ-image, and how strong is the universal and mythological element. The hero is an extraordinary being who is inhabited by a

daemon, and it is this that makes him a hero. That is why the mythological statements about heroes are so typical and so impersonal. Christ was a divine being, as the early Christian interpretation tells us at first hand. All over the earth, in the most various forms, each with a different time-colouring, the saviour-hero appears as a fruit of the entry of libido into the maternal depths of the unconscious. The Bacchic consecrations depicted on the Farnese stucco-relief contain a scene in which a neophyte, wrapped in a mantle drawn over his head, is being led before Silenus, who holds the λίκνον, which is covered with a cloth. The covering of the head signifies invisibility, that is, death.[83] Among the Nandi, of East Africa, the newly-circumcised, the initiates, have to go about for a long time dressed in queer cone-shaped grass hats, which envelop them completely and reach to the ground. The circumcised have become invisible, i.e., spirits. The veil has the same significance among nuns. The neophyte dies like the seed-corn, springs up again and gets into the winnowing-basket. Proclus reports that the neophytes were buried in the ground up to their necks.[84] The Church is, in a sense, the hero's grave (cf. the catacombs). The believer descends into the grave in order to rise again from the dead with the hero. It can scarcely be doubted that the underlying meaning of the Church is the mother's womb. The Tantric texts interpret the interior of the temple as the interior of the body, and the *adyton* is called "garbha griha," the seeding-place or uterus. We can see this quite plainly in the worship of the Holy Sepulchre, a good example being the Holy Sepulchre of San Stefano in Bologna. The church itself, an extremely ancient polygonal building, was built from the remains of a temple to Isis. Inside, there is an artificial spelaeum, known as the Holy Sepulchre, into which one creeps through a tiny door. Worshippers in such a spelaeum could hardly help identifying themselves with him who died and rose again, i.e., with the reborn. Similar initiations seem to have been performed in the neolithic caves of Hal Saflieni in Malta. An Etruscan ossuary in the archaeological museum at Florence serves at the same time as a statue of Matuta (pl. LIV), the goddess of death: the clay figure of the goddess is hollowed out inside as a receptacle for ashes. It is clear from the accompanying illustration that

Matuta is the mother. Her chair is adorned with sphinxes, a fitting symbol of the mother of death. (Cf. the Oedipus myth.)

[537] Of the further deeds of Hiawatha only a few can interest us here. The battle with Mishe-Nahma, the fish-king, in the eighth canto, deserves mention as a typical battle of the sun-hero. Mishe-Nahma is a monster fish who lives at the bottom of the waters. Challenged to battle by Hiawatha, he swallows the hero together with his boat:

In his wrath he darted upward,
Flashing leaped into the sunshine,
Opened his great jaws, and swallowed
Both canoe and Hiawatha.

Down into that darksome cavern
Plunged the headlong Hiawatha,
As a log on some black river
Shoots and plunges down the rapids,
Found himself in utter darkness,
Groped about in helpless wonder,
Till he felt a great heart beating,
Throbbing in that utter darkness.

And he smote it in his anger,
With his fist, the heart of Nahma,
Felt the mighty king of fishes
Shudder through each nerve and fibre …
Crosswise then did Hiawatha
Drag his birch-canoe for safety,
Lest from out the jaws of Nahma,
In the turmoil and confusion,
Forth he might be hurled and perish.

[538] This is the almost worldwide myth of the typical deed of the hero. He journeys by ship, fights the sea monster, is swallowed, struggles against being bitten and crushed to death (kicking or stamping motif), and having arrived inside the “whale-dragon,” seeks the vital organ, which he proceeds to cut off or otherwise destroy. Often the monster is killed by the hero lighting a fire inside him—that is to say, in the very womb of death he secretly creates life, the rising sun. Thus the fish dies and drifts to land, where with the help of a bird the hero once more sees the light of day.[85] The bird probably signifies the renewed ascent of the sun, the

rebirth of the phoenix, and is at the same time one of those "helpful animals" who render supernatural aid during the birth: birds, as aerial beings, symbolize spirits or angels. Divine messengers frequently appear at these mythological births, as can be seen from the use we still make of *god-parents*. The sun-symbol of the bird rising from the water is preserved etymologically in the idea of the singing swan. "Swan" derives from the root *sven*, like 'sun' and "sound."[86] This ascent signifies rebirth, the bringing forth of life from the mother,[87] and the ultimate conquest of death, which, according to an African Negro myth, came into the world through the carelessness of one old woman: when the season of universal skin-casting came round again (for in those days people renewed themselves by casting their skins like snakes), she was absent-minded enough to put on her old skin instead of the new one, and in consequence died.

[539] It is easy to see what the battle with the sea monster means: it is the attempt to free the ego-consciousness from the deadly grip of the unconscious. The making of a fire in the monster's belly suggests as much, for it is a piece of apotropaic magic aimed at dispelling the darkness of unconsciousness. The rescue of the hero is at the same time a sunrise, the triumph of consciousness. (Cf. fig. 33.)

[540] Unfortunately, however, this heroic deed has no lasting effects. Again and again the hero must renew the struggle, and always under the symbol of deliverance from the mother. Just as Hera, in her role of the pursuing mother, is the real source of the mighty deeds performed by Heracles, so Nokomis allows Hiawatha no rest, but piles up new difficulties in his path, hazardous adventures in which the hero may be victorious, but may also meet with his death. Man with his consciousness is always a long way behind the goals of the unconscious; unless his libido calls him forth to new dangers he sinks into slothful inactivity, or in the prime of life he is overcome with longing for the past and is paralysed. But if he rouses himself and follows the dangerous urge to do the forbidden and apparently impossible thing, then he must either go under or become a hero. The mother is thus the daemon who challenges the hero to his deeds and lays in his path the poisonous serpent that will strike him.

Accordingly Nokomis, in the ninth canto, calls Hiawatha, points with her hand to the West, where the sun sets in purple splendour, and says to him:

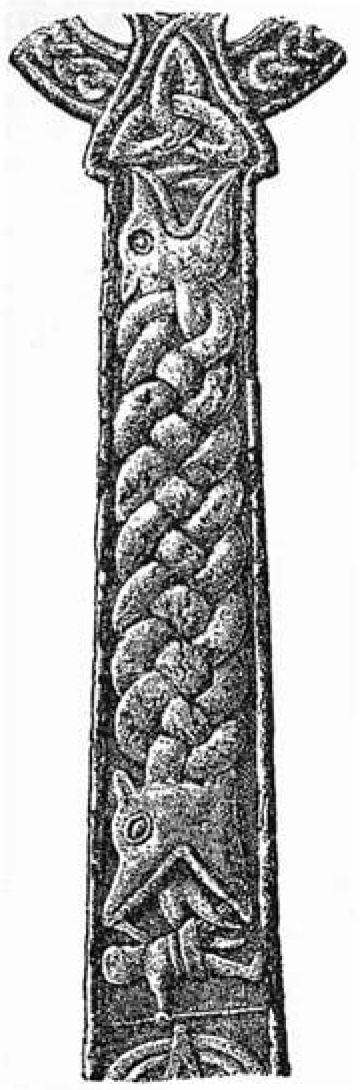

Fig. 33. Vidarr’s fight with the Fenris-Wolf
Relief from a cross, Churchyard of Gosforth, Cumberland

> Yonder dwells the great Pearl-Feather,
> Megissogwon, the Magician,
> Manito of Wealth and Wampum,
> Guarded by his fiery serpents,
> Guarded by the black pitch-water.
> You can see his fiery serpents …
> Coiling, playing in the water.

[541] The danger that dwells in the West is death, whom none, not even the mightiest, escapes. The magician, we are told, had killed the father of Nokomis. Now she sends her son forth to avenge her father. From the symbols assigned to the magician we can see what he symbolizes. Snake and water are mother attributes. The snake coils protectingly round the maternal rock, lives in the cave, twines itself round the mother-tree, and guards the precious hoard, the secret "treasure." The black Stygian water, like the muddy spring of Dhulqarnein, is the place where the sun sinks down for rebirth, the maternal sea of death and night. On his journey thither Hiawatha takes with him the magic oil of Mishe-Nahma, which helps his canoe through the waters of death (hence it is an immortality philtre, as was the dragon's blood for Siegfried). Thus Hiawatha makes the "night sea journey" over the Stygian waters:

All night long he sailed upon it,
Sailed upon that sluggish water,
Covered with its mould of ages,
Black with rotting water-rushes,
Rank with flags and leaves of lilies,
Stagnant, lifeless, dreary, dismal,
Lighted by the shimmering moonlight
And by will-o'-the-wisps illumined,
Fires by ghosts of dead men kindled
In their weary night encampments.

[542] This description clearly shows that they are the waters of death. The rotting water-plants point to the entwining and devouring motif already mentioned. The dream-book of Jagaddeva[88] says: "Whoever dreams that his body is wrapped round with bast, creepers or cords, with snake-skins, threads or webs, will certainly die."

[543] There is no doubt that the above description refers to the realm of the Terrible Mother, represented in this case by the magician, a negative father-figure, or by a masculine principle in the mother herself, just as the secret *spiritus rector* who impels Hiawatha to his task is represented by Nokomis, the mother, who is a feminine principle in the breast of the hero. The latter is Hiawatha's anima, and the former would correspond to the animus of the Terrible Mother.

[544] Arrived in the Western Land, the hero challenges the magician to battle, and a terrible struggle begins. Hiawatha is powerless because Megissogwon is invulnerable. In the evening Hiawatha, wounded and despairing, retires for a short rest:

> Paused to rest beneath a pine-tree,
> From whose branches trailed the mosses,
> And whose trunk was coated over
> With the Dead Man’s Moccasin-leather,
> With the fungus white and yellow.

[545] This sheltering tree is described as “coated” with fungus. Tree-anthropomorphism is an important factor wherever tree-worship prevails, as for instance in India, where every village has its sacred tree (pl. LV), which is clothed and treated exactly like a human being. The trees are anointed with sweet-smelling waters, sprinkled with powder, adorned with garlands and draperies. And just as the people pierce their ears as an apotropaic charm against death, so they pierce the sacred tree. “Of all the trees in India there is none more sacred to the Hindus than the peepul or aswatha (*Ficus religiosa*). It is known to them as Vriksha Raja (king of trees). Brahma, Vishnu, and Maheswar live in it, and the worship of it is the worship of the Triad. Almost every Indian village has an aswatha.”[89]

[546] This well-known “village linden-tree” is clearly characterized as a mother-symbol: it contains the three gods. So when Hiawatha retires to rest under the pine-tree,[90] he is taking a dangerous step, for he is seeking refuge with the mother whose garment is the garment of death. As in the battle with the whale-dragon, so here the hero needs the help of a bird, of one of those helpful animals who represent the stirrings or intuitions of the unconscious, the helpful mother:

> Suddenly from the boughs above him
> Sang the Mama, the woodpecker:
> Aim your arrows, Hiawatha,
> At the head of Megissogwon,
> Strike the tuft of hair upon it,
> At their roots the long black tresses;
> There alone can he be wounded!

[547] So “Mama”—an amusing touch this, one must own—hastens to his aid. Oddly enough, the woodpecker also happened to be the “mama” of Romulus and Remus, for he put food into their mouths with his beak.[91] The woodpecker owes his special significance to the fact that he hammers holes in trees. Hence we can understand why he was honoured in Roman legend as an ancient king of the country, who was the possessor or ruler of the sacred tree, and the prototype of the *pater familias*. An old fable relates that Circe, the wife of king Picus, changed him into *Picus martius*, the woodpecker. She killed and magically transformed him into a soul-bird. Picus was also regarded as a wood demon and incubus,[92] and a soothsayer.[93] He was sometimes equated with Picumnus, the inseparable companion of Pilumnus, both of whom were called *infantium dii*, ‘gods of small children.’ Pilumnus especially was said to protect new-born infants from the wicked attacks of the wood-imp Sylvanus. This helpful little bird now counsels our hero to aim under the magician’s topknot, the only vulnerable spot. It is situated on the crown of the head, at the point where the mythical “head-birth” takes place, which even today figures among the birth-theories of children. There Hiawatha shoots in three arrows [94] and so makes an end of Megissogwon. He then steals the magic belt of wampum which makes him invisible; the dead magician he leaves lying in the water:

> On the shore he left the body,
> Half on land and half in water,
> In the sand his feet were buried,
> And his face was in the water.

[548] The situation is therefore the same as with the fish-king, for the magician is the personification of the water of death, which in its turn stands for the devouring mother. This great deed of Hiawatha’s, when he conquers the Terrible Mother and death-bringing daemon in the guise of the negative father, is followed by his marriage with Minnehaha. He can only turn to his human side after he has fulfilled his heroic destiny: firstly the transformation of the daemon from an uncontrolled force of nature into a power that is his to command; secondly the final deliverance of ego-consciousness from the deadly threat of the unconscious in the form

of the negative parents. The first task signifies the creation of will-power, the second the free use of it.

[549] We might mention, from a later canto (the twelfth), a little fable which the poet has interpolated: an old man is changed back into a youth by crawling through a hollow oak-tree.[95] The fourteenth canto describes how Hiawatha invents writing. I must confine myself here to the description of two hieroglyphs:

Gitche Manito the Mighty,
He, the Master of Life, was painted
As an egg, with points projecting
To the four winds of the heavens.
Everywhere is the Great Spirit,
Was the meaning of this symbol.

[550] The world is enclosed in the egg (cf. fig. 36) which surrounds it on all sides; it is the cosmic birth-giver, a symbol used by Plato and by the Vedas. This “mother” is omnipresent, like the air. But air is spirit, so the world-mother is a spirit, the *anima mundi*. The hieroglyph is at the same time a quaternity-symbol, which psychologically always points to the self.[96] It therefore depicts the uttermost circumference and the innermost centre, the infinite and the infinitesimal, corresponding to the Indian idea of the atman, which encompasses the whole world and dwells, “no bigger than a thumb,” in the heart of man. The second hieroglyph is as follows:

Mitche Manito the Mighty,
He the dreadful Spirit of Evil,
As a serpent was depicted,
As Kenabeek, the great serpent.

[551] The spirit of evil is fear, negation, the adversary who opposes life in its struggle for eternal duration and thwarts every great deed, who infuses into the body the poison of weakness and age through the treacherous bite of the serpent; he is the spirit of regression, who threatens us with bondage to the mother and with dissolution and extinction in the unconscious. (Cf. fig. 35 and pl. LXII.) For the hero, fear is a challenge and a task, because only boldness can deliver from fear. And if the risk is not taken, the meaning of life is somehow violated, and the whole future

is condemned to hopeless staleness, to a drab grey lit only by will-o'-the-wisps.

[552] The fifteenth canto describes how Chibiabos, Hiawatha's best friend, the amiable player and singer, the incarnation of all life's joys, was enticed into an ambush by evil spirits, fell through the ice, and was drowned. Hiawatha mourned him so long that, with the help of magicians, he succeeded in calling him back again. But he comes back only as a spirit, and is made master of the Land of Spirits. More battles follow, and then comes the loss of a second friend, Kwasind, the embodiment of physical strength. These events are omens of the end, like the death of Eabani in the Gilgamesh Epic. In the twentieth canto comes the famine, followed by the death of Minnehaha, which is foretold by two taciturn guests from the Land of the Dead; and in the twenty-second canto Hiawatha prepares for the final journey to the Western Land:

I am going, O Nokomis,
On a long and distant journey,
To the portals of the Sunset,
To the regions of the home-wind,
Of the Northwest Wind, Keewaydin.

One long track and trail of splendour,
Down whose stream, as down a river,
Westward, westward, Hiawatha
Sailed into the fiery sunset,
Sailed into the purple vapours,
Sailed into the dusk of evening.

Thus departed Hiawatha,
Hiawatha the Beloved,
In the glory of the sunset,
In the purple mists of evening,
To the regions of the home-wind,
Of the Northwest Wind, Keewaydin,
To the Islands of the Blessed,
To the kingdom of Ponemah,
To the land of the Hereafter!

[553] The sun, rising triumphant, tears himself from the enveloping womb of the sea, and leaving behind him the noonday zenith and all its glorious works, sinks down again into the maternal depths, into all-enfolding and

all-regenerating night. (Cf. figs. 3, 24.) This image is undoubtedly a primordial one, and there was profound justification for its becoming a symbolical expression of human fate: in the morning of life the son tears himself loose from the mother, from the domestic hearth, to rise through battle to his destined heights. Always he imagines his worst enemy in front of him, yet he carries the enemy within himself—a deadly longing for the abyss, a longing to drown in his own source, to be sucked down to the realm of the Mothers. His life is a constant struggle against extinction, a violent yet fleeting deliverance from ever-lurking night. This death is no external enemy, it is his own inner longing for the stillness and profound peace of all-knowing non-existence, for all-seeing sleep in the ocean of coming-to-be and passing away. Even in his highest strivings for harmony and balance, for the profundities of philosophy and the raptures of the artist, he seeks death, immobility, satiety, rest. If, like Peirithous, he tarries too long in this abode of rest and peace, he is overcome by apathy, and the poison of the serpent paralyses him for all time. If he is to live, he must fight and sacrifice his longing for the past in order to rise to his own heights. And having reached the noonday heights, he must sacrifice his love for his own achievement, for he may not loiter. The sun, too, sacrifices its greatest strength in order to hasten onward to the fruits of autumn, which are the seeds of rebirth. The natural course of life demands that the young person should sacrifice his childhood and his childish dependence on the physical parents, lest he remain caught body and soul in the bonds of unconscious incest. This regressive tendency has been consistently opposed from the most primitive times by the great psychotherapeutic systems which we know as the religions. They seek to create an autonomous consciousness by weaning mankind away from the sleep of childhood. The sun breaks from the mists of the horizon and climbs to undimmed brightness at the meridian.[97] Once this goal is reached, it sinks down again towards night. This process can be allegorized as a gradual seeping away of the water of life: one has to bend ever deeper to reach the source. When we are feeling on top of the world we find this exceedingly disagreeable; we resist the sunset tendency, especially when we suspect that there is something in ourselves which would like to follow this movement, for behind it we sense nothing good, only an obscure, hateful threat. So, as soon as we feel ourselves slipping, we begin to combat this tendency and erect barriers against the dark, rising flood of the unconscious and its enticements to regression, which all too easily takes on the deceptive guise of sacrosanct ideals, principles, beliefs, etc. If we wish to stay on the heights we have reached, we must struggle all the time to consolidate our consciousness and its attitude. But we soon discover that this praiseworthy and apparently unavoidable battle with the years leads to stagnation and desiccation of soul. Our convictions become platitudes ground out on a barrel-organ, our ideals become starchy habits, enthusiasm stiffens into automatic gestures. The source of the water of life seeps away. We ourselves may not notice it, but everybody else does, and that is even more painful. If we should risk a little introspection, coupled perhaps with an energetic attempt to be honest for once with ourselves, we may get a dim idea of all the wants, longings, and fears that have accumulated down there—a repulsive and sinister sight. The mind shies away, but life wants to flow down into the depths. Fate itself seems to preserve us from this, because each of us has a tendency to become an immovable pillar of the past. Nevertheless, the daemon throws us down, makes us traitors to our ideals and cherished convictions—traitors to the selves we thought we were. That is an unmitigated catastrophe, because it is an *unwilling* sacrifice. Things go very differently when the sacrifice is a voluntary one. Then it is no longer an overthrow, a "transvaluation of values," the destruction of all that we held sacred, but transformation and conservation. Everything young grows old, all beauty fades, all heat cools, all brightness dims, and every truth becomes stale and trite. For all these things have taken on shape, and all shapes are worn thin by the working of time; they age, sicken, crumble to dust—unless they change. But change they can, for the invisible spark that generated them is potent enough for infinite generation. No one should deny the danger of the descent, but it *can be* risked. No one *need* risk it, but it is certain that some one will. And let those who go down the sunset way do so with open eyes, for it is a sacrifice which daunts even the gods. Yet every descent is followed by an ascent; the vanishing shapes are shaped anew, and a truth is valid in the end only if it suffers change and bears new witness in new images, in new tongues, like a new wine that is put into new bottles.

[554] *The Song of Hiawatha* contains material that is well suited to bring into play the vast potentialities for archetypal symbolization latent in the human mind and to stimulate the creation of images. But the products always contain the same old human problems, which rise up again and again in new symbolic guise from the shadowy world of the unconscious.

[555] Thus it is that Chiwantopel puts Miss Miller in mind of another hero, who makes his entry in the form of Wagner’s Siegfried. Chiwantopel cries out in his monologue: “Alas! Not one who understands me, not one who resembles me or has a soul that is sister to mine.” Miss Miller declares that the sentiments expressed in this passage have the greatest analogy with Siegfried’s feelings for Brünhilde. This analogy prompts us to cast a glance at the relations between Siegfried and Brünhilde in Wagner. It is well known that Brünhilde, the Valkyrie, looked with favour on the brother-sister incest that gave birth to Siegfried. But whereas Sieglinde is the human mother, Brünhilde acts the part of the symbolic mother, the “spirit-mother” (mother-imago), not as a persecutor, like Hera with the infant Heracles, but as a helper. The sin of incest, of which she makes herself guilty by her complicity, is the reason for her banishment by Wotan. Siegfried’s birth from the sister-wife characterizes him as a Horus, the reborn sun, a reincarnation of the aging sun-god. The birth of the young sun, the god-man, stems from human partners, but they are really only vehicles for cosmic symbols. The spirit-mother therefore lends it her protection; she sends Sieglinde forth, with the child in her womb,[98] on the night sea journey to the East:

Away then, hasten;
Turn to the East! …
Woman, you cherish
The noblest hero in the world
In your sheltering womb! [99]

[556] The motif of dismemberment recurs in the broken sword of Siegmund, which was kept for Siegfried. Life is put together again from the broken pieces (miracle of Medea). Just as a blacksmith welds the

broken pieces together, so the dismembered corpse is reconstituted. This comparison also occurs in Plato’s *Timaeus:* the world’s parts are joined together with pegs. In the Rig-Veda the world creator Brahmanaspati is a blacksmith:

This world Brahmanaspati
Welded together like a blacksmith.[100]

[557] The sword denotes solar power, therefore a sword goes out from the mouth of Christ in the Apocalypse (cf. pl. v*b*), namely the procreative fire, speech, or the spermatic Word. In the Rig-Veda, Brahmanaspati is the prayer-word, which is accorded a pre-worldly, creative significance:

And this prayer of the singer, continually expanding,
Became a cow that was there before the beginning of the world.
The gods are foster-children of the same brood,
Dwelling together in the womb of this god.[101]

[558] The Logos becomes a cow, i.e., a mother who bears the gods in her womb. The transformation of Logos into mother is not really surprising, since in the *Acts of Thomas* the Holy Ghost is addressed as the mother, and it is always the mother-imago which proves to be the hero’s greatest danger but is for that very reason the prime source of his deeds and of his ascent. His ascent signifies a renewal of the light and hence a rebirth of consciousness from the darkness, i.e., from regression to the unconscious.

[559] The persecution motif is not connected here with the mother, but with Wotan, as in the Linus legend, where the father is the vengeful pursuer. Brünhilde stands in a peculiar relation to her father Wotan. She says to him:

You speak to the will of Wotan
When you tell me what you wish.
Who am I
If I am not your will?

WOTAN: I take counsel with myself alone
When I speak with you …[102]

[560] Brünhilde is a sort of “split-off” from Wotan, part of his personality, just as Pallas Athene was an emanation of Zeus. She is, as it were, Wotan’s emisslonging for the mother-imagoary or agent, and therefore corresponds to the angel of Yahweh, to the “eye of Ahura” or Vohu Manah, God’s good thought in Persian legend, or to the Babylonian Nabu, the word of fate, or to Hermes, the messenger of the gods, whom the philosophers equated with Reason and Logos. In Assyria the role of Logos falls to the fire god, Gibil. That Wagner should have put the designs of so martial a god as Wotan into the hands of a feminine agent is somewhat remarkable, despite the Greek precedent of Pallas Athene. A very similar figure is the Kore in the *Acts of Thomas*, of whom Thomas sings:

Maiden, daughter of the light,
In whom there abides the majestic splendour of kings …
On the crown of her head the king is seated,
Feeding with his own ambrosia those seated beside him.
Truth rests upon her head …
Her tongue is like the curtain of a door
Which is drawn back for them who go in.
Her neck rises up like a stairway,
And the first builder of the world created it.
Her two hands signify and proclaim the dance of the blessed ages,
And her fingers the gates of the city …[103]

[561] This maiden, according to the *Acts of Thomas*, is the “Mother of Wisdom.” Conversely, the Holy Ghost is worshipped in feminine form in one of the Eucharistic prayers:

Come, thou that knowest the secrets of the chosen;
Come, thou that partakest in all the combats of the noble combatant …
Come, peace,
That revealest the great things of all greatness;
Come, thou that layest bare the hidden things,
And makest manifest things not to be spoken;
Come, holy dove,
Which hast brought forth the twin nestlings;
Come, secret mother …[104]

[562] This Eucharistic feast is celebrated at a characteristic moment, immediately after Thomas had delivered a “beautiful woman” from an “unchaste demon” who had been plaguing her for years. This is probably no accident, because the therapeutic meaning of the hymn is the transformation of a sexual obsession into a recognition of the positive qualities of the feminine spirit.

[563] In line with the *Acts of Thomas* is the Ophite view that the Holy Ghost is the “first word,” the “Mother of All Living,” and the Valentinian idea that the Third Person is the “Word of the Mother from Above.” It is clear from all this that Wagner’s Brünhilde is one of the numerous anima-figures who are attributed to masculine deities, and who without exception represent a dissociation in the masculine psyche—a “split-off” with a tendency to lead an obsessive existence of its own. This tendency to autonomy causes the anima to anticipate the thoughts and decisions of the masculine consciousness, with the result that the latter is constantly confronted with unlooked-for situations which it has apparently done nothing to provoke. Such is the situation of Wotan, and indeed of every hero who is unconscious of his own intriguing femininity.

[564] Something of the sort must have been in Wagner’s mind when he wrote Wotan’s lament for Brünhilde:

None knew as she my innermost thoughts;
None knew as she the source of my will;
She herself was
The creating womb of my wish;
And now she has broken
That happy bond! [105]

[565] Brünhilde’s sin was her support of Siegmund, but behind that lies the incest which was projected into the brother-sister pair Siegmund and Sieglinde. The symbolical meaning, however, is that Wotan, the father, has entered into his own daughter in order to rejuvenate himself. This archaic fact is expressed here in a rather veiled way. In the legend of the “Entkrist” it is expressed openly by the devil, the father of the Anti-Christ. Wotan is justly indignant with Brünhilde, for she has taken over the role of Isis and through the birth of a son has deprived the old man of his power. Wotan beats off the first herald of doom, Siegmund, and

smashes his sword, but Siegmund rises again in the grandson, Siegfried. And the instrument of fate is always the woman, who knows and reveals his secret thoughts; hence the impotent rage of Wotan, who cannot bring himself to recognize his own contradictory nature.

[566] At Siegfried's birth Sieglinde dies, as is proper. The foster-parent [106] who brings him up is not a woman, but a chthonic god, Mime, a crippled dwarf who belongs to a race that has abjured love.[107] Similarly, the god of the Egyptian underworld, the crippled shadow of Osiris (who underwent a sorry resurrection in Harpocrates), brings up the infant Horus to avenge the death of his father.

[567] Meanwhile Brünhilde lies in enchanted slumber [108] on the mountain where Wotan has put her to sleep with the magic thorn (Edda), surrounded by a curtain of fire that keeps off all who approach and at the same time symbolizes the fiery longing of the hero for the forbidden goal.[109] Mime, however, becomes Siegfried's enemy and wills his death through Fafner. Here Mime's dynamic nature is revealed: he is a masculine representative of the Terrible Mother who lays the poisonous worm in her son's path.[110] Siegfried's longing for the motherimago drives him away from Mime:

Away with the imp!
Let me see him no more.
If only I knew
What my mother was like!
But that will my thought never tell me!
Her eyes' tender light
Surely did shine
Like the soft eyes of the doe.[111]

[568] Siegfried wants to part from the "imp" who was his mother in the past, and longingly he reaches out for the other mother. For him, too, nature acquires a hidden maternal significance ("doe"); he, too, discovers in the sounds of nature a hint of his mother's voice and his mother's speech:

Sweet little bird!
Never yet have I heard you;
Do you live here in the forest?

Could I but follow your sweet warbling!
Surely it would tell me
Something of my dear mother?[112]

[569] But his conversation with the bird lures Fafner out of the cave. Siegfried’s longing for the mother-imago has unwittingly exposed him to the danger of looking back to his childhood and to the human mother, who immediately changes into the death-dealing dragon. He has conjured up the evil aspect of the unconscious, its devouring nature (cf. pls. XXXII*b*, XXXIV), personified by the cave-dwelling terror of the woods. Fafner is the guardian of the treasure; in his cave lies the hoard, the source of life and power. The mother apparently possesses the libido of the son (the treasure she guards so jealously), and this is in fact true so long as the son remains unconscious of himself.[113] In psychological terms this means that the “treasure hard to attain” lies hidden in the mother-imago, i.e., in the unconscious. This symbol points to one of life’s secrets which is expressed in countless symbolical ways in mythology. When such symbols occur in individual dreams, they will be found on examination to be pointing to something like a centre of the total personality, of the psychic totality which consists of both conscious and unconscious. Here I must refer the reader to my later works, where I deal at some length with the symbol of the self.[114] The rewards of this battle with Fafner are glowingly described in the Siegfried legend. According to the Edda, Siegfried eats Fafner’s heart,[115] the seat of life. He wins the magic cap through whose power Alberich had changed himself into a serpent—an allusion to the motif of rejuvenation by casting the skin. Another lucky cap is the caul that is occasionally found over the heads of new-born children. In addition, by drinking the dragon’s blood Siegfried learns to understand the language of birds, and thus enjoys a peculiar relationship to nature, which he now dominates by knowledge. Last but not least, he wins the hoard.

[570] *Hort* is a Middle High German and Old High German word meaning ‘collected and guarded treasure’; Goth. *huzd;* OIcel. *hodd;* Germanic **hozda*, from the pre-Germanic **kuzdho—for kudtho—‘hidden.’* Kluge [116] associates it with Gr. *κεύθω, ἔκυθον*, ‘to hide, conceal’; also with G. *Hütte*, ’hut,’ *Hut*, ‘custody,’ E. *hide*, Germanic root **hud*, from IEur.

**kuth* (possibly related to *κεύθω* and *κύσθος*, ‘cavity, female genitals.’ Prellwitz[117] also relates Goth, *huzd*, OE. *hyde*, E. *hide* and *hoard* to κεύθω. Stokes[118] relates E. *hide*, OE. *hydan*, G. *Hütte*, Lat. *cūdo*, ‘helmet,’ Skr. *kuhara*, ‘hollow’(?), to Celt. *koudo*, concealment,’ Lat. *occultatio*. In this connection we might also mention the report of Pausanias:

> There was in Athens a sacred precinct [a temenos] dedicated to Gaia and surnamed Olympia. Here the ground is torn open to the width of a cubit; and they say that the water flowed off here after the flood at the time of Deucalion; and every year they cast into the fissure wheatmeal kneaded with honey.[119]

[571] We have already seen that pastries in the form of snakes and phalli were flung into a pit at the Arrhetophoria. We mentioned this in connection with the earth fertilization ceremonies. It is significant that the deadly flood flowed off into the fissure, back into the mother again, for it was from the mother that death came into the world in the first place. The Deluge is simply the counterpart of the all-vivifying and all-producing water, of “the ocean, which is the origin of all things.”[120] Honey-cakes are offered to the mother that she may spare one from death. In Rome money-offerings were thrown every year into the *lacus Curtius*, formerly a chasm that had been closed through the sacrificial death of Curtius. He was the hero who went down to the underworld in order to conquer the danger that threatened the Roman state after the opening of the chasm. In the Amphiaraion at Oropos those healed through incubation in the temple threw their money-offerings into the sacred well. Pausanias says:

> If anyone is cured of a sickness through a saying of the oracle, it is customary for him to throw a silver or gold coin into the well; for they say that this was where Amphiaraos rose up as a god.[121]

[572] Presumably this Oropian well was also the scene of his *katabasis*. There were any number of entrances to Hades in antiquity, Thus, near Eleusis, there was a gorge through which Aidoneus came up and into which he descended after kidnapping the Kore. There were crevasses in the rocks where the souls could ascend to the upper world. Behind the temple of Chthonia in Hermione lay a spot sacred to Pluto, with a chasm through which Heracles came up with Cerberus. There was also an

"Acherusian" lake.[122] This chasm, therefore, was the entrance to the place where death had been conquered. The chasm on the Areopagus in Athens was believed to be the seat of the dwellers in the underworld.[123] Similar ideas are suggested by an old Greek custom: [124] girls used to be sent for a virginity test to a cave where there lived a poisonous serpent. If they were bitten, it was a sign that they were no longer chaste. We find the same motif in the Roman legend of St. Sylvester, dating from the end of the fifth century:

> There used to be a huge dragon inside the Tarpeian Hill, where the Capitol stands. Once a month magicians and wanton girls went down the 365 steps to this dragon, as though into the underworld, bearing with them sacrifices and purificatory offerings from which the great dragon could be given his food. Then the dragon would suddenly rise up, and though he did not come out he poisoned the air with his breath, so that men died and much sorrow was occasioned by the deaths of children. When, therefore, St. Sylvester was fighting the pagans in defence of truth, the pagans challenged him, saying: Sylvester, go down to the dragon, and in the name of thy God make him desist, if only for a year, from this slaughter of human lives.[125]

[573] St. Peter then appeared to Sylvester in a dream, and counselled him to close this door to the underworld with a chain, as in the vision of the Apocalypse:

> And I saw an angel come down from heaven, having the key of the bottomless pit and a great chain in his hand.
>
> And he laid hold on the dragon, that old serpent, which is the Devil, and Satan, and bound him a thousand years, and cast him into the bottomless pit, and shut him up, and set a seal upon him.[126]

[574] Writing at the beginning of the fifth century, the anonymous author of a treatise entitled "De promissionibus" mentions a very similar legend:

> Near the city of Rome there was a certain cavern in which could be seen a frightful and terrible dragon of marvellous size, a mechanical contrivance that brandished a sword in its mouth [127] and had shining red jewels for eyes.[128] Every year girls were consecrated and adorned with flowers, and then given to the dragon in sacrifice. For, as they descended with their gifts, they unwittingly touched the step to which this devilish mechanism of a dragon was attached, and were instantly pierced through with the sword that sprang out, so that innocent blood was shed. A certain monk, who was known to Stilicho the patrician on account of his good deeds, destroyed the dragon in the following manner: he carefully examined each step with a rod and with his hand until he discovered the diabolical fraud. Then, stepping over it, he went down, smote the dragon and cut it to pieces, thus showing that they are not true gods who are made by the hands of men.[129]

[575] The hero has much in common with the dragon he fights—or rather, he takes over some of its qualities, invulnerability, snake's eyes, etc. Man and dragon might be a pair of brothers, even as Christ identified himself with the serpent which—*similia similibus*—conquered the plague of fiery serpents in the wilderness (John 3 : 14 and Numbers 21 : 6f.). As a serpent he is to be "lifted up" on the cross; that is to say, as a man with merely human thoughts and desires, who is ever striving back to childhood and the mother, he must die on the mother-tree, his gaze fixed on the past. This formulation is not to be taken as anything more than a psychological interpretation of the crucifixion symbol, which, because of its long-lasting effects over the centuries, must somehow be an idea that accords with the nature of the human soul. If this were not so, the symbol would long since have perished. Here, as everywhere else in this book when discussing the psychology of religious figures, I am not concerned with the theological point of view. I would like to state this categorically, for I am aware that my comparative procedure often juxtaposes figures which from another point of view can hardly be compared at all. It is clear to me that such comparisons might easily give offence to the newcomer to psychology. On the other hand, anyone who has to do with the phenomena of the unconscious knows with what hair-raising irrationalism and with what shocking tactlessness and ruthlessness the unconscious "mind" dismisses our logical concepts and moral values. The unconscious, it appears, does not obey the same laws as the conscious—indeed, if it did, it would not be able to fulfil its compensatory function.

[576] Christ, as a hero and god-man, signifies psychologically the self; that is, he represents the projection of this most important and most central of archetypes. (Cf. pl. LX.) The archetype of the self has, functionally, the significance of a ruler of the inner world, i.e., of the collective unconscious.[130] The self, as a symbol of wholeness, is a *coincidentia oppositorum*, and therefore contains light and darkness simultaneously. (Cf. pl. LVI, also fig. 39.) In the Christ-figure the opposites which are united in the archetype are polarized into the "light" son of God on the one hand and the devil on the other. The original unity of opposites is still discernible in the original unity of Satan and Yahweh. Christ and the

dragon of the Anti-Christ lie very close together so far as their historical development and cosmic significance are concerned.[131] The dragon legend concealed under the myth of the Anti-Christ is an essential part of the hero's life [132] and is therefore immortal. Nowhere in the latter-day myths are the paired opposites so palpably close together as in the figures of Christ and Anti-Christ. (Here I would refer the reader to Merezhkovsky's admirable account of this problem in his novel *Leonardo da Vinci.)* It is a convenient rationalistic conceit to say that the dragon is only "artificial," thus banishing the mysterious gods with a word. Schizophrenic patients often make use of this mechanism for apotropaic purposes. "It's all a fake," they say, "all artificially made up." The following dream of a schizophrenic is typical: *He is sitting in a dark room which has only one small window, through which he can see the sky. The sun and moon appear, but they are made of oiled paper*. Sun and moon, as divine equivalents of the parent archetype, possess a tremendous psychic power that has to be weakened apotropaically, because the patient is already far too much under the power of the unconscious.

[577] The descent of the 365 steps refers to the course of the sun, and hence to the cavern of death and rebirth. That this cavern is in fact related to the subterranean mother of death can be seen from a note in Malalas, the historian of Antioch,[133] who says that in that city Diocletian dedicated a crypt to Hecate, with 365 steps leading down to it. Cave mysteries in her honour seem also to have been celebrated in Samothrace. The Hecate mysteries flourished in Rome towards the end of the fourth century, so that the two legends quoted above might well refer to her cult. Hecate [134] is a real spook-goddess of night and phantoms, a nightmare; she is sometimes shown riding a horse, and in Hesiod she is counted the patron goddess of riders. It is she who sends that horrible and fearful night-time apparition, the Empusa, which Aristophanes says comes wrapped in a bladder swollen with blood. According to Libanius, the mother of Aischines was also called Empusa, because she *ἐκ σκοτεινῶν τόπων τοῖs παισὶν καὶ ταῖs γυναιξὶν ὦρμᾶτο*—"rushed out upon women and children from dark places." The Empusa had peculiar feet: one foot was of brass, the other of ass's dung. In Tralles, Hecate appears side by side with

Priapus; there is also a Hecate Aphrodisias. Her symbols are the key,[135] the whip,[136] the dagger, and the torch (pl. LVIII). As the deadly mother, her attributes are dogs, whose significance we have already discussed at some length. As guardian of the gate of Hades and as the triple-bodied goddess of dogs, she is more or less identical with Cerberus. Thus, in bringing up Cerberus, Heracles was really bringing the vanquished mother of death to the upper world.

Fig. 34. Hecate of Samothrace
Gnostic gem

As the "spirit-mother" she sends madness, the moonsickness. This idea is perfectly sensible, because most forms of lunacy consist of affections which amount to an invasion by the unconscious and an inundation of the conscious mind. In the Hecate mysteries a wand, named the λευκόφυλλος ('white-leaved'), was broken. This wand protected the purity of virgins and caused madness in anyone who touched it. We recognize here the motif of the sacred tree, the mother who might not be touched. Only a madman would attempt to do so. As an incubus or vampire she appears in the form of Empusa, or as a man-eating lamia (cf. pl. XXXVIII*a*), or again in that more beautiful guise, the "Bride of Corinth." She is the mother of all witchcraft and witches, the patron goddess of Medea, because the power of the Terrible Mother is irresistible, coming as it does from the unconscious. She plays an important part in Greek syncretism, being confused with Artemis, who was also called *έκάτη*, the 'far-hitting,' or 'she who hits at will,' a name that once more reveals her superordinate power. Artemis is the huntress with hounds, and Hecate too is the wild huntress prowling at night. She has her name in common with Apollo: *Ἒκατος*, *έκάεργος*. The identification of Hecate with Brimo as the underworldly mother is understandable, also her identification with Persephone and Rhea, the primitive All-Mother. Her maternal significance also explains her confusion with Eileithyia, the goddess of childbirth. Hecate is a birth-goddess (*κουροτρόφος*), the multiplier of cattle and goddess of marriage. In Orphic cosmogony she occupies the centre of the world as Aphrodite and Gaia, if not as the world-soul itself. On a carved gem she is shown with a cross on her head (fig. 34). The pillory where criminals were scourged was also known as the έκάτη; and to her, as to the Roman Trivia, were dedicated junctions of three roads, forked roads, and cross roads. Where the roads branch off or meet, dog-sacrifices were offered to her, and there too were thrown the bodies of the executed: the sacrifice occurs at the point of union. Where the roads *cross* and enter into one another, thereby symbolizing the union of opposites, there is the “mother,” the object and epitome of all union. Where the roads *divide*, where there is parting, separation, splitting, there we find the “division,” the cleft [137]—the symbol of the mother and at the same time the essence of what the mother means for us, namely cleavage and farewell. Accordingly, the meaning of a sacrifice on this spot would be: propitiation of the mother in both senses. The temenos of Gaia, the fissure and the well, can easily be understood as the doors of life and death,[138] “past which man’s steps have ever flinching trod,”[139] sacrificing there his obolus or his *πελανοί* instead of his body, just as Heracles pacified Cerberus with the honey-cakes. Thus the crevice at Delphi with the Castalian spring was the habitation of the chthonic Python who was vanquished by the sun-hero Apollo. The Python, incited by Hera, had pursued Apollo’s mother, Leto, when he was still in her womb; but she fled to the floating island of Delos on a “night sea journey” and was there safely delivered of her child, who later slew the Python. In Hierapolis (Edessa) a temple was built over the crack in the earth where the flood subsided, and in Jerusalem the foundation-stone of the temple was laid over the great abyss,[140] in the same way that Christian churches are often built over caves, grottoes, wells, etc. We find the same motif in the Grotto of Mithras[141] and the various other cave-cults, including the Christian catacombs, which owe their importance not to legendary persecutions but to the cult of the dead.[142] Even the burial of the dead in consecrated ground (“garden of the dead,” cloisters, crypts, etc.) is a rendering back to the mother with the hope of resurrection which such burials presuppose. In olden times, the dragon in the cave who represented the devouring mother had to be propitiated with human sacrifices, later with gifts. Hence the Attic custom of giving the dead man the *μελιτοῦττα* (same as *μᾶζα*, honey-cakes), with which to pacify the hound of hell, the three-headed monster guarding the door of the underworld. A substitute for the gifts seems to have been the obolus given to Charon, which is why Rohde calls him the second Cerberus, akin to the jackal-headed Anubis of the Egyptians.[143] (Cf. pl. XXXIIa.) The dog and the underworld serpent are identical. In the Greek tragedies the Erinyes are serpents as well as dogs; the monsters Typhon and Echidna are parents of the Hydra, of the dragon of the Hesperides, and of the Gorgon (cf. pl. XIV*b*); they also spawned the dogs Cerberus, Orthros, and Scylla.[144] Snakes and dogs are guardians of the treasure. The chthonic god was in all probability a snake that was housed in a cave and was fed with πἐλανοι (pl. LVII*b*). In the Asclepieia of the later period the sacred snakes were hardly ever visible, so they may have existed only figuratively.[145] Nothing was left but the hole in which the snake was said to dwell. There the *πἐλανοι* were placed and the obolus thrown in. The sacred cave in the temple at Cos consisted of a rectangular pit covered by a stone slab with a square hole in it. This arrangement served the purpose of a treasure-house: the snake-pit had become a slot for money, a “poor-box,” and the cave a “hoard.” That this development is fully in accord with the archaeological evidence is proved by a discovery in the temple of Aesculapius and Hygeia at Ptolemaïs:

> A coiled granite snake with an arched neck was found. In the middle of the coils there is a narrow slit, polished by use, just large enough to allow a coin of at most 4 cm. diameter to drop through. At the sides are holes for handles to lift this heavy object, the lower half of which could be inserted as a lid.[146]

[578] Here the serpent lies on the treasury as protector of the hoard. Fear of the deadly maternal womb has become the guardian of the treasure of

life. That the snake really is a death-symbol is evident from the fact that the souls of the dead, like the chthonic gods, appear as serpents, as dwellers in the kingdom of the deadly mother.[147]

[579] The development of this symbol, showing how the crevice in the earth, interpreted on the primitive level as the “mother,” came to signify the place of the treasure, therefore corresponds to the etymology of G. *Hort*, ‘hoard,’ as suggested by Kluge. Κεύθος (from *κεύθω*) means the innermost womb of the earth (Hades), and κύσθος, which he associates with it, has a similar meaning: ‘cavity’ or ‘womb.’ Prellwitz makes no mention of this connection. On the other hand, Fick [148] connects *Hort*, Goth. *huzd*, with Armen. *kust* (Lat. *venter*, ‘belly’), Slav. *cista*, Ved. *kostha*, ‘abdomen,’ from the IEur. root **koustho-s*, ‘viscera, abdomen, chamber, storeroom.’[149] Prellwitz connects κύσθος with *κύστις* and *κύστη*, ‘bladder, bag,’ Skr. *kustha-s*, ‘hollow of the loins’; also with *κύτος*, ‘cavity, vault’; *κυτίς*, ‘casket,’ from *κῦειν*, ‘to be pregnant.’ Whence also *κύτος*, ‘hollow vessel, skin’; *κύαρ*, ‘hole’; *κύαθος*, ‘cup’; *κύλα*, ‘depression under the eye’; *κῦμα*, ‘swelling, wave, billow.’ The basic IEur. root[150] is **kevo*, ‘to swell, be strong’; whence the above-mentioned *κυεῑν*, *κύαρ* and Lat. *cavus*, ‘hollow, arched, cave, hole’; *cavea*, ‘cavity, enclosure, cage, scene, stage, assembly’; *caulae*, ‘cavity, aperture, stable’;[151] IEur. **kuéyô*, ‘I swell,’ part. **kueyonts*, ‘swelling’; **en-kueyonts*, ‘enceinte’; *ἐγκυέων*, Lat. *inciens*, ‘pregnant’; cf. Skr. *vi-śvàyan*, ‘swelling.’[152]

[580] The treasure which the hero fetches from the dark cavern is *life:* it is himself, new-born from the dark maternal cave of the unconscious where he was stranded by the introversion or regression of libido. Hence the Hindu fire-bringer is called Matarisvan, he who swells in the mother. The hero who clings to the mother is the dragon, and when he is reborn from the mother he becomes the conqueror of the dragon. (PI. LIX*a*.) He shares this paradoxical nature with the snake. According to Philo the snake is the most spiritual of all creatures; it is of a fiery nature, and its swiftness is terrible. It has a long life and sloughs off old age with its skin.[153] In actual fact the snake is a cold-blooded creature, unconscious and unrelated. It is both toxic and prophylactic, equally a symbol of the good

and bad daemon (the Agathodaemon), of Christ and the devil. Among the Gnostics it was regarded as an emblem of the brain-stem and spinal cord, as is consistent with its predominantly reflex psyche. It is an excellent symbol for the unconscious, perfectly expressing the latter's sudden and unexpected manifestations, its painful and dangerous intervention in our affairs, and its frightening effects. Taken purely as a psychologem the hero represents the positive, favourable action of the unconscious, while the dragon is its negative and unfavourable action—not birth, but a devouring; not a beneficial and constructive deed, but greedy retention and destruction. (Fig. 35; cf. also pl. XXXIV and fig. 30.)

[581] Every psychological extreme secretly contains its own opposite or stands in some sort of intimate and essential relation to it.[154] Indeed, it is from this tension that it derives its peculiar dynamism. There is no hallowed custom that cannot on occasion turn into its opposite, and the more extreme a position is, the more easily may we expect an enantiodromia, a conversion of something into its opposite. The best is the most threatened with some devilish perversion just because it has done the most to suppress evil. This peculiar relationship to the opposite can also be seen in the vagaries of language, as for instance in the comparison of 'good, better, best.' 'Better,' however, derives from the old word *bass*, meaning 'good.' The related English word is 'bad'; its comparative would therefore be 'better' (badder!). What happens everywhere in language happens also in mythology: in one version of a fairytale we find God, in another the devil.[155] And how often has it happened in the history of religion that its rites, orgies and mysteries degenerate into vicious debauches! [156] Thus a blasphemer who arose at the beginning of the nineteenth century says of the Communion:

Fig. 35. The assault by the dragon
From Vitruvius, De architectura, *Venice, 1511*

> The communion of the devil is in the brothels. Everything that they sacrifice there they sacrifice to the devil and not to God. There they have the devil’s cup and the devil’s board; there they have sucked the head of the snake,[157] there they have fed on the bread of iniquity and drunk the wine of fornication.

[582] Anton Unternährer, as this man was called, fancied himself a sort of priapic divinity. He says of himself:

> Black-haired, very charming withal and of handsome countenance, everyone enjoys listening to thee because of the graceful speeches which flow from thy mouth; therefore do the virgins love thee.[158]

[583] He continues:

> Ye fools and blind men, behold God has created man in his own image, as male and female, and has blessed them and said: “Be fruitful and multiply, and replenish the earth, and subdue it.”

> Therefore has he given the greatest honour to these poor members, and placed them naked in the garden …
>
> Now are the fig-leaves and the covering removed, because ye have turned to the Lord, for the Lord is Spirit, and where the Spirit of the Lord is, there is liberty,[159] there is the brightness of the Lord mirrored with uncovered countenance. This is precious before God, and is the glory of the Lord and the adornment of our God, when ye stand in the image and honour of God as God created you, naked and unashamed.
>
> Who shall ever praise sufficiently in the sons and daughters of the living God those members of the body which are appointed for procreation?
>
> In the lap of the daughters of Jerusalem is the gate of the Lord, and the righteous shall there go into the temple, even to the altar. And in the lap of the sons of the living God is the water-pipe of the upper part, which is a tube, like a rod with which to measure the temple and the altar. And underneath the water-pipe are erected the sacred stones, as a sign and testimony [160] of the Lord, who has taken to himself the seed of Abraham.
>
> Out of the seed in the chamber of the mother God creates with his hand a man, formed in his own image. Then is the house of the mother and the chamber of the mother opened for the daughters of the living God, and God himself brings forth the child through them. Thus God creates children from stones, for the seed comes from the stones.

[584] History has numerous examples of how easily the mystery can turn into a sexual orgy just because it grew out of the opposite of the orgy. It is characteristic that this fanatic should return again to the symbol of the snake, which in the mystery religions entered into the faithful, fecundating and spiritualizing them, though all the time keeping its phallic significance. In the mysteries of the Ophites, the festival was celebrated with live snakes, and the creatures were even kissed. (Cf. the kissing of the Demeter serpent in the Eleusinian mysteries.) This kiss plays a not unimportant part in the sexual orgies of certain modern Christian sects.

[585] One of my patients dreamt that a snake shot out of a cave and bit him in the genital region. This dream occurred at the moment when the patient was convinced of the truth of the analysis and was beginning to free himself from the bonds of his mother-complex. He felt that he was making progress and that he had more control over himself. But the moment he felt the impulse to go forward he also felt the pull of the bond to the mother. Being bitten in the genital region by a snake (cf. pls. LXI*b*, LXIV), reminds us of Attis, whose self-castration was occasioned by his mother’s jealousy. Another patient had the following dream after a relapse into neurosis: she was completely filled inside with an enormous

snake. Only the end of its tail stuck out from her arm. She tried to seize hold of it, but it slithered away. A third patient complained that a snake was stuck in her throat.[161] Nietzsche uses this symbolism in his “vision” of the shepherd and the snake:

> And verily, what I saw was like nothing I ever saw before. I saw a young shepherd, writhing, choking, twitching, with distorted countenance, and with a heavy black serpent hanging out of his mouth.
>
> Did ever I see so much loathing and pale horror on a human countenance?[162] Perhaps he had been asleep, and the serpent had crawled into his mouth—and bitten fast.
>
> My hand tugged at the serpent, and tugged in vain. I could not pull the serpent out of his throat. Then a cry broke from me: “Bite—its head off! Bite hard!” My horror, my hatred, my loathing, my pity, all my good and bad broke from me in one cry.
>
> You valiant ones about me …, you lovers of mysteries, solve me the riddle I then saw, interpret for me the vision of the loneliest man!
>
> For a vision it was, and a foresight: *what* did I then see in a semblance? And *who* is it that is to come?
>
> *Who* is the shepherd into whose mouth the serpent crawled? *Who* is the man into whose throat all the heaviest and blackest must crawl?[163]
>
> But the shepherd bit, as my cry bade him—he bit with a strong bite! Far off he spat the head of the serpent and leapt to his feet.
>
> No longer a shepherd, no longer a man, but a transfigured being with light all about him, who *laughed!* Never yet on earth did a human being laugh as *he* laughed!
>
> O my brothers, I heard a laughter which was no human laughter—and now a thirst consumes me, a longing that is never allayed.
>
> My longing for that laughter consumes me: O how can I bear to live, and how could I bear to die! [164]

[586] The experience described here by Nietzsche can be interpreted as follows with the help of what we said above: the snake represents the unconscious psyche which, like the snake-god in the Sabazios mysteries, crawls into the mouth of the celebrant, i.e., Nietzsche himself as the *ποιμήν* or *ποιμάνδρης*, the shepherd of souls and preacher, firstly to stop him from talking too much, and secondly to make him *ἒνθεος*—‘“enthused,” filled with God.’ The snake had already bitten fast, but fear was swifter and more violent: it bit off the snake’s head and spat it out. If you want the snake to bruise your heel you have only to tread on its head. The shepherd laughed on getting rid of the snake—a wild hysterical laughter, because he had dished the compensation from the unconscious. He could now reckon without his host, and with the well-known

consequences: one has only to read the passages in *Zarathustra* where Nietzsche speaks of laughing and laughter. Unfortunately, everything happened afterwards just as if the whole German nation had paid heed to Nietzsche's sermon.

[587] The unconscious insinuates itself in the form of a snake if the conscious mind is afraid of the compensating tendency of the unconscious, as is generally the case in regression. But if the compensation is accepted in principle, there is no regression, and the unconscious can be met half-way through introversion. It must be admitted, however, that the problem as it presented itself to Nietzsche was insoluble, for nobody could expect the shepherd to swallow down a snake under such circumstances. We are confronted here with one of those fatal cases, by no means uncommon, where the compensation appears in a form that cannot be accepted and could only be overcome by something that is equally impossible for the patient. Cases of this kind occur when the unconscious has been resisted for too long on principle, and a wedge violently driven between instinct and the conscious mind.

[588] Through introversion, as numerous historical witnesses testify, one is fertilized, inspired, regenerated, and reborn. In Indian philosophy this idea of creative spiritual activity has even acquired a cosmogonic significance. According to the Rig-Veda (X, 121), the unknown creator of all things is Prajapati, "Lord of Creation." His cosmogonic activity is described as follows in the various Brahmanas:

> Prajapati desired: I will propagate myself, I will be many. He practised *tapas*, and after he had practised *tapas* he created these worlds.[165]

[589] The term *tapas* is to be translated, according to Deussen,[166] as "he heated himself with his own heat,"[167] in the sense that "he brooded his own brooding," brooder and brooded being conceived not as separate, but as one and the same thing. As Hiranyagarbha (the Golden Germ), Prajapati is the self-begotten egg, the cosmic egg from which he hatches himself (fig. 36). He creeps into himself, becomes his own womb, makes himself pregnant with himself in order to hatch forth the world of multiplicity. Thus Prajapati transforms himself by introversion into something new, into the multiplicity of the world. It is particularly

interesting to note the gradual approximation of widely divergent ideas. Deussen says:

> Just as, in a hot country like India, the idea of *tapas* became the symbol of strenuous effort and suffering, so the idea of *tapo atapyata* gradually acquired the meaning of self-castigation, and became associated with the view … that creation is an act of self-abnegation on the part of the creator.[168]

[590] Self-incubation,[169] self-castigation, and introversion are closely related ideas. Immersion in oneself (introversion) is a penetration into the unconscious and at the same time asceticism. The result, for the philosophy of the Brahmanas, is the creation of the world, and for the mystic the regeneration and spiritual rebirth of the individual, who is born into a new world of the spirit. Indian philosophy also assumes that creativity as such springs from introversion. Rig-Veda X, 129 says:

Fig. 36. Prajapati with the world-egg
India

Then the One, that was hidden in the shell,
Was born through the force of fiery torment.
From it there arose in the beginning love,[170]
Which is the germ and the seed of knowledge.
The wise found the root of being in not-being
By investigating the impulses of the human heart.[171]

[591] This philosophical view conceives the world as an emanation of libido. When therefore the insane Schreber brought about the end of the world through his introversion, he was withdrawing libido from the

world about him, thereby making it unreal.[172] Schopenhauer tried in exactly the same way to abolish through negation (the equivalent of holiness and asceticism) the cardinal error of the Primal Will in creating the world at all. Does not Goethe also say: “Is not the core of nature in the heart of man?”

[592] The hero who sets himself the task of renewing the world and conquering death personifies the world-creating power which, brooding on itself in introversion, coiled round its own egg like a snake, threatens life with its poisonous bite, so that the living may die and be born again from the darkness. The same idea is found in Nietzsche:

> How long already have you sat on your misfortune?
> Give heed, lest you hatch me
> An egg,
> A basilisk egg
> From your long travail.[173]

[593] The hero is himself the snake, himself the sacrificer and the sacrificed, which is why Christ rightly compares himself with the healing Moses-serpent (cf. pl. IX*b*), and why the saviour of the Christian Ophites was a serpent, too. It is both Agathodaimon (fig. 37) and Cacodaimon. In German legend we are told that the heroes have snake’s eyes.[174]

[594] Clear traces of the original identity of hero and snake are to be found in the myth of Cecrops. Cecrops was half snake, half man. In primitive times he was probably the snake of the Athenian citadel itself. As a buried god he was, like Erechtheus, a chthonic snake-deity. Above his subterranean dwelling rose the Parthenon, the temple of the virgin goddess. The flaying of the god, which we have already touched on in connection with the flaying-ceremonies of the Aztecs, is intimately bound up with the snake-like nature of the hero. It is reported of Mani, the founder of Manichaeism, that he was killed, flayed, stuffed, and hung up.[175] The hanging up of the god has an unmistakable symbolic value, since suspension is the symbol of unfulfilled longing or tense expectation (“suspense”). Christ, Odin, Attis, and others all hung upon trees. Jesus ben Pandira suffered such a death on the eve of the feast of the Passover, in the reign of Alexander Jannaeus (106–79 B.C.). This Jesus is supposed

to have been the founder of the Essene sect,[176] which had certain links with the Christianity that came afterwards. The Jesus ben Stada who was identified with the earlier Jesus but was later supposed to have lived in the second century A.D., was also hanged. Both were first stoned, a punishment which was, so to speak, a bloodless one like hanging. This may not be without significance in the light of a strange ceremony reported from Uganda:

Fig. 37. Agathodaimon serpent
Antique gem

> When a king of Uganda wished to live for ever, he went to a place in Busiro, where a feast was given by the chiefs. At the feast the Mamba clan[177] was especially held in honour, and during the festivities a member of this clan was secretly chosen by his fellows, caught by them, and beaten to death with their fists; no stick or other weapon might be used by the men appointed to do the deed. After death, the victim’s body was flayed and the skin made into a special whip.… After the ceremony of the feast in Busiro, with its strange sacrifice, the king of Uganda was supposed to live for ever, but from that day he was never allowed to see his mother again.[178]

[595] Marsyas, who seems to have been a substitute for Attis, the son-lover of Cybele, was also skinned.[179] Whenever a Scythian king died, his slaves and horses were slaughtered, skinned, and stuffed, and then set up again.[180] In Phrygia, the representatives of the father-god were killed and skinned. The same was done in Athens with an ox, which was skinned

and stuffed and afterwards hitched to the plough. In this way the renewal of the earth's fertility was celebrated.[181]

[596] The god-hero, symbolized by the spring zodion (Aries, Taurus), descends to the lowest point in winter, overcomes it, and having passed beyond the summer solstice is himself overcome as if by an unconscious longing for death. Nevertheless he is divided within himself, and his descent and approaching end therefore seem to him like evil designs of the sinister mother who secretly lays a poisonous snake in his path to undo him. The mysteries, however, hold out the consoling promise that there is no contradiction[182] and no disharmony when life changes into death: "The bull is the father of the dragon and the dragon is the father of the bull."[183]

[597] Nietzsche voices the same mysterious truth:

Here I sit,
Or rather,
Here I am swallowed down
By this smallest oasis.
Yawning it opened
Its lovely lips—
All hail to that whale
If he provides thus
For his guest's welfare!

Hail to his belly,
If it is
Such a lovely oasis belly!

The desert grows; woe to him who hides deserts!
Stone grinds on stone, the desert gulps and strangles.
Monstrous Death, glowing under his tan,
Stares and chews … his life is his chewing …
O man burnt out by lust, do not forget:
You are the stone, the desert, the death's-head! [184]

[598] After slaying the dragon, Siegfried meets father Wotan, who is plagued by gloomy cares because the earth-mother Erda has laid the old serpent in his path in order to enfeeble him. He says to Erda:

All-knowing one,
Care’s piercing sting
By thee was planted
In Wotan’s dauntless heart:
With fear of shameful
Ruin and downfall
Thy knowledge filled him;
The fearful tidings
Choked his breast!
Art thou the world’s wisest woman?
Then tell me:
How may a god conquer his care?

ERDA: Thy name
Is not as thou sayest!

[599] With poisoned sting the mother has robbed her son of the joy of life and deprived him of the power which lies in the secret name. Just as Isis demanded the secret name of Ra, so Erda says: “Thy name is not as thou sayest!” But the Wanderer has found a way to conquer the fatal charm of the mother:

The gods’ downfall
No more dismays me
Since I willed their doom!

To the loveliest Wälsung
I leave my heritage;
To the eternally young
Joyously yields the god![185]

[600] These wise words contain in fact the saving thought: it is not the mother who lays the poisonous worm in our path, but life itself, which wills itself to complete the sun’s course, to mount from morn to noon, and then, crossing the meridian, to hasten towards evening, no more at odds with itself, but desiring the descent and the end.[186]

[601] Nietzsche’s Zarathustra says:

> I praise my death, the free death which comes to me because I desire it.
>
> And when shall I desire it?
>
> He who has a goal and an heir desires death at the proper time for the goal and the heir.[187]

[602] Nietzsche’s *amor fati* is somewhat overdone, and like an ailing Superman he tries to be always one jump ahead of fate. Siegfried is more cautious: he conquers father Wotan and sets out to win Brünhilde. The first thing he sees is her horse; then he thinks he espies a man sleeping in armour. He cuts off the coat of mail, and when he sees that it is a woman he is seized with terror:

My heart doth faint and falter!
On whom shall I call for help?
Mother! Mother!
Remember me . .
Can this be fear?
O Mother, Mother!
Thy dauntless child!
A woman lies sleeping
And she has taught him to fear!

Awake, awake!
Holiest maid!
So shall I suck life
From sweetest lips,
Even though I die in a kiss!

[603] In the duet which immediately follows the mother is invoked:

O mother, hail,
Who gave me birth.

[604] Brünhilde’s avowal is particularly significant:

Didst thou but know,
O joy of the world,
How I have ever loved thee!
Thou wert my gladness,
Thou wert my care!
Thy tender life I sheltered
Before it was thine;
Before thou wert born
My shield was thy guard.[188]

[605] Brünhilde, standing to Wotan in a daughter-anima relationship, is clearly revealed here as the symbolical or spiritual mother of Siegfried,

thus confirming the psychological rule that the first carrier of the anima-image is the mother. Siegfried says:

Then death took not my mother?
Was the loved one but sleeping?

[606] The mother-imago, at first identical with the anima, represents the feminine aspect of the hero himself. Brünhilde tells him as much in the words:

Thine own self am I
In the bliss of thy love!

[607] As the anima she is the mother-sister-wife, and as the preexistent archetype she has always loved him:

O Siegfried, Siegfried!
Conquering light!
Always I have loved thee,
For I alone divined
Wotan’s hidden thought-
The thought which I never
Dared to name,
Which I dared not think,
Which I only felt,
For which I fought,
Struggled and strove,
For which I defied
Him who conceived it.…
Canst thou not guess?
It was naught but my love for thee!

[608] The anima-image brings with it still other aspects of the mother-imago, amongst others those of water and submersion:

A glorious flood
Before me rolls.
With all my senses
I only see
Its buoyant, gladdening billows.…
I long to plunge
My burning heat
In the water’s balm;

Just as I am
To sink in the flood.
O that its billows
Might drown me in bliss!

[609] The water represents the maternal depths and the place of rebirth; in short, the unconscious in its positive and negative aspects. But the mystery of regeneration is of an awe-inspiring nature: it is a deadly embrace. There is an allusion to the terrible mother of heroes, who teaches them fear, in the words of Brünhilde, the horse-woman who conducts the dead to the other side:

Fearest thou, Siegfried?
Fearest thou not
The wild, raging woman?

[610] The orgiastic “Occide moriturus” from the love-scene in the metamorphosis of Apuleius resounds in Brünhilde’s words:

Laughing let us be lost,
Laughing go down to death!

[611] And in the cry

Light-giving love,
Laughing death![189]

we find the same significant contrast. These orgiastic frenzies and barbaric extremes are in the very nature of the *Mater saeva cupidinum* and determine the fate of the hero. Luck must stand unbidden and unforeseen at his side if he is not to perish of exaggerated self-confidence at the very first undertaking. But his mother-anima is blind, and his fate overtakes him sooner or later regardless of his luck—in most cases sooner. The subsequent fate of Siegfried is the fate of every archetypal hero: the spear of the one-eyed Hagen, the Dark One, strikes his vulnerable spot. In the shape of Hagen the one-eyed Wotan slays the son. The hero is the ideal masculine type: leaving the mother, the source of life, behind him, he is driven by an unconscious desire to find her again, to return to her womb. Every obstacle that rises in his path and hampers his ascent wears the shadowy features of the Terrible Mother, who saps his strength with the poison of secret doubt and retrospective longing; and in every conquest he wins back again the smiling, loving and life-giving mother. This image, taken as a kind of musical figure, a contrapuntal modulation of feeling, is extremely simple and its meaning is obvious. To the intellect, however, it presents an almost insuperable difficulty, particularly as regards logical exposition. The reason for this lies in the fact that no part of the hero-myth is single in meaning, and that, at a pinch, all the figures are interchangeable. The only certain and reliable thing is that the myth exists and shows unmistakable analogies with other myths. Myth-interpretation is a tricky business and there is some justification for looking at it askance. Hitherto the myth-interpreter has found himself in a somewhat unenviable position, because he only had exceedingly doubtful points for orientation at his disposal, such as astronomical and meteorological data. Modern psychology has the distinct advantage of having opened up a field of psychic phenomena which are themselves the matrix of all mythology—I mean dreams, visions, fantasies, and delusional ideas. Here the psychologist not only finds numerous points of correspondence with myth-motifs, but also has an invaluable opportunity to observe how such contents arise and to analyse their function in a living organism. We can in fact discover the same multiplicity of meanings and the same apparently limitless interchangeability of figures in dreams. On the other hand we are now in a position to establish certain laws, or at any rate rules, which make dream interpretation rather more certain. Thus, we know that dreams generally compensate the conscious situation, or supply what is lacking to it.[190] This very important principle of dream-interpretation also applies to myths. Furthermore, investigation of the products of the unconscious yields recognizable traces of archetypal structures which coincide with the myth-motifs, among them certain types which deserve the name of dominants. These are archetypes like the anima, animus, wise old man, witch, shadow, earth-mother, etc., and the organizing dominants, the self, the circle, and the quaternity, i.e., the four functions or aspects of the self (cf. pls. LVI, LX) or of consciousness. It is evident (figs. 38 and 39; pl. LIX*b*) that knowledge of these types makes myth interpretation considerably easier and at the same time puts it where it belongs, that is, on a psychic basis.

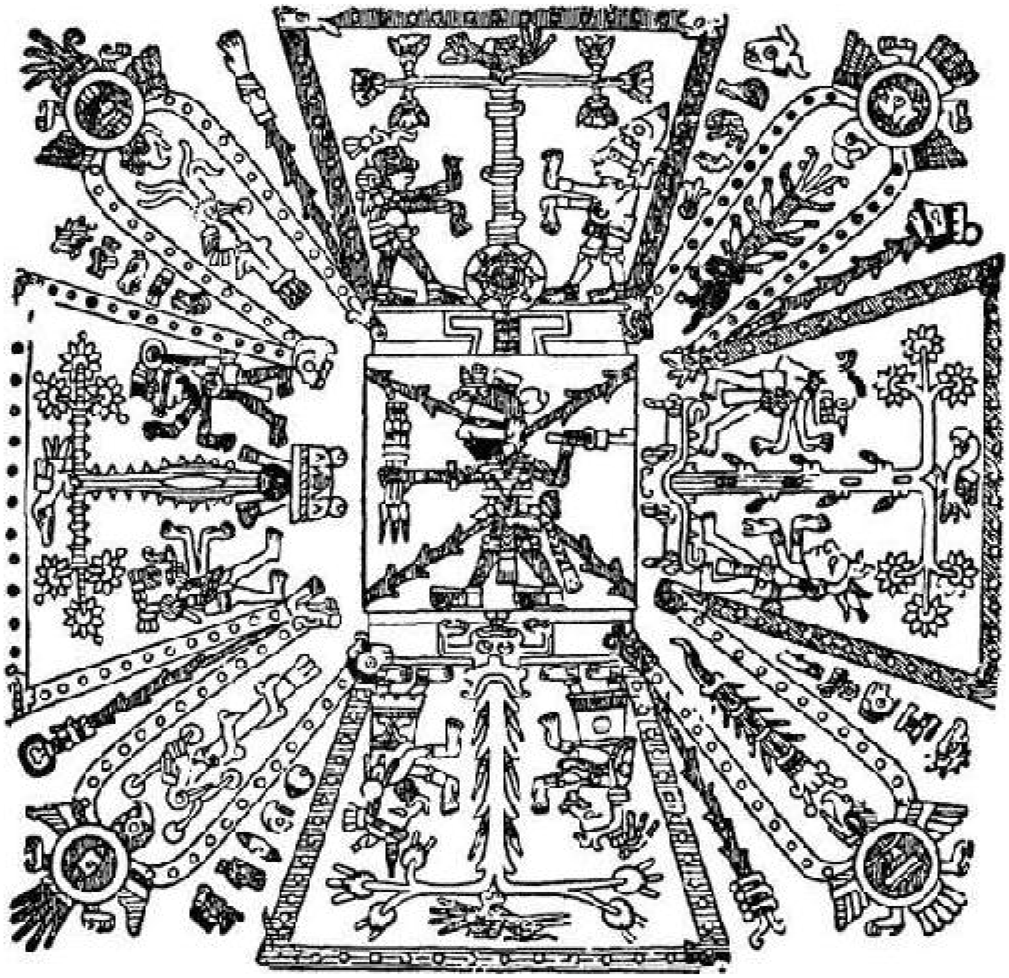

Fig. 38. World plan
From an Aztec codex

[612] Looked at in this light, the hero myth is an unconscious drama seen only in projection, like the happenings in Plato's parable of the cave. The hero himself appears as a being of more than human stature. He is distinguished from the very beginning by his godlike characteristics. Since he is psychologically an archetype of the self, his divinity only confirms that the self is numinous, a sort of god, or having some share in the divine nature. In this mythologem may lie the root of the argument in favour of "homoousia." For psychology it makes a vast difference whether the self is to be considered "of the same nature" as the Father (*ὁμοούσιος*), or merely "of a similar nature" (*ὁμοιούσιος*). The decision in favour of homoousia was of great psychological importance, for it asserted that Christ is of the same nature as God. But Christ, from the point of view of psychology and comparative religion, is a typical manifestation of the self. For psychology the self is an *imago Dei* and cannot be distinguished from it empirically. (Cf. pl. LX.) The two ideas are therefore of the same nature. The hero is the protagonist of God's transformation in man; he corresponds to what I call the "mana personality."[191] The latter has such an immense fascination for the conscious mind that the ego all too easily succumbs to the temptation to identify with the hero, thus bringing on a psychic inflation with all its consequences. For this reason the repugnance felt by certain ecclesiastical circles for the "inner Christ" is understandable enough, at least as a preventive measure against the danger of psychic inflation which threatens the Christian European. Although the religion and philosophy of India are largely dominated by the idea of homoousia,[192] there is less danger in this direction because the Indian has an equally homoousian idea of God (Brahman), which is very definitely not the case with the Christian. The latter has far too little introspection to be able to realize what modifications in his present conception of God the homoousia of the self (Atman) would involve. I hope my reader will pardon these reflections, which may seem very remote from our theme. I add them here only to put the numinosity of the hero archetype in the right perspective.[193]

VIII

THE SACRIFICE [1]

[613] Let us now turn back to the Miller fantasies and watch the last act of the drama. Chiwantopel cries out with painful emotion:

> “In all the world there is not a single one! I have searched among a hundred tribes. I have aged a hundred moons since I began. Will there never be anyone who will know my soul?—Yes, by almighty God, yes!—But ten thousand moons will wax and wane before her pure soul is born. And it is from another world that her parents will come to this one. She will be fair of skin and fair-haired. She will know sorrow even before her mother bears her. Suffering will be her companion; she too will seek—and will find no one who understands her. Many a suitor will wish to pay court to her, but not one of them will know how to understand her. Temptation will often assail her soul, but she will not yield.… In her dreams I shall come to her, and *she will understand*. I have kept my body inviolate. I have come ten thousand moons before her time, and she will come ten thousand moons too late. *But she will understand!* It is but once in ten thousand moons that a soul like hers is born!”

> (A lacuna.)–A green viper darts out of the bushes, glides towards him, and stings him in the arm; then it attacks his horse, which is the first to succumb. Then Chi-wan-to-pel says to his horse: “Farewell, faithful brother! Enter into your rest! I have loved you and you have served me well. Farewell, I shall rejoin you soon!” Then to the serpent: “Thanks, little sister, you have put an end to my wanderings!” Now he shrieks with pain and calls out in prayer, “Almighty God, take me soon! I have sought to know thee and to keep thy law. Oh, suffer not my body to fall into corruption and decay, and become carrion for the eagles!” A smoking volcano appears in the distance, the rumbling of an earthquake is heard, followed by a landslide. Chi-wan-to-pel cries out in an extremity of anguish as the earth closes over his body: “Ah, she will understand! Ja-ni-wa-ma, Ja-ni-wa-ma, thou that understandest me.”

[614] Chiwantopel’s prophecy is an echo from Longfellow’s *Hiawatha*, where, at the end of the hero’s career, the poet could not resist the sentimentality of dragging in the white man’s Saviour in the guise of the supreme representative of Christianity and Christian morals. (One thinks ruefully of the work of salvation accomplished by the Spaniards in Mexico and Peru, and of the Indian wars in North America.) With this prophecy the personality of our author is again brought into closest relationship with the hero as the real object of Chiwantopel’s longing. The hero would undoubtedly have married her had she only lived in his time, but unfortunately she comes too late—ten thousand moons too late.

This very considerable time-gap points to a gap in another sense: Miss Miller's ego is separated by a gulf from the figure of Chiwantopel. He is wholly "on the other side." She will seek him in vain, just as he seeks her; in other words, there will never be any possibility of a meeting or union of conscious and unconscious, the one thing needful to compensate the conscious attitude and create wholeness. She or he will be able at most to dream of such a meeting, and only so will their souls be able to understand one another, to love and embrace. But this love will never become a conscious fact. In this respect the situation holds no favourable prognosis for Miss Miller; for every real love-relationship consists ultimately in the girl finding her hero, and the hero his soul, not in dreams, but in palpable reality.

[615] The next passage runs: "I have kept my body inviolate." This proud sentence, which naturally only a woman could utter, since a man is not given to boasting about such matters, confirms yet again that all enterprises have remained but dreams. The hero's assertion that he is inviolate refers back to the abortive attempt on his life in the preceding chapter and explains what exactly it meant. He tells us in the words: "Temptation will often assail her soul—but she will not yield." This statement expresses the "touch me not" attitude of our author, which is as it were dictated by her "ghostly lover."[2] At all events the awakening of this hero-figure—the animus—usually has some such consequences for the conscious mind. It is as if a new instinct were aroused, and the soul were seized by a hitherto unknown longing: the image of earthly love pales before that of the heavenly, which turns the heart and mind away from their "natural" destination. I use the word "natural" here in the sense given it by the Age of Enlightenment. In reality of course the world-spurning passion of the "spirit" is just as natural as the marriage-flight of insects. Love for the "heavenly bridegroom" or for Sophia is a phenomenon that is by no means confined to the sphere of Christianity. It is in fact that "other," equally natural instinct to cleave to the realities of the soul. These are not makeshift inventions, as certain theories would have us believe, but facts and figures which can fill a man with passion and enchantment, and turn his head as easily as the creatures of this world. "You are conscious only of the single urge,"[3] says Faust to

Wagner. But Miss Miller seems to be on the point of forgetting this urge for the sake of the other. By so doing she does not escape the danger of one-sidedness, but only changes its sign. Whoever loves the earth and its glory, and forgets the "dark realm," or confuses the two (which is mostly what happens), has spirit for his enemy; and whoever flees from the earth and falls into the "eternal arms" has life for an enemy. This is what happens to the hero Chiwantopel, who personifies Miss Miller's otherworldliness: he falls foul of the green snake.[4] Green is the colour of the vegetation numen ("green is life's golden tree"), and the snake is the representative of the world of instinct, especially of those vital processes which are psychologically the least accessible of all. Snake dreams always indicate a discrepancy between the attitude of the conscious mind and instinct, the snake being a personification of the threatening aspect of that conflict. The appearance of the green viper therefore means: "Look out! Danger ahead!"

[616] We know from the rest of the story that Chiwantopel is eliminated very thoroughly indeed: first he is fatally bitten by the snake, then the snake kills his horse, his animal vitality, and finally he is engulfed in a volcanic eruption. This solution of the problem represents an attempt on the part of the unconscious to compensate and help the dangerous situation of the conscious mind. So far this situation has only been hinted at. But if it requires so drastic an annihilation of the hero, in contradiction to his usual mythological role, we may justifiably conclude that the human personality of the author is threatened in the highest degree by an invasion from the unconscious (euphemistically conceived as a "creative fantasy"). If only the fascinating Chi-wantopel could be got out of the way, then there would at least be some hope of her interest turning again to the earth and its greenness, the other way being barred by the death of her lover. An invasion from the unconscious is very dangerous for the conscious mind when the latter is not in a position to understand and integrate the contents that have irrupted into it. One certainly does not have the feeling that Miss Miller is the "one who understands," though it is perfectly plain that "she who will understand" is meant for her. Since she has in fact not the slightest idea of what is happening, her situation is critical, because in these circumstances there is a very good chance of the

conscious being overwhelmed by the unconscious, as indeed actually happened a little later, with fatal results.[5]

[617] When such an invasion happens, we are often faced with a situation in which the unconscious overtakes or “takes over” the conscious mind. The latter has somehow got stuck, with the result that the unconscious takes over the forward-striving function, the process of transformation in time, and breaks the deadlock. The contents then pouring into consciousness are archetypal representations of what the conscious mind should have experienced if deadlock was to be avoided. The tendency to stand still can easily be seen from the special emphasis laid on the inviolateness of the body, as well as from the wish to preserve it from corruption in the grave. She wants to stop the turning wheel that rolls the years along with it—wants to hang on to childhood and eternal youth rather than die and rot in the earth. But although we can forget, in the long-cherished feelings of youth, in the dreamy recollection of memories stubbornly hung on to, that the wheel rolls onward, yet the greying hair, the lax skin, the lined face are pitiless reminders that whether or not we expose ourselves to the destructive forces of life, the poison of the stealthily creeping serpent of time consumes our bodies nonetheless. Flight from life does not exempt us from the law of age and death. The neurotic who tries to wriggle out of the necessity of living wins nothing and only burdens himself with a constant foretaste of aging and dying, which must appear especially cruel on account of the total emptiness and meaninglessness of his life. If it is not possible for the libido to strive forwards, to lead a life that willingly accepts all dangers and ultimate decay, then it strikes back along the other road and sinks into its own depths, working down to the old intimation of the immortality of all that lives, to the old longing for rebirth.

[618] Hölderlin follows this path in his poetry and in his life. I will let the poet speak for himself:

To a Rose

In the mother-womb eternal,
  Sweetest queen of every lea,

Still the living and supernal
Nature carries thee and me.

Little rose, the tempest dire
Strips our petals, ages us;
Yet the deathless seeds aspire
To new blooms, miraculous.[6]

[619] The following comments may be made on the imagery of this poem. The rose is a symbol of the beloved.[7] So when the poet dreams that he and the rose are in the womb of nature, it means psychologically that he is still in the mother. There he finds eternal germination and renewal, a potential life that has everything before it, containing in itself all possibilities of realization without his having to submit to the labour of giving them shape. Plutarch records the same motif in the naïve myth of Osiris and Isis mating in their mother's womb. Hölderlin likewise feels that it is the enviable prerogative of the gods to enjoy everlasting infancy. He says in "Hyperion's Song of Fate":

Fateless, like the sleeping
Infant, breathe the heavenly ones,
Chastely guarded
In modest bud;
Their spirits
Blossom eternally,
And the quiet eyes
Gaze out in placid
Eternal serenity.[8]

[620] This quotation shows what he means by heavenly bliss. Hölderlin was never able to forget this first and greatest happiness whose haunting presence estranged him from real life. The motif of the twins in the mother's womb is found in the African legend, recorded by Frobenius,[9] of the Big Snake, which grew out of a little snake in a hollow tree ("stretching forth of the serpent"), and which devoured all human beings (devouring mother = death) until only one pregnant woman remained. She dug a ditch, covered it with a stone, and there gave birth to twins

who afterwards became dragon-killers. The mating in the mother also occurs in the following West African legend: “In the beginning, Obatala the Sky and Odudua the Earth, his wife, lay pressed close together in a calabash.”[10] Being “guarded in modest bud” is an image that is found in Plutarch, where it is said that the sun is born at dawn from a flower bud. Brahma, too, comes out of a bud (cf. pl. XLVI*a*), and in Assam a bud gave birth to the first human pair.

Man

Scarcely had the ancient mountain tops
Sprouted from the waters, O earth,
And the first green islands, redolent
With young saplings, breathed delight
Through the May air over the ocean,
And the joyful eye of the sun-god
Looked down on his firstlings, the trees and flowers,
Laughing children of his youth, your offspring:
When, on the fairest of those islands,
Born after a warm night, in the dawn-light long ago,
Earth’s most beautiful child

Lay under clustering grapes. And the boy
Looked up to Father Helios, who knew him,
And tasting the sweet berries, he chose
The sacred vine for his nurse.
And soon he is grown; the beasts
Fear him, for he is other than they,
A Man. He is not like you and not
Like the father, for boldly the high
Soul of the father in him is united
With your joys and your sadness for always,
O earth. Rather would he resemble
Eternal nature, mother of gods, the terrible.

Therefore, O earth, his presumption
Drives him away from your breast, and your tender
Gifts are in vain; ever and ever too high
Does the proud heart beat!

Leaving the sweet meadow of his shores

Man must go out into flowerless waters,
And though his orchards shine like the starry night
With golden fruit, yet he digs

Caves for himself in the mountains and grubs in the pit
Far from the sacred ray of his father,
Faithless also to the sun-god, who
Loves not toilers and mocks at cares.

Ah! the birds of the wood breathe freer, and though
The breast of man more wildly and proudly heaves,
His arrogance turns to fear, and the delicate
Flowers of tranquillity bloom not for long.[11]

[621] This poem contains the first hint of discord between the poet and nature; he begins to feel estranged from reality. Note that the little child chooses the "vine for his nurse." This Dionysian allusion reminds us of Judah in Jacob's blessing (Genesis 49:11): "binding his foal unto the vine, and his ass's colt unto the choice vine."

[622] There is a Gnostic gem showing a she-ass suckling her foal, surmounted by the sign of Cancer and the inscription "D.N.-IHV.XPS.": *Dominus noster Jesus Christus*, to which is added, "Dei filius."[12] As Justin Martyr indignantly observes, the connections between the Christian legend and that of Dionysus are unmistakable (e.g., the miracle of the wine). In the Dionysus legend the ass plays an important part as the steed of Silenus. The ass pertains to the "second sun," Saturn, who was the star of Israel and is therefore to some extent identical with Yahweh. The mock crucifixion on the Palatine, with an ass's head (cf. pl. XLIII), is an allusion to the tale that an ass's head was worshipped in the temple at Jerusalem.[13] The difference between Christians and Jews was at that time not very clear to an outsider.

[623] Hölderlin is mainly concerned with the Dionysian nature of man: the vine is his nurse, and his ambition is to "resemble eternal Nature, mother of gods, the terrible." The "terrible Mother" is the *mater saeva cupidinum*, unbridled and unbroken Nature, represented by the most paradoxical god of the Greek pantheon, Dionysus, who significantly enough was also Nietzsche's god, although actually Nietzsche's original

experience suggests rather the sinister huntsman, Wotan. Wagner was more explicit on this point.

[624] “Presumption” drives man away from the mother and from the earth, and estranges him from the “sacred ray of his father,” until his defiance changes into fear. As a child of nature he falls into discord with her, precisely because he tries to resemble the “mother of gods.” No reason guides him, only the Dionysian *libido effrenata:*

To Nature

While about thy veil I lingered, playing,
    And, like any bud, upon thee hung,[14]
Still I felt thy heart in every straying
    Sound about my heart that shook and clung.
While I groped with faith and painful yearning
    To your picture, glowing and unfurled,
Still I found a place for all my burning
    Tears, and for my love I found a world!

To the sun my heart before all others
    Turned as though he heard my every cry,
And it called the stars its little brothers,[15]
    As it called the spring God’s melody;
And each breeze in groves or woodlands fruity
    Held thy spirit, and that same sweet joy
Moved the well-springs of my heart with beauty—
    Those were golden days without alloy.

Where the spring is cool in every valley,[16]
    And the youngest bush and twig is green,
And about the rocks the grasses rally,
    And the branches show the sky between,
There I lay, imbibing every flower
    In a rapt, intoxicated glee,
And, surrounded by a golden shower,
    From their heights the clouds sank down to me.[17]

Often, as a weary, wandering river
    Longs to join the ocean’s placid mirth,

I have wept and lost myself forever
    In the fulness of thy love, O earth!
Then, with every other joyful being,
    Forth I rushed from Time’s captivity,
Like a pilgrim home from travel, fleeing
    To the arms of rapt Eternity.

Blest be childhood’s golden dreams, their power
    Hid from me life’s dismal poverty;
All the heart’s good seeds ye brought to flower,
    Things I could not reach, ye gave to me!
In thy beauty and thy light, O Nature,
    Of all effort and compulsion free,[18]
Fruitful love attained a kingly stature,
    Rich as harvests reaped in Arcady.

That which brought me up is dead and riven,
    Dead the youthful world which was my shield,
And this breast, which used to harbour heaven,
    Dead and dry as any stubble field.
Though the songs of springtime sound as ever,
    Bringing friendly comfort to my smart,
Yet the morning of my life is over
    And the spring has faded from my heart.

Shadows are the things that once we cherished,
    Love itself must fade and cannot bide;
Since the golden dreams of youth have perished
    Even friendly Nature’s self has died.
Heart, poor heart, those days could never show it—
    How far-off thy home, and where it lies;
Now, alas, thou nevermore wilt know it
    If a dream of it does not suffice.[19]

Palinode

What gathers about me, Earth, in your dusky, friendly green?

What do you waft me, airs, what do you bring me again?
There is a rustling in all the tree-tops …
Why do you wake my soul? why stir up
The past in me, ye kindly ones?

Spare me and let them rest, do not mock
The ashes of my joy. Pass on,
Ye fateless gods, let your youthfulness
Flower upon those grown old.
If you would deign to come down to mortals,
Young girls will blossom for you,
Young heroes, and sweeter than ever
Morning will play round the cheeks of the happy,
And ravishing sound
The songs of those without care …
Ah, once the fountain of song
So easily rushed from my bosom, when heavenly
Joy still shone from my eyes …[20]

[625] The separation from youth has even taken away the golden glamour of Nature, and the future appears hopeless and empty. But what robs Nature of its glamour, and life of its joy, is the habit of looking back for something that used to be outside, instead of looking inside, into the depths of the depressive state. This looking back leads to regression and is the first step along that path. Regression is also an involuntary introversion in so far as the past is an object of memory and therefore a psychic content, an endopsychic factor. It is a relapse into the past caused by a depression in the present. Depression should therefore be regarded as an unconscious compensation whose content must be made conscious if it is to be fully effective. This can only be done by consciously regressing along with the depressive tendency and integrating the memories so activated into the conscious mind—which was what the depression was aiming at in the first place.

Empedocles

You seek life, and a godly fire
Gushes and gleams for you out of the deeps of earth,
As, with shuddering longing, you
Hurl yourself down to the flames of Etna.

So by a queen’s wanton whim
Pearls were dissolved in wine—heed her not!
What folly, O poet, to cast your riches
Into that bright and bubbling cup!

Yet still you are holy to me, as the might of earth
That bore you away, audaciously perishing!
And I would follow the hero into the depths
Did not love hold me.[21]

[626] This poem reveals the poet’s secret longing for the maternal depths and for the regenerating womb. (Cf. fig. 40.) He would like to be melted like pearls in wine, to be sacrificed in the chalice, the “krater” of rebirth. He longs to imitate Empedocles, of whom Horace says: “Empedocles, eager to be thought a god immortal, coolly leapt into burning Aetna.”[22]

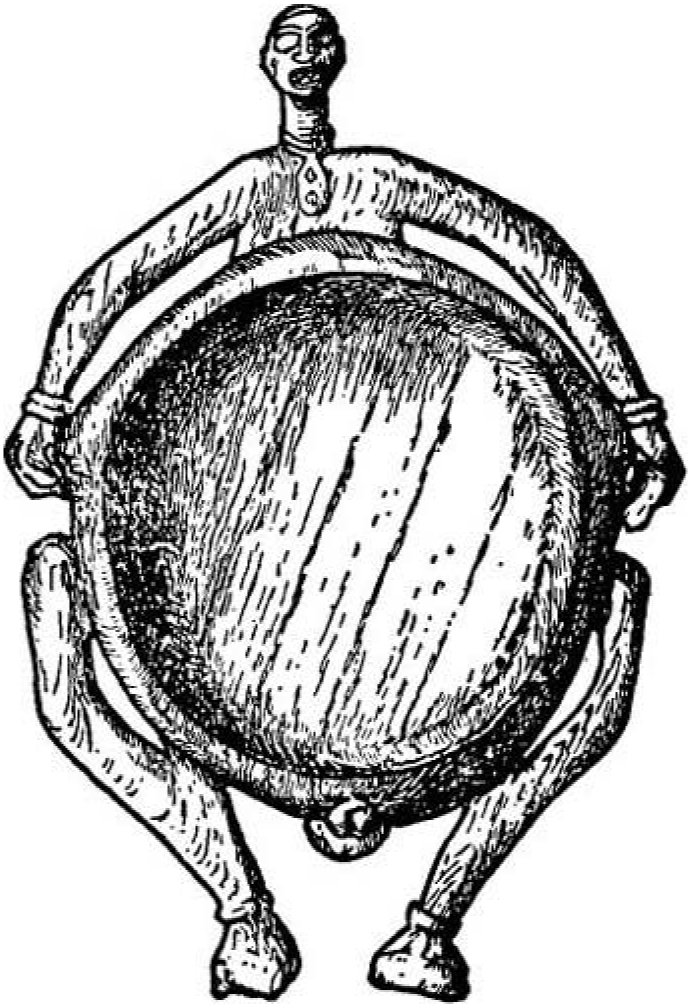

Fig. 40. The womb of the World Mother
Wooden bowl, Congo

[627] He wants to go the way of the hero, the ideal figure that floats before him, and to share his fate. Yet love still holds him back in the light of day.

The libido still has an object which makes life worth living. If this object were abandoned, then the libido would sink down to the subterranean mother for rebirth:

In Memoriam

Daily I go a different path, sometimes
Into the green wood, sometimes to bathe in the spring,
Or to the rock where the roses bloom.
From the top of the hill I look over the land,

Yet nowhere, O lovely one, nowhere in the light do I find you,
And in the breezes my words die away,
The sacred words we once had …

Aye, you are far removed, holy countenance!
And the melody of your life is kept from me,
No longer overheard. And where are
The magical songs that once

Soothed my heart with the peace of the heavenly ones?
How long it is, how long! the youth is
Grown old, the earth itself, which then
Smiled upon me, has grown different.

Farewell! each day the soul departs,
Turns back to you, and over you weeps
The eye that with brighter shining
Gazes across again, there where you tarry.[23]

[628] This distinctly suggests a renunciation, an envy of one’s own youth, of that time of “effortlessness” which one would so gladly cling on to. But the final stanza portends disaster: a gazing towards the other land, the distant coast of sunrise or sunset. Love no longer holds the poet fast, the bonds with the world are broken, and loudly he calls for help to the mother:

Achilles

Lordly son of the gods! Because you had lost your beloved,
You went to the rocky coast and cried aloud to the flood,
Till the depths of the holy abyss heard you and echoed your grief

In the stillness, where far from the clamour of ships,
Deep under the waves, in a peaceful cave, the beautiful
Thetis dwells, your protectress, goddess and nymph of the sea.
Mother she was to the youth, for the powerful goddess
Had once, on the rocky shore of his island, lovingly
Nursed the boy at her breast, had made him a hero
With the might of her strengthening bath and the powerful song of the waves.
And the mother, lamenting, heard the cry of her child,
And rose like a cloud from the gloomy bed of the sea,
Quieted with tender embraces the pains of her darling.
And he listened while she, caressing him, promised to help him.
Son of the gods! O were I like you, I could trustingly
Pour out my secret grief to one of the Heavenly Ones.
This I shall never see, but must bear the disgrace, as though I
No more belonged to her who still thinks of me, even with tears.
Beneficent gods, who disdain not men’s prayers, then hear me!
How raptly and fervently have I not loved you, holy light,
Since I have lived, the earth and your fountains and woodlands,
Father Aether—this heart has felt you about me too ardent and pure.
O soften, ye kind ones, my sorrows, that my soul be not silenced too early,
That I may live and thank you, heavenly powers in the highest,
With joyful song till the last, hurrying day,
Thank you for gifts gone by, for the joys of lost youth,
Then take me out of my loneliness up to yourselves.[24]

[629] These songs describe more vividly than one could hope to do in plain language the poet’s steady withdrawal and increasing estrangement from life, his gradual submersion in the abyss of memory. After these nostalgic longings the apocalyptic vision of Patmos bursts upon us like a mysterious visitor from another world, a vision swirled round by mists from the abyss, by the gathering clouds of insanity bred by the mother. Mythological ideas again flash forth, symbolic intimations of death and the resurrection of life.

[630] I give here some significant fragments from “Patmos”:

Near is God
And hard to apprehend.
But where danger is, there
Arises salvation also.[25]

[631] These words show that the libido has now sunk to a depth where “the danger is great” (*Faust*, “The Mothers”). There God is near, there man would find the maternal vessel of rebirth, the seeding-place where he could renew his life. For life goes on despite loss of youth; indeed it can be lived with the greatest intensity if looking back to what is already moribund does not hamper your step. Looking back would be perfectly all right if only it did not stop at externals, which cannot be brought back again in any case; instead, it ought to consider where the fascination of the past really springs from. The golden haze of childhood memories arises not so much from the objective facts as from the admixture of magical images which are more intuited than actually conscious. The parable of Jonah who was swallowed by the whale reproduces the situation exactly. A person sinks into his childhood memories and vanishes from the existing world. He finds himself apparently in deepest darkness, but then has unexpected visions of a world beyond. The “mystery” he beholds represents the stock of primordial images which everybody brings with him as his human birthright, the sum total of inborn forms peculiar to the instincts. I have called this “potential” psyche the collective unconscious. If this layer is activated by the regressive libido, there is a possibility of life being renewed, and also of its being destroyed. Regression carried to its logical conclusion means a linking back with the world of natural instincts, which in its formal or ideal aspect is a kind of *prima materia*. If this *prima materia* can be assimilated by the conscious mind it will bring about a reactivation and reorganization of its contents. But if the conscious mind proves incapable of assimilating the new contents pouring in from the unconscious, then a dangerous situation arises in which they keep their original, chaotic, and archaic form and consequently disrupt the unity of consciousness. The resultant mental disturbance is therefore advisedly called schizophrenia, since it is a madness due to the splitting of the mind.

[632] In his poem, Hölderlin describes the experience of entering into that wonderland of primordial images:

In darkness dwell
The eagles, and fearless across the abyss
Go the sons of the Alps

On lightly built bridges.

[633] With these words the dark fantastic poem sweeps on. The eagle, the sun-bird, dwells in darkness—the libido has hidden itself, but high overhead pass the dwellers in the mountains, probably the gods ("Ye wander above in the light"), symbols of the sun travelling across the sky like an eagle flying over the depths.

Therefore, since all round are upheaped
The summits of time,
And those that dwell nearest in love
Must languish on uttermost mountains,
Give us then innocent water,
O pinions give us, to pass
Over with constant minds and again return.
